NEW YORK, THURSDAY, JULY 7, 1870.

The Week.

THE Congressional labor of the week has been mainly expended on the usual important work of the closing days of the session, the Tax, and Tariff, and Appropriation Bills getting a principal share of attention, though the House has passed the Funding Bill, and, conjointly with the Senate, made some amendments in the naturalization laws. The word "white," wherever it occurs, is struck out; but an amendment providing that the Chinese be excluded from the benefits of the amendment was retained. The Senate, on Friday, went through some odd performances with the income-tax clause in the Tax Bill. In the afternoon of Friday, it abolished the tax entirely. In the evening, under the management of Mr. Sherman—management perhaps a little too sharp for dignity or for the permanency of the result obtained—it was voted that the tax, reduced in amount to two-and-a-half per cent., and limited in existence to the next two years, should be continued. Great is the consequent disgust of the newspapers; but we do not observe that there is much of the popular clamor which the newspapers would have us believe is raging.

As usual on the Fourth of July, the sachems and braves of Tammany, to say nothing of certain guileless medicine men and a fluent prophet or two, met on the Fourth of July for their annual "big talk," and afforded some indication of the intentions of the Democratic party, or, at any rate, of the franker section of it which inhabits New York, and listens to the words of "Big Six." As it happens, this section of it is just now the most powerful in the party, for New York will carry into the next convention an almost overwhelming influence in virtue of her immense Democratic majority, and the facilities for making it bigger if a bigger one is wanted. Still, the party has for a long time seldom failed to hearken to those of its counsellors who were deemed to have the longest heads, and the enthusiasm of the "young men" is usually restrained by the medicine men and great chiefs. This time nothing was done but what might have been expected, unless, indeed, we except the open nomination for the next Presidency of Governor Hoffman. This, however, any crowd of New York Democrats have always been ready to do by acclamation for the last two or three years; and, for the matter of that, there would seem to be no reason discernible by ordinary observers why Mr. Hoffman might not be the choice of a full and regular Democratic convention.

He has never failed in getting such offices as he wanted, the record of his "running" being about as good as that of any man in the country; some, at least, of the duties of his offices he always performs with credit; he is thought to have good abilities, and if his official conduct will not bear close inspection, the mass of the people do not know the fact; his name would get him many Republican votes, unless, indeed, the Republicans were to give a place on their ticket to a genuine German; he is young and has many personal friends, and, on the whole, though there is a belief—not too well founded—that no man much talked of for the Presidency stands any chance of getting it, Mr. Hoffman is sufficiently likely to turn out the candidate to make it worth the while of other Democratic gentlemen with aspirations to look thoroughly into such passages in his history as his complicity in the Erie frauds; his complicity in the voting frauds of last fall in this city; his connection with Supervisor Tweed, and much more of the secret history of his official existence. The Republicans, too, might do worse than go into the investigation, for appearances now, as we are about half through the present quadrennial political period, do not seem to indicate anything like a walk over the course in the next contest.

The speeches of the Tammany orators were in manner better than those for several years past, and were perhaps a shade better in spirit, the passage of the amendments having necessarily the effect of moderating a little the obstinate anger which used to assert that the reconstructive legislation must be undone. There was, however, more or less of this spirit shown. Still, it may almost be left wholly to the consideration of such persons as are in the habit of persuading themselves that because Copperheads were once bitterly hated, the Republican party is never going to be beaten. Really, the kind of talk of which we had some on the Fourth from Senator Casserly has now not very much political significance. Bitter haters of the North there are in the South, no doubt; and no doubt there are men in the North who still hate rebels; but it is not to minorities like these classes that it is much worth while to look; on the great middle mass of the people all this set of feelings begins to have a slighter influence. Of more consequence is it to see the planks of the new Democratic platform. The importation of Chinese labor is to be opposed, and "the workingman" is told to see in the Democratic party the friend of the artisan, protecting him against the servile labor which will bring into existence here a condition of society in which we shall have only the very wealthy and a horde of servile laborers, their serfs. There is to be at once a great diminution of our taxes—a lightening of the burdens of this generation, and remitting to future generations some part of the expense of the war. There is to be at once full amnesty to the persons engaged in the late war, and an absolute withdrawal of Congressional interference with the States. Little or nothing was said concerning Cuba, and about as much concerning San Domingo, while the inefficiency of the present Congress received a great deal of attention. But the main planks were the Chinese question, the taxes, and the cessation of Congressional intervention in the affairs of the States. Of course, also, it was felt that the advent of the Democracy to power would produce cheering and unmistakable indications of the thousand years of peace. In that time justice shall be done alike to ploughholder and bondholder, Mr. Cox said; taxes shall be light; paper money shall be worth its face; "bribery, fraud, scheming, and bounties will become obsolete—as they were unknown under Democratic rule;" no more land is to be stolen from the people, no more grass grown in our ship-yards, no more powers usurped. It is almost like living under the direct rule of Peter B. Sweeny himself! Finally, Mr. Cox thought that the Radicals would soon discover that in bringing over a Chinaman they had caught a Tartar.

His view of the case seems to have struck General Butler also, who, in his Fourth of July oration, delivered in Connecticut, spoke out plainly the feeling of Eastern Massachusetts, which is a region of artisans. General Wilson also, as we remarked last week, perceives the pretty plain determination of the average workingman to resent the coming invasion, if, indeed, there is an invasion to come. When General Butler made an end of his speech, Ex-Governor Hawley, who was on the platform with him, denied the soundness of the speaker's doctrine, and dealt with him for it, but softly, as one of the brethren with another. He did not see his way clear, he said, to shut the inviting doors of America in the face of a suffering world. With the flag in one hand and the New Testament in the other, he would welcome all who would come hither. He did not say what his attitude would be in case some millions of Mongolians, destitute of our political training, aliens to us with an alienage that makes them foreign in a vastly different sense from that in which any European is foreign, were to establish themselves among us permanently. Probably he is not ready with his answer, but from the tone of his remarks we feel a fear that he would for a while yet at least simply quote the truths of the Declaration as to the equality of all men. But that would hardly dispose of the problem when once such a problem had really come. As for the question of the Chinese coming here in not very large numbers, and settling, as at North Adams, temporarily, and as the contracted and imported servants and instruments of a manufactory, it is probable that the workingmen of Connecticut will soon settle that for most of her legislators. But, from present appearances, it is borrowing trouble for any of us to be worrying ourselves too much about waving the flag and either inviting or repelling suffering Mongols by the million.

Whether or not we ought to be now or at any other time fighting the Indians, or on the eve of general Indian war, it would seem that there is no doubt that, being on the verge of war, we ought to have some soldiers on the Plains. Wherever the Indians now like to go in a band of five hundred or a thousand they find themselves superior in strength to our forces. Of officers there seem to be plenty, and the young gentlemen who lament that they cannot be out in active service instead of being shut up in the artillery school at Fort Monroe are probably profitably employed in studying the algebra and geometry which disturb them so much. But if men are not to be had elsewhere, it appears as if the four or five hundred soldiers stationed at that fort might be employed to better advantage in doing garrison duty in some fort on the Plains that now has fourteen or twenty men in it and has to shut itself up when the Indians take to the war-path. Everybody says the one thing too, except the Indian agents and the Congressmen who practise their economies in the safety of Washington and the full view of admiring constituents, by cutting down the Army Appropriation Bill—while, perhaps, adding something to bills like that which was the other day stigmatized as a mere scheme to lay hold of the farms of the Mission Indians in California. General Sherman says there are not soldiers enough; General Sheridan says he cannot keep the field, and must content himself with guard duty; and there is but one account from the settlers. It is possible that the reports of the coming trouble are exaggerated; but Sheridan says that the Indians of the Northern and Southern Reservations both are off their reservations, and that he distrusts them entirely, naming Red Cloud by name. Possibly that gentleman does, as has been suggested, place some reliance in the assurances of certain great orators here in New York, who, when he was with us, informed him that rather than the red man should suffer injustice, they would themselves grasp the United States by the throat and compel it to be just. At all events, the army is mistaken, or Red Cloud begins to fear his "young men" are irrestrainable. Perhaps they are really so; and perhaps they are conveniently so. In either case, reflections are suggested as to the propriety of the "treaties" we make with these potentates.

British gold has been once more triumphant in its nefarious work. More than a majority of our Senators and Representatives have united in signing a letter to Special Commissioner Wells, in which they set forth the service that he has done the country, and declare him a most useful and faithful officer. It is said that Mr. Dawes ascertained, by a strict canvass, that there could be obtained a two-thirds majority in favor of continuing the office, which went out of existence, by limitation, on the 1st instant. Mr. Wells, being advised thereto, went to the President to discover his feeling in the matter, and was told that Mr. Boutwell opposed the continued existence of the office of Special Commissioner, and that he must think no more of it. Had Congress, then, re-enacted the law establishing the office, it is clear enough that we should have had in it some other man than Mr. Wells, and it is clear, too, that he would have been, in effect, a preacher of high tariff at all events, whether or not he were theoretically a protectionist of the Carey-Greeley school, as he probably would have been. Mr. Boutwell is said, by some people, to be merely jealous of Mr. Wells's reputation as a financier, of which, indeed, the Springfield *Republican* says truly that it is "a better reputation than any man in this country ever won off the battle-field in so short a time." But there is no need to look so far as that for the motives of an act which is entirely in consonance with all the apparent and avowed motives governing Mr. Boutwell's public conduct. He wants high duties, because his notion of the way to get a large revenue is to make duties as high as possible, and his desire for a big revenue is that the Secretary of the Treasury may diminish, by sheer force of purchase, the volume of the national debt. He would not precisely kill the goose that lays the golden egg, but to lighten the burden of taxation and so give our bird time to hatch a brood that would all, in the next generation, be laying golden eggs too, is an idea that finds no lodgment in his mind. In Mr. Wells's it has, and so have many similar ideas; and Mr. Boutwell naturally looks on him with distrust. Then, too, the fanatical moral reformer's hatred of "the judicial mind" is a sentiment of respect compared with the depth and sincerity of his contempt for a statistician and scientific legislator.

A good piece of news that comes from Connecticut is that the Hartford *Evening Post* nominates Mr. Wells as representative from the Third Congressional District, which certainly has now an opportunity to honor itself and "do the state some service." But the opposition in caucus may well be too strong for any such nomination to be made, for how many assessorships, and clerkships, and collectorships is Secretary Boutwell likely to allow his former subordinate? Not "his quota," we imagine. The "men inside politics," however, should remind themselves that Mr. Wells may one day be Secretary himself. It is also reported that Governor Hoffman has offered Mr. Wells a Special Commissionership to examine and report on the system of taxation now in operation in this State.

Probably Mr. Thurlow Weed, if he possessed the power of being in several places at the same time and of making himself invisible, might master the secrets of New York politics, but they are far too much for most people. How, for instance, to explain the recent changes in the Federal offices in this city? One thing seems to be clear about it, namely, that the change is a blow at Senator Fenton, whose influence, by the way, considering his character, is not the least of the mysteries of our local politics. Ex-Senator Morgan apparently it is who triumphs in these latest events, and Mr. Conkling, too, is understood to be very well pleased, while Mr. Fenton is working hard to defeat the confirmation of the new candidate for the collectorship. Mr. Thomas Murphy, an Irishman by descent if not by birth, is a Roman Catholic in religion, a shaky Republican, for he was strong for the projected Andrew Johnson party at the time of the Philadelphia Convention, shaky in his business reputation, and an out-and-out politician of the kind that is noisiest in conventions. He is expected to weld together by his management of the custom-house the three or four thousand employees of the custom-house, and the thousands more or less who are dependent on them, into a compact mass useful to the Republicans in this city; and there is hope in the souls of some that he may detach certain Roman Catholics from their allegiance to Tammany. The reasonableness of this expectation becomes manifest when it is recollected that Mr. Murphy is a leader in one of the "gangs," as the Republican committees in this city are called who, by their fighting, greed, and treachery, have made the party in this city the imposing host that it is. There is no doubt that he will feed fat a temporary Murphy faction, and will repay some old grudges as well as reward some old services, but it may very well be doubted if his appointment will do anything but still further weaken the party. But it looks very much as if he would not be confirmed.

Mr. Noah Davis, now in Congress, is understood to be a good lawyer, and is a well-known Republican in the interior of the State. He also is an enemy of Fenton's. That he is fit for his place, the District-Attorneyship, is not doubted. We do not know, either, that the present incumbent's fitness is doubted. Mr. Hillhouse for the Sub-treasuryship is said to be well selected; and it is difficult to get a good man for so responsible a place, held at so small a salary, and under bonds so heavy. With these changes, which may be the work of the politicians, or may be, as some say, so far as they offend Senator Fenton, the result of a personal friendship which Grant has for Ex-Senator Morgan, there comes a talk also of changes in two foreign missions. The President does not like Mr. Motley as minister to England, or Mr. Bancroft as minister at Berlin. Mr. Grinnell might have had the Prussian mission, it is said, and Mr. Morgan the English. None of the appointments, the actual ones or the rumored, seem to give anybody a higher respect for the President's way of selecting his men.

Mr. Conkling, some time since, brought into the Senate a naturalization bill, which has for its object the prevention of some of the frauds which occur annually in the naturalization of foreigners in this and other cities, but in this city defiantly and to an enormous extent. Everybody knows that the conferring of the privilege of American citizenship—which ought to be a solemn act, and to wait patiently for which, and, moreover, take some trouble in the getting of which, no one should think a hardship—has here been done with such indecent haste and shameful dishonesty as to constitute one of the great scandals of the country. The new bill throws the business into the hands of the United States Courts and Special Commissioners of Naturalization. Every Democrat opposed the measure with all his might, though not a reason was urged against its passage which was better than calling its advocates Know Nothings. It will, however, no doubt become law. It was embarrassed in its course through the Senate by its friends as well as its enemies; Mr. Sumner making its discussion the occasion for a fight in favor of the Chinese, whom he declared "born free and equal;" which Mr. Stewart not accepting, Mr. Sumner denounced the honorable member from Nevada as a Simon Peter, who had turned traitor to the cause of human liberty, and, taking a copy of the Scriptures, he read, *in extenso*, an account of Peter's denial of his Master, to which he added the remark that now Mr. Stewart also might well go out and weep bitterly. To laugh consumedly, however, appeared to Mr. Stewart the proper way of treating the matter, and "the debate became highly interesting," one account says. It was a good deal more like Peter's denial of his Master, Mr. Stewart thought, for Mr. Sumner to pretend that the Bible was in favor of letting in millions of pagans into a land now of Gospel light. Mr. Williams, of Oregon, announced that, for his part, he considered Mr. Sumner's notion of the Mongol's equality to be "all stuff and nonsense." But Mr. Sumner insisted on his amendment, and a vote was taken which resulted in its rejection, and shortly afterwards the bill passed. The latter part of this ludicrous debate is, perhaps, of value, as indicative of the loosening hold on power and influence of a set of ideas and a set of men who, though for reasons more extraneous to themselves than any of the school have yet been able to believe, formerly had a good deal more influence in this country than they are now enjoying.

Some time since, a clause was introduced into the Tariff Bill providing, in the interests of students, that a man who should import English or other foreign books in single copies, should pay no duty upon them, but that the man who imported them as a dealer should, as now, be taxed. This legislation had, at first sight, a look of fairness, but there is no doubt that it would have worked injustice. Under this provision, any one, student or not, might have brought into the country, at one entry, any number of volumes—a hundred thousand—provided the collection contained all single copies, and no duplicates. That there are not foreign publishing houses who would speedily have had some "students" over here, travelling about and taking orders, no one will doubt; and it is probable that the attempt to benefit the class of buyers whom Congress intended to benefit would have resulted in most of them being left without the convenience of large collections to examine, but dependent on their own knowledge of the means of buying books and transmitting money abroad, or else upon the services of a low class of agents. The American importer, on the other hand, would clearly be injured, and probably more injured than such good as the clause conferred upon others would, on the whole, compensate for. Moved by considerations of this kind, the Senate has struck out the provision, and we now buy of the importers again. But surely the end desired by the Senate might be partially at least attained if there were some such provision as that the student and the importer alike might import, duty free, all current scientific books, and all books of any kind more than fifty, or thirty, years old. The newest of the literature of knowledge, and the oldest of the literature of power, are the needs of the student classes in this as in other countries; and much of our present tax on advancement in learning and culture would be removed by some such provision as the one suggested. It would be hard, to be sure, to draft it; but there is no impossibility in specifying the subjects which would free the new books from duties; and as to the others there need be no trouble.

Coming chiefly, we take it, from the purely political press, there was in Illinois a while ago, the Constitutional Convention being still in session, a great deal of talk to the effect that the defeat of the new constitution was a foregone conclusion. But its friends promptly came to the rescue, and have not only prevented its defeat by default, but have worked so well as to secure the adoption not only of the main body of the instrument, on which it was easier to get a vote, but also of all the provisions which were submitted to a separate vote; and the majority, as we go to press, is said to be large. We have heretofore given our readers pretty full information of the character of the new constitution, but, that interest in this experiment may be kept alive, we recapitulate its chief points. Of most popular interest, perhaps, is the section relating to minority representation. The last half of it reads thus: "In all elections of representatives aforesaid, each qualified voter may cast as many votes for one candidate as there are representatives to be elected, or may distribute the same, or equal parts thereof, among the candidates, as he shall see fit, and the candidates highest in votes shall be declared elected." There are to be three representatives in each senatorial district, and two years is the term of office. A majority of all the members of each House is required for the passage of a law, and, for an act to take effect before the first day of the July next succeeding its passage, the majority carrying it must be two-thirds of each House. No appropriation of money can be made in any private act. No local or special laws can be passed for the chartering of towns and cities; for regulating the interest on money; for changing the salaries of officers during their terms of office; for granting or amending railroad charters; for bestowing any exclusive privilege on any person or corporation. There shall be no "consolidation of stock" of competing or parallel railway lines. The roads shall be public highways, and the maximum and minimum rates of fare shall be fixed by the Legislature. The State must not lend its credit to any person or corporation; nor extend the term of office of any officer; nor release or commute the payment of taxes to any town or district. No defaulter, and no person convicted of any infamous crime, shall sit in the Legislature or hold office. Finally, provision is made that there shall be no "gerrymandering" of the State in the interest of the party that happens to be uppermost. General legislation in place of special; minority representation, and the control of the railroad highways of the State may be roughly said to be the great distinguishing marks of the new constitution, the operation of which will be looked at closely, and which is sure to find imitators if it proves a success. The number of people everywhere increases who have ceased to believe that our constitutions, State or national, were inspired, and that the forty millions of Americans of to-day were saved by the labors of the founders all thought and care in regard to the laws under which they live.

The news from Europe is of no special importance. From the Council nothing definite is heard, but it is definitely known that the 29th of June passed and St. Peter's Day was not marked by the promulgation of the dogma declaring the infallibility of the Pope. No one seems any more able than before to tell us what is to be the upshot of the gathering, but there is talk of everything's being brought to a conclusion by the 10th instant. From Spain or from Paris comes rumor that Prim is negotiating with a prince of the house of Hohenzollern to fill the throne of Spain. But Prim lives in such a cloud of intrigue, and has thus far so well concealed his intentions and plans, that no story is too absurd to find some credence and some seeming confirmation. In England, Lord Clarendon has been succeeded by Lord Granville, and the Earl of Kimberley takes the place of Colonial Secretary. How well he will be able to deal with discontented New Zealand and with Canada demanding independence remains to be seen. But he is a man of university honors; in the prime of life, being but forty-four years old; has been Under Secretary of State for Foreign Affairs, Ambassador to Russia, and Lord-Lieutenant of Ireland, and has filled various like positions, diplomatic and other.

"THE INTERESTS OF THE PARTY."

All our custom-houses are interesting to Americans for other reasons than their use as instruments in the collection of the larger portion of the national revenue. In most other countries, they possess no attractions for anybody but the statistician or the political economist, and their returns are nothing better than the dry statement of the nature and amount of private trade with foreign countries. In the United States, on the other hand, they not only furnish an easy and efficacious mode of filling the Treasury, but they form the channel through which the public beneficence reaches most forms of suffering and misfortune. There is no American, who knows anything about the custom-houses of his country, who can pass one without exhibiting an emotion which few foreigners can understand, because he knows that it is through them, and them mainly, that the Federal Government appears in the character of an almoner, and consoler, and soother, and that in every one of them he would be pretty sure, should he lose either his fortune or his reputation, to find refuge and subsistence. There is no custom-house roof that does not cover, as with a shield, not simply large numbers of honest men who have lost their all, but of rascals who, having tried hard and unsuccessfully to get a living out of somebody, are forced to seek at least temporary solace in the bosom of the people, for such the custom-house may fairly be called.

The New York Custom-house, besides sheltering more affliction and disappointment than any other, brings in a very large proportion of the Government revenues, and, consequently, it is the source of a large and very important portion of the Government patronage. It, therefore, plays a part in politics to which no other custom-house in the world can lay claim, and excites an amount of interest and attention all over the country which people would never think of bestowing on any mere fiscal machine. The capacity of nearly every administration is tested by the manner in which the offices in it are filled. To make the wrong man collector, surveyor, or even appraiser of this port, is a mistake which no reputation, however brilliant, can survive. Probably no single person has in these latter days rendered much greater services to a community than General Grant rendered to the United States. After many men had been tried and found wanting, he struck the blow which not glorified, or exalted, or enlarged the nation simply, but saved it. Nevertheless, his inability to give "satisfaction to the party" in the matter of the New York Custom-house is held, by many sage politicians, to have dimmed the lustre of his exploits, and, indeed, many hold that it shows that he was not much of a general after all; that there is no use in calling a man a great soldier who could give the collectorship to Moses H. Grinnell. Not that Mr. Grinnell has proved a bad *collector*. We have read most of what has been said against him during the past year, and we have never yet heard it said that he failed in his duty towards the Government. We believe it is generally acknowledged that he put as few rascals in office as was, under the present system, possible, and, in employing helpless and incompetent persons, employed the least helpless and incompetent. It appears it was in his duty to the party he failed; and he failed in his duty to the party almost in the direct ratio of his fidelity to the Government; for his duty to the Government required him to be particular about the fitness of his appointees, while his duty to the party required him to disregard fitness to the utmost possible extent. Indeed, although Mr. Grinnell had been by no means unknown or inactive in local politics, it may fairly be said that, in appointing him, as in giving the United States Marshalship to General Barlow, and in one or two other cases, the President gave signs of that desire to break with party traditions and institute a new régime for which a vast number of his supporters really gave him credit during the presidential campaign; for Mr. Grinnell's business position and antecedents put him in the category from which it would be natural and proper to select the man who was to receive and hand over the enormous sums of money that come through the New York Custom-house, and to resist the tremendous temptations which that institution offers to anybody who has control of it.

But, as we have frequently said before, the President committed at the outset the capital mistake of trying to ride two horses, or to reform a little when nothing but total change would do. When the people were in the temper in which they elected him, they would have cordially supported him in an attempt to throw off the party yoke, break with the past, and establish the principle of selection for fitness. Nobody expected from him skill in the management of party machinery; nay, his nomination was demanded by the country mainly because he was well known *not* to have it. But then, the only condition on which he could count on the support of the country in turning over a new leaf was *thoroughness*. People were willing to accept him as a plain, blunt soldier, who would do his duty; and had he stuck to this rôle from the outset he would have carried all before him. But the minute he tried to reform by piecemeal—that is, to fill some offices on the principle of fitness, and others on the principle of "spoils"—he at once offered himself to criticism as a "manager," and his enemies were not slow to perceive and take advantage of his weakness in this direction. In the character of a politician, skilful in the adjustment of "claims," he is, of course, condemned, both by his education and temper, to hopeless failure; and every attempt he has made to "manage" has been disastrous. In that sphere, he is as helpless as any owl in daylight. Any sparrow can peck at him and make sport of him.

The politicians have at last succeeded in persuading him to put the New York Custom-house to rights according to their notions, or, in other words, to take sides in the fight which has been raging between the two contemptible factions which have long divided the Republican party in this State, and made those who have watched the doings of the Republican leaders in this city wonder what courts and jails were made for when such people as these were running about loose. He has accordingly, acting we do not pretend to know under what influences, ranged himself against the Fentonites—a band whose bond of union consists in admiration of Senator Fenton—by ousting one of its chief men, General Merritt, from the post of naval officer, and the shifting of Mr. Grinnell to make way for Mr. Thomas Murphy. Merritt's removal is of no great consequence, and there might be many excuses made for Mr. Grinnell's, but, in appointing Mr. Murphy, it may be fairly inferred that the President has cast aside all regard for the better aims and tendencies of the party, for Mr. Murphy is a politician of the politicians, has never been anywhere but "inside politics," is rich through Government contracts, and has that peculiar reputation which consists in being generally believed capable of participation in any job, and, indeed, by no means savory charges are made against him under this head already. A touch of the humorous, as is so often the case in these matters, is given to the affair by the pretence that the "interests of the party" called for what we must characterize as this monstrous abuse of a great trust. It remains for the people to let the politicians know what the "interests" of great parties really are. Managers are apt to forget them very rapidly.

CONGRESS AND A FUNDING BILL.

The financial legislation of the present Congress is, we are glad to say, likely to be at last brought to a close by the new Funding Bill which the House has just got up as a substitute for the Senate bill and which, let us add, there is no likelihood of the Senate's adopting. Many attempts have already been made to give the European capitalist an opportunity of investing freely in United States bonds, and all on the principle that his greatest difficulty at present is the high rate of interest. Accordingly, both Houses have been steadily at work for some years trying to lower the interest sufficiently to accommodate him. Mr. Sumner gave the listening Senate to understand last spring that if we only lowered the interest enough, there would be a rush of capital from abroad that would set free millions on millions for employment in "getting people down to tide-water" on new railroads and in various other industrial enterprises, but then in his bill he quite arbitrarily and injudiciously, as it seems to us, fixed the rate at four per cent. or thereabouts, because whatever be the motive which induces a man who can buy a United States bond at five-and-a-half per cent. to prefer one at four per cent., it must act with equal power in leading him to prefer a two per cent. bond to a four, and, indeed, it is difficult to avoid the conclusion, if the argument be sound, that in no way can the United States get so much money as in offering to take it without paying any interest at all. Mr. Sumner, too, and in this he was only repeating the arguments of many other people, laid a good deal of stress on the length a bond had to run as an element in its value, and, if we remember rightly, mentioned forty years as a period of peculiar temptation to capitalists. No doubt, investors are influenced by the length of a bond in deciding whether they will buy it, but if time was so important an element in the problem as to reconcile a man holding securities at six per cent. to a conversion at four, we might fairly conclude that, by signing a solemn engagement never to pay off the debt, we could get money at one or even a half of one per cent.

In spite of all the discussion which has taken place, neither the House nor the Senate have disembarrassed themselves of these peculiar ideas about the motives which influence investors, and especially about the ability of Congress to cajole capitalists by fine words. For instance, there is no doubt that the solemnity of the discussions of which we have had so much, as to the amount of interest which the Government should pay on its new loan, and as to the name its securities should bear, "fours," or "fives," or "sixes," has been due to a firm belief that the Government could fix the interest at what it pleased. Now, it can fix the rate at which it will borrow, but it can no more fix the rate at which capitalists will lend than it can fix the price of beef in the London market. Congress calling a bond a "four per cent. bond" will not do more to make it a four per cent. bond—that is, towards borrowing money on it at that rate of interest—than calling a sheep a cow does towards converting mutton into beef. A capitalist can now go into the market and buy as many United States bonds as he pleases at rates that will pay him from five to six per cent. Capitalists are not doing so with any great eagerness, else the price would rise rapidly, and the interest consequently fall. What Congress asks us to believe is, however, that while neglecting these bonds, with which they are now familiar, no sooner will a bond bearing a much lower rate of interest be offered, than they will rush at it. Mr. Schenck says he has "assurances" that the whole of this proposed new issue will be taken during 1870–1, and the House seems actually to have been encouraged by the announcement. Now, we venture to say that no person who has either the means or the intention of investing even ten thousand dollars at four per cent. in these securities ever gave Mr. Schenck any assurance of the kind. If any banker, home or foreign, ever said so, we can understand his unwillingness to have his name mentioned, for there would, if he takes money on deposit, certainly be a run on him. Nobody would leave funds in the hands of a banker who did business on sentimental considerations, or was such a fool as to lend money to a man one and a half per cent. less on new notes than he was obliged to pay on the paper already in the market. We take the liberty of believing, therefore, that the "assurances" came from some gentleman to whom the business of banking is an inscrutable mystery, and who fancies that people make advances to Government out of admiration.

One thing is certain, that if this last House bill does not "fund" something, funding is all over for this year. It has occupied more of the time of the House and Senate than anything else, and has, perhaps, furnished more amusement to the world than anything they have done or attempted. The discussions on it, if carried on by gentlemen with more knowledge of the principles of finance, would have been very offensive to the moneyed world, because they were all based on the assumption that capitalists are idiots; and the exceeding transparency of the arrangements made to entrap them have only been pardoned by the consideration that they were made in perfect simplicity and good faith.

We shall now make a suggestion, not to Congress, as a corporate body, but to the individual members, as gentlemen about to enjoy a few months of leisure—in which they will have, what they rarely have at Washington, time for reflection—and it is this, that the Secretary of the Treasnry be authorized to sell a certain amount of United States bonds, of certain denominations, in open market, for what they will fetch. We shall then know at what rate the United States can borrow, and shall be able accordingly to give a name to the funds. But it is only in this way we can find out. Congress does not know, and can do no more towards fixing the rate than the New York Common Council. Gentlemen may fancy, and a great many do fancy, that there would be in this a sacrifice of dignity, but then they cannot prevent this sacrifice by humbug; indeed, we only aggravate it; and this funding humbug has gone about far enough. No matter what we *say*, we have to sell our bonds in the market at such a price as investors are willing to offer. Mr. Chase tried to hide this process from the public eye by issuing legal tenders, and trying to make people believe that when he had sold a $1,000 bond for $1,000 in greenbacks, with gold at 200, he had sold it "at par." That device really did succeed for a little while, but people rapidly found it out, and have since then become exceedingly sharp—*how* sharp, Congressmen have little idea. There is no course so "dignified" as the truthful, frank, and straightforward one which takes account of the principles of human nature and of the facts of human society. It is time that we recognized this in our financial legislation. There is nothing in selling bonds at their market value to be ashamed of, if we really want the money; and if they go low, it is not the lowness which ought to make us blush, but the causes which produce it. People whose past-due promissory notes are circulating to the tune of $300,000,000, at 12 per cent. discount, ought not to be so terribly sensitive as some Congressmen seem to be. Our credit will be and is improved by deeds, never by names.

THE ITALIAN PROBLEM.

III.

Mr. Herbert Spencer, in his "Reasons for Dissenting from the Philosophy of M. Comte," requotes from the thirtieth chapter of his "Social Statistics" the following passages:

> "Ideas do not govern and overthrow the world: the world is governed and overthrown by feelings, to which ideas serve only as guides. The social mechanism does not rest finally upon opinions, but almost wholly upon character. . . . The social state at any time existing is the resultant of all the ambitions, self-interests, fears, reverences, indignations, sympathies, etc., of ancestral citizens and existing citizens. . . . Ideas wholly foreign to this social state cannot be evolved, and" . . . their "establishment . . . depends on the fitness of the society for receiving them (from without). Practically, the popular character and the social state determine what ideas shall be current, instead of the current ideas determining the social state and the character."

The fallacy here refuted (though refuted by assertion only) is a very common one. Comte assumes it as a truism "that ideas rule and overthrow the world." If he were right, the unity of Italy would be inexplicable except as a revolutionary intermezzo; while Mr. Spencer's theory not only explains the accomplished fact, but shows its logical necessity and the reasons of its endurance. According to Comte, the intellectual differences pointed out in the preceding articles ought to have created—what they have not created—that *anarchie intellectuelle* which Positivists abhor as the source of all evil, and their sudden mixture and permutation ought not to have been, what it has proved to be, an exchange of mental commodities conducive to wealth and power. And this being so, we must infer that the products thus exchanged were complementary to each other, or else that they had some common factor, which, according to Mr. Spencer's theory, must be the resultant of all the hopes and fears, aspirations and desires, hatreds and sympathies, of all the Italians, past and present.

Where can we search for such resultants? The component forces with which we have here to do are feelings pure and simple, aspirations, character; and the natural manifestations and truest utterances of these are *poetry* and *music*, and popular *customs* or instinctive modes of action. In these the sentiments appear freest from intellectual admixtures, much freer than in plastic art, in prose literature, and in political action. The study of the local customs would open a vast field, upon which we cannot enter here. But music and poetry are more easily surveyed. Both seem to be a common property of all Italian races. In a language where the inflexions are longer than the radicals, and generally long enough to attract the word-accent, rhyming becomes almost inevitable. The emotions that crave utterance can get an easy vent in such a language, without having to overcome those technical difficulties which in more unwieldy, rhymeless, or monosyllabic languages make poetry the art of a select few. There is not a person in Italy that has not made some verses in his life. The custom still prevails at dinner parties to season the last courses of the repast with a round of extemporized couplets. Like the "loving cup" of old, this custom, too, may pass away and be superseded by postprandial prosing and heartless toasting. But it is still in force thoughout the peninsula.

The improvising powers of the Italians are notorious. They are common not only to all the Italian races, but to all ranks of society. They seem independent of dialect, of occupation, or of education, and are kept in working order by frequent practice, though, of course, with variable success. And this is done under the only form of soliloquizing which is deemed compatible with soundness of mind, namely, under the form of *singing*. Sometimes it may be screaming rather than singing; it may be out of tune or out of key, or it may be a keyless Ambrosian chant; yet, in the majority of cases, it must be called singing. Almost everybody, unless he is talking, sings. The Turin weaver, sitting at his loom, sings. The Lombard peasant, walking behind his plough, sings. The Sicilian muleteer, driving his donkey, sings. The fisherman sings in his boat, the washerwoman sings at her tub, the *vetturino* sings on his box, the ragamuffin sings in the streets, and even the dandy may intone the *casta diva* quite unexpectedly in broad daylight and in a crowded street.

The genuine Italian street-songs, the *ritornelli* and the *rispetti*, are simple and sometimes quaint melodies, to which extemporized verses are sung. In the north of Italy, these melodies change, like the fashions, almost every season, but in Rome and the Neapolitan provinces they still preserve their archaic character. Nobody knows their origin or their authors. The recent ones are, of course, extempore performances of some idler, who tests the merit of his song by singing it continually until it spreads from street to street and from town to town. But those used in the South must be of great antiquity. To unlearned ears they seem to be in minor keys, but they belong in reality to the "authentic" Greek modes, or to the plagal modes of Gregory the Great; at all events, they must have originated long before the consequences of Guido's (of Arezzo) musical reform were felt in those southern regions. The keys and the characters of these *ritornelli* differ very considerably in the different parts of Italy—so much so, that they cannot be said to have any common trait that stamps them as Italian. They are not popular songs, such as any other nation may have. Nor must they be confounded with the real songs of Italy, composed by the masters of the art, and which become popular afterwards. The *ritornelli* are (and this is all they have in common) musical blanks, to be filled up by each singer, according to his momentary mood and feelings, with improvised rhymed verses. Thus every Italian has a ready means of thinking aloud, and he rarely fails to avail himself of it to beguile his solitude or the tedium of a task or a walk. It may not be real singing always, or real poetry, but it is an attempt at both; and the universal use of *ritornelli*, as an utterance of feeling, is a truly national characteristic of the Italians. It shows, perhaps, that the Italians cannot be a reticent people, or a very deep people either. But it also shows clearly that, if they cannot keep their feelings to themselves, they like to utter them in an artistic form, and that these feelings are such as to be capable of artistic utterance; in other words, potentially at least, the Italians are a nation of poets and musicians.

The territorial distribution of this poetic or musical talent is strikingly even. It seems to thrive in every corner of the land, and even the maxima of its excellence are pretty equally scattered over the surface of the peninsula. Sicily can boast of having been the cradle of Italian poetry. Sorrento was Tasso's birthplace; Filicaja was born at Naples, Metastasio at Rome, Petrarca at Arezzo, Dante and Niccolini at Florence, Ariosto and Tassoni at Modena, Monti and Guarini at Ferrara, Chiabrera at Savona, Alfieri at Asti; Manzoni, Parini, and Giusti at Milan, Goldoni at Venice. More striking still is the local distribution of musical genius. To mention only the greatest names: Bellini was born at Palermo; Pergolesi, Cimarosa, and Mercadante at Naples; Palestrina at Rome, Rossini at Pesaro, Pacini at Pistoja, Paer and Verdi at Parma, Tartini at Padua, Donizetti at Bergamo, Paganini at Genoa.

This alone would not be conclusive, perhaps. But when added to what has been said in proof of the ubiquity of musical and poetic talent in every part of Italy and in every stratum of Italian society, it cannot but strengthen our argument. Moreover (and this is an important addition), the masterpieces in both arts show a remarkable similarity of style and character, or, negatively and more accurately expressed, there is no radical or specific difference between them. All Italian musicians were melodists—Bellini the Sicilian as well as Donizetti of Bergamo. If Palestrina was less so, it was due to no local spirit, but to his avowed object of divorcing sacred music from secular music. They all wrote for the voice. Instrumental music, as an independent art, has never been cultivated in Italy. Its dreamy, undefined, transcendental character has charms for the German, but does not tempt the Italian, who uses instrumental music as the scaffolding for his melodramatic performances, just as a painter uses the frame for his picture, but who does not care to decipher its hieroglyphics.

In Italian poetry, too, there is an absence of all that we are wont to call *romantic*. It shows a variety of forms—epic, dramatic, and lyrical. Many of the poets were masters in satire and in epigrammatic verse; some were sentimental; but no Italian poet ever excelled in the "romantic" style. Ugo Foscolo's attempt to acclimatize it in Italy was a failure, and that, too, at a time when the romantic school had monopolized poetry in Germany, and when the triumvirate, Wieland, Uhland, Tieck (which Heine suggested as a good rhyme to "romantic"), reigned supreme from the Alps to the Baltic.

These are curious coincidences. The persistent neglect of instrumental music, and the exclusion of the romantic style from poetry, by a people so eminently musical and poetic, constitute a curious trait. If the universality of musical and poetical disposition showed a community of sentiment in the Italian races, this equally universal exclusion of the romantic and the transcendental shows a further community of *modes* of sentiment, which, as such, becomes an important, if not the most important, national characteristic of the Italians. Let people thus constituted, however discordant they may be in other respects—let them have common enemies and common sufferings, and the unionist sentiment, the national idea, is the inevitable result.

But even this affinity of feeling and community of aspiration would have remained sterile in Italy without a community (and that, too, an easily intelligible community) of material interests. If one part of a country is so constituted that whatever is good for it, economically and commercially, is detrimental to the immediate interests of the other parts, then their cohesion must depend on the capacity of the people to look beyond these immediate interests, and this capacity is notoriously rare in the world. But when it can be proved even to the most short-sighted and selfish politician that the *idem velle et idem nolle* involves no sacrifice to any one part, the greatest obstacle to this union is removed.

Now, Italy cannot, like some other countries, be divided into an agricultural and a manufacturing district. It is both, at the same time and everywhere. It is agricultural throughout because the soil is fertile throughout, in Sicily as well as in the Lake district. Whether they plant grain or rice, the vine or the olive, whether they rear cattle or silkworms, the Italians must everywhere be agriculturists, but, roughly speaking, in no part of Italy more so than in another. Even the plains of Lombardy, which might, at first sight, be called agricultural *par excellence*, are interspersed with busy towns, with mills and factories. Even there the Italian rustic does not live in vast solitudes of waving corn-fields. Even there his fields, though numerous, are small, and his villages, though small, are numerous. Most of these latter are boroughs rather than villages, and consist of compact streets, with street-lamps, shops, cafés, and restaurants, and the people seem cockneys rather than villagers. They cultivate the ground, of course—how could they help reaping such easy harvests?—but they do so from no predilection or natural predisposition. They are born cockneys, and their natural mission seems to be to build towns wherever they can, and to cultivate the resources of town life. Thus the plough remains within earshot of the theatre and the café.

The cultivated Italian, it may be granted, likes villa life as much as Horace or Cicero ever did. He has a genuine taste for stately villas, terraced gardens, fountains, statues, and shorn hedges. If he can, he will pass his Aprils and his Octobers at such a villa. But rural life in the northern sense, the idyl in a thatched cottage, has but little attraction for him. While in town, he may long for it, to

> "Quaff sweet oblivion of life's cares."

But, when he gets there, he soon finds out that the cares of town life are sweeter than the oblivion of them, that they are always easier to bear than to forget, and that the chair in his café was a more comfortable seat than the turf *patulæ sub tegmine fagi.*

It is well known especially to the managers of universal suffrage, that townfolks are more quick-witted than country people. But this quick-wittedness is a cause as well as an effect, and if not allowed to be wasted in idleness, vice, or crime, can easily be turned to good account. The poor man of a town naturally becomes the artisan, the mechanic. Now, the Italian being naturally of a townish disposition, may not improperly be called a born artisan. He has a well-shaped hand and a clear head, is docile and ingenious. His country is rich, if not in coal, in water-power, and in a variety of raw products, both mineral and vegetable. If some parts of Italy have never acted up to the measure of their capabilities, if the exporters of raw silk have still to depend on the Lyons looms for their wives' wardrobes, this is not owing either to lack of skill or of resources, but to native apathy, and, above all, to the perverseness of the fallen dynasties.

The soil of Italy being everywhere fertile, and the Italians having, instinctively as it were, studded this fertile soil with towns, or possible centres of art and industry, it follows that the agricultural interest and the manufacturing interests must be everywhere coexistent in Italy. And they are in such close juxtaposition that they cannot war against each other, or give rise to inter-territorial antagonism. What is good for Turin may not be good for its rural suburbs; but what is good for the whole of Piedmont will be good for the whole of Tuscany, and what is good for Lombardy will prove good for Naples too. All parts of Italy are equally interested in the establishment of free-trade, or (according to their lights) in the maintenance of protective duties, and the tariff cry can never be made the cry for secession in Italy. Nor is there any other cry that could serve such a purpose. Where affinity of sentiment—where similarity of utterance, be it in speech, art, or action—and where identity of economical interests exists as it does in Italy, the union of the country may well be considered safe and lasting, notwithstanding the newly formed political fractions—of which it may be said that their denominators are much bigger than their numerators, and that their sum total must be unit, whatever their differences may be.

Only one form of centrifugal force must, sooner or later, assert itself, and that is administrative decentralization, or, as we may call it in this case, municipal autonomy. The "land of the hundred cities," as the Italians like to call their country, has a right to claim this autonomy, and will claim it, as soon as she has recovered from the excitement and confusion created by the national transformation. Sooner or later, Italy must become, what every body politic ought to be, *e pluribus unum.* That is the chemical formula of organic substances, the magic formula of life. *Ex omnibus unum,* says Christianity; and even Victor Hugo's less pretentious formula, his "United States of Europe," though absurd as a political cry, and revealing a ludicrous want of perception in its author, embodies a legitimate and righteous aspiration.

FRANCE.

PARIS, June 17.

I DO not suppose that in any European country, or in any age, there ever was a situation thoroughly analogous to the present political one here. The word "gâchis" is more than ever the only one that describes the condition to which matters have come; and such an apparently inextricable "mess" can hardly be imagined.

Just see how we stand: The absurd *plébiscite* having, as far as outward appearances go, "succeeded," and the Empire being reaccepted by the masses, as 7,000,000 of votes are stated to have victoriously proved, the first cry is that we are going inevitably in for "reaction." M. Rouher and M. de Forcade are seen dimly looming in the distance, and the Extreme Right are regarded as likely to be surpassed. On the other hand, the Liberal Imperialists, as they style themselves, declare that the success of the *plébiscite* is the commencement of a new era of freedom—"Order and freedom combined!" say they.

Well, it is neither. The success (if such it be) of the *plébiscite* is simply another step in the "gâchis." The spirit of the age is too strong to let the Emperor venture upon any real recurrence to "personal power," but the irresolute nature and past tergiversations of Ollivier forbid him to trust the Progressists or to follow the guidance of genuine public opinion. Accordingly, he contents himself with a small personal affront to M. Ronher, and eludes all serious political responsibility.

The "small affront" is this: A few days previous to the ceremony of receiving the 7,000,000 of votes, the Emperor settled with M. Rouher that both he and M. Schneider should make him a short speech, in the name of the two bodies of the state. M. Rouher prepared his discourse, the Emperor was quite satisfied with it, and the two harangues (that of M. Schneider and M. Rouher) were communicated to the Keeper of the Seals. The evening before the ceremony, M. Ollivier returned to M. Rouher *his* speech, simply stating that it was dispensed with. You may conceive the indignation in the Senatorial camp. But the very day following, the real difficulties began. Majority after majority fell crushing in upon the ministry, like the beams and rafters of a house whose roof has fallen in, and Émile Ollivier soon found himself destroyed by the chamber he had so foolishly and so unconstitutionally spared. Upon the question of the publicity of the *conseils généraux,* the poor unfortunate ministers alone voted for the Government. But that was comparatively nothing; the real disaster was what is now termed here "Jérome David's paving-stone" (*le pavé de Jérome David*). Ollivier had, as usual, resorted to his vulgar and hackneyed expedient of the "want of confidence" vote, when Jérome David, the very "head and front" of the Extreme Right wing, launched out his terrible verdict: "We may think ill and lowly of you; we may deem you irresolute, incapable, unsafe; we may, in a word, condemn you from *all* points of view, but, *till the time comes for your displacement, we will vote for you!*"

So hard a blow was never given to any minister, and as such Ollivier felt it. Pale and trembling with rage, he sprang to the tribune, and implored his pitiless enemies to recall their words: "You cannot insult men and then support them," he stammered; "you cannot tell us we are unworthy of esteem and then inflict upon us your protection. *In the name of honor, vote against us!*"

So strange an appeal was, perhaps, never made before; but it was useless. The *Right* knew its strength—knew that the Left, not feeling itself yet ready to compete for office, meant to abstain, and the representatives of every principle Ollivier had been called upon to defeat rose up and ruined Ollivier for ever by the contemptuous unanimity of their vote.

This time, in spite of his enormous vanity, Ollivier has felt that he was mortally hit. He will undoubtedly resort to the framing of an Electoral Reformed Law, which will naturally induce a dissolution, but it is all too late; Ollivier is doomed, and will swell the list of those men who, in history, have thoroughly misunderstood their own aptitudes and the desires of their country. "Ollivier was born to be an usher at a provincial school" said a well-known politician, the other day, whose words have more than once stamped the public men of his time in France. It is probably true, and when the Emperor lets him drop, as he will the day it suits him, there will remain of Ollivier nothing—he will go down used up and ridiculous.

But what is, perhaps, more worthy of attention than anything else that is going on, is the fact of the publicity of debate at the general councils. This, coupled with one or two other little circumstances, is, perhaps, the most important event that has occurred in France since the great revolution. The work of '89–'93 was, as we all know, a work of centralization—a work of hostility to what was, at that time, called Federalism, and what represented the provincial spirit. Every single move of every French Government since—let what would be its form—has gone in that one same sense for the last eighty years. This recent vote is the one first step in the opposite direction.

From the period of the great Revolution, through the First Empire and the Restoration, down to 1830, the same spirit prevailed. The capital was everything; there was, elsewhere, no intelligence, no policy—nothing The people of the provinces were ignorant, uncultivated, "ridiculous," not to be taken into account. This endured through Louis Philippe's reign, but the instrument of freedom existed, and the province had a means of self-assertion if it chose. After the Revolution of February, 1848, when Louis Napoleon came to power and ended by achieving empire, he very soon judged that it was impossible for a despotic rule to coexist with the councils general and *mairies* existing in their (then) form. If the prefects named in Paris tried to coerce the department they administered, they found opposite to them an assembly composed of all the territorial force, and headed by the most influential personage of the county, whom they had elected President.

This could not be allowed to subsist, or all autocracy was at an end. Accordingly, in the month of May, 1855, the new municipal laws were framed, by which the Emperor became virtually the one single source of all power. From him were henceforth to emanate all the presidents of general councils and all the mayors of towns and villages. In reality, for fifteen years the central Government had been supplying both "question and answer" at the same time. It nominated the prefects, but it also nominated the local functionaries; so that, instead of something like truth and the general good being served by discussion, administrative pressure was everywhere and unescapable.

All this is altered now, and it is the one great gain of the last crisis, thanks to which all independence might ulteriorly be achieved. But the one almost unbelievable step is that of publicity. No one would ever have dreamt, till now, of the debates of the general councils being made public. Not the most advanced Liberal—nay, not even the most radical of republican parliamentarians—ever adverted to such a contingency; and this extreme and extraordinary proposal came from the Right.

It is true that, out of all the vast majority who voted this unexpected measure, I do not believe that any one has even now realized to his own mind the incalculable effects it may produce. It is, in truth, the absolute negation of the principle on which is founded the policy of France since '89, namely, centralization. Up to 1789–93, France had her representative machinery in her provincial parliaments, and there was more genuine liberalism in what were termed "Les États" than modern historians have agreed to admit. The granting of publicity to the discussions of the general councils will, in fact, make of them, in a given time, little less than so many diets. Two small incidents show what must soon follow: the first was the attempt to give publicity to the municipal councils also; and the second was the proposition for grouping together several departments, so as to make a "region."

The first proposal was negatived very properly, for, in the present state of education in France, there could have been nothing secured, save loss of time, by the publicity of the debates of municipal councils composed chiefly of peasants. As to the composition of several departments into a "region," that may or may not succeed, but if it does, it will simply be made a *de facto* return to the *États* of the pre-revolutionary epoch.

There are few things more curious than to watch the evolutions of the political institutions of old European countries, reviving, as they often do, almost primeval principles under forms which seem to spring from the so-called revolutionary tendencies of our time.

Notes.

LITERARY.

Messrs. George Routledge & Sons announce that they have nearly ready a life of Charles Dickens, by Mr. George Augustus Sala, a gentleman qualified to make, if not a satisfactory biography of Mr. Dickens, at least a pleasant volume about his former acquaintance.

—Messrs. Sabin & Son's *Bibliopolist* for April and May is largely taken up with an account of the Rice sale, at which certain books named brought astonishing prices. Dr. Brinton furnishes an interesting account of the ancient phonetic alphabet of Yucatan, with illustrations, and expresses his belief that the "deciphering of the inscriptions of Palenque, Uxmal, Itza, and the other ruined cities" of the peninsula, as well as of the three or four manuscripts that have been preserved, "will become certainly a less serious task than that of translating the cuneiform inscriptions of Nineveh." What is probably more certain is, that this field of archæology and ethnology is destined eventually to absorb the energies of the best scientific intellect America can produce. The monuments of Yucatan indicate periods of human civilization scarcely less impressive than the geologic periods to which they are so peculiarly related. Catlin, in his newest work, just published by Trübner, assigns thousands of years to the submersion of the ruins of Palenque and Uxmal. Beside such a chronology, the ruins of Ceylon and the Malayan archipelago seem almost modern. In the *Bibliopolist's* Notes and Queries, by the way, there is copied from the Waterbury (Connecticut) *American* an account of the earliest button-making in this country. If the enquiry were extended so as to embrace the continent, we would submit in evidence the statues from which Dr. Habel made drawings in the Central American cities he discovered on the Pacific coast, and to which we recently referred. These effigies wore shoes and buttons, and their beards were of the cut now known as the imperial. Even a Connecticut Yankee must sometimes acknowledge that there is nothing new under the sun.

—We mentioned, a few weeks since, the decision of the United States Circuit Court for the Southern District of Illinois, in regard to the right of an author to his productions before publication. Delivery, it will be remembered, as of a lecture or a sermon, or even the representation of a play, was not considered publication, at common law, and therefore the writer had a legal protection against any reporter or plagiarist. The Supreme Court of Massachusetts has just rendered a decision which still further guards the interests of the tribe of *littérateurs.* The proprietors of a Boston paper which thrives by publishing stories and "novelettes" to a not over and above intelligent audience, were sued for the return of certain prose and poetical manuscripts which they had received from a would-be contributor. The latter had forgotten to enclose stamps in case of rejection, and, after waiting some weeks, the publishers destroyed his rubbish. The court, however, decided that, unless bought and paid for, the author had a property in his contribution, and the jury accordingly awarded him fifty dollars, besides costs, which it is safe to call a liberal verdict. Apparently the printed warning that manuscripts cannot be returned unless prepaid does not avail the publisher, who, we presume, is not liable except in the case of articles for which it is customary to pay. It would, indeed, be a hardship if every "letter to the Editor" must be filed away religiously or put in a pigeon hole. We should hope, too, that a certain lapse of time would vitiate the author's claim to his manuscript; but if there is no other defence for the publisher, we should advocate his suing the author for "storage"—charging the exact amount previously recovered of him under the ruling we have cited.

—An English paper is "exercised in mind" by a decision recently made in an English court which had before it for consideration two versions of the play of "Frou-Frou." In the original French there is a certain amount of uncleanness in the shape of insinuation and indelicate *double entente*—or *double entendre,* as everybody says; and in the account we get of the young girl who is the heroine there is the pleasing suggestion, or, indeed, statement, that she is perfectly well aware of the wickedness of her old *roué* of a father. In Mr. Sutherland Edwards's English version of this feeble and immoral drama—which, however, had its success and was at once pounced on by the British playwrights—the indecencies are purged away; the old rake is made more stupid and less wicked; the girl goes to her ruin with a cleaner mind; the innuendoes are left out, and the play made every way more suitable than the French one for the more proper and less intelligent British playgoer. This version was at once succeeded by another one, which differs from Mr. Edwards's in retaining most of the improprieties of the original. Mr. Edwards's employer, who had paid for the right of translation, brought suit against the writers of the second version, but finds himself at the end of the hearing with his claim upset. The international copyright law between France and England makes a distinction between an adaptation and a translation—a distinction which may often work injustice, as all of our readers know who have read that liveliest of all Mr. Charles Reade's abuse, "The Eighth Commandment." The evidence was, however, that by omitting the indecency and making certain changes in the business and in the sequence of scenes, Mr. Edwards has made what the theatrical profession reckon an adaptation and not a translation.

—Medicine being a non-literary profession, and a college education not being considered an indispensable preparation for it, it is not strange that the rhetoric of doctors should so often remind us that M.D. and A.B. are not degrees of the same order of culture. The regular medical oration is a sufficiently wonderful production, but we have lately met with a poem which will match the most favored prose production of even the Georgetown Medical College—let us say, with all respect for that institution. The author is the president of a medical association of one of our chief cities, and, though he declared that his "poem," as he himself called it, "was not designed for publication," he has had the additional weakness, after delivering it on a public stage before his colleagues, to let it get into print. This is how it opens:

"No captious thoughts, or aim, or disposition,
Nor wish, nor jealous feeling, would
In this hasty, hurried manuscript
Bear intolerance, by he who writes suggestions
Only, on such a theme as etiquette."

Proceeding to give his experience of consultations under the code of ethics, he poetizes as follows:

"Once on a time
Was summoned by a friend to see another's
Patient. Responded no! Unless with the attendant.

. . . .

At last I did agree to meet the doctor the
Following day for consultation,
The hour came, and I was there;
Another passed, and I in waiting still:
Began to think of leaving. But in my exit
Met the sage, with a good morning doctor,
Shaking hands. A fine nice morning this?
'*Yes,*' was his reply. '*Have you seen the patient, sir?*'

. . . .

He turning to the patient's friend, remarked
'*If you'r dissatisfied with me, let him see the patient.*
Go in and see him, sir; I'll ne'er prescribe
For him again.'"

The moral is enforced by this quotation:

"Sir John Herschell says,
'If a man has desire, and disposition
To become a scholar, and a gentleman of culture,
Give him discipline, books, and opportunity,
And success will crown his efforts,
Unless, perchance, his ethics become perverted.'"

And with this noble strain the poem concludes:

"Keeping in mind then,
That conscientiousness is the goal of goodness,
And goodness and purity the principle of the *golden rule,*
And the motto of *right* our beacon light,
We will be enabled to 'paddle our fragile bark'
Through the billows of adversity, despondency, and despair,
And gain the shore of distinction and honor;
True to ourselves, our neighbor, and our God."

It is but just to say that the author, who has thus mistaken his powers, is arguing for more liberal and enlightened "ethics," and deserves to be anything but ridiculed for his sentiments. He, we are sure, was not scandalized by our criticism the other day on the color-code established at Washington, nor felt that it was harsh in us to say, with Whately, that the trade-unionism of physicians is not less odious than that of mechanics.

—In our issue of June 16 (No. 259), using the information then made public, we stated of the Philadelphia Academy of Natural Sciences, which had just elected three ladies members, that they were the first thus favored. We are now informed on better authority, and are pleased to state that long ago the Academy recognized the fact that the study of the natural sciences does not pertain to men exclusively—that science belongs to no sex. The list of members of the institution shows that Mrs. Lucy W. Say was elected in October, 1841; Miss Margaretta H. Morris, September, 1859; Miss R. A. Cope, Miss Ann Haines, Miss Jane R. Haines, and Mrs. E. H. Vaux, February, 1867; Mrs. E. P. Long and Miss Bohlen, in March, 1867. The American Philosophical Society also has elected ladies. Its list of members includes the Princess Catherine Romanowna Daschkaw, who was elected April 17, 1789; she died January 4, 1810, aged 65. Mrs. Elizabeth Agassiz, Mrs. Mary Somerville, and Miss Maria Mitchell were elected October, 1869, and Mrs. Emma Seiler, January, 1870. In this society, candidates for membership are selected and proposed without their knowledge; and rejected candidates cannot know, under the rules, that their names have been before the society. Such being the record of the Philadelphia societies, the recent opposition to Miss Lewis and her colleagues appears to have been purely reactionary.

—To any one whose taste or study leads him to make pedestrian excursions on the Continent, may be recommended Bensen's "Brief Description and History of the City of Rotenburg on the Tauber" ("Kurze Beschreibung und Geschichte der Stadt Rotenburg ob der Tauber"). The town in question (spelt also Rothenburg) lies on the border of Bavaria and Würtemberg, nearly due west of Nürnberg and south by east of Würzburg. Formerly, when on the travelled highway between Augsburg and Frankfort, it was a city of considerable importance, and at one time reckoned in all the domain belonging to it some 20,000 inhabitants. Seven years later, however, in 1810, nearly half its territory was ceded to Würtemberg, and since then its population has been on the decline, so that while the city itself might contain 40,000 inhabitants, it actually numbers but 1,242 families or 5,000 souls. Rothenburg is built on an elevated plateau resembling not a little the site of Jerusalem, and its more than forty towers make it a very impressive object from the plain. What entitles it to a visit from those who follow the by-ways of Europe, is the fact that, as has been said, it is the most antiquated of all German cities, and preserves most purely its mediæval aspect—is like a stiffened or petrified city, that has been forgotten alike by destructive and by reconstructive time. Architecturally, it is almost without exception a Gothic city, and its Jacob-Kirche (1373–1471) is to be ranked with the cathedrals of Cologne, Strasburg, Ulm, and Freiburg. In short, Rothenburg offers to the stranger probably the least altered remnant now obtainable of the Middle Ages.

—Rothenburg is, perhaps, connected by name with a period far anterior to the Middle Ages, and, for those who are curious about the religion of our Northern ancestors, or, in fact, about the religious development of mankind, has an interest additional to what has been already alluded to. We venture, at least, to regard it as one illustration of an admirably critical article in the *Revue Celtique* for May—the first number, we remark, of a periodical which starts with the best evidence of the wisdom of its projectors and the ability of its editor, Mr. H. Gaidoz—on the true name of the Celtic divinity known as Gargantua (the devouring). The writer, Professor F. Liebrecht, compares three independent essays relating to the same divinity, and draws from them mutually confirmatory proofs that formerly a part of the Indo-Celtic race worshipped a solar god of destruction as well as of generation, whose name occurs in the forms Rudra (or Ruda, the Hindu Siva), Hrodr, Hrodo, Rode, Ruth, Roth, etc. Some of our readers may recall the account we gave, two years ago, of Dr. Hugo Meyer's analysis of the myth of Roland, and his identification of this hero (Chrodoland, Hruodland, Hrodland, Ruoland, Roland, Ruland) with the sun-god, Tyr (Heimdall, Freyr, Balder), who, in the North, was also known as Hrodr, and in Germany as Hrodo, Rode. Traces of the worship of a Gallic deity, Roth, or Ruth, the male analogue of Venus, are found in Rouen more particularly, which has a *Mont de Roth* as well as a *Mont Gargant*. St. Mellon, followed by St. Romain, in the fourth century, uprooted this heathen worship and threw down its idols, with the singular result that, in commemoration of this achievement, the phallic symbol, which distinguished the deity himself, was sold in the streets of Rouen on the fête-day of St. Romain (October 22), in the shape of little images called *gargans*, till within fifteen years, when the custom was suppressed on the ground of its indecency. It is this phallic element which connects, if it does not identify, the worship of Roth with that of Rudra. The number of places which bear the name of the former is considerable in Germany and the North, but we can only conjecture that Rothenburg should be classed among them.

—The *Revue Celtique*, to return to it once more, is shapely and well printed, and contains 178 pp. of matter in French and in English, with several woodcuts. The contributors are French, English, German, and Russian scholars, and do not seem to be lacking in number. Mr. Gaidoz takes especial charge of the *Chronique*, but also furnishes several short reviews, and throughout adds notes to the writings of others in a manner which realizes the idea of an editor, and a most competent one. Of the longer articles, two, besides Professor Liebrecht's, relate to Celtic divinities; two—and they are highly interesting to lovers of decorative art—on Irish miniature as displayed in the initial letters of illuminating missals and the like; two to Irish manuscripts; two to a Breton folk-story; and one to a Breton dialect. Professor Max Müller discusses the name of the Danube. And, finally, there is inserted in the binding a facsimile reprint of a Welsh work by Griffith Roberts, in 1567, in 32mo, to be continued until completed. We can only repeat the good wishes with which we welcomed the inception of the *Revue*, feeling confident that it will fully equal, if not exceed, the expectations of scholars.

—The first part of a "New Dictionary of the Italian Language," compiled by a commission appointed by Minister Broglio, has by this time appeared. It contains a preface by Giorgoni, in the form of a letter to Sella, the present minister of finance, as one who knows something of everything and much of many things. The letter concludes with a discussion of the right of Florence to impose its language upon the rest of Italy, as Rome sets the standard time. The last degree of intimacy with the character of the late Massimo D'Azeglio is now afforded to the public by his "Letters to his Wife, Louisa Blondel," edited by Giulio Carcano (Milan: Rechiedei Bros.)—a 16mo volume of upwards of 500 pages. The widow of the great statesman has of her own accord thus supplemented the *Ricordi* edited by her daughter, and it may be supposed that she would not have done so had not the correspondence been of a nature to bear so severe and unusual a test. The letters are 315 in number, embracing the years 1838–1865, and are calculated to inspire fresh admiration and reverence for the writer. Count Cavour's memory has been perpetuated by a newspaper bearing his name, and Massimo D'Azeglio's is at length similarly honored, though not precisely in the same way. Two Florence advocates, of previous experience as journalists, began last month the issue of a new daily literary and political paper called *Fanfulla*, the name, as readers of "Nicolò de' Lapi" need not be reminded, of the hero of Barletta. As might be guessed, *Fanfulla* will not ally itself with any faction, but will carry a free and, let us hope, an entirely honest and patriotic lance, like the old soldier himself in other days.

—All the world has heard of the village of Ammergau, in Bavaria, where the peasants every tenth year represent, on several days in three or four months, a mediæval passion play; and if there is anybody who has not, he has only to turn to one of the pleasantest of love-stories, and read the Baroness Tautphœus's "Quits," to get a full description of it. This year it is attracting tourists from all parts of Europe, and even is a great part of the inducement which draws people to Germany from far-away America. According to a correspondent of the *Pall Mall Gazette*, whoever goes will see something extremely well worth seeing. There is nothing of the rough buffoonery and clumsy attempts at imitating trained actors, which we might hastily expect. On the contrary, everything is done with a skill that a manager might envy, and the effect is so far from being in any way comic or low as to be solemnly impressive, though no doubt too horrible in parts. In the space at our disposal we give some brief account of the nature of the performance. It takes place in the open air, the surrounding hills being seen over the stage, and the rustling of a row of poplars supplying a constant undertone. Here, in front of an audience of five thousand persons, is a wide and deep platform containing the stage proper (which has a temple front and is provided with drop scenes), and also there are buildings with balconies—in which some of the action goes on—porticoes and vistas representing the streets of Jerusalem. The main business of the play is to represent the Passion of Christ, and this is accomplished by a performance which lasts from eight in the morning till half-past four in the afternoon, with an intermission of an hour at noon. First, a chorus of ten men and ten women—dressed in tunics of clear colors, short muslin cassocks, and, over the cassocks, long robes, of colors contrasted with those of the tunics—advance to the front of the platform, and the choragus introduces the first *tableau vivant*, which is a scene drawn from the Old Testament, and supposed to foreshadow some scene in the life of Christ. Thus Judas's bargain with the high priests is preceded by the prefiguring sale of the innocent blood of Joseph. While the tableau is on view the chorus sings explicatory verses, an orchestra of a dozen violins and a few wind instruments playing at the same time music melodious but not very decidedly marked. Next come the actors, and represent some scene in the series of events beginning with the triumphal entry into Jerusalem, and ending with the ascension. The actors are, perhaps, a hundred in number, and, like the chorus, they are richly and handsomely dressed. Their language is largely made up of the words of Scripture, ingeniously and probably filled in and rounded out. Their parts, as we have said, are played excellently, with an adaptation to the requirements of the rôle, an absence of self-consciousness, and an absence, too, of that transparency of disguise so common on the stage, which would be considered admirable in the best trained stock company. But, for the matter of that, these men and women ought to acquit themselves well. Naturally intelligent, educated to a considerable extent by the clergymen of the place, submitted to the influence of a refining tradition, the Ammergau peasant has from his childhood taken some part in these representations. If he is to play Judas, for example, he has been selected, and his hair and beard have been trained or trimmed, perhaps for years, in accordance with the conception of Judas which the tradition has handed down. Interest, of course, centres in the actor who takes the part of Jesus. He is this year a young man of the type of face familiar in the Jesus of Dürer, and is at first somewhat disappointing to the eye of one accustomed to the lineaments with which the Italian masters have made us familiar. It is all the fitter, for the play represents rather the Man of sorrows than the One altogether lovely. The actor in question plays with dignity, and great sympathy, vigor, and effectiveness. The scene of the crucifixion is one which draws abundant tears both from women and from men, and indeed must be trying to weak nerves; if there are many American women among the witnesses, and there are no hysterics or spasms, it is a wonder. It opens with the three crosses. The thieves are already nailed to theirs and lifted up, but the third lies upon the ground with the sufferer stretched upon it. The executioners then raise it, and the ensuing scene lasts half an hour or so. The most horrible part of it is the breaking of the legs of the thieves, which is said to be done in the most life-like manner. There are no signs of the contrivances by which the figures are fastened to the cross, and they appear to hang supported by the nails that seemingly are driven through the hands and feet; and when the spear pierces the side blood appears to flow out. Most painful, too, is the scene of taking down the rigid corpses from the crosses; the effect being very powerful on the nerves of the audience, as is shown by the shudder running through it, when Nicodemus first loosens and afterwards draws out the nails. But this horrid fidelity to truthfulness of detail is alleviated, we are told, by the beauty of the grouping—equalling that of the highest masters—when the body of Jesus is lowered to the ground among his weeping relatives and friends.

—There is, perhaps, no one of our English poets with whose idea we connect so inevitably as with Gray's the idea of elegant refinement of educated taste. New proof of the justness of this view of his character has recently come to light in the shape of nine vellum-bound volumes containing a large collection of manuscript music—arias, canzonets, selections from unprinted operas—which the poet gathered together when in Italy. Pergolesi is represented in the collection, and so are Zamperelli, the great Leonardo da Vinci, Rinaldo di Capua, Bernasconi, Leo, Latilla, Orlandini, Sarri, Galuppi, Broschi, Lampugnani, Araia, Mazzoni, and other composers. Each volume has an index in the poet's own handwriting, and there are even some songs written by him, which we may very probably conjecture him to have often sung to the accompaniment of the harpsichord with which he used to solace himself and regale his friends in his bachelor quarters at Cambridge. That he was fond of playing, and that his taste was for Italian music, we already know from his biographers. The volume containing these songs that we mention is lettered "Ana de L. da Vinci," but what is the character of the ana we are not informed. Undoubtedly it was when Gray was a young man, travelling in Italy with Horace Walpole, that he made this interesting collection, which is now held for sale by Messrs. Scribner, Welford & Co.

RECENT WORKS ON GOVERNMENT.*

THERE is always a certain charm of novelty in taking up a book by a new author with an old subject, and Mr. Mulford has introduced himself for the first time to the public under a caption which commends itself to our columns and our readers. There has been in literary circles a good deal of friendly criticism of this work in advance of its publication, and a generous distribution of the table of contents and the opening chapter, with some commendatory notices, may have taken off the freshness of the first reading. Yet, with a great deal of learning, and much substantial excellence, the work is not likely to secure many readers or much solid praise. The citations show that the author has read the leading political writers of Germany, and the names of men like Mohl and Stahl, Bluntschli and Zoepft, show that his study in that direction has been many-sided, for these are the leaders of the most diverse political tendencies. Stahl represents and embodies the high-and-dry church-and-state party, which flourished greatly under the late mediæval King of Prussia; Mohl is the leader of the liberal conservatives, and typifies the scientific statesmen of modern Germany; while Bluntschli and Zoepft are professors and book-makers, who are not at all on the first line of either literary or political importance. Yet Mr. Mulford puts them all on the same footing, and treats them all alike. In the same way, his references to Dr. Brownson and to Calhoun, to Lieber and Hurd, are made in a way that shows a readiness to use any available author, without much regard to his authority. Another fault of the book is the fact that there is an overanxiety to support much that is admitted and may well be assumed, by references to great names and learned works. Then, too, there is the strong influence of men and minds such as Maurice and Hegel, Stahl and Trendlenburg, who are acknowledged as the author's chief sources, and who belong to a school that has little act or part in the practical working political science of their own countries, and is not in the least likely to be useful here. Moreover, the book, in spite of a strong denial at the outset, is of itself an abstract study, and, although applied to many of the practical questions of the day, abstract science is not to the taste even of the best of our political students. There is a pretty strong infusion of theology, of a mild Unitarian type, not unlike that of Dr. Bellows and his school, who think less and talk more in the old conventional way than they mean, and use Scripture authorities and parallels rather because they are familiar and ready at hand than from any special aptness or fitness for illustration of our real political history or condition. There is, besides, a want of continuity in the subject, and of due arrangement in the chapters and subject-matter, while the entire absence of an index throws the reader back on that unsatisfactory finger-post, pointing only and always in one way—the table of contents.

With these and other faults—not the least of which is an unreadableness of style—Mr. Mulford's "Nation" has good qualities, and much in it to commend. It is an honest effort to find a basis for political science outside of the mere dry letter of the law; to establish the right of our Government on some broader and firmer foundation than the well-worn text of the Constitution; to show the ethical and moral significance of the important political problem in course of being solved by the growth and prosperity of the United States, and of the great commonwealths within it. There have been so much pains taken to restrain study and intellectual cultivation in the legal profession, and in the larger field of elementary education at schools and colleges, to the hard crust of the existing, as if there were no other, form of government, and no science of comparison, that it is satisfactory to find an author who endeavors first to make a diligent study of the men who have labored to open a wider range of political science, and then to apply his labor, and the fruits of it, to our own daily political life, and the problems of our own political future. The question of what success Mr. Mulford has had, and what results he will produce, are really, therefore, less important than the fact that the task has been begun. The growth of a strong feeling of dissatisfaction with the existing condition of the science of politics is just as wholesome as that best of all signs, the hearty disgust for the present state of the nation, due to the miserable trade in politics.

Mr. Seaman is not a novice in the art of book-making, and puts the fact in evidence by stating on his title-page that he is the author of "Essays on the Progress of Nations," and by a few pages of notices of his two volumes on that subject at the end of this his last work. The book itself has a good and honest purpose, and in that at least suggests comparison with

---

"The Nation: The Foundations of Civil Order and Political Life in the United States. By E. Mulford." New York: Hurd & Houghton. 1870. pp. 418.

"The American System of Government, its Character and Workings, etc. By Ezra C. Seaman." New York: Charles Scribner & Co. 1870. pp. 282.

"The First and Second Part of a Work on Government. By J. B. Colt." Hartford. 1870.

Mr. Mulford's somewhat similar endeavor. The defect of that, its excess of learning, its ponderous movement, weighted as it is with German philosophy and a great deal of very sound and very useless wisdom of other tongues and other men, would be just the disease with which Mr. Seaman ought to be inoculated. His method is that of the good old-fashioned American politician of the type of fifty years ago, and as he tells us that it is forty years since he commenced the study of the law, it is not surprising that he should claim (in Italics) *to have discovered great defects in our representative and elective system*. This much any man who had lived in poorer and better days might have done; but he *seeks to point them out to his readers, and to suggest suitable remedies*, and this part of Mr. Seaman's labor is likely to be about as effective as Mrs. Partington's use of her mop.

Mr. Seaman's reforms are either an impossible return to the rules of his own political youth, or mild moral changes that are not needed by the better part of our population, and not worth anything for the lesser and more active portion that does such mischief. To return to a property qualification is almost past hope, while minority representation has practically been adopted in New York, and is not likely to be left without imitation in a country so imitative as ours. The evil of the existing systems of party nominations has been met, at least in part of Pennsylvania, by what is there known as the Crawford County system; and if its effects are as good as is believed by those who have secured its adoption, they are not likely to be disregarded by a community which is not yet totally in a state of political depravity. Mr. Seaman sees no good to come of Civil Service Reform as it is now agitated, but this is rather because he can see no good in the Republican party than from any real consideration of the subject. He suffers, however, even more from defects of style, a kind of Western orientalism of language, the use of such fine phrases as serve to round sentences without completing their sense. He declares, for instance, that the Supreme Court of the United States enlightens the civilized world, as if it had not enough to do in our own quarter of it; and that the Auburn penitentiary system does so too; and that the extremes of popular candidates here were, on one side, "nature's noblemen," on the other, "trading politicians of easy virtue," certainly a mild suggestion of Burke. The rehash of newspaper leaders on Woman's Rights, Statistics, and Currency can hardly save the book or commend it even to the authorities that supply so much of its material, although it is drawn with happy indifference alike from *Times* and *World*, *Tribune* and *Post*, and other such nourishing fountains of political truth and science.

Mr. Colt is apparently a spiritualist, or a believer in "the spirit style," and his fifty pages are about equally divided into a prose part and a poetical part, wherein the three representatives, Republicus, Democraticus, and Monarchicus, or Hengist, talk from their respective stand-points, although they talk in pretty nearly the same strain, and with an equal indifference to common rules of English verse, English grammar, and English spelling. There is something odd in the ingenuous faith that leads a man to print all his pet beliefs, and to defy the common belief of the world. However nearly allied to that which is often allied to great wit, Mr. Colt seems to have got little good of his relationship, unless there be wit in making new words, as, for instance, "gingle," "sensed," "a unite," "birthe," "to birth," "birthing;" but some of his hits are not so utterly bad as the new phrase of "slavery, our heel institution," or the new word "untearly," and indeed we ought to be thankful to the printing-press for the ingenuity of discoveries that no sane intellect could make or preserve.

It would be well worth while suggesting to some of our industrious collectors to make a specialty of eccentricities of the class to which "Colt on Government" belongs. In one case, a long litigation on very dry subjects has been enlivened by frequent appeals made by one of the parties litigant through the printer, and the public thus reached is much larger than that generally interested in a lawsuit; but the joke is made a sad one by the incoherence of the poor man. In another case, a learned recluse has passed among his friends for years as a man of vast capacity and profound learning, but in an unfortunate moment he trusted his thoughts to print, and that which was instructive in conversation and harmless in manuscript, turns out, under the garish black and white of printed matter, to be wanting in the one thing that makes the difference between sound and unsound. Almost every man knows of some one who passes for sane enough in the ordinary affairs of life, yet is really just on the verge or across the line of the *mens insana*. But when print and paper are used, the whole world is made witness to that which might have rested in the bosom of a few persons. The curious distinctions and the plentiful cases of imperfect mental condition which the new school of writers and practitioners in lunacy supply, both in their text-books and in their evidence as experts in law courts, may well stagger us; but they are not more surprising than the revelation of such a publication as that of "Colt on Government," and if it serve only to show Mr. Colt how much he needs to be broken in, and curbed, and bitted, it may do good enough to prevent any more of it.

DALL'S ALASKA.*

THE American people are probably not quite as much interested in Alaska as they were two or three years ago. At that time, every available source was eagerly ransacked for information; but, nevertheless, comparatively little was found that was reliable. With reference to the southern shores of Alaska, and the Aleutian and Seal Islands, we are now tolerably informed. This portion of the territory, since its cession to the United States, has been pretty well examined and reported upon, both by official and unofficial travellers. Of that interesting portion of the territory which is adjacent to the great Yukon River, we are still comparatively ignorant, and our sources of information with respect to it are few. Our fullest and most accurate information up to this time concerning the Yukon and the adjacent territory, was to be found in Mr. Frederick Whymper's interesting book, entitled "Travels in Alaska and on the Yukon," which was published last year, and which is principally an account of a journey made by him and Mr. William H. Dall from Norton Sound to Fort Yukon and back. To this we may add the reports and other papers of Captain Raymond, United States Engineers, who made during last summer a topographical and astronomical reconnoissance of the river from the sea to Fort Yukon. We now have an important addition to our Alaska literature in the work of Mr. Dall himself, at one time Director of the Scientific Corps of the late Western Union Telegraph Expedition. It is issued in the usual elegant style of the University Press, and is profusely illustrated with well-executed wood-cuts.

Mr. Dall divides his book into two parts. In the first, he gives an account of his travels on the Yukon and in the adjacent territory; and, in the second, he treats of the geography, history, inhabitants, and resources of the country generally.

In the fall of the year 1866, Messrs. Whymper and Dall made an overland journey from St. Michael's Island in Norton's Sound to Nulato, a Russian trading-station on the Yukon River, about six hundred miles from the sea. Wintering at this station, they started in the following spring in boats for Fort Yukon, a station between five and six hundred miles further up the river, where they arrived after a journey of twenty-seven days. After a stay of several weeks at this place, they returned in canoes down the Yukon to the sea. An account of such a journey, through a country almost unknown and untravelled, could not fail to be deeply interesting; but we imagine that the general reader, who is not likely to feel particularly entertained by the author's personal doings and discomforts, will find Mr. Whymper's account much more readable than Mr. Dall's; though, on the other hand, the latter contains some valuable matter which is peculiar to itself. We may mention, as a single instance, the song of the Koyukon woman hushing her child to sleep, in the translation of which the original spirit and rhythm have been wonderfully preserved—a song, by the way, which suggests the thought that the Great American Poet may be going to come from Alaska. Perhaps Mr. Seward bought him, and he is not, after all, coming from the boundless prairie, as some prophets have held, nor from Colorado, as is held and taught by certain others.

But the chief excellence of Mr. Dall's book lies in its second part. Here he has collected an astonishing amount of valuable information, from sources numerous, and in many cases not easily accessible, concerning the geography, history, inhabitants, climate, and resources of the new territory. But we notice one serious and unaccountable omission. Mr. Dall completely ignores the important expedition of last year. Having mentioned his last journey from Nulato to the sea, he says: "This completes the history of the explorations of the Yukon"! And yet the fact that on two occasions he does not disdain to make use of the results of the enterprise, just so far as they are needed to confirm some statements of his own, or otherwise serve his purpose, precludes the theory of ignorance which we would fain adopt in lieu of one more damaging.

The expedition of last year was remarkable for being the first journey *by steam* on the waters of the Yukon. A small steamer, constructed by capitalists in San Francisco, was sent on the deck of another vessel to Norton Sound, and finally succeeded in reaching Fort Yukon. During this journey, many astronomical and other observations were made at various places on the river. When the geographical position of Fort Yukon had been determined, and it was found to be within our territory, the agents of the Hudson Bay Company were ordered to remove beyond the line, and the American flag was raised over the fort.

---

* "Alaska and Its Resources. By W. H. Dall." Boston: Lee & Shepard. 1870. 8vo, pp. xii. 627.

Of all this, Mr. Dall gives not the slightest intimation. Concerning the most careful exploration of the Yukon ever made, the reader will, therefore, discover nothing. Probably the facts were not regarded as sufficiently important for mention. One cannot get everything into a single book, and room was required for the information that *ukali* gave Mr. Dall the heart-burn; that he was on various occasions cruelly bitten by unmentionable insects; that he broke the handle of his frying-pan, and lost his iron spoon; that the intoxicated Malemutes, "the most lamb-like people on the face of the earth," cowered before his threatening revolver; or that he sailed triumphantly into some Indian village, over him floating the stars and stripes and the rampant clam-shell of the Scientific Corps. The purpose of the book is stated to be, "to comprise in a small compass the most valuable part of the present knowledge of Alaska;" should it not be added, "with special reference to its bearings on Mr. Dall"?

The strictures which the author goes out of his way to make on the map of Whymper and Arrowsmith appear to us not fair as regards the former. Turning to Mr. Whymper's book, we find that he does not pretend to assume any responsibility for the map of that portion of the river between Nulato and the sea. It is copied (he tells us) from the maps of Lieutenant Zagaskin, of the Russian Navy, and Captain Smith, of the Telegraph Expedition. Of this Mr. Dall must be perfectly aware, yet it is this part of the map which contains the "several inexcusable errors" upon which he so severely comments. His criticisms on the remainder of the map seem to be equally uncalled for. It was made from notes taken during a canoe-journey to Fort Yukon and back. Mr. Whymper had no means of ascertaining correctly either distances and positions; and, under these circumstances, he published it as a mere "sketch-map" (inaccurate, as a matter of course), for the purpose of giving an idea of the country until something better could be obtained. The scientific reader may be safely trusted, in view of these facts, to judge whether Mr. Whymper's conduct in the premises can be fairly described as "more than reprehensible," and also whether that of Mr. Dall, in such invidious allusions to the legitimate labors of a fellow-worker, is not something decidedly less than magnanimous.

After reading Mr. Dall's criticisms upon his former comrade, we naturally turn to his map with the expectation of finding something much more accurate and creditable. Mr. Dall states his authorities for his map of the Yukon River as follows:

> "The course of the Yukon from Fort Yukon to Nulato, from Ketchum's sketch-map and my own compass-bearings and distances, carefully corrected for variation and by means of all the known points. . . .
>
> "The course of the Yukon below Nulato is from the Russian Admiralty charts, corrected from my own observations."

Considering the great difficulties under which Captain Ketchum labored in his journey from Nulato to Fort Yukon, his sketch-maps cannot have been very accurate; moreover, it is presumed that Mr. Whymper had the benefit of them equally with Mr. Dall. The latter's "own compass-bearings and distances" were taken at the same time and under the same circumstances as Mr. Whymper's, and we see no reason why his work should be regarded as more accurate than that of the latter gentleman. As for his corrections "by means of all the known points," they become somewhat insignificant when it is remembered that no such thing as a known point exists between Nulato and Fort Yukon. Mr. Dall, it seems, has corrected the charts of the Russian Amiralty from his "own observations." These observations consist, as far as we can ascertain from his book, of a few compass-bearings and a series of skilful guesses, made while floating down the river!

On the whole, we do not think we ought to expect much accuracy in Mr. Dall's map; and examining the position which he assigns to Fort Yukon, the only point east of Nulato as yet determined by observations, we find that he has located it thirty-eight minutes too far north, and one degree and forty-six minutes too far east. Under the circumstances, are we not prepared for the conclusion that a little of that modesty which characterizes Mr. Whymper's book might have been advantageously employed to adorn the pages of Mr. Dall?

We are also at a loss to understand why the name of the author should lend its lustre to two geographical features of the new territory. Geography it is proposed to enrich by the addition of *Dall River* and *Cape Dall*: the former, a stream past the mouth of which he floated; the latter, a cape, the vicinity of which, as far as we can discover, has never been seen by Mr. Dall. We admit that this is a harmless vanity, since the ignorant natives who are destined during the present geological era to be the sole inhabitants of these localities will probably cling perversely to their own uncouth nomenclature; but it seems rather beneath the dignity of one who, even in a small way, professes to be "scientific," to seek that cheap notoriety which people less favorably circumstanced attain by chalking their names upon fences and barn-doors.

In treating of the resources of Alaska, Mr. Dall takes a much brighter view than is usual of the agricultural prospects of the country. It is true, he admits that "in the Yukon Territory we cannot look for self-supporting agricultural districts; still," he remarks, "the settler may have milk in his tea and fresh vegetables on his table, if he possess the energy and knowledge to make the most of his opportunities. It will not be necessary for him to rely on the products of the chase alone, if he will but take the necessary care to provide shelter for his cattle, and to cut and gather for their winter fodder the perennial grasses which cover prairies and lowlands."

When we mildly ask, "What settlers?" Mr. Dall promptly replies, "Those who are called there to develop the resources of the country, be they lumber, fish, or furs." But lumber, we are told, does not exist on the Yukon within one hundred and fifty miles of the coast, and is not of a very good quality when obtained. Besides, this portion of the river is tortuous and shallow, and should timber-rafts ever reach the river's mouth, they would still be eighty miles from the nearest anchorage. Moreover, in spite of Mr. Dall's dismal prognostications, the vast forests of Puget Sound and Oregon still offer us an abundant supply for an indefinite time, and while these remain we are not likely to seek lumber in Northern Alaska. As for fish, we would ask whether swarms of salmon have caused the settlement of the Columbia River and Puget Sound; whether the fish of these localities have ever found an adequate market; and finally, whether, while these near sources are capable of furnishing vastly more fish than are sufficient to meet the demand, we can properly regard this as one of the resources of the Yukon? As to the fur-trade of the Yukon, it furnishes employment for something less than a score of men, none of whom can be regarded as settlers, and all of whom are hardy hunters and traders who are continually travelling up and down the country. It will undoubtedly refresh these adventurous backwoodsmen, unaccustomed to luxuries and inured to hardships, to learn that nothing prevents them from having milk in their tea except the trifling want of a cow. It should also be remarked that Northern Alaska appears to have some disagreeable climatic peculiarities. It is intensely cold in winter and hot in summer. Moreover, the relative length of day and night at certain seasons of the year does not seem to be agreeable to the civilized man. We are inclined to believe that these small circumstances might injuriously affect the settlement of the country, even if it offered much greater temptations than are claimed to the adventurous pioneer.

The views presented in this volume, of other portions of the territory and other resources, are equally sanguine, and, in our judgment, in most cases equally unwarranted. We are quite willing to admit that "a proper and not onerous system of taxation would afford two hundred and fifty thousand dollars in gold per annum;" but is there not some pertinency in that other fact, which we do not find in this volume, that the territory is an expense to the Government of about three times this amount?

Mr. Dall says, "We have bought for a nominal price the key to the North Pacific. It can no longer be said that three iron clads can blockade our entire western coast. Two hundred and fifty years hence there may be a new New England where there is now a trackless forest. The time may come when we shall call on our Pacific fishermen to man our fleets, on the lumbermen of Alaska to don the blue, and strike another blow for unity and freedom. The oak must weather the storms of many winters before it gains maturity. Alaska is not a California, where cities arise in a night and may pass away in a day. Meanwhile we must be patient."

We should say so. But we wonder whether Mr. Dall really thinks that any enemy would ever be insane enough to blockade Alaska!

PAYNE'S "INDEX OF BIOGRAPHY."[*]

This is a very useful and, in general, well-executed biographico-chronological dictionary, and we are sorry that we are bound to criticise, to condemn, and to reject—as our superscription shows—its very first word. But the fact is that Haydn, the author of the well-known "Dictionary of Dates," has had nothing whatever to do with the elaboration of the work before us; that he died a number of years before its compilation by Mr. Payne; and that his name figures on its title-page only because the publishers of his "Dictionary" formed the plan for the new work, and destined it to be a companion to the older. Their design met with a long-cherished similar desire of Mr. Payne, and he elaborated the work with zeal and care. His aim was "to give to the public a copious, if not an exhaustive, date-book of biography, which, while portable," should be "somewhat wider in conception than most manuals of a like order;" and this, we have no hesitation in saying, he has fully achieved. And we not only find his "Index" "no unworthy *confrère* of the 'Dictionary of Dates,'" but superior to it both in plan and execution. But in qualification of this our praise we must add that we are far from sharing the editor's—or should we rather say, the publishers'?—admiration of Haydn's production, the merits and demerits of which we lately set before our readers. Mr. Payne's first edition is more perfect than the eleventh of Haydn's, but neither is, as yet, sufficiently correct "for the use of the statesman, the historian, and the journalist."

---

[*] "Haydn's Universal Index of Biography, from the Creation to the Present Time, for the use of the statesman, the historian, and the journalist. Edited by J. Bertrand Payne, M.R.I., F.R.S.L., F. Geog. Soc. (London and Paris), Member of the Society of Antiquities of Normandy, Massachusetts, and New Jersey." New York: Virtue & Yorston. London: E. Moxon, Son & Co. 1870.

Comprehensiveness, conciseness, and a very careful revision are the chief merits of Mr. Payne's "Index;" its principal defect is a lack of symmetry. The following may perhaps be regarded as a fair specimen of the best of his notices: "Johnson, Andrew, American statesman, *b.* 29 Dec., 1808; worked as a tailor; self-educated; gradually rose to be member of Congress, 1843–53; governor of Tennessee, 1853–57; United States senator, 1857–63; elected Vice-President of United States, 1864; President (after the assassination of Lincoln), 15 April, 1865–4 March, 1869; articles of his impeachment rejected by the Senate, May, 1868." But with notices of such conciseness and fulness combined, many others contrast either by their unproportionate length, or—which is much more frequently the case—by a brevity to which some of the most essential details are sacrificed. Thus, while the notice of Henry IV., Emperor of Germany, is spun out to a considerable length, that of the Emperor Titus consists only of four short lines, three of which are filled out with his names and the dates of birth, succession, and death; the conquest of Jerusalem is not mentioned. The same contrast is observable between "O'Donnel," for instance, and "Pulaski," the latter of which contains no allusion to the important historical career of the "Polish patriot" in his own fatherland, besides what may be contained in this designation. In the same way, the brief notice of Maximilian of Mexico entirely ignores his life in Europe, and immediately after the date of his birth gives that of his acceptance of the Mexican crown. Graver omissions are those of entire heads important in history or literature, such as—to mention only a few—Rehoboam, King of Judah, and the two Polish Kings Stanislas of Poland, one of whom is vainly referred to under "Poniatowski," and the other also ignored as Leszczynski; the Generals in the Thirty Years' War, Thurn, Pappenheim, and Torstenson; the Zrinyis, Kara Mustapha, Chlopicki, Dembinski, Windischgrätz, Muravieff; the historians, Schlosser, Rotteck, and Raumer; the poets, Rückert and Herwegh; L. A. Feuerbach, Gutzkow, Tschudi; Gfrörer, George Rawlinson; Jules Favre, Sardou, Veuillot.

Two-thirds of the names just mentioned belong to the history and literature of the last two generations, and it is but justice to the author to state that he has treated earlier periods much more fully and with greater care and accuracy. Contemporaneous history, owing, in part, to the deceptive guidance of hastily executed and ill revised materials of reference, forms, in fact, the weak side of his book. Thus, we find that Garibaldi defended Rome in April, 1850; defeated the Neapolitans in May, 1850; and retired from Rome in July, 1850—all of which events took place in 1849; that Mazzini was "dictator at Rome as triumvir" from March, 1849, to June, 1850—though he too retired in July, 1849; that Kossuth was born "27 April, 1806, or 16 September, 1802"—both of which dates are wrong, the correct one being April 27, 1802; that both Lamartine and Ledru-Rollin received a number of votes for the presidency "22 December, 1848"—a date posterior by twelve days to that of the well-known election of the *Dix Décembre;* that General Pepe, then at the head of a revolutionary army in Northern Italy, suppressed the republican "insurrection at Naples, 15 May, 1848." That the same General subsequently defended Venice is not stated; nor that Cavaignac served in Algeria; nor, in either of the respective notices, that Emile Girardin killed Armand Carrel in a duel; nor that Prim commanded the Spanish army of invasion in Mexico. Lee is stated to have "baffled M'Lellan [*sic*] before Richmond, May, 1862;" "defeated Burnside at Fredericksburg, 12–16 December, 1862;" "Grant in the Wilderness, 5 May, 1864;" and "surrendered with his army, 9 April, 1864"—all of which dates are more or less incorrect. Neither Fort Donnelson, nor Vicksburg, nor Chattanooga is mentioned in the notice of Grant. Under "Johnston," "Jackson, Missouri . . . 1862," stands for "Jackson, Mississippi . . . 1863." Similar mistakes, or misprints, occur in the notices of Burnside, Beauregard, and "McClellan," while Meade is stated to have "superseded Butterfield as commander of the army of the Potomac," and to have been "succeeded by General Grant." The war of 1846–48 with Mexico is not mentioned under "Taylor, Zachary;" under "Grant" its date is "1845;" under "Lee," "1846–47;" under "Johnston," "1847;" under "Hooker," "1846–48;" of General Scott there is no notice. Defects of this kind in the biographical chronology of the past are not only rarer, but, a close examination allows us to state, exceedingly rare. Mr. Payne is very correct in the spelling of foreign names and titles, with few exceptions. Russian names form a general exception. The two pages which contain "Kostrof" and "Kutusoff" have four equivalents for one and the same Russian termination: *of*, *ov*, *ow*, and *off*.

THE MAGAZINES FOR JULY.

THE *Atlantic* for July has among its contributors Mr. Longfellow, Mr. Hamerton, Mr. Howells, Mrs. Stowe, Mrs. Thaxter, Miss Phelps, Mr. Bayard Taylor, Colonel Higginson, Professor Shaler, and other men and women of more or less eminence in letters, but its best piece of magazine literature is a fresh and interesting account—often humorous in a very pleasant way—of how Mr. Ralph Keeler, the author, made "The Tour of Europe for $181 in Currency." A natural-born wanderer he seems to be, for he is the same person who a year ago described his boyish journeyings with a troupe of negro minstrels who traversed our Western States; and here we have him setting out from the city of Toledo, seven hundred miles from the sea, determined to make the grand tour as it never had been made before. How he got to New York: how afterwards he travelled through Germany, Belgium, France, and Italy, this morning dressed in the blouse of the *Handwerksbursche*, and this evening in the broadcloth that asserted him the equal of the potentate in whose dominions he may have happened to eat his four-cent dinner; how he was matriculated at the University of Heidelberg; how he was penniless, and on the verge of suicide at Paris, but at the end of certain days of starvation received some money for a magazine article, and thereupon forthwith set out not for home but for Italy; how he slipped through the hands of the Roman police—not having money enough to pay the tax levied on departing foreigners—and got to Leghorn; how he there, for want of ten cents, attempted to cheat a boatman whom he hired to carry him aboard an American bark lying in the harbor, and how a foremast hand paid the ten cents for him; how the captain of the bark brought him home for nothing, and how on arrival here he found awaiting him a check for an article he had sent to a Scotch periodical—of all this Mr. Keeler makes a story that would be agreeable reading for its incidents merely, but which he tells in a manner that of itself gives pleasure, and will make readers desire further acquaintance with him.

Mr. Shaler's essay, entitled "An Ex-Southerner in South Carolina," is interesting, but will be displeasing to a good many persons as being not laudatory of the negro race in general, and decidedly not laudatory of the negroes of the South Carolina Sea Islands. What may be the usefulness of general philosophizing on the negro's nature, and the possibility of his being or becoming the equal of the white man, we do not know; but most of the fault that has been found with Mr. Shaler's assertion of facts is undeserved, the facts being, we think, nearly what Mr. Shaler asserts them to be, and we have closely observed the negroes of the region round Beaufort. That these people are unchaste, unindustrious, and untrustworthy, any one would say who knows them. Doubtless they are, on the whole, the least intellectual and least moral of all the colored people in the South, if we except the negroes of the rice country, with whom, by the way, the war to some extent mingled them. As to the drunkenness alleged against them by some observers, more is now heard of it than used to be heard in times of slavery or in the time when there was a strict military government, and how much of what is heard is true it might be difficult to say. It would, however, be not wonderful if a people without self-respect, suddenly exposed to temptations of a sort powerful to influence the sensual and the ignorant, should become open to the charge which some bring against the South Carolina blacks. Of more importance is the question raised by Professor Shaler whether or not the Southern negro can be as rapidly raised in the scale of civilization by teaching him English grammar as by taking some other means of elevation. However that may be, there is no one, we suppose, who has thought much on the subject who will not agree with our author that the Southern black man needs, as soon as he can get it, as much as possible of the Southern white man's advice, example, and honest, hearty, unforced co-operation in all the business of life. Manifestly it is not for his good that anybody should create any artificial gulfs between him and the abler men among whom his lot is cast. It is not, however, necessary to discourage his learning the alphabet or English grammar or anything else under the heavens. Nor can Professor Shaler be said to do this. Only, his opinion that the schoolmaster is not, on the whole, the best of all the possible instructors and helpers of the negro, may very probably be, by some of his readers, mistaken for the opinion that the negro would be better off if the schoolmasters and schoolmistresses were away.

Mrs. Stowe's second "Old-Town Story," which is, perhaps, not so good as the first, but much better told, is from the mouth of Mr. Sam Lawson, and relates an attempt made by the British, in the war of 1812, to capture the American sloop *Brilliant*, aboard which vessel Mr. Lawson was at one time a mariner. "A Day's Pleasure" is the first part of one of Mr. Howells's essays. One of Mr. Higginson's essays we may call "The Shadow." It has all his prettiness and gracefulness, not to say grace. But doubtless there is, under the true grace, of which gracefulness no more than reminds us, a substratum of strength. "Criminal Law at Home and Abroad" is by Mr. Francis Wharton, and is devoted to showing that the continental European system of examining accused persons as if they were criminals very ill subserves the ends of justice. The English fashion of holding the prisoner innocent till he is proved guilty, and of respecting his silence, Mr. Wharton thinks better in its integrity than as we here in America, in some States, have modified it. To say that a prisoner may testify is, Mr. Wharton remarks, to say that he must; for if a prisoner may speak and will not, he will be thought silent because of fear that his words may betray him. Then, too, the prisoner, innocent or guilty, will naturally think he can better himself by talking; but who of us, Mr. Wharton asks, being put into the position of an accused person, would not, in our trepidation, and under skilful cross-examination, often make ourselves appear guilty though we were not guilty? And how much more likely should we be to betray ourselves if, instead of being questioned by a lawyer, with a lawyer of our own standing by to protect us, we stood before a judge, and were searchingly questioned not only about the one act with which we are charged, but concerning every act of all our lives, and each word or circumstance, of no matter what nature, which could throw any light upon our characters and dispositions? This method of examination, says the writer, is the child of the civil law, which is the law not of constitutional liberty, but of despotic government; and we may be doing ill to adopt in our republican court-houses the methods of government which look on men as rather the abject slaves of the state than as the possessors by right of individual freedom. "The Shipping of the United States" is an instructive article, good for Congressmen, by Mr. E. H. Derby. Mr. Longfellow's poem tells a story and inculcates a moral. Mr. Burt Wilder writes on the Woman question, which certainly is becoming tiresome, as treated of in the magazines; and the "Reviews and Literary Notices" are numerous and all good. The works criticised are Dante Rossetti's Poems, Beecher's "Lecture-Room Talks," Emerson's "Society and Solitude," Fitz Hugh Ludlow's "Heart of the Continent," a "Book of Decorum," compiled by a writer in *Harper's Bazar*, a "Life of Gibson the Sculptor," and two or three other volumes. The *Atlantic* has, we see, at last frankly adopted the system of signatures to articles. Whatever may be the merits of the anonymous system, there is no doubt that it is better to give an author's name with his contribution than to print his contribution without signature, and, at the same time, send about to all the papers a slip for publication containing the contributors' names. The latter nearly all the so-called anonymous magazines have long been doing as regularly as the months came in, and except for the clumsiness and inconvenience of this habit of theirs, there has not been any difference between them and their companions.

A strong point about the *Galaxy* is its independence of all the publishers, including its own. Its editors are understood to have complete control of its columns, and as it happens that they are not in the publishing business, the magazine occupies a position not occupied by any other leading magazine which we now recollect. Its reviews are perhaps not so able as they appear to be honest, and all the advantage of its position it perhaps does not reap; but it certainly is intelligent in its reviews of books, and that is fully as much as can be said of the book-reviews of most of its rivals. It professes, however, to be a magazine of light reading rather than of literature and criticism. Its reputation in this particular it well maintains this month, Mr. Mark Twain's department being up to his ordinary mark, and being, to our apprehension, very funny, and very well worth reading by anybody who likes to be amused, and is not above laughing when he feels like it.

The *Catholic World* pays its respects to a gentleman whom we have been for a long time expecting to see brought to confusion. He is a person who has written more or less for the *Galaxy* and the *Christian Union*, and whose writings have had a good deal of the attention and praise which the more zealous and foolish portion of the Protestant world always gives to the sillier and weaker and dirtier of the attacks upon Roman Catholicism. "Ten Years in Rome" is the general title under which this person's writings have been ranged, and he professes to have been at first a student in the College of the Propaganda, and afterwards a sub-librarian of the Congregation of the Index Expurgatorius, and still later the private secretary of the Cardinal D'Andrea, some of whose papers he says he has now in his possession. The *Catholic World* flatly denies each and all of these assertions, and makes out what seems to us a clear case of imposition against the author in question—a case perfectly consistent, too, with the air of mendacity and ignorance which all his writings wear. It will be well if the editors and churches that have patronized him since his arrival in this country give some attention to his character—as to which there is no doubt plenty of evidence in New York as well as in Rome.

Another person to whom the *Catholic World* pays its respects is Mr. Disraeli, whose picture in "Lothair" of Archbishop Manning and whose theory of the methods of the Catholics in the business of converting desirable young Englishmen to the ancient faith, are not such as to please good Romanists. Still, the gentleman who once remarked that it was difficult to understand the prejudice against Jews when one reflected that half Christendom worships a Jew and the other half a Jewess can afford to take a certain quantity of abuse, especially if it is of a rancorous and violent kind. This writer, however, shows some appreciation of the novel, or, as he calls it, political pamphlet. This no doubt it is in intention, as its forerunners also so often were; but no doubt too its political weight will be just about that of its forerunners.

Lippincott's has for its most prominent article something by Mr. Justin McCarthy, who in the *Galaxy* talks about American women in a manner which shows that he did not fail when in the old country to kiss the blarney-stone long and often, and who in *Lippincott's* is fluent with familiar not to say threadbare talk about the bad influence of British women in politics. "A Week among the Mormons" is worth reading, trite as its title threatens it to be, for it is the work of a person who seems to have had exceptionally good means of getting information. She confirms all that has been said about the homeliness and ignorance of the Mormon women, the deliberateness of the Mormon men's practice of keeping them illiterate and uninformed of the life women lead outside of Utah, the dissatisfaction or rather the painful resignation with which they regard polygamy, and the cunning and sensuality of the leading Mormons. Mormon girls are not educated at all, she declares; and then, while still young, their heads filled with Mormon dogma and with nothing beside, they have laid on them the yoke of marriage and maternity. Is is thus, she says, that they reach such measure of contentment as they do reach, but it seems to her even then but a weary resignation. And it seems to her certain by-and-by to disappear; she thinks the advent of the railroad is already causing a stir among them, and that they are looking curiously at the Gentile world.

The *Overland Monthly* is as good as usual and contains some excellent writing. We think nothing better has been anywhere said about Dickens since his death than that which the editor says here in his perhaps rather too laudatory words of tribute. There is also a striking sketch called "Mr. Thompson's Prodigal" which everybody will like, and which in its picture of Mr. Thompson himself is extremely good.

In *Putnam's* the most readable thing is Mr. Stillman's praises of Dante Rossetti, who seems to him highly to be admired. Mr. Stillman has, however, a good deal of knowledge of his subject.

Harper's has some excellent talk about Fechter in Mr. Curtis's best vein, and besides its other reading of the regular kind which it always offers, it has some very pleasant reminiscences of Thackeray by Mr. George Hodder, once his amanuensis and for many years his friend and warm admirer. Perhaps this is the most attractive of all the articles in the month's magazines.

Hours at Home continues its newly discovered letters of Charlotte Brontë, and has for its most noticeable other contribution something by

Froude the historian on salmon fishing in Ireland. Mr. W. C. Wilkinson has some pretty verses entitled "In Memoriam W. W. A." They have a freshness not common now in poems of this class.

Spontaneous Generation and the Hypothesis of Physiological Units. A reply to the *North American Review.* Pamphlet, pp. 16. (New York: D. Appleton & Co.)—As one of the minor events of the considerable battle which is likely to be waged about Mr. Herbert Spencer's philosophy, the publication of this little pamphlet would not demand much notice were it not for the facts that it is in answer to the two heaviest charges brought against that author by his reviewers, and concerns two of the most important questions which now occupy the attention of a large number of thinkers. Mr. Spencer was charged with having tacitly repudiated the idea of spontaneous generation in one part of his work; the establishment of his whole scheme being dependent upon the existence of this spontaneity in the evolution of life. The second charge is, in the words of Mr. Spencer, "that in ascribing to certain specific molecules, which I have called 'physiological units,' the aptitude to build themselves into the structure of the organism to which they are familiar, I have abandoned my own principle, and have assumed something beyond the redistribution of matter and motion."

Mr. Spencer seems to define himself clear of both those charges. In freeing himself of the second he exhibits his extensive knowledge of the facts of natural science and his power of generalization. There would be no other way to give the reader a distinct idea of his argument save by transcribing half a dozen pages in mass. Should he desire to give his mind a nice steady pull in consecutive thought, let him attentively read the last eight pages. No naturalist can lay down this really fruitful brochure without a sincere respect for the intellect which produced it. Yet we doubt whether, if he is a student of any part of the field of nature which can acquaint him with any of the great series of phenomena, such as the development of life in time, the succession in classification, or the growth of the individual, he will feel quite satisfied with the methods or the results of the author. Great and far-reaching as is the grasp of Mr. Spencer, he cannot grasp all the sciences as well as those less tangible branches of human thought which may not be included by this term. The result is that most special students who give their life to getting a little insight into some of the parts of the infinite field find that Mr. Spencer is a master in all those things of which they know a little, but fails more or less, seems to want personal familiarity, with the one subject which they know well. For this not Mr. Spencer but nature is to blame; we confess him an Aristotle in comprehensiveness, but the man who is to do for the science of to-day what the Stagirite did for the science of the Alexandrine age must be equal to an Aristotle raised to the tenth power—we might say to the n^{th}. The task must be gone at in another way. We must wait until we get some constants in our biological sciences before we write the equation of the universe. We have been trying for a long time to do something with *polarities* observed and hypothecated, but the word has proved anything but an "open sesame" in our sciences.

Analysis of American Law. By Thomas W. Powell. Philadelphia: Lippincott. 1870. pp. 712. [Preface, pp. 12; Selection of Law-Books, pp. 2; Analysis of the Law, pp. 17; Index, pp. 7.]—Although published in Philadelphia, the author writes from Ohio and largely concerning Ohio. His book appears to be a judicial mixture of Kent's "Commentaries" and Blackstone's. Unfortunately the mixture is not well made, and there are blunders of composition very damaging to the use of students, as, for instance, that at page 576, where the expressions are loose enough to make the penalty of bigamy fall upon the person who is the unfortunate victim, not the author of the mischief. If the law of Ohio really punishes the wife of the man who commits bigamy, and sends her to prison for his offence, there are a good many citizens of other States likely to go there and make use of the privilege—a pleasanter one even than that of Indiana or Illinois in divorce. This looseness of English is so common throughout the book that one instance may serve for the whole. It is rather odd in this day and generation to find De Tocqueville referred to as "a foreign gentleman of great celebrity, and of friendly sympathy for us;" it is a note of the rusticity that marks the whole key in which the book is written. Citizens, with the author, are "the favored of the people;" but wherein the distinction exists between the one and the other nowhere appears. The effort to put all the law in one volume is not a very new one, but the distribution of it into four heads—Public, Private, Civil, and Criminal Law—is at least a novelty, which would be worth doing if it were done well. The selection of law-books in a prefatory page shows, however, that Judge Powell desires only to make the law cheap and easy of access—a bad thing for clients, but a worse one for lawyers, as it leads them, if they follow his suggestion, to take their learning at second-hand, if they take it at all. The mixture of principle and authority, of technical and general, is of a kind that always puzzles the professional mind, and makes it avoid such a hotch-potch as handy-books and treatises of the law; and here we have it only at rather unusual length, and apparently in great honesty of purpose, as a *vade mecum,* a cheap and commodious course for laymen and students. The condition of mind in which either class would rise from the perusal of one of the fragments of this book is past conjecture; if it were possible to find any one who could read it through, in the vain thought that that was a study of the law, there must be small hope of his future success in getting a living in the courts.

The book belongs to that class common enough in all sciences, and mischievous specially in those which are not in their nature absolute, which give results alone, with little or nothing of the processes of reasoning or of historical development that brought them about. A man may be a very good practitioner in law or in medicine, but unless he knows the reason by which he acts, the less he writes the better. A lawyer may give his clients good advice, or a judge may decide the causes that come before him honestly and well, but if in doing so he talks of "jobs by contract," of fiction in pleading as "a humbug," and generally neglects the simple rules of grammar, it is for the great disadvantage of students to have him preserved in a ponderous and imposing-looking volume. The book is intended only for Ohio law-students, but theirs is a hard fate, if they surrender the good old landmarks of the law for this new light.

The Private Life of Galileo. Compiled principally from his Correspondence and that of his Eldest Daughter, Sister Maria Celeste, Nun in the Franciscan Convent of St. Matthew, in Arcetri. (Boston: Nichols & Noyes. 1870.)—For the unscientific reader, this life of Galileo will prove a very interesting book, though it is a pity that it was not written more with a view to instruction, if not less with a view to entertainment. Not only is the book deficient in this respect, but it leaves an unpleasant feeling in the mind that the writer has not done a perfectly honest piece of work, but has tried to present the character of Galileo in the most favorable light, rather than to discover and tell exactly what manner of man he was. Certainly the impression he seeks to convey is different from that conveyed in other books that treat of the same subject. This difference we might put to the credit of his book, but that certain things are evidently glozed over, and that Galileo's own letters sometimes convey a different impression from that inferred from them. Nothing is much better established than that this "martyr of science" was seldom or never perfectly straightforward. Of course, it was not so easy to be straightforward in Italy in the seventeenth century as it is in England or America to-day. The Catholic Church, and especially the Society of Jesus, at that time, was a thoroughly organized conspiracy against all honesty of thought and sincerity of speech. But there was no call for Galileo to promise Urban IV. that he would do one thing and then go deliberately and do another. There was no call for him to teach the Ptolemaic law after he had accepted the Copernican system, as in a letter to Kepler he confessed to have done. But to criticise the conduct of the philosopher is not to justify the conduct of the church. The account of his trial will be new to the American reader, being made up from a paper in the *Revue des Questions Historiques* (1867), entitled "Galilée, son Procès, sa Condamnation," based upon Vatican documents. It is an instructive chapter in the internal economy of the Roman Church.

We get very interesting glimpses of the social and domestic relations of Galileo. As a man of the world, we see him looking out sharply for his own advantage, with an unmistakable fondness for good company and wine, and submitting his neck almost too easily to the yoke of patronage. The picture of his family and connections is not a pleasant one, he having no lawful wife, but three illegitimate children, two of whom are sent, while very young, to a convent, and plenty of brothers and sisters and nieces and nephews, who are the veriest parasites, begging of him continually for all sorts of assistance. A more worthless set of people have seldom if ever beset the path of a great man. Even his daughter, Sister Maria Celeste, does not justify by her letters the high estimate which our author sets upon her. They are very interesting letters, or would be, if they had nothing to do with Galileo, for they are so many pictures of convent life in the seventeenth century. Apparently it was a very dull and stupid sort of life, mainly given to preserving citron and baking quinces and pears. Of these delicacies Sister Celeste sends many to her father, but he pays for them with interest, among all his relatives there not being a more inveterate beggar than this same Sister. The convent, true to its Franciscan vow, is poor enough, and Galileo is continually being called upon to replenish its exhausted treasury. He seems to have been of a remarkably generous disposition, and withal somewhat credulous and easily duped.

BOOKS OF THE WEEK.

*** *Publishers will confer a favor by always marking the price of their books upon the wrapper.*

Authors.—Titles.	*Publishers.—Prices.*
A Manchester Man, Stagnation of Trade: its Causes, Effects, and Cure, swd	(S. R. Wells)

MEHR LICHT

THE UNDERSIGNED beg to announce to their Friends and the BOOK-BUYING PUBLIC that they have established themselves at

451 BROOME STREET,

For the purpose of carrying on a

Bookselling Business,

Where they will be happy to see them and receive orders. They will keep on hand a full Stock of the

PUBLICATIONS OF THE DAY,

Besides the

Works of Popular Standard Authors, Children's Books, Libraries, and Toy Books, etc.

Bringing with them *an experience of Twenty-seven Years* in the "Trade" in this City, they are prepared to transact a FIRST-CLASS business INTELLIGENTLY.

Bibles, Books of Common Prayer, Church Service, and Hymn Books of all denominations,

In the various editions and styles of binding.

Orders from PUBLIC OR PRIVATE LIBRARIES, SUNDAY-SCHOOLS, OR CLERGYMEN will receive a LIBERAL DISCOUNT.

They will guarantee to all customers promptness and despatch in all business engagements.

Soliciting your patronage, we remain,
Yours faithfully,

DE WITT C. LENT & CO.,
PUBLISHERS AND BOOKSELLERS,
451 Broome Street,
(A few doors west of Broadway),
NEW YORK.

The Hartford (Conn.) Courant.
(DAILY AND WEEKLY.)

THE COURANT is the oldest Newspaper of prominence in the United States, and, with less than half-a-dozen exceptions, the oldest printed in the English language. It was founded in October, 1764, and has been published uninterruptedly, under the same title, ever since. It has a very wide circulation throughout the Connecticut Valley, and is one of the best mediums for Advertisers in New England.

The DAILY COURANT is issued every morning (Sundays excepted), at $8 per year, and has a circulation second to but one provincial Eastern daily. The WEEKLY COURANT has a circulation of nearly 10,000 copies, extending to all parts of the country. A Supplement of eight pages is given gratuitously every other week, filled with choice literary reading. Terms—$2 50 per year; or to clubs, $2. Address,

HAWLEY, GOODRICH & CO., Publishers,
HARTFORD, CONN.

L. W. SCHMIDT,
GERMAN BOOKSELLER,
24 BARCLAY STREET, NEW YORK,

Imports regularly all the leading Foreign Publications, including Periodicals.

Foreign works noticed in the NATION *kept constantly on hand or procured to order.*

A Library of Education.

FROM THE

BEST WRITERS OF ALL COUNTRIES.

Vol. I.—Locke's Thoughts on Education.

Vol. II.—Locke's Essays on Study and Reading; Milton's Epistle on Education, with Lives of Locke and Milton.

Vol. III.—Horace Mann's Report on the Study of Physiology in Schools.

Vol. IV.—Scottish University Addresses; (1) Mill, on Literary and Scientific Education; (2) Froude, on Hand-work before Head-work; (3) Carlyle, on the Choice of Books.

Vol. V.—The Bible in the Public Schools—the Opinions of Individuals and of the Press, with Judicial Decisions.

Vol. VI.—The Bible in the Public Schools, Part II., containing the Addresses of A. D. Mayo and Thomas Vickers, of Cincinnati.

Other volumes, in preparation, will be duly announced.

It is our design to make Complete and Standard Editions of the works of educational writers of eminence, and reduce the cost to a minimum. We have adopted a model, very successful in France, which puts the products of the best minds within the reach of all.

The price—Twenty-five cents a vol., post-paid.

J. W. SCHERMERHORN & CO.,
14 Bond Street, New York.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

PAMPHLETS of every description, embracing Prospectuses, Statements, and Reports of Corporations, Statistical, Scientific, and Literary Papers, Law Pleadings, etc., etc., will receive the same attention as books, and be printed with especial care.

JOB WORK, in all its details: Cards, Circulars, Programmes, Bills, Receipts, Forms, etc., will be promptly dispatched, with taste, and in the newest varieties of type.

NEWSPAPERS, MAGAZINES, and other Periodicals will be printed on reasonable terms, and strictly upon time.

In short, the Proprietors undertake to satisfy first-class custom in all that pertains to a general Printing Business.

Orders may be sent to THE NATION PRESS, 27 Rose Street (a few doors North of Frankfort), or to this Office, and estimates will be furnished at either place.

JOHN ROSS, Manager.

LIFE AND LETTERS OF CAPTAIN JOHN BROWN. Edited by Richard D. Webb, and published by Smith, Elder & Co., London, 1861. In all respects the best life of John Brown ever written. Illustrated by a photographic portrait without a beard, showing perfectly the character of the lower part of the face. Cloth, 12mo, price $1 50.

Sent post-paid on receipt of price. Address PUBLISHER OF THE "NATION," Box 6732, New York City.

THE EVENING POST,
HARTFORD.

The Largest Paper published in Connecticut.

The attention of Advertisers is called to the fact that the EVENING POST combines the entire circulation of the *Morning Post* and the *Evening Press*, and is issued in Three Editions Daily, and has the Largest Circulation of any Evening Paper in New England (out of Boston).

The best advertising medium in the State. Advertising Rates furnished on application.

THE CONNECTICUT POST

Is the best Weekly Family Newspaper published in New England. Its circulation has more than doubled during the past year, and is rapidly increasing from week to week.

Its ample proportions, containing Eight Pages of Forty-eight Columns, with Supplement of Twelve Columns, twice a month, afford sufficient room for a systematic arrangement of a large amount of variety of reading matter.

A leading characteristic of the POST is its State and New England News, which is furnished by responsible correspondents, and collected with care from other sources, making the CONNECTICUT POST in every respect a superior first-class Family Journal, specially adapted to the wants of New Englanders. In all departments it is fresh, choice, and sparkling.

TERMS, IN ADVANCE:
EVENING POST (Daily), One Year, $8.
CONNECTICUT POST (Weekly), One Year, $2.

HARTFORD, CONN.,

Daily and Weekly Times

Have widespread circulations throughout the Connecticut Valley, and find ready admission to thousands of families as regularly as the return of the seasons. The *Times* was established in 1817, and there is not a State in the Union, or hardly a civilized country on the earth, to which copies are not sent.

TERMS: $2 50 a year, or to Clubs, $2, for Weekly; $8 for Daily.

*** One of the best mediums for advertisers in New England. Address "*Daily Times*, Hartford, Conn."

HOMŒOPATHIC MEDICINES.
ESTABLISHED IN 1835.

BOERICKE & TAFEL
(Successors to WM. RADDE),
Homœopathic Pharmaceutists and Publishers,
145 GRAND ST. (bet. Broadway and Elm St.), New York.

Constantly on hand a full assortment of Medicines and Books for Physicians and Family use. Orders per mail promptly attended to.

FOREIGN AGENTS OF THE NATION.

GREAT BRITAIN.—George Street, 30 Cornhill, London, E. C.

IRELAND.—R. D. Webb & Son, Dublin.

FRANCE.—Bowles Brothers & Co., 12 rue de la Paix, Paris.

SWITZERLAND.—Vérésoff & Garrigues, Place Bel-Air, Geneva.

ITALY.—Furse Brothers & Co., 9 Piazza di Spagna, Rome. Cerulli & Co., 5 Vico Satriano a Chiaja, Naples.

TERMS TO FOREIGN SUBSCRIBERS.
Five Dollars per annum, plus postage, in advance.

The Nation.

NEW YORK, THURSDAY, JULY 14, 1870.

The Week.

The Tax and Tariff Bill and the Appropriation Bill have, of course, occupied the attention of Congress for the last week, and the former is now the subject of the final conferences, while the latter has passed both Houses and gone to the President for signature. The projected expedition to the North Pole gets fifty thousand dollars instead of a hundred thousand. The plans of putting up new buildings for the State Department, extending the Capitol grounds, and increasing the salaries of the judiciary and heads of Departments, which were all Senate amendments, the House defeated, acting under an impression—as to which we wonder how correct it is—that the people demand these small economies. We very much doubt if the people would rage a great deal if the Secretary of the Treasury or the Secretary of State were to get three or four thousand a year more than he gets now. The *Tribune* makes a fearful hullabaloo each year about the continuance of the franking privilege, and one would suppose the voters were on the point of rising in their might and straightway hurling honorable members from their seats; but nobody observes that Senators or Representatives ever do more than go through the motions of repealing the franking law, or that their votes on the subject make or unmake them. And just so we are inclined to think it would be in case Congress took the bull by the horns and gave United States judges a salary that they could live on. The House managers were willing to do something for the Supreme Court justices, but the rest of the judiciary they proposed to leave as at present. To this the Senate managers could not agree, so it will be matter of further conferences next year. Female clerks are hereafter to be paid as male clerks of the same grade—a stroke of statesmanship which ought to secure to the Republican party the votes of the *Revolution* officials when once the franchise is given them. Mr. Drake's attack on Chief-Justice Chase's decision in regard to the status of such suitors in the Court of Claims as were rebels during the war, came to a successful conclusion. It is now declared that all claimants of property in that Court must prove their loyalty from the beginning of the war, else they have no standing in Court. Neither Mr. Johnson's pardon nor the taking of Mr. Lincoln's amnesty oath is to avail them anything. They may, however, apply, if they like, to Congress for relief.

The Tax and Tariff Bill effects a large reduction of taxation, for Congress was compelled to lend an ear to the clamor of the country, and the influence of the Treasury Department was not able to prevail entirely against the unmistakable popular demand for a lightening of the burden. But there is no doubt that Congress might wisely and, with good policy, have made a still further reduction, and that the $60,000,000, or thereabouts, might very well have been increased to a hundred millions and more. So far as we have got at this present writing, the whole system of special or license taxes is abolished except the licenses of brewers and distillers. The income tax is set at two and a half per cent. instead of five, and the exemption is set at $2,000. This relieves the law of a great deal of its practical injustice, for it removes from its pressure most of the men of small fixed salaries. The House, as we write, has accepted the diminution of percentage and the increase of exemption, but confers with the Senate as to limiting the operation of the tax to the years 1870 and 1871. There will be more gold watches owned in the country hereafter than the singularly small number which have been in existence here since 1863, for the tax on those articles is dropped, as is that on carriages, billiard-tables, gold and silver plate, boats and barges, passports, legacies and successions, and gross receipts. Stamp taxes are taken off canned fish, transfers of mortgages, and notes of less than $100. Except stamp taxes, no taxes are henceforth to be paid on sales except on sales of tobacco, wines, and liquors. The iron men have got the duty on Bessemer steel rails fixed at 1¼ cents a pound—a specific duty which is heavier than the present *ad valorem* duty. How this tax will fare in conference remains to be seen. It is also in the bill that goods in bond may be carried to interior ports—a provision which caused much discussion, and divided the East and West by a marked line.

Other Congressional business has not been devoid of interest. On Wednesday week, Mr. Washburn, of the Postal Committee, procured the printing of a large number of his reports on the proposed system of postal telegraphy, and made a speech showing how much cheaper and more serviceable the telegraph might become if used as in England and in Belgium. The Pat.-Woods-Porter breach-of-privilege case came up on Wednesday and Thursday, and whiled away some few agreeable hours. On the latter day a proposal was made that a new voting machine be set up in the hall of the House during the vacation, and it was highly recommended, Mr. Cox informing the House that it was in use in Italy and France, and worked admirably; and that though its use would stop filibustering by dilatory motions, he would waive partisan objections, and vote for its admittance. But Mr. Dickey civilly declared that the concern was all a humbug, so it was rejected. On Thursday, in the Senate the most impudent scheme yet projected for stealing Government land was offered in the shape of a certain amendment brought in by the Postal Committee for the benefit of the American and Oriental Steamship Company, which is to ply between this country and India, by way of the Isthmus of Suez, and wants twenty acres of land in the Southern States for every ton of ships built, and 640 acres for every ship's apprentice taken on board. It was easily killed. While we are on this subject of Congressional honesty we may, as requested, call attention to the fact that for some reason Congress has refused to unseat no less than four Democrats whose seats were contested by Republicans.

On Friday, the Senate Committee, to whom it was referred, begged to be excused from further consideration of woman's right to the ballot, and were so excused. Perhaps the movement feels the effects of the weather; something has taken much life out of it lately. On the same day the Senate agreed that the number of Representatives should be raised to 300. In the House, the bill was passed which is designed to promote reciprocity with Prince Edward's Island. It provides that the island shall admit all United States goods at the same rates as she admits those of Great Britain or any of her colonies, while we, on our part, have greatly lowered the duties on the products of the colony. This is a sort of a premium to the island on staying out of the Dominion, and will not make Nova Scotia or New Brunswick more contented with their lot. The revocation of the treaty three or four years ago did the business men of the maritime provinces great injury, and their dissatisfaction is at the bottom of two-thirds of the disgust with the Dominion. On the same day the Senate took off the disabilities of about 5,000 ex-rebels, but excepted from amnesty G. A. Smith, and Basil Duke, who was generally known as "John Morgan's brains," and the House had its annual talk about abolishing the *Globe*, and, as usual, did not abolish it; it also passed a bill making it possible for a judge to resign, if so minded, after ten years of service, and providing that, in case his resignation is accepted, his salary shall be continued to him.

The Senate, on Monday, discussed the pensioning of Mrs. Lincoln, and seemed to be more inclined to grant her petition. But there was the usual talk from Mr. Yates and others about Mrs. Lincoln and her family having been Southern sympathizers during the war, and about the danger of establishing the precedent of putting a civilian on the pension list. We may, however, without overturning much, establish the precedent, we suppose, of giving a pension to the widows of Presidents murdered in office by public enemies. On the same day, the amended Naturalization Bill passed. It might as well have been amended out of existence, for any good it can do in the prevention of frauds. It provides for two Special Commissioners of Elections, one from each party, who shall "assist" at elections in towns containing 20,000 inhabitants, and who shall have the services of the United States marshals. The truth seems to be that neither party dares to appear hostile to the speedy naturalization of foreigners, so we are to keep all the old abuses. Georgia, as we write, is not yet in.

We are obliged to postpone to next week the full consideration of the Currency Bill which has passed at last. It orders the Secretary of the Treasury to redeem $45,000,000 of three per cent. certificates, but does not tell him where he is to get the money to do it with, a somewhat important omission. He is to redeem them as fast as certain $54,000,000 new national bank-notes, provided for by the bill, are issued by new banks to be hereafter established; and, if he does so, there will nominally be an addition of $11,000,000 to the currency, but in reality, owing to the scarcity of greenbacks which must take the place of the certificates in the bank reserves, the probabilities are that the banking circulation will be diminished rather than increased. A funding bill has at last been agreed on, which issues $1,000,000,000 thirties at four per cent.; $300,000,000 fifteens at four and a-half; and $200,000,000 of tens at five. There is some hope for these last; but little, we should think, for the others.

The threatened war has served to confirm, in a rather striking manner, the views recently expressed by us on the steady decline of speculation in all branches of business. Our markets have scarcely been affected by it at all. Gold, which in 1866, on the outbreak of the Austro-Prussian war, rose thirty-five per cent. in two days, has barely moved from its recent sluggish inactivity. The public funds have not materially fluctuated. Grain and flour have actually declined, and nowhere is there evidence of any disposition to speculate on the probable results, to us, of a war between the two mightiest military powers of the European continent. That our material interests can remain unaffected by such a war, should it arise, is, however, not to be anticipated. On the contrary, it would have a most far-reaching influence on our national development, and could not fail to bring about changes in the social condition of European nations which would react upon us with double force. The prospect of peace or war is, therefore, for us, of the utmost importance—a fact which makes it all the more remarkable that speculation has not attempted to benefit by it. Even the Currency Bill, with its varied and important provisions, failed to influence the markets in either direction.

The session, as everybody knows, has not been a reputable one. In fact, a more helpless Congress, as far as the national interests are concerned, has not often met and talked, than the Congress now about to dissolve. But it has dealt with one subject energetically and promptly, namely, the case of Pat Woods, a drunken Irishman, who, while drunk, assaulted Mr. Porter, a member of Congress, in the streets of Richmond. Woods met Porter, and invited him to "take a drink;" Porter refused, whereupon Woods smote him in the face. It seems incredible, but it is as true as that the sun is in the heavens, that the House took this offence out of the hands of the police, and made it a breach of privilege; have actually debated it for several hours, Pat being at the bar; went very near imprisoning him for eight months, on the motion of Mr. B. F. Butler; and have finally imprisoned him for three months. We believe it has never been questioned that, to commit a breach of privilege on the person of a legislator, you must know him to be a legislator. There is no pretence that Woods knew Porter; Congressmen have no peculiar costume; and, consequently, what he really did commit was a common assault. A more miserable and ludicrous piece of tyranny, therefore, than treating it as a violation of parliamentary law, was probably never committed. All that can be said about it is that it is a worthy close to the debates on "funding" and on the tariff and the currency. But, if Congress is going to follow this precedent, Congressmen ought to have a uniform, so that, when anybody gets into a bar-room wrangle with the more disreputable members, he may restrain himself. The House has, however, done itself credit by its treatment of Whittemore, whom it refused to readmit, though it is doubtful whether, owing to its failure to expel him formally the first time, its position now is technically sound. The scamp's labors among the colored people are thus thrown away for the present. But why don't his defrauded creditors in Massachusetts bring him home on a requisition from Governor Claflin? Is he not "wanted," as the police say, in Salem, or thereabouts?

In spite of the great rejoicings there were over the reciprocity clauses in Mr. Burlingame's treaty, and the admission of China "to the family of civilized nations" which that treaty was declared to mark, the arrival of barely seventy-five quiet, well-behaved Chinamen in South Adams, Massachusetts, for the harmless, if not meritorious, purpose of making cheap shoes for American Christians, has raised a great uproar, and thrown a large number of politicians of both parties into a state of terrible excitement. It now appears the Chinese civilization is not only not equal to ours, but is far inferior; that the teachings of Confucius are worthless; that the Mongolian blood is horribly corrupt; that the Chinese population is eaten up by nameless vice; and that "the admission of China to the family of civilized nations" was a great mistake; and that "down-trodden Chinamen" are not going to be allowed to take shelter in this particular refuge of the oppressed. As we have before noted, General Butler has come out against them in a Fourth-of-July oration, and even Senator Wilson, of Massachusetts, denies that they have an "inalienable right" to make shoes in Massachusetts; and now the renowned Mr. Mungen, of Ohio, has introduced a bill into the House providing for the appointment of a joint-committee to devise machinery for the exclusion of Chinamen from the United States, except as travellers and merchants. It is safe to predict, however, that it will be as difficult to keep Chinamen out of America, if they want to come, and if employers want their services, as "to keep the skin from perspiring," to use King Louis of Holland's happy phrase, when his brother was urging him to enforce the embargo laid by the Berlin decrees. Nor do we think their advent will prove fatal to the American government or civilization. The only class in the world equal to the task of destroying either is the class of native American demagogues.

The Massachusetts Crispins seem, at least so far as South Adams is concerned, to be completely disorganized by the arrival of the Chinese, and we see that many of them have betaken themselves to other employments. Should the experiment prove successful, and there seems little reason to doubt that it will, it is very likely that the importation of Chinamen will become a favorite mode of resisting strikes all over the country. The lesson to be learnt from the incident by the working-classes is plain enough. Capital cannot be resisted successfully by force, or by restrictive legislation, or by combinations, however well organized. It is too subtle and fugacious a thing, and the world is too large and communication too easy, for any one country or race to retain it one minute longer than it pleases to stay. If it cannot work successfully in Europe, it will go to America; or if it finds America hostile, it will go to Asia. Moreover, steam has given it access to an enormous labor-market, which the trades-unions of Christendom will find it impossible to penetrate. Between India and China it is safe to say that capital now has within its reach, if hard pressed, the labor of three or four hundred millions of very cunning hands, ready to work for small wages, and for as many hours as they can support. In the face of this tremendous fact, the efforts of European and American workmen to coerce capital become almost ludicrous. They have but one means of protecting themselves against its tyranny, and that is, becoming capitalists themselves by co-operating. It is becoming clearer and clearer every day that this is the only road out of their difficulties. Of course, it requires more patience, intelligence, and self-restraint to co-operate than to strike or harangue political meetings, but there is nothing else for it; and working-men are gradually, though perhaps very slowly, beginning to feel this. At a recent co-operative congress, in Manchester, England, it was stated that the number of co-operative societies had risen from 150 in 1860 to 1,000 in 1870; that they had 250,000 members, and a capital of $15,000,000; and it is now proposed to establish a co-operative bank, we presume like those of Germany. We fear, however, the movement will not receive the support it deserves till the great craze of a "general strike" has had a trial, and has plunged the industry of the civilized world in confusion.

The long fight at Washington over the New York collectorship has resulted in the overwhelming defeat of Senator Fenton and the triumph of Mr. Conkling, who seems in his heart not to dislike a fight, and who appears to have managed this one with great skill and ferocity. How far to go in congratulating the country on his victory we do not know. He is hardly fighting "for his own hand," or it would be easier to tell; for, doubtless, there is a choice between such a man as he and such a man as Fenton. But, for anything we know, he represents a side which may be as unprincipled and rascally as ever any New York governor was. Certainly the man in whose immediate interest this final battle was fought is not a shining credit to his friend, the President, nor his patron, or rather ally, the Senator, nor even to the Republican party as existent in the city of New York. The scenes at Washington would have been ludicrous if one did not think of what they mean. Heated politicians hurried there from all parts of New York; Tom This was telegraphed for by one set of lobbyists, and Charley So-and-So was summoned to counteract him, and went on with pockets full of affidavits; there was mysterious wine-drinking in hotel-parlors, and much open whiskey-drinking in Washington bar-rooms, and fierce discussions of "claims" and "records;" there was any amount of button-holing, and promising, and threatening; there was betting on "Tom Murphy's chances," and on Fenton. One ornament of the curule chair makes a two or three hours' speech, to show that Tom is a traitor to the party, and a swindling contractor; another Senator calls his honorable friend a thief, a taker of bribes, and a detected traitor to the party; and then, by a vote of forty-eight to three, the most valuable and one of the most responsible offices in the United States is given to a hack politician, unfit for any trust. Senate and President share the honors about evenly. There will now be a clean sweep of custom-house officials, and for the second time in two years the work be committed to green hands.

The Illinois Constitution has been adopted by a heavy majority, the minority representation clause included. It is difficult to overestimate the importance of this to the whole country, inasmuch as the constitution will probably be copied elsewhere. The minority representation clause is the first serious attempt made by a democracy to amend its legislative machinery, and is, perhaps, for that reason, and in consideration of the magnitude of the evils it is intended to correct, the most important political reform effected since parliaments first met. Its working will be watched with great interest all over the world, and, indeed, it would be difficult to offer a more instructive study to political observers than the history and debates of the convention which framed this constitution. It will be very curious, too, to watch the experiments of "the men inside politics" on the minority representation rule. At present they are walking round it, and smelling it a little fearfully. They will gradually pluck up courage, however, and handle it, and see whether they can't make a stink-pot or fire-ball of it, or sell it as old cheese.

All other news from Europe becomes unimportant by the side of the news of the French attempt to get up a war with Prussia, which appears to have produced a profound sensation all over the Continent; for, however small our faith in the conclusions of the agent of the Associated Press, there is no getting over the evidence afforded by the quotations of Government funds on the various exchanges. There has been something very like a panic both in rentes, consols, and even in five-twenties in London. The performances of the Emperor are all the less excusable, inasmuch as they are due to his recognition of a theory which he has always waged war against, and against which his dynasty was a standing protest, and which has really lost all force in European politics—viz., that the family ties of sovereigns exercise an influence on international relations. It is notorious—and a dozen proofs of it might readily be produced—that they do nothing of the kind. Since the French Revolution, there has not been a single war or revolution in originating or conducting which the blood relationship of kings can be said to have played any part. Yet, all the excitement in Paris is due to the pretence that nations do still fight battles to help the then monarch's uncle or first cousin. To what extent the French public shares the fury of the court and the Paris press, it is impossible to make out from the telegrams. Everything we know of the state of French feeling about war points to the conclusion that the Emperor's dread of Hohenzollerns is not shared by the people at large, and that he would in case of disaster have absolutely no sympathy to fall back upon. Some of the stories of his intentions must, if true, call forth many grim smiles at the Prussian headquarters—such as, that he is going to command in person with the Prince Imperial on his staff.

The Prussians, in the meantime, seem to be taking matters very coolly, and have, as far as they show themselves in the controversy at all, the air of men who are quite sure of their game. Their moral position could hardly be better, unless, which is very unlikely, the French hold proofs of their complicity in the Hohenzollern nomination. They have had nothing to do with Leopold's selection; he is not a member of the royal family properly so called; on reflection, they may see fit to discourage or forbid his pretensions. In the meantime, it is the Spaniards who are acting, and not they; and in any event, it is impossible for them to do anything in the presence of hostile military demonstrations. If there is to be fighting, the French will have to begin it, and, if they begin, we venture to predict they will find the Prussians thoroughly prepared, and with one of the finest and best-led armies the world has ever seen. It is worth mention that there is hardly a mile of the Rhenish Provinces over which Prussian officers, of all arms, have not for years been in the habit of doing the work of actual marching and manœuvring, as if in real war, by night and by day. And if Napoleon's nerves can stand the fag of even a fortnight's campaign in that region, he must be in a far better state of health than the public has of late been led to believe.

By the way, we cannot help feeling surprised that none of our daily contemporaries have seized on the present tempting opportunity for getting up a "triple alliance" among the European despots. Such materials for new and startling combinations as now present themselves both to editor and correspondent have not been witnessed for many a long day. We perceive with pain, too, that there is trouble between the *Tribune* and *Times* about the Hohenzollern family, owing to the *Tribune's* having declared that it was Prince Charles, of Hohenzollern-Sigmaringen, instead of Prince Leopold, who was the candidate for the Spanish throne, for which the *Times* raps it over the knuckles. But, then, is the *Times* sure that the *Tribune* does not mean the "Prince Charles, of Roomelee," of the *Worcester Spy*, who is, according to that periodical, hereditary ruler of Constantinople and the parts adjoining, and who has been missing since the late great massacre of the Jews in those regions? Is it not possible that he has turned up in Spain, and is trying to shelter himself from the Sultan's wrath by getting himself made King of that country, with the secret support of the Moors of Granada? Should this supposition prove well-founded—and we regret that we are unable to reveal the source from which it comes to us, but the *Tribune* may rely on it that none of its correspondents, either horse or foot, has access to it—there will be warm work before long. What the effect of this will be on five-twenties, it is difficult to say. We also see, with regret, that the pusillanimous Khedive, whom the *Tribune* got ready for a fight with the Sultan, at considerable expense, nearly two years ago, has utterly and finally backed out of his engagement, and is at this moment in Constantinople, making his peace and submission. This is a little too bad, but we never did believe in the Khedive, and were surprised at the *Tribune's* taking any trouble about him.

"THE CHINESE INVASION."

The arrival of the Chinese shoemakers in Massachusetts has plunged a great many gentlemen, some worthy and some unworthy, into considerable embarrassment. In the first place, those Republican politicians who were led by their ardor, during the anti-slavery struggle and the reconstruction process, into taking strong ground against the doctrine that there was any marked difference either in the political or moral value of different races, are somewhat appalled by the prospect of having the strength of their position subjected to so serious a test as the influx of countless Chinese. In the second place, our friends the protectionists, who have so long been advocating the exclusion of the products of foreign "pauper labor," while calling loudly for the admission of "the pauper labor" itself—that is, for a protected market for their goods, but an open market for the workmen—are a good deal startled by the prospect of seeing their system applied to such a vast store of pauper labor as the Chinese Empire. In the third place, the uproarious sinalogues who amused themselves, after the arrival of the Burlingame Embassy, in abusing Mr. Ross Browne and everybody else, native and foreign, who denied that the Chinese were a progressive people, and their civilization equal, if not superior, to ours, and that the Burlingame treaty was one of the greatest gains ever made by humanity, are now a good deal alarmed by the operation of that very reciprocity clause of the treaty over which they did so much of their crowing. One's enjoyment of tiger-hunting, it has been well remarked, depends largely on which does the hunting—the tiger or the man. So, also, when we agreed to give the Chinese the same privileges in the United States which Americans enjoy in China, and declared that China was henceforward to be considered a member of the family of civilized nations, the value of our agreement seems to have depended a good deal on whether we or the Chinese availed ourselves of it to any great extent; and we suppose we shall now see some of the very publicists who shrieked so triumphantly over Mr. Burlingame's treaty asking to have our minister sent whimpering to the Board of Foreign Affairs at Peking, to tell them that when we agreed to let the Chinese come here freely the same as Irishmen and Germans, we never, never thought they would come. But then, it is quite clear that a country which receives a million and a-half or two millions of immigrants every year, and which is constantly calling for more, and has practically unlimited room within its borders, and which has made itself conspicuous by its hostility to distinctions "based on race, or color, or religion," cannot—consistently with decency or self-respect—get up and tell a great empire, with which it has just concluded a treaty of peace and amity, and before there are seventy thousand Chinamen in the country, that their morals, manners, blood, and religion are so objectionable that we cannot possibly receive them even as day-laborers, except in driblets. It may not have been wise to talk about the Chinese in the way we did when Mr. Burlingame was here, or rush into the treaty with the enthusiasm with which we rushed into it; but there is now no help for it. We must stick to our bargain. It is too late to have the Mongolian blood analyzed, and the low condition of Chinese morals exposed.

It is quite safe to say, however, that the expectations entertained by some of the alarmists as to the probable volume of the Chinese immigration, are grossly exaggerated; that the number of Chinese who know anything about the United States, or can be tempted into coming here, is comparatively small, and that the "swamping" process with which we are threatened, if it ever comes to pass at all, is indefinitely remote. We think, too, that the fear, into which some orators pretend to fall, that we are going to see "the coolie system" established among us—that is, Chinese laborers working at low wages, in a state of half-slavery, for a long term of years, has no foundation in fact. The coolie system cannot be established anywhere, except in a country where the sparseness of population and the sluggishness of public opinion would allow of the employer using violence to enforce his rights, without the provision of severe legal penalties for desertion or refusal to work. In the United States, the law provides no adequate remedy for breaches of contract on the part of laborers, as those know to their cost who import Irish and Germans; so that, no matter what we may, at public meetings, call the Chinese whom capitalists bring in—coolies, peons, or slaves—they will be, in practice, as free from the first day as any Irish hodman in New York. If one of them runs off or refuses to work, the employer will have no remedy but an action for damages—whether he could resort to a bill in equity for specific performance, we are unable to say—and we presume no Chinaman would object to any employer's pursuing him with weapons of this sort, as long as he found any solace in it. As to coolies being subjected to any species of corporal compulsion in any workshop or factory in the United States, those who fear this can hardly have estimated the keenness of the look-out which is now kept in all parts of the country, by large numbers of gentlemen, for attempts to "establish caste in America." Let us but hear of one or two cases of coercion, or attempted coercion, and we should see the victim surrounded by more "rising young lawyers" with writs of habeas corpus, and more members of Congress, and persons anxious to be members of Congress, with speeches and exposures, than the largest factory in the United States could possibly contain. Indeed, let the employers be ever so peaceable and long-suffering, we do not doubt that there will spring up what may be called a coolie bar, composed of legal gentlemen entirely devoted to egging on the Chinamen to make their masters uncomfortable in innumerable ways. So that we earnestly recommend all persons who are afflicted by the prospect of even a partial revival of slavery amongst us to hang up their harps and trumpets, and possess their souls in peace. We doubt if even Mr. Banks will ever be able to get materials for one report out of this particular field of possible human misery.

But, supposing that the Chinese are likely to come in vast numbers and undersell our laborers by their low standard of living, and debauch our politics by their ignorance and immorality, what can we do to prevent their coming? Nothing, we fear. We have gone too far in leaving all these things to be taken care of by Providence, to go back now and attempt to construct protective machinery. There is no way in which they can be shut out, and we are quite sure that any party which attempted to provide one would cover itself with ridicule. All the forces and ideas and wants of the age would fight against anything of the kind. Not that we agree with General Hawley, that we ought, "with the flag over our heads and the New Testament in our hands, bid them come." This mode of meeting difficult political problems has been tried long enough, and has met with very indifferent success, though it is still a favorite with a great many good people. It has been found in practice that when you sit down in this way the thieves come and sit down beside you, with far larger flags over their heads and a far larger Testament on their knees than yours, and, after having read you to sleep, go along the road, and "clean out" the passengers, and, when you wake up and open your Testament again, you find, on the whole, the world somewhat worse than when you closed your eyes. If we are really to be beset by a great swarm of men of an inferior civilization to ours, it will be well to wave the flag and well to read the Bible, but we shall need, also, the diligent and careful repairing and strengthening of our political fabric. We shall need stringent measures for the purification of elections, closer attention to the character of public men, a total reform in the civil service, and, above all, the restoration and preservation of the independence of the judiciary. It is the attempt to conduct the complex affairs of a great nation on the model of the town-meeting which has enabled ignorant foreigners to work so much mischief in American politics, and if they succeed eventually in making a change in the form of government necessary for the protection of property and civilization, it will be because Americans themselves have furnished them, in the shape of corrupt and incompetent civil servants and of poor and dependent judges, with the only weapons which can ever put American polity in serious peril.

THE EUROPEAN IMBROGLIO.

We are witnessing, in the eagerness of the French Government for a fight with Prussia, the first marked and, it is to be hoped, most unpleasant result of the plébiscite. Ever since the vote, the constitutional machinery, which it was fondly hoped that M. Ollivier had set up, has been getting out of gear. The Emperor has openly allowed other persons to speak for the Government in the Chambers, and his adherents have, it is believed, under the instructions of the Tuileries conveyed through an obscure journalist, voted against the ministry, on one occasion putting M. Ollivier in a ridiculous minority of twelve in the Corps Législatif. In the Senate he has been no less unfortunate. The convention he recently made with the Pacha of Egypt about the capitulations, or treaties exempting Christians from trial before the native tribunals, will probably not be ratified. Another convention made with Spain, admitting Spanish judgments to recognition in the French courts, without examination of their merits, brought on him still rougher handling in the Senate, and his colleague, the Duc de Grammont, who is now high in favor at the Tuileries, did nothing to help him. The journalist above mentioned, M. Clement Duvernois, a mere creature of the court, who has for some time been carrying on a paper, maintained, it is generally believed, out of the privy purse, of late took to abusing M. Ollivier so fiercely that the Emperor had, in common decency, to dismiss him; but on going he fired a parting shot by announcing that "the ministerial is not necessarily the imperial policy, and that it may often happen that the policy maintained by the ministers in the Chamber is at variance with the personal tendencies of the sovereign;" and that "before the 8th of May it was difficult to distinguish between the Emperor and his ministers; but, thank God, the plébiscite has changed all that." To appreciate the full significance of this, it must be remembered that Duvernois, besides being an "inspired" editor, is a member of the Chamber.

M. Ollivier's retention of his office, under not only these personal slights, but the almost open repudiation of the régime the carrying out of which was his object in taking office, has lost him the respect of nearly every man in France whose respect is worth having; but the complete exposure of the hollowness of the pretence that parliamentary government had been restored seems to have been reserved till now. The attempt to pick a quarrel with Prussia about the Spanish crown is being made in a style which makes further concealment of the real state of the Government impossible. Both in the nature of the pretext, and in the manner of putting it forward, there is an ostentatious eagerness on the part of the Emperor and his confidants to make it appear as plain as possible that France is still ruled by a Cæsar, and that the army is still the most important element in the state, and to wipe out the remembrance of the checks of the last seven years, if not by actual war, at least by an amount of bluster which will produce on the French imagination the effect of war.

There is nothing in the offer of the Spanish crown to Prince Leopold to call for sudden military demonstrations on the part of France. There are a dozen ways of accounting for the offer without ascribing it to a desire on the part of Prussia either to annoy France or aggrandize herself. No malice aforethought is implied in it, as in the celebrated Spanish marriages set on foot by M. Guizot. The Spaniards are looking high and low for a king, and turn naturally to the idle young men of royal blood. They have tried Italy, Portugal, and England in vain. The Orleanist princes ruled out, there is no Frenchman available, and it was the most natural thing in the world that they should next turn to Germany; and amongst the eligible Germans there is nobody so eligible as this Prince Leopold. He is a Hohenzollern, to be sure, but of another branch than Frederick William's, is out of the line of succession to the Prussian throne, is nearly as closely related to the French Emperor as to the King, and has had his readiness to accept a situation as monarch advertised, if we may use the expression, by the accession of his brother to the throne of the Danubian Principalities. If, however, he is too much of a German to permit of his reigning at Madrid without offence to France, the course prescribed to the Imperial Government by usage, and courtesy, and a decent regard for peace, and for the opinion of the civilized world, and the course which, let us add, a ministry really constitutional would have pursued, was to ascertain first from Prussia whether she supported or took any interest in the Prince's nomination. If she had repudiated all share in promoting his election, as it appears now she would have done, and as, indeed, she has done, it would only have remained to signify to Spain the determination of France not to permit his accession, and Spain assuredly would not have thought of disregarding peremptory prohibition from such a quarter. It would, indeed, be ridiculous for the Spaniards, after the remarkable displays of indifference to all possible aspirants to their throne which they have been making for the last two years, and with their treasury on the verge of bankruptcy, to go to war with France for the sake of Prince Leopold, whose name the nation now hears for the first time. In fact, the quarrel, if quarrel there be, lies between France and Spain simply. Prussia really withdrew from the controversy by the repudiation of Prince Leopold, which the telegraph announces she at once made; and here it ought, as far as she is concerned, to have ended.

The Emperor, however, was clearly determined from the outset either to humiliate her or force her to fight, for he has insisted on her not only disclaiming all connection with "the intrigue," but forbidding the Prince to accept the Spanish offer. Now, to this demand Prussia might accede as a matter of comity after the receipt of a serious remonstrance, but it is clearly impossible for her to accede to it when backed by threats and immense and sudden military preparations and warlike articles in the Paris papers. A demand made under such circumstances is almost a declaration of war, and there is no power in Europe which would hesitate to consider it so; but its success would serve the Emperor's purpose nearly as well, and in fact better, than a great and decisive victory. It would relegate Prussia once more to a second-class position, and restore the prestige of the Empire.

It is difficult to extract from the telegrams much aid in calculating the chances of war, inasmuch as the telegraphers naturally select all the startling incidents of the crisis and pass over the quieter and less striking phenomena which make for peace; but if it be true that the French Government has of late been bringing to bear on the Spaniards the pressure which ought to have been applied to them at first, and to nobody else, it would seem that it is preparing a back-door escape from a position which every day must become morally less tenable. A more ferocious display of eagerness for war has not taken place in Europe within sixty years than France is now affording; and in our time any power which takes the field under the strong moral reprobation of the civilized world goes into battle half-armed. It appears, indeed, as if fortune, which has done so much for Prussia, was going once more to crown her with rejoicing; for Bismarck could not possibly have desired a better chance of escape from the various and great difficulties which attend the organization of the new confederation than that which the French Emperor is apparently offering him. The Prussian yoke is a heavy one, and the other members of the confederation are tolerably restive under it. What is wanted to reconcile them to it, and to drive the whole of Germany into a real as well as paper unity, is a foreign war forced on the Government, and no war could possibly do the work so well as a war with France. Austria or Russia, or even England, might in a contest with Prussia find plenty of friends and sympathizers on what is now German soil; but a French army seeking to annex German territory without provocation will find itself face to face not with Prussia only, but Germany in arms; and Germany in arms is, we take it, a foe which France will never again meet with the smallest chance of success. That unseen and indefinable force which we call national vitality, and which, if it does not always win battles, wins campaigns, and holds the future with a mighty grasp, has apparently abandoned France, while it swells the German veins almost to bursting. France is living on her nerves, and splendid nerves they are, but they cannot do the work of muscle. Her population is stationary or declining, her great towns are converted into great sores, her Government has no roots in the soil, and, though the army never was better, it has smaller reserves, in proportion to its responsibilities, in the shape of heart and hope and numbers to draw on, than any of its predecessors, and none of its predecessors has ever undertaken a task so mighty as the subjugation of Prussia, as Prussia will be when the Rhenish Provinces are invaded. We cannot help believing that the sober second thought of the Emperor, if not his physical inability to support the strain of prolonged excitement and anxiety, will yet lead to a peaceful arrangement of the difficulty.

ANOTHER DELICATE SUBJECT.

THE fact, which there is no denying, that there are to be found, amongst the female advocates of Woman's Rights in this country, some whose reputation is positively bad, and others whose reputation would bear improving, has not unnaturally brought some odium on the whole movement, and this odium is somewhat increased by the belief which many people entertain, that, owing to the chance of acquiring notoriety which the movement offers, the number of such women engaged in it is likely to increase greatly if it continue to spread. These charges the respectable agitators meet by a plea which is known to lawyers as "confession and avoidance;" that is, they say: "True, but what of it? You men, in your politics, have no hesitation whatever in associating on perfectly friendly terms with well-known profligates of your own sex, and think yourselves and your work none the worse of it. Indeed, some of your most famous statesmen have been men of dissolute lives. Now, chastity is a law of universal obligation, just as binding on one sex as on the other. We shall, therefore, not submit any longer to the imposition of pains and penalties for the violation of it on women to which men are not also exposed. If you wish us to be particular about the company we keep, you must set us a good example. Until you do so, we shall follow the good old plan of 'accepting aid from any quarter,' and shall admit everybody to our platform who is willing to adhere to our doctrine and preach it." This is the argument, too, which the Englishwomen who are engaged in the discussion of that savory subject, the Contagious Diseases Act, use freely, with the necessary modifications, and although as yet it is brought forward somewhat timidly in this country, and oftener in private than in public, we have little doubt we shall see it paraded before long as invincible, and large numbers of "strange women" securing under cover of it "spheres of usefulness," from which, under the present heartless social regulations, they are excluded. Some of the respectable section of the agitators are, however, conscious apparently that this view of the subject at least needs defence. Mr. T. W. Higginson, in a recent number of the *Woman's Journal*, utters a mild protest against bringing to the work anything but "clean hands," and deprecates the use of the platform for the repair of damaged reputations or the purging of old stains. Mrs. Stowe has also warned the brethren and sisters away from the discussion of matrimony and kindred subjects, feeling conscious apparently that the views of some of them on these questions can hardly be aired without giving offence. But, with all this, we believe we are right in saying, that from the doctrine that "chastity is a law of universal obligation," which there is no gainsaying, the champions of Woman's Rights have deduced, or are fast deducing, the conclusion that one of the things they may lawfully do, in order to get these "rights," is to treat female violations of the law as no worse than male violations of it, and to disregard, as of male invention for the perpetuation of male tyranny, the old and universal usage which lodges woman's honor in her purity. In doing this, they are doing one of the things which make them in our eyes, and that of a large portion of the community, mischievous people, and mischievous in the direct ratio of their individual worth and influence, and in support of this view we shall resort once more to that plain speaking without which, as we have already said, it seems impossible to discuss this question efficiently.

Although it is true that chastity is a law of universal obligation, it is not true that men's guilt in violating it is as great as that of women, because the degree of guilt depends on the degree of temptation, which in the case of men is very strong, both from temperament and circumstances, and in the case of women very weak. Men's passions are fierce and active; women's, feeble and dormant. Moreover, the way in which the work of life has been divided makes men's exposure to temptation constant; women's, very rare. The race has, therefore, in forming its moral judgment on the quality of offences against sexual purity, always treated the man's guilt as less heinous than the woman's, and although this rule does occasionally work astounding injustice, and has called into existence that great blot on Christian civilization, the cold-blooded male seducer, it does in the vast majority of cases work what, we believe, is in the courts of heaven, as well as those of earth, recognized as substantial justice. The distinction has, however, a utilitarian as well as a purely ethical basis, and one no less important certainly. Like most other of the usages kept up by society for the regulation of the relations of the sexes, it has for its object the maintenance of the integrity and purity of the family. The maternity of a child is a physical fact, very difficult of concealment, hardly ever successfully concealed, and usually provable by many witnesses. The paternity of a child is, on the other hand, simply an inference which derives all its strength from the importance attached to chastity by the female sex. It rests simply and solely on the character of the mother. It is incapable of proof by any other testimony than hers. All that is known about it is locked up in her breast, and to weaken her scruples, therefore, is to throw doubts on the origin of all her children; or, in other words, to strike at the very roots of the family organization. If we had things so arranged, therefore, that a woman thought no more of violating her marriage vows than a man, we should have probably in a very large part of the world have either to give up the family altogether, or shut women up, as they once were shut up. The inference with regard to the paternity of children, therefore, has to be jealously guarded, not only because it is in the nature of things weak, but because it furnishes what is, in the present state of human nature, the main or sole inducement to husbands to toil and accumulate for their wives and offspring. For, let it never be forgotten, the husband must, except in an infinitesimally small number of cases, be everywhere the bread-winner. Children must always look to their father for most of the arms with which they face the world. Now there may come a time when, after having heard the requisite number of lectures, and read the requisite number of tracts, a man will toil cheerfully for the maintenance and education of such children as his wife may see fit to introduce into the household, without caring whether they are his own or not. But we are still far away from any such consummation. As matters stand, brutal man will neither dig nor delve for the support of any children which he does not possess a moral certainty he has begotten. He acquires this certainty through his confidence in his wife's purity, and society helps to justify it by visiting her lapse from virtue with the deepest of earthly damnations. To be sure, the arrangement does not work perfectly; but then the world is full of imperfections, brethren. We know you would have made a far better world if you had had a chance, and it does seem a pity that so many things, and especially the relations of the sexes, and the manner of perpetuating the species, should have been settled without waiting for your appearance or consulting you. But then, you must admit, it is the Lord's doing, and, if not as well done as you could have done it, is at least unchangeable.

But we have another worse charge to make against this new manifestation of the rage for equality, and a more serious one. Instead of trying to level *up*—that is, to raise men to the female standard of purity—the agitators are actually, and almost without blushing, trying to level down—that is, to put women on men's lower plane. The necessity of associating with scoundrels, and of pretending not to know that they are scoundrels, is to the best men a horrible necessity. Women are saved, and to their own infinite gain, from having to undergo anything similar with regard to the worst members of their own sex. We know there is often cruelty in the exemption, but we know, too, that it is an unspeakable support to virtue. It might, perhaps, have been better, as we said some time ago, if matters had been so arranged that a man might have thieves for his bosom friends, while entertaining a hearty horror of theft. So also it might, perhaps, have been better if matters had been so arranged that ladies might have prostitutes visit them freely at their houses without losing a particle of their horror of vice. Providence has managed the affair differently. It has made, as is notorious, the avoidance of bad company one of the greatest aids and one of the chief conditions of right living. Women are fortunate enough to be able to avail themselves of it in the cultivation of the greatest of all their virtues, and the most useful. It is now gravely suggested that they throw this aid away, and display for the morals and manners of their fellow-women that beautiful indifference which their brothers and husbands show for the weaknesses of the Fisks and the Whittemores—that is, reduce us all to the same condition of moral phlegm, so that, when we go home in the evening sick and sad, after a day's work among male scallawags and cheats, we may meet our sweet Mlle. Cora Pearl, the distinguished Cocotte, and her friend Madame Dodo, the brilliant and public-spirited proprietor of the celebrated "never-failing No. 3 pills," coming out from a committee meeting in our back parlors.

We venture to affirm, however, that the moral standard which prevails among the women of the Western World, and the precautions they take for its maintenance, are among the most precious achievements of civilization—those of which mankind may most justly be proud. If we were asked to point out the most impressive indication of progress, we should unquestionably name, not the deliverance of women from the bolts, and bars, and veils of the harem, but the commission to their custody of their own purity, and the singular fidelity with which they have fulfilled the trust. We doubt, too, if anything has done half as much for the elevation of men as the lesson which every man learns from his earliest years from them of what is possible in the field of self-restraint, and one of the very best things we know about men is the pains they take to keep the unseemly, or base, or degrading side of life from the eyes and ears of their wives, and daughters, and sisters. Women, it is true, have done little for the world by their minds; but they have done an enormous deal by their manners, in exemplifying, day by day, virtues of which, in their absence, men would only dream. The next task to be undertaken by them is the introduction among men of their standard of virtue; and not—even for the sake of shining in the edifying wrangles of the caucus and the court-room—the adoption of men's. The value of their contributions to politics is a matter of pure speculation; if we were to judge from what they have done already, we should say it would be very small. The value of their contributions to morals, happily, is a matter of experience. There is no man to whom some woman has not proved a second conscience, and it will be a sorrowful day for humanity when we see men and women in the market-place and the legislature encouraging each other—to use the chaste language of a distinguished male Republican politician and philanthropist—"not to be too damned scrupulous."

ENGLAND.—THE EDUCATION QUESTION.

LONDON, June 24, 1870.

THE great interest of the past fortnight has been the debate—which is not yet ended—upon the Education Bill. The question is, in many ways, so important, and it illustrates so strikingly some of the modern tendencies of English politics, that I must dwell upon the situation at some length. I gave you a short account in my last letter of the then position of affairs. To the surprise of everybody, Mr. Gladstone opened the debate on the motion for going into committee by proposing a new scheme, intended, in the view of Government, to offer an available compromise. This scheme, whether successful or not, considerably modifies the attitude of Government towards the question, and I must shortly explain its nature. There were, as I explained, three classes of schools proposed in the original bill: first, the denominational schools on the present system; secondly, the schools founded out of local rates; and, thirdly, schools founded by denominations, but receiving aid from the local rates. In each of these classes of schools, according to the Government plan, religious instruction might be given in the tenets of any particular sect; but a proviso was inserted to enable the children of other sects to attend the schools without receiving instruction to which their parents might conscientiously object. Mr. Gladstone's present proposal is that, in the second or rate-supported class of schools, the religious teaching shall be strictly "undenominational," to use the expression which has become technical; and that object is to be secured by forbidding the use of any catechism or formulary characteristic of any particular sect. By this means, it is hoped that a religious teaching will be given which will be tolerably acceptable to nearly all classes of children. This is regarded as a concession to the party represented by the Birmingham League and the secularists generally. It is balanced, therefore, by proposing to increase the Parliamentary grant at present made to the denominational schools, which was formerly one-third of their whole resources and is now to be one-half. Finally, the third proposed class of schools is to be given up altogether; that is to say, the denominational schools are in no case to receive aid from the local rates. Thus the measure, if adopted, will in fact reduce our system to two classes of schools: schools founded out of the local rates, and supported partly by the rates, partly by the children's payments, and partly by Parliamentary grants, and teaching a kind of neutral religion from which all specific formularies have been cut out as much as possible; and, secondly, schools founded by the denominations, and supported partly by voluntary subscriptions, partly by children's payments, and partly by Parliamentary grants, and giving such religious instruction as they please, though, as a condition of receiving the Parliamentary grant, there is in all cases to be a "conscience clause."

This plan has excited an extraordinary amount of discussion from all sides and from all points of view. It is disputed whether it is a concession to the denominations or a concession to the supporters of a secular system. An animated debate has already lasted for three days, and will last for at least another day. From the chaos of conflicting sentiment, it is rather difficult to disentangle any definite result. Two conclusions, however, seem to be probable. The new plan has certainly not pacified the opposition. Mr. Disraeli did his best to make matters unpleasant on the first evening on which it was propounded; and his attack has been followed up by several of his political friends. They place themselves unreservedly on the side of denominational education, and denounce the kind of neutralized religion which is offered as being equivalent to no religion at all. On the other hand, the radicals are equally clear that the scheme will, in spite of appearances, be on the whole in favor of denominational teaching. They declare that the religious instruction will be just as denominational as now, in spite of the exclusion of catechisms; and demand that stronger security shall be taken. It is plain enough that the only logical conclusion from their demands would be to exclude religious instruction altogether from the state schools, and leave it to voluntary effort. If the agitation be continued, I have no doubt whatever but that is the position which they will ultimately assume. But it is curious to remark that they are afraid of urging this distinctly and boldly; they dread the unpopularity which might result from saying that the Bible should be excluded from the schools; for, after all, they feel that the Bible is still a good name to conjure by in England; and they, consequently, propose that the religious instruction to be given in the rate-supported schools should consist simply in "undenominational and unsectarian" teaching from the Bible—whatever those adjectives may mean. Hereupon issue is joined, and any amount of eloquence is expended in pointing out, on the one hand, that the English people will not be satisfied without a religious teaching which is something more than a sham; and, on the other, that no Englishman will submit to paying for his neighbor's religion. All the usual commonplaces are advanced with proper energy, and all other aspects of the education question are fairly lost behind the disturbance produced by this exciting topic.

Mr. Forster, whose position has improved more rapidly than that of any of our statesmen during the last few years, has spoken very forcibly of the danger of delay, and the many objections to leaving children uneducated whilst we are discussing what shade of theology is to be impressed upon minds equally incapable of all theological distinctions, and the postponing all the other important questions which are pressing for public attention. The newspapers, for the most part, agree with him in that matter, and cry out with tolerable unanimity against the miserable waste of time and energy due to these vehement discussions. For God's sake, it is said, let us get some system of schools set at work, and drop these ceaseless squabblings which stand in the way of all serious reforms. And yet the debate is continued. Very few members seem willing to sacrifice their eloquence to their patriotism. Indeed, the more the situation is examined, the more serious it seems to be. The indications as to the fate of the present measure are far from distinct; the obstinacy of opposition, both on the radical and conservative side, may protract the discussions to such a length as to render legislation impracticable, or the majority at Mr. Gladstone's disposal may enable him to force it through. Even if carried in its present form, there is danger that it may lead to a renewed agitation during the coming vacation, and he would be a bold man who should feel certain that that agitation would not lead to very serious results. The fact is simply, that the question touches what is just now, and, if I mistake not, is likely to be for some time, the most delicate point in English politics. There is, as I have several times remarked, a growing eagerness about all questions which touch the position of the National Church. It would be useless to enquire who is most to blame or to praise for this state of things; but everybody feels that questions connected with the Establishment have a most intimate connection with our politics. The strongest point of the Church has been the degree in which it has supplied the educational system of the country. In almost all rural districts, the schools have been founded and supported by the clergy, and in towns the clergy have taken by far the largest share in the work. This being so, they have a natural jealousy of legislation which proposes to take the management in great degree out of their hands. Dissenters, on the other hand, are thoroughly determined to take every possible advantage of the change. This is the difficulty which gives the real intensity to the struggle. It is the beginning of a warfare which will probably be carried on with greater rather than less animosity as time goes on; and must ultimately end, as most people believe, in the disestablishment of the Church of England. We are, indeed, a long way from that consummation, and there will be many ups and downs in the contest, many truces and fresh outbreaks of hostility, and many new party combinations, before the end. Meanwhile, however, the existence of jealousies which cannot be really satisfied short of that conclusion is daily more obvious, and serves to embitter controversies which would otherwise be of less importance. Now, Mr. Gladstone is still a genuine believer in the Church of England; though by his legislation in the case of Ireland he has done more than any living man to hasten the inevitable catastrophe. Mr. Gladstone's staunchest supporters, on the other hand, are dissenters, and in almost every English borough the dissenters form a strong and united portion of the Liberal party. Hence, in spite of his existing majority, he is in a position by no means free from danger. He may carry his measures in the House of Commons, but there is always the risk that by alienating the dissenters he may lose his command of the country. They could change the balance of parties, and upset the present régime, strong as it appears to be at the present moment. The indignant Radicals, like Mr. Fawcett, Mr. Vernon Harcourt, and Mr. Dixon, may be in a small minority, but their hostility is of more importance than their numbers indicate, because they have at their backs the great majority of the dissenting interest. I have noticed this, because it is the circumstance which gives real importance to an opposition of no great numerical value. At present, one of two things seems to be almost equally likely. Either the Government will get their own way, or all legislation on the matter will be postponed for a year. As I should exceedingly regret such a conclusion, and would rather see almost any system of schools than none, I hope for the success of Mr. Gladstone's proposal. But if it succeeds, there will still be food for agitation, and I only express the general conviction in saying, that ultimately any compromise, however ingenious, will probably break down, and that the state will either confine itself to supporting the efforts of the different denominations, or, which is far more probable, that it will attempt simply to provide a secular system, and leave the religious instruction of the country to voluntary efforts. The difficulties in the way of any solution are so great, that we have probably a long period of political warfare before us.

I will only remark at present, that one other question seems to be coming up, namely, the efficiency of Parliament itself. Never were so many important questions before it, and never did the House of Commons appear to be so incapable of getting through its work. A proposal was made the other day to forbid the bringing on of any business after twelve o'clock at night. It was finally agreed that it was impossible to draw a hard and fast line, and that the question must be left to the good sense of members. The facts stated, however, were significant of the labor imposed upon ministers by present arrangements. After a hard day's official work, Mr. Gladstone has to be up night after night till long after twelve, ready to take his part in debate, and scarcely able to snatch more than a few minutes for his dinner. Mr. Bright's health has broken down under the pressure, and more than one of his colleagues has suffered materially. Considering how seriously Mr. Gladstone takes every question, and how excitable and vehement he is apt to be, it must be admitted that the strain to which he is subject is almost greater than a man can be expected to bear for many years together. It is not wonderful that arrears accumulate, and the present meritorious effort to get two large measures through the House in a single session seems as if it might aid simply in increasing confusion. The fact is that Parliament undertakes to do too much, and, not content with having supreme legislative power, insists on applying itself to the minutest details. It settles everything, from a change in the land-laws to altering the direction of a road in the Park. Some remedy is clearly needed, and the present era of political activity will, it is to be hoped, call attention to this amongst other aspects of our system.

Correspondence.

COEDUCATION AT ANTIOCH COLLEGE.

To the Editor of the Nation:

Sir: Without attempting fully to discuss the merits or demerits of a system which, at present, is attracting much attention all over our country—bearing, as it does, so intimately upon the more important question of "Woman Suffrage"—I beg permission to state a few simple facts concerning coeducation at Antioch, hoping that in the course of my remarks I may be able to correct certain loose statements which, from time to time, have been made, ostensibly for the purpose of giving information relative to the success of coeducation, but really to give aid and comfort to the agitators of "Woman's Rights."

I am further led to make the following statements by an expression of opinion on the part of the *Nation*, of May 26, that it would be desirable to ascertain the average proportion of male to female students in the mixed colleges of the West.

Antioch began its career in 1853 under the direction of Horace Mann, whose well-known reputation as an educator induced a large number of young persons of both sexes to apply immediately for admission. Commencing with the year 1853, the attendance, as shown by the catalogues of the respective years, is as follows:

	1853–4	1854–5	1855–6	1856–7	1857–8	1858–9	1859–60	1860–1	1861–2	1862–3	1863–4	1864–5	1865–6	1866–7	1867–8	1868–9
Gentlemen,	235	238	248	401	252	207	145	150	121	..	96	..	138	133	148	130
Ladies,	98	141	115	138	158	116	85	96	77	..	72	..	70	73	84	77
Total,	333	379	363	539	410	323	230	246	198	..	168	..	208	206	232	207

It will be seen from the table above given, that the average attendance of the ladies bears to that of the gentlemen a ratio varying between the limits ¾ and ⅓ nearly. There is no catalogue for 1864–5, and that of 1862–3 I have been unable to obtain.

From 1857 to the present year, the numbers in the graduating classes are given in the subjoined table:

	1856–7	1857–8	1858–9	1859–60	1860–1	1861–2	1862–3
Gentlemen,	12	5	14	21	5	6	0
Ladies,	3	2	4	7	2	8	1
Total,	15	7	18	28	7	14	1

	1863–4	1864–5	1865–6	1866–7	1867–8	1868–9	1869–70
Gentlemen,	0	0	3	4	2	3	4
Ladies,	1	0	1	0	3	1	3
Total,	1	0	4	4	5	4	7

Here the proportion of the female graduates to the males is from $\frac{1}{1}$ to ¼. It will be noticed that, from 1861 to 1865, the ratio is reversed, that is, the number of female graduates is larger in each case than that of the males, though the numbers in both cases are very small. The cause of this inversion in the ratio is due to the war, which, as is well known, took a large majority of the patriotic young men from the schools and colleges all over the country. This fact is amply sufficient to explain why the number of male graduates was not proportionately larger. Again, Antioch underwent, about that time, a financial crisis which would operate, of course, to the diminution of attendance irrespective of sex. These two conditions removed, I can see no good reason for believing that the ratios existing between the numbers of the male and female graduates previous to the war would have changed.

Of what significance are the figures given in the first table? It is a notable fact that there are many colleges in the country, especially in the Eastern States, which offer better facilities to young men than Antioch has been able to afford. The *best* class of young men (and I say it without intending any disrespect to Antioch) attend those colleges. Men of less ambition and perhaps of less ability, and men without means, come here. How is it with respect to the other sex? Deprived of educational advantages in her own State, the Eastern girl, intelligent, full of impetus and fire, hurries to join her Ohio sisters in the participation of those privileges which her brother enjoys at Harvard and Yale. We hear it said again and again, that woman is not inferior to man in mental grasp—that she does not want energy—that she can endure as much hard study as man and come out of it better—that all she wants is the *opportunity* of going to college.

If these be the characteristic traits of women, what shall we do with the figures given above?

If the incentives to attend college acted alike upon men and women, we should regard the statistics given above as *prima facie* evidence that women have either little desire or little ability to become highly educated, but it becomes so *a fortiori* when we remember that these mixed Western colleges are the *only* ones which *women* can attend, whereas men have access to *all the colleges in the world.* Reverse the case, and what would be the result? Allow women free access to all colleges, but restrain men to a half-dozen small colleges here in the West. I think in that case there would be little question in regard to the predominant sex at Antioch.

These considerations lead us to the easy explanations of what Woman's Rights people regard as a telling fact. It has been repeatedly stated that the women of Antioch were equal to the men intellectually. In the Cornell *Era* of March 23, Professor Russel says: "At Antioch College the women always took the lead in mathematics as well as in history." If the statement were true, which I deny, it would prove nothing, for the reasons which I have just given. But the statement, aside from this view of the case, is worthless for three reasons. First, No record of class-standing has been preserved at Antioch, and hence Mr. Russel has no data upon which to base an opinion; secondly, Mr. Russel did not teach mathematics; and, thirdly, my own observation, extending through a period of four years, warrants me in the opposite belief. It is certainly a great pity that men of intelligence and experience should make statements at once so gratuitous and unscientific.

But if it can be proved, as it cannot, that the women of Antioch recite as well as the men, it remains to be shown that they are equally able to apply the principles learned in the recitation room. I have looked in vain among the statistics of the alumnæ of Antioch, but can find nothing to confirm Mr. Russel's statement. I find no women who in after-life have justified his very liberal opinion of their mathematical superiority. On the contrary, I find that most of our female alumnæ have accepted the positions of wife and mother, and in so doing have shown their good sense. They have shown by their own free choice that domestic life—aye, even the much-abused *sphere*—presents attractions superior to every other calling in life.

To show that woman is able, equally with man, to undergo the mental strain incident upon a course at college, some statistics were given in the last number of the *Nation* relative to Oberlin College, by which it appears that the mortality among the male graduates of that college is greater than among the females.

Out of 79 male graduates of Antioch 9 have died, 3 of whom were either killed in battle or died of sickness induced by exposure while soldiers. Omitting these, we have 6 out of 79, or a little less than 1 to 13. Of the female graduates, 2 out of 37 have died, or 1 to 18.

If it were at all worth while, the significance of these figures could be changed by the statement of two facts. First, the mental strain inseparable from a college drill at Antioch is not of itself sufficient to impair the constitution of any person, male or female; and, secondly, a large number (nearly all, in fact) of the young men who graduate here have done it without means. They have paid their college expenses by sawing wood, building fires, sweeping the halls, etc. Where a young man relies upon his manual labor for support while attending college, it is easy to see that a much larger draft is made upon his vital resources. A man who works four or five hours a day each day at manual labor can only sustain his class-standing at a great sacrifice of strength, and, in many instances, of health. Such men rarely graduate with constitutions unimpaired, and it would be strange indeed if mortality were not greater among them than among women whose only duties have been to prepare recitations. I admit that some women are going to school here under the same unfavorable conditions, but few of this class have ever graduated and few succeed in remaining in school for more than one or two years. I merely adduce these plain facts to show how gratuitous many of the statements are which are daily made by persons of superficial observation as to woman's ability to cope with man under all circumstances. I do not say that she *cannot* do it; I only say that in Antioch, and I presume the case is the same in other Western colleges, she has not, up to this time, actually done so.

That the system of coeducation is a good one, and will, sooner or later, become widely adopted, I firmly believe. Its tendency is toward moral development in both sexes. For the past ten or twelve years, not a single difficulty has arisen here out of the sexual relation. All this proves that coeducation may be safe when practised within proper bounds; that men and women may be morally as well as intellectually improved by it; but I don't think that it proves anything more.

We have not, as yet, data sufficient upon which to base a law relative to the comparative mental capacities of men and women.

S.

YELLOW SPRINGS, OHIO.

THE CHURCH AND THE WORLD.

TO THE EDITOR OF THE NATION:

SIR: I am a constant reader and great admirer of the *Nation*, but from some of its religious sentiments am sometimes compelled to dissent. In the issue, June 16, is an article, under the caption of "The Church as a Reformatory Agent," called forth by a discussion raised in Mr. Beecher's church as to whether Charles Dickens was a Christian. In the discussion of the subject you make some very just and pertinent remarks, but some also which were at least uncalled for. As to the power of the early Christians, it is only partly true that they conquered the world by the spectacle of a "godly, sober, and religious life." If we credit the history of the church, we must admit that very marked displays of divine—miraculous—power continued for several generations after the times of the apostles. But with that statement I did not wish particularly to find fault. The vices of our times are greatly different from the earlier ages of the church, you say, and "great numbers of the knaves of our time . . . are in the church, and active in it, and call themselves 'Christians,' as a help in their business; and their presence, great and small, has robbed the church, we do not hesitate to say, of a large portion of its power as a reformatory agency." All of which is true. But you make this last statement for the purpose of showing church members that it is useless for them to talk of and insist upon reformation in the case of individuals or of society, until the church is rid of all its tainted members. Now, that is simply the old, threadbare objection that has been raised by every individual to whom Christ in his Gospel has appealed since he published it. But how futile it is. Suppose every body of reformers were compelled to rid itself of its unworthy members before it should be allowed to preach its doctrines, what would become of reform? Did not Christ and his apostles go about their work of reformation while yet there was at least one of their number who was a deceiver? Far be it from me to palliate the presence of bad men in the church. But it is wholly impossible, in the present state of society, that such shall not be the case. The tares and wheat will be found together, and human power cannot wholly separate them. You pay, perhaps, a just compliment to the Quakers, and say that, "if other denominations wish their denunciations of fraud and corruption to have weight, and their reproaches of such men as Dickens for not being Christians to be anything but impertinences, they will have to weed themselves in some way of their tainted members, and prevent themselves being used to push trade."

Now, I suppose the editor of the *Nation* will admit that the principles of Christianity, and its claims upon each individual, remain the same, whatever be the character of its professors. If its claims are not the claims of man, but those of God—if every man is responsible to his Maker, why may Mr. Dickens, or any other man, be excusable for refusing to be a Christian or a church member until the church is weeded of its "tainted members"? I confess I am unable to see why a man, or class of men, should be branded as impertinent for raising the question as to whether the character of a certain other man measured up to a prescribed level—a level not of human prescription, however.

Will you, sir, be kind enough to throw a little more light upon this subject? and oblige, B. H. B.

[We neither said nor suggested that "the church should rid itself of its impure members before it preached its doctrines." What we did suggest was that it was very unsafe and unbecoming to assail anybody who, like Mr. Dickens, did Christian work outside the church, for not formally belonging to the organization, or to doubt his being a Christian because he did not belong to it, as long as so many members of the church are great rascals. If, for any reason, the church is obliged to submit in silence to the presence, in its pews and at its sacraments, of notorious knaves—(and we affirm that it does so submit)—who use their connection with it as a cover and help in their villany, then, we say, it owes, at least, some silence and forbearance to the upright, pure, and self-denying men who profess and practise Christianity outside of it. We say, moreover, that it is a fair deduction from Christ's teachings that, were he on earth, he would have taken Charles Dickens to his heart in a loving embrace, while he would take a whip of small cords to some of the "Christians" who have had the audacity to question Dickens's claim to be considered one of his followers. In short, our position is that, if the church means to make membership a test of men's Christianity, it must make it a mark of pure living also, which it does not.—ED. NATION.]

THE DEVELOPMENT OF BREITMANN.

TO THE EDITOR OF THE NATION:

SIR: Whether the gradual development of the original Hans Breitmann be in or out of keeping; whether the first sketch be improved or obscured by the subsequent touches, is a fair question for critical discussion. You take the latter view; allow me to submit some reasons for holding the former.

When Breitmann first appears to us, giving his "barty," he is a jolly, rowdyish Philadelphia German, probably proprietor of a *weinhandel* or a beer saloon. This is all we know of him, for the maudlin sentiment which concludes the ballad is put not into his mouth, but into that of his guest, the narrator. About a year passes and Breitmann turns up again, rather more beery and rowdyish than before, but giving evidence of some education and intellectual capacity. The "demperance men" have woke him up a little; he retaliates on their sermons by preaching a sermon himself against the Sunday laws. He can "quote what Luther said," and bring tears into the eyes of his sympathizing audience by his allusions to Fatherland. Then he goes back to his casks and his counter, and we hear no more of him till the war, which wrought so many wonderful changes, stirs up his soul also. He remembers that he, too, once fought for freedom in his native Baden, that he was "out" in '49 with Hecker and Sigel. Having got rid of some superfluous flesh among the Turners, he raises a volunteer cavalry troop, goes off to the war, fights heroically, and plunders indiscriminately. To his nature, thus aroused, comes simultaneously the recollection, across the fumes of fifteen years' beer and tobacco, that he was once a *bursch* and studied Latin and metaphysics. He furbishes up his long-disused learning as he had furbished up his long-disused sword. It comes back to him—somewhat shaky and imperfect. Thus the Latin of the "Philosopede" is bad even for macaronic Latin, *inter* governing an ablative, etc.

Of the two processes through which Breitmann has been put by circumstances, the first seems to me very natural, and the second not unnatural. At the supposed time of Breitmann's arrival in America, somewhere about 1850, the state of our society was such (and is it *entirely* changed at present?) that a man having a taste for some recondite specialty, and also strong animal instincts, found almost nothing to encourage his pursuit of the one and a great deal to encourage his indulgence of the other *penchant*. Thus the decadence of the *bursch* into a lager-beer-saloon keeper is a very likely occurrence. His subsequent partial restoration is less probable, but not very improbable, certainly not impossible. The rehabilitation is but partial. Breitmann may become a metaphysician and a sort of scholar again; he may even take the fashionable European tour on the profits of his *weinhandel* and his official and military spoils, but he will always have a bit of the rowdy sticking to him. Still, I am astonished at your taxing him with coarseness. Had you said *profanity*, I could have understood your censure and sympathized with it. Breitmann *is* sometimes wantonly and gratuitously profane. This regrettable fact may, perhaps, partly at least, be accounted for by his having made during the war the acquaintance of a certain journalist who is well known to swear more terribly than our army ever did in Flanders, South Carolina, or elsewhere. It ought, also, in justice to be remarked that the Puritan mind is prone to a species of irreverence (such as constantly crops up in the "Biglow Papers") which to some cultivated persons is more offensive than downright hard swearing, because the former looks premeditated, while the latter is extemporaneous. Still, after all possible palliation, the naked fact remains that profanity is, under all circumstances, highly reprehensible. But, however reprehensible, it is not exactly a synonym for coarseness. *Coarseness* means to me one of two things, *vulgarity* or *indecency*. The latter cannot surely be predicated of Mr. Leland, and of the former he has less than the great majority of our popular writers, "whether *or not* [*?*] they have been sermonizers or humorists." A page of Billings or Nasby, an editorial of the *Tribune*, an essay of Dr. Holland's, a sermon of Henry Ward Beecher's, contains more vulgarity than all the series of "Breitmann" put together.

Allow me to remark, in conclusion, that all his hostile critics have utterly failed to perceive or appreciate the many-sidedness of Mr. Leland. They have regarded the "Breitmann Ballads" as merely "funny" or "comic" verses. They have closed their ears to the spirit and swing and dash of those battle-pieces which challenge comparison with the most stirring lines of Browning ("Breitmann in Battle," "Breitmann in Maryland," etc.), and thoroughly confute Mr. Justin Macarthy's *obiter dictum* that no American war poetry breathes the *certaminis gaudium*. They are equally deaf to the pathetic element introduced into "Breitmann in Church." Do me the favor to read again as an illustration of the first point Breitmann's outburst against discipline, verses 3, 4, and 5; as an illustration of the second, all the penultimate stanzas describing the death and burial of Von Stossenheim. In my opinion, they contain the nearest approach to real poetry that can be found in any of the "numerous verse" as yet evoked by our war.

Carl Benson.

Lenox, Mass., July 2, 1870.

[The charge of coarseness brought against Mr. Leland's last book, and also against other of his writings, was based on a passage in the poem which tells how German may be learned, and on passages that Mr. Leland chose to translate from Heine. We need not be more specific. In this last book, it is, as we have said, a not very serious degree of coarseness, but coarseness it undoubtedly is. As to the question of the "development" of Breitmann, the processes which he has undergone since his first appearance mean, to our apprehension, that Mr. Leland cared more to be funny than to stick to his original figure. It is probable that under his second method we get more jokes about more sides of the German character than we otherwise should have got, but we pay for this by losing, as we maintain, the true "development" of Breitmann. It is our opinion—our guess, if Carl Benson prefers to call it so—that Mr. Leland was unwilling to take the trouble of artistically developing his creation in accordance with its original form, and that he has for some time merely been saying as many witty things as came into his head about any German fashion of thought that afforded opportunity for jesting. To be sure, a little of Breitmann now and again "crops out," as the geologists say. As for our author's many-sidedness and the high excellence of his verse we are of another opinion than our correspondent, or, rather, we know nothing about his many-sidedness, and we hold the opinion that his verse is spirited verse, decidedly clever, but not to be called remarkable. And all the Von Stossenheim business, with its deliberate pathos in the midst of its jocosity, seemed to us in false taste. The sentimentalism and prettiness of it were not too good anyhow, but where they were placed they were bad. As for Mr. Justin McCarthy's *dicta* on American war poetry, it had not occurred to us to consider them. We are rather inclined, now that we think of the matter, to agree with him, and to say, so far as we recollect our war poetry, that while it had some other merits, it had not for a merit the expression of the *certaminis gaudium*. In Mr. Leland's poetry rollicking, high spirits in campaigning and fighting makes itself manifest; but the *certaminis gaudium* is another matter.—Ed. Nation.]

CAPTAIN PARKER AND COLONEL HIGGINSON.

To the Editor of the Nation:

The following is an extract from an editorial from the South Carolina *Daily Republican*:

> "The allegations contained in the letter published in the *Nation* are beneath notice. We know Mr. Parker, and have known him for quite a long period, and we can believe the testimony of Col. Higginson as to his former life.
>
> "We should not deem this small business worthy of notice, had not Northern friends written to us about it."

If I recollect aright, Col. Higginson made this statement in a letter published in your paper.

"Of his (Capt. Parker's) antecedents or occupation before enlistment, I remember nothing, if I ever knew anything." Thus, it appears from the Colonel's own statement that he knew nothing whatever of Capt. Parker's former life.

"I should not deem this small business worthy of notice" had not Northern and Southern friends volunteered to furnish me letters and affidavits which will prove *more* than all I have said concerning our State Treasurer.

I would respectfully suggest that his political friends had better not deny, or throw any doubt upon, any of the statements made in my letter in the *Nation* of June 9. If they do, the proof will be forthcoming.

Yours truly, J. W. Collins.

Beaufort, South Carolina, June 30, 1870.

Notes.

LITERARY.

Messrs. T. B. Peterson & Brothers announce that their biography of Dickens, which is in the hands of Dr. Shelton Mackenzie, will contain, besides a full history of Mr. Dickens's life, his uncollected pieces in prose and verse, anecdotes, the biographer's personal recollections of the novelist, and many letters written by Mr. Dickens to various persons. The volume, which is to be a large two-dollar duodecimo, will also contain an engraving after a photograph taken a few days before the death of the original. Dr. Mackenzie has long been far gone in what Mr. Disraeli calls his anecdotage, and his books are full of all kinds of gossip, but they always discredit the dictum of the ex-premier—as indeed do most books of personal anecdote—for they are always pleasant light reading. No doubt the opportuneness of the forthcoming volume will be the most conspicuous thing about it, but it is safe to say that, inadequate as it must necessarily be, it will have numerous really good qualities and will be worth attention. So, we may say here, will doubtless be Mr. James T. Fields's reminiscences in the next *Atlantic Monthly*, Mr. Fields having had exceptionally good opportunities of seeing most sides of Mr.

Dickens's character and of knowing him at his best. But, beyond a doubt, we shall have numberless essays and many volumes; and not more than the vast public which admired the novelist will very eagerly read.

—Is it ungracious, by the bye, to call the attention of some of Mr. Dickens's American friends to a mistake that they make in selecting for praise one particular of his conduct when he was last in this country? They gently censure him for having written the "American Notes," and for his humorous portraits of typical Americans in "Martin Chuzzlewit," and then they praise him for the frank retractation which he made at the farewell dinner that was given him in New York, and for his statement that he felt bound to tell all the world that he had been allowed to go about the country everywhere without being intruded upon by anybody. Rather a singular way that appears of complimenting a people—averring that actually they have acquired the decency of not putting their noses into the hotel-rooms of celebrated persons who wish to be treated with ordinary civility and good manners. Both the censure and the praise which our critical fraternity have bestowed upon Mr. Dickens for his American caricatures and his parting compliments are a little absurd. Mr. Dickens was a caricaturist, and caricatured, very funnily too, certain veritable phases of American society just as all his life he caricatured Englishmen and English things, and our anger at his account of Mr. Pogram and the rest most of us now admit to have been what Mr. Charles Reade's Jacky calls "a good deal dam ridiculous." The farewell speech was, beyond a doubt, well meant, but to look on it as condonation of the original crime, error, or whatever it was, seems to be to blunder, and moreover to forget the circumstances under which late after-dinner speeches are very frequently made.

—The managers of the Boston Public Library announce that they are gathering materials—pamphlets, broadsides, prints, newspapers, and so forth—for the purpose of making volumes commemorative of Dickens, and they ask the assistance of all their friends, as they desire to make as full as possible the evidence of the loss sustained by his death. Also, as formerly, the managers desire to make volumes commemorative of the recent "Memorial Day," by which term is doubtless meant the day otherwise known as "Decoration Day"—a designation not so good, perhaps, as that here suggested, but one that it will be found difficult to displace.

—We have just been advised by Messrs. Zeigler & McCurdy, of Philadelphia, publishers of "subscription" books, that it would gratify them if we were to make some more remarks intended to injure the subscription-book business. They exhort us to "go in, gentlemen," and say that, if we are well paid for attacking the subscription publishers, why, "it is all right." The supposition is that we are corrupted and bribed by the regular trade—a hint which those gentlemen will perhaps take to heart. Messrs. Zeigler & McCurdy also direct us to insert, as an advertisement of Dr. Daniel March's volume, "Our Father's House," the description of that work which we quoted the other day as an illustration of the way in which the subscription publisher fosters literary taste and discernment in the rural districts. Our readers can turn, then, to our advertising columns and refresh themselves with Messrs. Zeigler & McCurdy's account of "Our Father's House." Next the firm informs us that a copy of the work in question is on its way to us, and, finally, administers a finishing stroke by urging us to read the book "either before or after you review it." Not after, we think. We do not mind saying, however—whether in consequence of getting the advertisement we leave Messrs. Zeigler & McCurdy to guess—that some of Dr. March's writings we have read, and that we know him for a man of ability. Neither his "Night Scenes of the Bible," nor his earlier work on the places specially connected in memory with the life of Jesus, would lead any one to expect from him the book which Messrs. Zeigler & McCurdy's advertisement would seem to promise. It is true that a man may, when once he has got into it, easily degenerate into a writer of the sort of letterpress that would match the "rose-tinted paper, ornate engravings, and superb binding" of the advertisement. But it is more charitable, as well as more reasonable, to consider what manner of man the subscription-book publisher is, than to believe without evidence that a good scholar and preacher has turned imbecile.

—We have called attention on several occasions to the peculiar character of the premiums offered subscribers by editors and publishers; but, perhaps, with the exception of the Catholic journal which agreed to celebrate the mass so many times for so many new subscriptions, we have not found a more curious "inducement" than is held out by the *National Normal*. This is an educational journal published in Cincinnati, of which we know little, except that "reviewers have pronounced it lively, spicy, wide-awake, slashing, etc." Whether, we may remark, it merits all these laudatory terms we do not know. Nor, indeed, could we say how laudatory such terms are when applied to a magazine whose object is to instruct and assist school-teachers. We have not read more than one article in the *National Normal*, and that was a very remarkable article about Harvard University, to which seat of learning the editor had just been paying a visit, and of which he made an original estimate. That is to say, to persons who had an intimate acquaintance with the matters of which the editor talked, his statement seemed a series of absurdities. But the magazine may be a good magazine for all that, though its name and its praises are not in its favor. What we were to speak of is one of its premiums for subscriptions. Whoever sends the publisher a new name and the proper accompaniment of a dollar and a half is to get a photographic group of the editors of the *National Normal* and of the officers and teachers of the Southwestern Normal School—"12 photos," the whole group being of "the full size of a page of the *National Normal*." This would seem not a very "deludhering" lure. To be sure, however, some of the editors and teachers are of the suppressed sex.

—In speaking last week of the admission of women to the Philadelphia Academy of Natural Sciences, we did injustice, it would seem, to two of the ladies whom we mentioned as having been admitted to membership. Mrs. L. W. Say and Miss M. H. Morris were, we are now informed, admitted indeed, and not only that, but were admitted in virtue of their long devotion to science and at a time when admission was an honorable scientific distinction. But as for the other ladies mentioned by us, they—if we understand our new informant, who is herself one of them—were admitted at a time when the society, being in want of money, conferred membership on anybody, man or woman, who gave to its treasury a certain sum.

—The *Journal of Psychological Medicine* is always interesting—though it cannot be said to have all the interest which belongs to the peculiarly attractive field in which it works—and the July number is as good as any which have preceded it. The opening paper will perhaps be pleasing to many readers, for it deals with the case of what De Quincey would call that hugely overrated murderer, Daniel McFarland. The conclusion to which Dr. Hammond comes in regard to this agreeable personage is "that he is at present in such a physical and mental condition as to render him liable, upon comparatively slight cause, to another explosion of mania"—a statement which suggests the enquiry if it is not somebody's official duty, or cannot be made somebody's official duty, to catch him and put him where he ought to be. "Contributions to Biology" is by Dr. H. B. Baker, who treats of the order of creation of living beings, the simplest form of existence, organic motion, and kindred topics. He suggests something that is new, we believe, in reference to the effects of certain poisons. As, for instance, he maintains the theory that the acids of arsenic prove the cause of death by combining with and refusing to release the iron of the blood. Hydrated peroxide of iron is therefore the best medicine in cases of poisoning by arsenic; and therefore, too, it is that the habitual use of small doses of arsenic gives paleness to the complexion of the user, the red color disappearing with the disappearance of the iron which causes it. "Right and Left Handedness" is an interesting essay by Dr. Thomas Dwight, who lays down, as probably true, the following propositions: "1. There is an inborn impulse to use, to excite motion, one-half of the brain, the left, in preference to the other. 2. One-half of the brain, the left, has a more acute perception of tactile impressions, while the other, the right, distinguishes more readily different degrees of temperature and weight. 3. This arrangement is occasionally inverted." Occasionally "inverted," it will be observed the doctor says; that there is ever such an arrangement as to produce a person having the two halves of the brain one in function, he seems to deny. He is inclined to believe that there are no ambidexters, and that all persons who have been called such have very probably been persons who were born with a tendency to left-handedness, and who acquired the faculty of using the right hand also. He would, moreover, maintain that ambidexters, so-called, are not equally skilful with the two hands after all. That is what he would have to maintain, ambidexters being so called because of the popular belief that they can do the same thing as well with one hand as with the other, and not because of any belief as to the innate or acquired character of the qualification. That we shall ever know the nature and origin of this impulse to use one side in preference to the other, Dr. Dwight thinks impossible; but a step is made, he remarks, when it is admitted that it is an impulse born with us, a part of our organization, and is neither due to the arrangement of the arterial system nor is the effect of habit. Another article that the general reader will like is that written by Dr. J. Schwabe, and entitled "From the Lumber-room of Modern Superstition." It is very harsh with our brethren the spiritualists; and it taunts the somnambulists also. Why does not some one of them go to Paris, it wishes to know, and take the premium of ten thousand francs which, more than forty years ago, the Academy of Sciences offered to any somnambulist who will read, in the presence of a committee, a sealed letter which will be placed upon his breast? Dr. Schwabe supposes that the reason why the somnambulists do not take steps to acquire this sum of money is that they know well that certain preparations are necessary before one reads sealed letters "with the stomach," as he coarsely says, in order still further to belittle the clairvoyants. "Above all," he adds, with German lightness, "they must know beforehand the contents of such letter." People who have faith in the moon's influence on the weather, and her mysterious effect upon tapeworms, the planting of vegetables, the chopping of wood, and the like, also come in for raps from the doctor, who is austerely scientific enough to gratify Mr. "William St. John," who writes from Hodmir, Hungary, to the Sunday *World*, letters of a character to make Superstition hang her wretched head. Readable, too, is the notice of the life of Faraday, by Professor S. H. Dickson, who makes the best review of the book, or rather of its subject, that we have anywhere noticed. The three other long articles are less readable, but perhaps better worth reading, than any of those mentioned. They are these: "Some Points in regard to the Development of a Nervous System and Vision," by Dr. T. Edwards Clark; "Galvanization of the Sympathetic Nerve," by Drs. A. D. Rockwell and G. M. Beard; and "A Case of Cancer of the Brain," by Dr. S. G. Weber. Among the book-notices there is one good one of a German work, which perhaps will be worth the attention of some of our advanced thinkers. "The Relations of the Morbid Conditions and Processes in the Female Sexual Organs to Mental Disease" is the translated title of the work. The introduction dwells upon the influence which the sexual "sphere" exerts on the development and general character of the organism.

—We are requested to say that the next meeting of the American Philological Association will be held at Rochester in this State. The first meeting will be at three o'clock in the afternoon of the 26th instant, and the place of meeting will be the First Presbyterian Church. Professor W. D. Whitney will address the Association on the evening of the first day of the session. Rochester is "proverbial for its hospitality," like every other city and town on this continent, and the members of the Association will no doubt make a pleasant visit. For this and every other reason, there should be a full attendance.

—Our readers have not, we believe, had any full account of the undertaking which is now in progress in England to revise thoroughly the authorized version of the Bible, and we take from an English paper an account given by a writer who seems to be heartily in favor of the scheme. To begin with, it is necessary to understand that the English Government has nothing to do with it, which is probably just as well for its popular success, as there are large numbers of British Nonconformists who would hold off from any movement that suggested the interference of the state with religious affairs. And, of course, it is highly desirable that the dissenters should be drawn over to use the new Bible, for, probably, it is they who use the Scriptures most—at least so far as reading the Bible goes. The admirable arrangement of the Prayer-book gives, in the matter of acquiring acquaintance with Scripture, an immense advantage to an English Anglican over any but a sedulous private reader. To return: the state has nothing to do with this attempt at revision, which was set on foot by the Convocation of the Southern Provinces of the English Church, and which will be largely in the hands of Anglican clergymen. It will not, however, be by any means exclusively in their hands; the company who have now for a week or so been at work on the New Testament—a body separate from that engaged upon the Old—contains, indeed, an archbishop, three bishops, three deans, two archdeacons, two canons, and some plain parsons; but it also contains representatives of the Presbyterian, Congregationalist, Methodist, and other dissenting sects, Scotch as well as English. Dr. Newman was desired to asssist; but, of course, it was impossible that he should do so. Dr. Pusey frowns on the scheme—not many things, it would appear, pleasing that gentleman nowadays. The chief promoter of the movement has been Dr. Ellicott, Bishop of Gloucester and Bristol, a man of great energy and very well known as an admirable Biblical scholar, who has long believed and taught that there is urgent need of a revision of the King James Version. The arguments opposed to his have been, first, that to meddle with the words as they stand would tend to unsettle the faith. The Bishop replies that faith in the very historical foundations of Scripture has of late been seriously shaken. It was urged, too, that present change would beget a future demand for more extensive alterations. Dr. Ellicott answers this objection by pointing to the confessed deficiencies of the present translation, and to the existing means for assuredly improving it, and then reminds the objectors that it is discreditable and wrong to neglect the duty of to-day for fear that the morrow will not be able to care for the things of itself. It is our bounden duty, he holds, that the people should have God's truth put before them in as manifest a form as possible. No one says that, fine as our present Bible is, it does not often mislead. Holding these views, and pushing them with great energy, Dr. Ellicott has succeeded in getting the Convocation of Canterbury to authorize a committee which, as we have said, is in alliance with the learned of the dissenting churches and has begun work. It is computed that even if the committee were to be as radical as the Bishop would have it be, the changes would not affect more than about five per cent. of the words as they stand. But how many dogmas of the churches would be affected by the changes that would be made by an assembly of perfectly unbiassed scholars, of eminence equal to that of the committee—that there is no one to tell us, and the world at large will not expect too much from this assembly's labors. The *Saturday Review*, by the bye, to whom we are indebted for our facts in regard to this matter, remarks in its customary pleasant way that the proposal of Mr. Buxton that the President of the United States should unite with Queen Victoria in appointing the board of revisers was of course an absurd proposal. At which little sneer, Boston, with its new lexicon of Byzantine and Patristic Greek, which will smite awe into the hearts of Tregelles and Tischendorf and Lachman, can afford to smile superior.

—A curious and instructive comparison for those who are interested in our own Civil Service Reform is found in the progress of ten years in English agitation of the subject. In the first part of the fourth volume of the Transactions of the National (British) Association for the Promotion of Social Science, for 1860, will be found, at pp. 302–326, a few suggestive articles by Horace Mann, James Heywood, and W. G. Blackie, on the then existing condition of Civil Service Examinations. In 1853, a report by Sir Stafford Northcote and Sir Charles Trevelyan described the Civil Service as being recruited in great measure from the unambitious, the indolent, and the incapable, and those who, from indolence or physical infirmity, were unable to succeed in other professions. This was the result of the old system of appointments by the Government. In consequence of the impression produced by this report, the Government promised, in 1854, to introduce a plan for improving the system of admission; but it was not until 1855 that an Order in Council was issued, constituting the present Civil Service Commission—a Board independent of political influence, charged with the duty of testing, according to standards and rules prescribed by the various departments themselves, the physical, mental, and moral qualifications of the Government nominees. The system of patronage was still maintained, and in the same hands as before; the only difference being that the persons nominated were to be examined as to their fitness. In 1859, after a great deal of discussion, both in Parliament and out of it, a select committee of the House of Commons, of which Lord Stanley was chairman, made a report endorsing open competition as best for the public service, but not recommending its speedy adoption in all the departments. India was the *corpus vile* on which this experiment was to be tried before it could be safely attempted at home. It has borne the test, however, so well, that now, in this year, on the 4th of June, 1870, after discussions, as the London *Times* says, that have extended over some fifteen years, the principle of unlimited competition has triumphed in the distribution of Government appointments. By an Order in Council, the entire Civil Service of the United Kingdom, in all its grades, high and low, has been taken from the hands of official patrons, and made the prize of ability, industry, and good education. The change from that concomitant of Parliamentary government ever since Parliamentary government has been fully established, the nomination system, has been made slowly and by degrees; but it seems now to be completed by this bold reform, characteristic alike of the careful and almost tedious delay in preparation, and the rapidity in consummation, of all the schemes adopted and matured by Mr. Gladstone. Naturally enough, the change has attracted no small degree of attention, and the *Spectator* welcomes it as interesting in political organization, and introducing into it the men and the classes who have hitherto scarcely attempted to study it, and have never seriously attempted to mould it. Still another authoritative newspaper sees in this new reform a reflex action due in part to the discussion and agitation of the same subject in this country, and Mr. Jenckes's Bill, in spite of Congressional inaction on the subject, has done good if it be so; while the unconscious influence of all that has been written and said shows that the friends of reform builded better than they knew.

DANTE GABRIEL ROSSETTI'S POEMS.*

PERHAPS to criticise fully and truly these poems it is necessary that the critic should have a fuller knowledge than we have of Mr. Rossetti's paintings. If to say this is to hint that we consider the poems, in and of themselves, unsatisfactory—an inadequate expression of their author's thought and feeling—we shall still say it. And further, we may say that we would desire a closer acquaintance with the author's paintings, because we should be glad to think of him himself more respectfully than we find ourselves now able to think of him; and there is a probability that in his work with the brush, which may be reasonably supposed his more natural instrument of expression, we should find not only a better presentation of his thought, a more effective address to the mind and feeling of the reader, but also less of what seems to us affectation—essential falseness and weakness.

A more adequate expression of the author's thought and feeling we have been asking for; but it may be that he has no great amount of thought to express, and that, as we say, he needs colors wherewith to express the feelings and sentiments which his subjective intellect and sensuous nature perceive clearly, and even with painful intensity, but which, by reason of this subjectivity of intellect, he cannot set before himself, still less before anybody else, in words that do much more than hint at them. As for his power of thought, we certainly do not find that he has it in excess of that of nine-tenths of the contemporary minor poets. There is no poem in the volume which makes any abiding impression upon the mind except by reason of its pictorial power, which often is very great indeed, and by reason of an occasional intensity of sensual religious feeling, which, however, often goes near to be disgusting, as producing here and to-day the impression of falseness or weakness in the man who pretends to feel it or the man who really feels it. We say plainly that we do not find ourselves able to believe in a really honest nineteenth-century Fra Angelico, for example, with a sound English education, unless he is, *ex hypothese*, a person of some considerable weakness of mind, or a person conceitedly perverse to the point of easy self-deception—which is saying again, in a more particular manner, that he is a weak person, to whom one gives little attention or respect.

Is this, for instance, genuine religious feeling, or is it religious feeling "after the early Italian manner?" The poet speaks of the Virgin Mary, who, after long and heart-sick waiting, as a widow might wait, is now at last joined to Jesus in heaven.

"But oh! what human tongue can speak
That day when death was sent to break
From the tir'd spirit, like a veil,
Its covenant with Gabriel,
Endured at length unto the end?
What human thought can apprehend
That mystery of motherhood
When thy Beloved at length renew'd
The sweet communion severéd—
His left hand underneath thy head,
And his right hand embracing thee:
Lo! He was thine, and this is He."

The sensuousness of the conception is also to be noted, but the book is throughout sensuous, though it is never that Mr. Rossetti drops into any such thick air as his friend Swinburne finds native to his lungs. He is usually in Mr. Morris's plane. It is true of all of them, however, that they seem to be unduly troubled by woman and keep up constantly a more or less dismal and wailful or dismal and wooing noise about her. A sort of clean indecency, as in the sonnet on "Nuptial Sleep"—a sort of deliberate hovering between nudity and nakedness, if we could make our meaning clear—is as low as Mr. Rossetti ever gets. But it has all come to be tiresome enough, and the only excuse that a man could make for writing things like "Jenny," for instance, is that he wrote them years ago, when the fashion first came in; when nobody but Browning had done morbid psychology and nobody had been prurient, purely or impurely, in the fashion with which we have since been made so familiar. "Jenny" suggests Browning, but more directly suggestive of that poet is "A Last Confession," which, perhaps, most readers will like better than any other poem in the volume. It is powerful—a dramatic story of passion very effectively told. Or shall we say that it would be all this if Browning had not done the same sort of thing so long, and so much better? Yet there are some fine and original things in it, as the description of the woman, and the growth of the quarrel.

The sensuousness of Mr. Rossetti's writing is most agreeably visible in "The Blessed Damozel," which is aglow with what has been pronounced mystical, imaginative love, but which, as it seems to us, expresses in a sufficiently carnal manner the author's belief that earthly passion and affection, in no wise elevated or clarified, so far as we observe, is to last on into eternity and be of the bliss of heaven:

"The blessed damozel leaned out
From the gold bar of heaven;
Her eyes were deeper than the depth
Of waters stilled at even;
She had three lilies in her hand,
And the stars in her hair were seven.

. . . .

"And still she bowed herself and stooped
Out of the circling charm;
Until her bosom must have made
The bar she leaned on warm,
And the lilies lay as if asleep
Along her bended arm."

She is looking for the coming of her lover, from whom she was parted ten years ago by death. When he comes—

"We two, she said, will seek the groves
Where the Lady Mary is
With her five handmaidens, whose names
Are five sweet symphonies,
Cecily, Gertrude, Magdalen,
Margaret, and Rosalys.

. . . .

"He shall fear, haply, and be dumb:
Then will I lay my cheek
To his, and tell about our love."

So, it may be held, a despairing and longing lover might conceive of his mistress, lost to him in heaven—as being even there unhappy or uncontent because he also is not there. And, doubtless there may be truth to nature, and beautiful and poetical truth to nature, in this conception. Still the lover would be of a certain temperament who should so imagine, and the details of whose conception were such. It was not, however, to insist on this that we cited these passages, but to remark on an allied quality which is the most marked quality of the book, and that is the definite, pictorial imagery which is so definite and clear that it must have at its root a desire to body forth in tangible, palpable form, if that were possible, the pictures that present themselves to the author's mind and the feelings that agitate him. His sister, Miss Christina Rossetti—a better poet to our mind—thinks in pictures which she must write down; her brother habitually composes pictures which he might better paint. He has some thinking to do outside of this picture-making, and there he is at another disadvantage as compared with his sister; she interferes less with her reader's enjoyment of her pictorial power. Not one of his own Pre-Raphaelite paintings could be more plainly visible than the Blessed Damozel as she leans out from the gold bar—

"Her robe, ungirt from clasp to hem,
No wrought flowers did adorn,
But a white rose of Mary's gift,
For service meetly worn;
Her hair that lay along her back
Was yellow like ripe corn."

There is, of course, in this "Blessed Damozel"—which, let us say here, exercises the prerogative of the imagination, creating for us its own place and time, and exerting its own compelling charm—there is, of course, in this fine poem the quaintness of the Pre-Raphaelite painter, and its author's limitations are pretty sharply indicated. But to see them more strongly marked, a poem like "The Woodspurge" will better serve:

"The wind flapped loose, the wind was still,
Shaken out dead from tree and hill;
I had walked on at the wind's will;
I sat now, for the wind was still.

"Between my knees my forehead was,—
My lips drawn in said not Alas!
My hair was over in the grass,
My naked ears heard the day pass.

"My eyes wide open had the run
Of some ten weeds to fix upon;
Among those few, out of the sun
The woodspurge flowered, three cups in one.

"From perfect grief there need not be
Wisdom or even memory:
One thing then learnt remains to me,—
The woodspurge has a cup of three."

In this pretty and true little piece—which, by the way, has about as much to say as any of its companions—the Pre-Raphaelite is very plain to be seen—even to the length of his hair, if we may be permitted to be irreverent, where we have not the least reverence at all. Our author's intensity; his pictorial power; the strain of dejected sadness that pervades all his writings until he is even depressing; his utter abandonment to his feelings; his affected diction; his way of making his subjective sorrows and joys flood the whole universe, so that to this day the little weed no doubt means bitter grief to him—everything that he is and has except his religiousness, if that is the name of it, and except the direct presence of the sexual side of his sensuousness, is to be seen in "The Woodspurge." Perhaps his want of humor, too, might be guessed from it. Or, if his serious poems are not proof that nobody with a strongly-developed sense of the ridiculous could have written them, the reader may look at "A Match with the Moon," where there is something intended for fun. Or he may turn to the absurd little foot-note where Mr. Rossetti is at pains to inform us that it was not Mr. Tennyson who taught him to rhyme firsts and fourths and seconds and thirds, but that he used the metre of "In Memoriam" weeks before that poem appeared.

---

* "Poems by Dante Gabriel Rossetti." Boston: Roberts Brothers. 1870.

It is now some years since we made the acquaintance of "The Blessed Damozel," the first poem of our author's which became generally known to Mr. Rossetti's public, and although familiarity with it has diminished the respect which at first we had for it, it is still, to our mind, a very fine poem, giving proof of true poetical capacity in its author. But the volume before us has been a decided disappointment. Not only in no case does the author show himself capable of going out of the narrow range of sentiment with which "The Blessed Damozel" deals, but in no case has he been nearly so fortunate as he was when he gave us that magically bright figure, breathing its own breath and dwelling in that ineffable land. Afterwards he can give us sonnets that sound as if they had been translated out of the *Vita Nuova;* pictures that look as if they had been copied after some monkish painter with a lust of sanctity,—a hunger and thirst after palpable spiritual food; an occasional pretty fancy or a true thought, as in the last poem we have cited; a diction as highly colored and even more forced, if not so forcible, as that of "The Blessed Damozel;" as much warmth of passion as hers. But nowhere else are his faults so well subordinated as in that piece, where they even go to assist him in producing his effect, while at the same time his virtues are at their best, and, combining with his weaknesses, produce a unique and fine poem. One such is enough, to be sure. Such things are not the bread and wine whereby man lives, and that do not cloy.

AN OLD-FASHIONED GIRL.*

OF American writers of "juveniles," as the publishers call them, the number has come to be immense. Almost every religious denomination has its thousands of Sunday-schools, in each of which it is thought necessary that there should be a library, filled with books, which may be good, but which must at all costs be denominational, and which, therefore, can be written by almost anybody. And it is an established belief among parents generally, sectarian and unsectarian, that, so long as a child does not read books that are "immoral," he cannot read too much; and that a book's being in every way foolish does not make it so harmful that the child needs to be protected against it. What, then, must be the character of the reading that is prepared for the world of youthful readers is easily seen. It is a fact that, within the last ten or fifteen years, one of the most successful of our writers for children has turned out, not three volumes, or four, or five, or ten, but no less than forty-six. And he has not only issued his six volumes of the "Boat Club Series" and six of the "Starry Flag Series," and five or six each of half-a-dozen other sets of volumes, but he is the editor of a monthly magazine for boys and girls; and, moreover, he will, no doubt, be ready at Christmas to add four or five more volumes to those which he has already published. That there should be any nutriment in the daily and hourly skimmings of a mind that can consent to work in this manner is an impossibility, and it must be simply a misfortune to a child to be submitted to the influence of such a story-teller and moralist. It is in his publishers and bankers' books only that a justification can be found for his; it is out of reason that he should be successful otherwise than pecuniarily. Yet, except in the matter of fecundity, the author to whom we allude is a fair specimen of the common run of our writers for children, and his performances are on the ordinary level of "juveniles." He sells more volumes than the others, but he does not sell different ones—the very great majority of such things being the work of writers at once incompetent and given to money-getting, or incompetent merely. Most such authors, it would almost seem, are persons who think incompetency to write for adults a sufficient reason why they should write for children; and they prey on the young, and preach to them, just as a certain sort of clerical gentleman, incapable of keeping together a congregation at home, goes out as a missionary to the illiterate heathen, and gets a living by "talking down" to people who do not understand him, to be sure, and do not get good from him, and who, for anything he cares, get from him good or get from him harm, but who like to listen to talk, and are willing to give him a living for talking. But there are missionaries, too, of another kind—men and women who put to shame most of us that stay at home; and so, it is needless to say, there are writers for children who command the admiring respect of the best writers for men, and of the best readers; but between them and the majority of writers for children the difference is infinite. Hans Andersen, for instance, there is nobody who patronizes; nor does any one, writer or reader, look down on the brothers Grimm, or the author of "Robinson Crusoe," or Mr. Lewis Carroll's narration of "Alice's Adventures," or the sketches made in fairyland by Mr. George Macdonald.

There is no country in the world, it is said, where children count for so much as in the United States, nor where so much is done for them; but, for some reason or other, we have not produced any thoroughly good writer for children. Possibly it may be true, as is charged against us by enemies, that it is only Young America that is born here, and that there are never any Americans who really are young. At all events, whether from want of an audience, or from whatever cause, it is easy to name all the American writers who at all skilfully address themselves to the childlike mind. Miss Louisa Alcott we take to be about as good as any, though one sort of the work that she does Mrs. Whitney perhaps does better. The young lady who is all but marriageable, but who has not yet quite finished her last year of boarding-school—the New England young lady, who has still some months of school-life to finish, but who begins to have opinions in regard to the niceness of various young gentlemen; who, though she may play croquet, has "views of life;" who goes to the Thursday afternoon concerts in Boston, and to the Horticultural Hall lectures on Sundays; who has a cultivated taste in music and an eclectic turn in religions—this mingled young girl and young lady, produced in the vicinity of Boston and not elsewhere, Mrs. Whitney draws with what seems to the unlearned eye perfection. Miss Alcott draws her too; but, on the whole, Miss Alcott's sympathies seem to be rather with earlier stages of life than with this of which we speak, and there is—at least to the adult reader—something of a fresher sense of boyhood and girlhood to be got from her writing than from that of her cleverer contemporary. Miss Alcott, however, no more than Mrs. Whitney, is free from an influence which it appears to be agreed shall be called Bostonian, and which is, doubtless, of disadvantage to any one who proposes to make literature in which there shall be at once matter to interest children and, so to speak, the living figures of children themselves. Self-consciousness in not the worst sense of that term—a constant consciousness of the goodness and beauty and admirableness of one's good and beautiful and admirable acts and thoughts and behavior—a sort of patronizing and Jack-Horner-like practice of all excellent virtues and graces—would seem to be extremely common in that corner which knows itself to be the new and improved *umbilicus mundi.*

Then, too, it may be said of this "Old-Fashioned Girl" of Miss Alcott's that it is done from the outside, and that what is depicted is only partly the thing that was to be depicted, and is partly Miss Alcott's not perfectly intelligent and sympathetic conception of it. It is not boys, we should say, it must be women, who have acquaintance with any boy so persistently touzly-headed as Miss Alcott's "Tom," and so extravagantly fond of pockets full of pea-nuts, and so sure to get into scrapes which prove nothing at all against the sinner's moral character, but merely bear witness to his superfluous animal spirits and energy. And, doubtless, our author's girls, also, are to some extent artificial, and persons of her drama rather than real persons—creatures of her will rather than beings with wills of their own. This is not always true, for every reader must recognize in Miss Alcott's stories many pictures that are strictly photographic—that are, indeed, strictly true to nature. But, speaking generally, her personages exist for their creator's purposes, not their own; they all are made that they may point a moral. The hero must preach a woman's notion of manliness—must be, violently, the nondescript known to women as The Boy; the heroine must be, out and out, the "old-fashioned girl"—that is to say, she must be unsophisticated to a degree which makes it too manifest that she was created in a world very familiarly acquainted with sophistication; the second heroine must be a "new-fashioned girl" of the most decided and fashionable type, and the doings and fortunes of these personages must be such as to teach us the value and beauty of simplicity and honesty, and the folly and badness and hollowness of pretension and display. Thus a wide door is opened to unnaturalness; and that a good deal of unnaturalness does not come in, few readers would say.

---

* "An Old-Fashioned Girl. By Louisa M. Alcott." Boston: Roberts Brothers. 1870.

But—to stick to the quotation—if Miss Alcott's personages do rather too much and too regularly point a moral, they also in their way do adorn a tale; and the readers of her books are exceedingly few, discriminating and undiscriminating, who have not got from them pleasure. They are unfailingly good-hearted and kind-hearted; they have a great deal of fun in them, and a great deal of good sense; no one will learn from them to admire any moral qualities but those that are to be admired; they are, as stories, well enough constructed, and whether or not the author's "call to preach" she does well to answer, and whether or not her art of portraiture is defective, it is certain that she assists the reader to reproduce his youth, and to sympathize with the young and innocent and happy. Those who demand of each worker in literature an artistic success will be of another opinion, but to have produced, whether artistically and legitimately or otherwise, the effect with which we have credited Miss Alcott, seems to us not a small service to have rendered. Perhaps we might say more than this, and credit our author with having written books well adapted to the wishes of her ostensible audience, and likewise to its needs. Certainly her stories have been read by an immense number of girls and boys. But girls and boys read anything and everything, and are easily pleased; and, on the whole, one would set down Miss Alcott as being of that class of writers for children who write not so much for children as about them, and would not predict for her the true success of writers of "juveniles," as of other works—the pleasing of more generations than one.

The First Book of Botany. Designed to Cultivate the Observing Powers of Children. (By Eliza A. Youmans. New York: D. Appleton & Co. 1870.) —After half a century of unsuccessful clamor for a place in a general education, natural history has suddenly had the school-doors thrown wide open for its entrance, and is not only made welcome, but is hailed as the bearer of panaceas for all the chronic ills of our school system. From this unreasoning trust it has more to fear than from the unreasoning suspicion which preceded. Those who know its real value as an educational agent, who are devoted to the difficult task of securing its proper influence in the training of youth, must feel great apprehensions lest the next generation lose confidence in the value of a scientific element in our education. After a spasmodic effort to cram a certain amount of scientific information from encyclopædic text-books into the heads of primary and grammar-school students—after perceiving that no brilliant intellectual result follows this well-conducted experiment, it is to be feared that the old-fashioned pedagogy may be again master of the field. If anything brings this disgrace upon natural science, it will be the utter misconception of what it really is and what it can effect. If it falls from public esteem, it will be before the persistent text-book makers who are now swarming around it. Natural history is about as well suited to be taught by a text-book as morality or religion. If a book must come into the business, it will be good in proportion to its want of all the characters which belong to the class. Judged by this standard, we must award the unpretending work of Miss Youmans high praise. The author has unquestionably the proper conception of the duty of the teacher. Every effort is made to keep the attention of the student upon the object to be studied, and so well has she succeeded that we may safely say that the student can do nothing with the book unless he has the specimen in hand. As the title indicates, the object of the plan of instruction adopted by Miss Youmans, essentially that of Professor Henslow, of Oxford, is to cultivate the observing powers of children. She has very properly limited the field to the elements of structural botany. The plan of the work can be best understood by taking the arrangement of a single chapter. That which treats of "The Stem" has six exercises, under the following heads: "Parts of the Stem and Leaf Axil," "Appendages of the Stem," "Position of Leaves," "Arrangement of Leaves on the Stem," "Shapes of Stems," "Attitude of Stems," "Color, Surface, Size, and Structure." All of these features are distinctly shown by diagramatic drawings, and there is a schedule to aid the student in his analysis. The plan is so arranged as to be suitable for a primary school, but the method is one which may apply to the college as well. We heartily recommend any teacher, in any department of natural science, who is wise enough to doubt the perfection of his methods, to look over this book.

As an appendix, the authoress gives us her opinions on the "Educational Claims of Botany." Although she assigns a high value to this study, it is not a higher value than any teacher who has had varied experience in teaching natural history must award to it. The proper road into the biological sciences is certainly through the vegetable kingdom. The material is more accessible, the forms are less influenced by vitality, and the problems are not complicated by the great questions which come from the intellectual powers of animals; and, in giving us this good guide for the student, and better guide for the teacher, Miss Youmans has earned the thanks of all those who desire to see education what it should be.

The Woman of Business; or, The Lady and the Lawyer. A Novel. By Marmion Savage, author of "The Bachelor of the Albany," etc. (New York: D. Appleton & Co. 1870.)—This ought to be a very good book to take into the country for summer reading. It is long enough to last a not overvoracious reader for a whole season, and although it is constructed with no little skill, is not ill-written, and has some very fair character drawing, it is of a sufficiently unexciting, not to say uninteresting, description to allow its readers to lay it down readily at any moment, while yet it permits them to resume it free from any lively apprehension of being bored by it. This is not to give the book, as a book, any special praise, but, as we said before, we do not know that it is not the best recommendation of it for summer reading. A very good novel, taken to an out-of-the-way country place, is apt to produce lively dissensions between the best of friends, and gives occasion for some keen strategy for obtaining possession of it, which is rather discouraging to such observers as a prior reading of the book in question gives leisure to cherish optimistic views of human nature.

Of course, if one has a conscience about his amusements and desires to read nothing but "the best," he will not, on the score of such approval as we find ourselves able to give it, be likely to hasten to possess himself of this story—nor, indeed, will he stand in any great need of our advice to leave not only it but every other novel of the season unopened. Judging from the numbers and the badness of most of them, one is driven to conclude, however, that the ordinary novel-reader is not overburdened with either conscience or discrimination in his choice of amusements.

A Race for a Wife. By Hawley Smart, author of "Breezie Langton." (New York; D. Appleton & Co. 1870.) *Breezie Langton: A Story of Fifty-two to Fifty-five.* By Hawley Smart, author of "A Race for a Wife." (New York: D. Appleton & Co. 1870.)—These are novels of a kind which, while they indicate on the part of their author a certain kind of cleverness and what is called "knowledge of the world," are good for nothing but to pass away the idlest of hours, and are not even then likely to prove other than an aggravation of its dulness. They are sporting novels, devoted in great part to unexciting details of the turf and gaming-table, which read as though their author had devoted himself to a class of subjects and a kind of readers with the sole view of attempting to make literature in his own case a tolerably well-paying profession. The hack novelist is visible on every one of his pages. As to his plots, incidents, and characters, they are alike old and unexciting, and though neither of these novels is to be found fault with on the score of immorality, the vapid moralizing in which their author indulges himself after a fashion not unsuggestive of Mr. Lawrence, is nearly as valid a reason for condemning them. We are sorry to find the Appletons including them in their "Library of Choice Novels," where they assuredly make a poor show beside stories like Freytag's "Lost Manuscript," and are easily put to shame by Mrs. Oliphant and Anthony Trollope.

Harbaugh's Harfe. Gedichte in Pennsylvanisch Deutscher Mundart, von H. Harbaugh, D.D., herausgegeben von B. Bausman. (Harbaugh's Harp. Poems in Pennsylvania German Dialect, by H. Harbaugh, D.D., edited by B. Bausman.) (Reformed Church Publication Board, Philadelphia. 1870. Pp. 117.)—A very tender affection and a pious zeal have together produced a really praiseworthy monument to an excellent man. Dr. Harbaugh was very popular among his own church and his own neighbors, and he wrote books that have been acceptably received in the large circle of pious people, on "The Future Life" and other kindred subjects. His own life was that of a successful and self-made man from among Pennsylvania Germans. His great-grandfather came from Switzerland in 1736, and settled in Berks County, Pa. His descendant, the author of the poems in which the ancestral tongue is preserved, was one of twelve children, and his own poetry is the best witness to the life he led.

After working on the paternal farm, in the intervals of hard work picking up what he could at the country school, he became a cabinet-maker, and supported himself by his handiwork until, and even during, his partial course of study at Marshall College and the Theological School in Mercersburg. His pastoral life was passed at Lewisburg, Lancaster, and Lebanon, and for the last years of his life he was Professor of Theology at his own Alma Mater at Mercersburg. He was born and bred, and spent his life and labor, and died in the very home of Pennsylvania German, and what he wrote in honest simplicity was read in perfect faith. His poems have been collected in this volume, and to them have been added very simple and not ineffective sketches, that reproduce the scenes of the author's birth and life, while an admirable explanation of the dialect itself, with nine pages of a glossary, rather than a dictionary, giving the words in Pennsylvania German, in German, and in English, make the book really useful as an addition to our small stock of philology of our own country. The author of this little sketch, Mr. J. M. Beck, of the Reading *Adler*, is of opinion that Pennsylvania German is a dialect of its own, but nearest to that of the Pfaltz or Rhenish Palatinate, brought over by the early emigrants from that section of Germany. It is, of course, largely affected by its stronger English neighbor: but that varies in degree, for in the Lehigh Valley the German has kept the upper hand, while in the Susquehanna the English element is more marked, although the dialect itself has become the "Haussprache" of many families of Scotch and Irish origin. Of the strictly literary or poetical merit of the work we have the less need to speak, because it has a special interest of its own in thus preserving the customs and the language of one section of our country. But, as compared to the other productions in the same dialect, of which several have recently been first mentioned in the *Nation* and afterwards attracted attention both abroad and at home, "Harbaugh's Harfe" is a world ahead of the "Pit Schwefelbrenner" and other merely political or would-be comical popular appeals. As contrasted to the Hans Breitmann books, too, it has the merit of being truthful and honest, and as showing exactly what Pennsylvania German is both in the population that speak it and in the few who are trying to give it shape and form enough to preserve it in print.

The Greatest Library in the World.

NOW READY.

Lives of the Founders, Augmenters, and other Benefactors of the British Museum—1570-1870.

Based on New Researches at the Rolls House; in the Department of MSS. of the British Museum; in the Privy Council Office; and in other Collections, Public and Private. By EDWARD EDWARDS. 1 vol. thick 8vo, large and beautiful type, cloth, $8. Large paper, royal 8vo (only 60 copies printed), cloth, $17 50.

*** By a special arrangement with the English publishers, Messrs. Trübner & Co., the above is offered at the greatly reduced price mentioned.

BY THE SAME AUTHOR.

MEMOIRS OF LIBRARIES;

Including a Hand-book of Library Economy. With Diagrams, Fac-similes, and other Illustrations. 2 thick vols. 8vo, cloth, $13 50.

The same, on large and heavy paper, 2 vols. royal 8vo, $27 50.

LIBRARIES AND FOUNDERS OF LIBRARIES.

1 vol. 8vo, cloth, $7 50.

The same, large paper, royal 8vo, cloth, $15.

FREE TOWN LIBRARIES.

Their Formation, Working, and Results, in Britain, France, Germany, and America. 1 vol. 8vo, cloth, $7 50.

HARTFORD, CONN.,

Daily and Weekly Times

Have widespread circulations throughout the Connecticut Valley, and find ready admission to thousands of families as regularly as the return of the seasons. The *Times* was established in 1817, and there is not a State in the Union, or hardly a civilized country on the earth, to which copies are not sent.

TERMS: $2 50 a year, or to Clubs, $2, for Weekly; $8 for Daily.

*** One of the best mediums for advertisers in New England. Address "*Daily Times*, Hartford, Conn."

A Popular Life of Dickens.

READY IN A FEW DAYS.

CHARLES DICKENS:

A Sketch of his Life and Works.

WITH A FINE PORTRAIT ON STEEL AND A VIEW OF THE RESIDENCE AT GAD'S HILL.

12mo, cloth, $1.

Uniform with Hurd & Houghton's "Household Edition of Dickens's Works," and may be bound with the "Globe" and other editions.

G. P. PUTNAM & SONS, Publishers,
ASSOCIATION BUILDING,
Fourth Avenue and Twenty-third Street, New York.

THE EVENING POST,

HARTFORD.

The Largest Paper published in Connecticut.

The attention of Advertisers is called to the fact that the EVENING POST combines the entire circulation of the *Morning Post* and the *Evening Press*, and is issued in Three Editions Daily, and has the Largest Circulation of any Evening Paper in New England (out of Boston).

The best advertising medium in the State. Advertising Rates furnished on application.

THE CONNECTICUT POST

Is the best Weekly Family Newspaper published in New England. Its circulation has more than doubled during the past year, and is rapidly increasing from week to week.

Its ample proportions, containing Eight Pages of Forty-eight Columns, with Supplement of Twelve Columns, twice a month, afford sufficient room for a systematic arrangement of a large amount of variety of reading matter.

A leading characteristic of the POST is its State and New England News, which is furnished by responsible correspondents, and collected with care from other sources, making the CONNECTICUT POST in every respect a superior first-class Family Journal, specially adapted to the wants of New Englanders. In all departments it is fresh, choice, and sparkling.

TERMS, IN ADVANCE:
EVENING POST (Daily), One Year, $8.
CONNECTICUT POST (Weekly), One Year, $2.

AGENTS WANTED—

$100 to $200 per month—

Clergymen, School-teachers, Smart Young Men, and Ladies wanted to canvass for the New Book,

"OUR FATHER'S HOUSE;
OR,
THE UNWRITTEN WORD."

By DANIEL MARCH, the popular author of "Night Scenes."

This master in thought and language shows us untold riches and beauties in the Great House, with its blooming flowers, singing birds, waving palms, rolling clouds, beautiful bow, sacred mountains, delightful rivers, mighty oceans, thundering voices, blazing heavens, and vast universe with countless beings in millions of worlds, and reads to us in each the Unwritten Word. Rose-tinted paper, ornate engravings, and superb binding. Send for circular, in which is a full description and universal commendations by the press, ministers, and college professors, in the strongest possible language.

ZEIGLER & McCURDY,
PUBLISHERS,
16 South Sixth Street, Philadelphia, Pa.

Philadelphia Evening Bulletin.

PUBLISHED DAILY, SUNDAYS EXCEPTED.

No. 607 Chestnut St., Phila.

The EVENING BULLETIN offers special advantages by its Large Circulation in Business and Family Circles, for all departments of Business Advertising. As the oldest and best Philadelphia evening paper it is the most desirable advertising medium, and is printed on fine paper, large quarto, forty-eight columns, containing the fullest Telegraphic News, Commercial and Financial Reports, Foreign and Domestic Correspondence, Literary and Art intelligence, and all the requisites of a first-class Business and Family Newspaper.

Published by PEACOCK, FETHERSTON & CO.,
607 Chestnut St., Philadelphia.

The Week.

CONTRARY to the anticipations we expressed last week, Louis Napoleon has pushed on to extremities, and war is now on foot between France and Prussia, although, at the present writing, there is no news of actual collision, though the telegraphers report sometimes a slight skirmish, and at others an awful battle, as having occurred on Sunday or Monday last. It is now universally acknowledged that Prussia had, before the declaration of war, conceded everything which self-respect permitted or usage required. The crisis has been brought on by the Emperor's insisting that the King should not only repudiate all connection with the Hohenzollern candidature, or even forbid it, but should make a general disavowal on behalf of himself and his family of all intention of ever at any time laying claim to the Spanish throne. Of course this was an insult. If you accuse a neighbor in private of having given you cause of offence, and he denies having committed or connived at the act of which you complain, and you then insist upon his promising that he never will commit such an act, or connive at it, most people would consider it the part of prudence for you to keep the doors open in the line of your retreat, if your neighbor be a choleric man. The insult appears to have been aggravated by the conduct of the French ambassador, M. Benedetti, who, doubtless under instructions, pursued the King to Ems, dogged him, and insisted peremptorily on an answer. This led, as was of course expected at Paris, to his prompt dismissal by a message, which was doubtless uncivil, through an aide-de-camp, and war was forthwith declared by France.

The whole performance bears a striking resemblance to the manner in which faction fights used to be "inaugurated" in fairs by another branch of the Celtic family. There is one emotion which probably no man but a thoroughbred Celt is in our day capable of experiencing, and that is a sense of wrong at not being attacked by somebody. Accordingly, we find the French looking on themselves as martyrs, and the police are encouraging the singing of the *Marseillaise* in Paris—a shout of defiance hurled at a ruthless invader—though the guilt of the foe appears thus far, in this instance, to consist in not having declared war without provocation. Of course, however, there can be no doubt that war with Prussia has long been deliberately planned by the court. The failure of the Imperial anticipations with regard to the results of the campaign of 1866, and the rather ludicrous rebuff experienced by the Emperor when he politely asked the victor for the Rhenish Provinces, coming on top of the Mexican disaster, gave the Napoleonic dynasty a serious blow, and the last three years' have been passed in preparation for some stroke of retrieval. The army has been enlarged, reorganized, and rearmed with breech-loaders. There can be little question, however, that the final move has been precipitated by the result of the plébiscite, and this result has been due partly to the insane behavior of the Reds and partly to the baseness and stupidity of M. Ollivier. The Flourens and Rocheforts managed to frighten thoroughly all that portion of the French people which has anything to lose and loves a quiet life, and some sapient Liberals intensified their alarm by treating these madcaps with the respect due to real champions of freedom. The Emperor cunningly appealed once more to the popular voice while the public mind was in this state—a distinctly revolutionary proceeding to which M. Ollivier tamely submitted rather than resign. Thinking himself enabled by the vote to throw off his pretence of liberalism and go back once more to pure Cæsarism—that is, the reign of brute force veiled by the mock deliberations of a sham legislature — Napoleon has once more thrown himself on the army, and provided a victim for it in the person of Prussia.

The probable limits of the war no man living can determine. The most serious feature in the case is that the original cause of the dispute—the Hohenzollern candidature—being removed, it will be almost impossible for the Emperor to strive for anything short of the Rhine Provinces; the French people will certainly consider anything short of their annexation as a sign of failure, and Louis Napoleon cannot afford to make another military failure. It is doubtful whether he would survive one; the dynasty certainly would not. But it is impossible to conceive of a cession of German soil by Prussia in our day, except as the result of overwhelming defeat—such defeats as only the elder Napoleon was competent to inflict. Any victories the French may achieve are pretty sure to be dearly bought, and to leave the victor little energy or audacity, while they would be sure to weld Germany into a solid and enduring mass. Moreover, as a "rectification" of the French frontier, the Rhine Provinces of Prussia would be of no use without Belgium, and any menace to Belgium would unquestionably bring England into the field. Her obligations on this score are such as cannot be evaded without greater humiliation than the English people are prepared for; and, England in, all other powers would follow, and we should have such a clearing off of old scores as has not been witnessed since 1813. We suspect, before it is all over, the opinion which was generally held out of France in 1815, that Bonapartes are enemies of the human race, will have generally revived. But it is not the Bonapartes, after all, who are most to blame, but the French people, whose want of political sense produces Bonapartes just as our foreign vote in New York produces Tweeds and Sweeneys. Tyrants and demagogues must have a suitable soil to grow on, just like fungi or weeds.

The probabilities are that the campaign will be a slow one, owing to the age of the principal generals on both sides—they are all sixty and more; but it is certain that the engagements will, owing to the weapons employed, be murderous. There is one contingency which may be looked to as capable of closing the war at any moment—the breaking down of the French Emperor's nerves. This suddenly brought about the treaty of Villafranca, in the midst of successful operations, in which he had the sympathy of Europe, and when he was eleven years younger and in better health. Thiers and Jules Favre, approaching the subject from opposite sides, condemn the war as unprovoked; but, although there is little doubt that the enthusiasm for it which has been reported from Paris has been to some extent manufactured, once the troops are in the field there will be only one party in France. In Germany, too, the actual advance of the French will, there is no question, end all wavering, even on the part of those who most hate and fear Prussia. Baden takes the lead, and the rest of the South Germans will go in one by one. Their case is a hard one. If the war strengthens Prussia, she will probably swallow them without more ado; if she is defeated, they have to share in a humiliation which for all Germans has traditional horrors. French rule and French campaigns have left bitter memories all over the confederation.

And now, would it be too much to ask of the daily papers either to employ rational beings as their news collectors in Europe, or else *edit* the despatches before publishing them?—that is, if not weigh their probability, at least strike out those portions which are, through their absurdity, insulting to the intelligent reader. For instance, who that finds amongst his Cable telegrams the announcement that "the French hold Rome, the key of the Mediterranean," does not feel his fingers instinctively searching for the hair or nose of the Associated Press? How does that body suppose a person of average sense likes being told seriously as a piece of news that "Eastern France is absolutely alive with soldiers," or that "the Corps Législatif had declared war against Prussia at fifty minutes past one this afternoon," or "that secret instructions have been issued to French officers that the troops shall divide all lands they conquer?" We think the press owes it to the American public to offer a reward for the discovery of the person who sent this last report over the wires, if it did come over the wires. A more wanton insult to the American people, including the lunatics and inebriates, it would require a man with a genius for insults to devise.

The telegraphic report from Paris, to the effect that the leaders of the various parties in Hungary have united in a public declaration of sympathy for France, will most likely turn out to be a fabrication of French newsmongers. Of the three parties in that country, the extreme Left, which from time to time receives its inspiration from Kossuth, desires nothing more ardently than the fullest success of Prussia, which would lead to a consolidation of the whole of Germany under the Hohenzollern dynasty, and the total break-up of Austria, and consequently to the complete independence of Hungary. The moderate Liberal party, whose leading organ is Jókai's *Hon*, have also many a time unequivocally declared for the cause of German unity, and against the pretensions and interference of both France and Austria. The Conservative party, generally designated as the Deák party from the name of its leader, might perhaps be induced by its belief that the continued existence of Austria is absolutely necessary for the preservation of the Hungarian nationality not to rejoice in the too complete success of Prussia; but that party is too prudent and too well disciplined to indulge in exaggerated and premature effusions of sentiment. Nor would Deák himself, "the Aristides of Hungary," be inclined to lend his voice to the cause of the aggressor, even when likely to serve the interest of his country. Some insignificant demonstration in favor of France may have taken place in Pesth on the part of some rash youths, but we are convinced the leaders of the Hungarian parties have had nothing to do with it.

A decorous and business-like close of a session nobody expects, for somehow Congress always contrives to be at the last in a great hurry, and in a state of extreme confusion, so the House was like a bedlam on Friday, when the adjournment took place. But if there was as much noise and disorder as ever, there seems to have been an improvement in particulars more essential. "One-half of the House occupied itself in watching the other half," and there was far less than the regular amount of jobbery. There was, however, no lack of attempts of all kinds, down to the simple and bold device of surreptitiously inserting a clause never enacted into a bill in process of engrossment. It would seem as if there ought to be no difficulty in detecting the author of this little trick, but, so far as we hear, the honorable member, or the clerk, or whoever it was, has not as yet been discovered; nor do we remember any case of the kind in which investigation was followed by the public discovery of the culprit's name. The House was ready for adjournment before the Senate, which body could not be brought to an agreement with the House's views concerning the Georgia Bill and the Indian appropriations.

Just what in effect has been done with Georgia it is not easy to see, beyond the fact that she is once more within the Union. The latest fighting over her has been caused by the question whether or not before her admittance she should be saddled with a Congressional command to keep Bullock and his crew in office for a term of two years longer than otherwise they could have kept in. No mortal knows any good reason why House and Senate should not have driven him from their doors, and it is past guessing what can be the motives of Congressmen in guarding his interests. But, so far as now appears, Congress, in its final action, has at least shirked the settlement of the question, if it has not settled it in a way to make its miserable record in regard to the Georgia muddle consistently unwise and incapable to the very end. The bill declares Georgia in the Union, and ordains that State elections shall be held "in accordance with the State constitution." What it is that the law and the constitution order is the question over which Bullock and his enemies have been disputing, and now, it would seem, Bullock and his judges and Legislature are to have the deciding of it, so that on the whole we are likely to hear a little more of Georgia.

The quarrel over the appropriations for the Indians terminated in a truce, but there is no peace. The House claims the right to make or to refuse to make appropriations necessary for the carrying out of treaties. The Senate, of course, maintains that the treaty-making power is vested in itself and the President conjointly, and that whenever the payment of money is necessary for the carrying out of a treaty, the House is bound to make the necessary appropriations, asking no questions; otherwise, it would be arrogating to itself the exercise of treaty-making functions, a sphere from which it is shut out by the Constitution. It is proper to observe, by the way, that this troublesome problem in the working of our political machine has come up now and here because of our absurd fashion of calling our bargaining and dickering with a few naked savages an exercise of the "treaty-making power." Still, it was safe to come up sooner or later, and the House, which yielded reluctantly at the time of the Alaska purchase, is said to have made up its mind not to yield in case Mr. Sumner had ever brought forward the St. Thomas treaty. General Grant and Secretary Cox were of course very anxious for the passage of some sort of a bill, as otherwise an Indian war was inevitable, while in case the Secretary could fulfil his engagements, there was a prospect of general peace—Red Cloud himself being "good in his heart" at present, and in person preaching goodness to a pair of hostile tribes disposed for war. Mr. Dawes undertook to get the matter settled by offering to put into the hands of the President five million dollars, to be spent as he in his discretion might think best; but this the Senate would not have; and in the last of a dozen or so of conferences, the House Committee assented to the Senate's bill, but attached to it a declaration that their action must be taken as neither affirming nor denying the validity of the Senate's opinion as to appropriations for treaties, and the question is sure to be reopened.

The Army Bill was another measure that got a great deal of attention in the closing days of the session. It is a measure as to which it is difficult to say whether it was more the result of a spirit of true economy or of that curious wool-pulling economy which covers, scantly, such a multitude of sins of extravagance in Washington. Here is the Senate, which absolutely has passed every land-grabbing bill that it could lay its hands on, and which provoked the derisive laughter of the House by sending in its Secretary, too late, in the very last seconds of the session, with the announcement of still one more grant of lands—this economical body it is that effects a saving of $1,300 on the salary of Sheridan, and $500 or so, more or less, on that of Sherman, and then asks our admiration for its carefulness in expenditures! However, the law seems to be in the main judicious. The number of names on the retired list is fixed at three hundred; any officer of thirty years' standing may be retired at his request; a court of enquiry is to examine into the cases of officers held to be incompetent or of bad character, and such as cannot stand an examination are to be mustered out; any officer that likes can be mustered out by asking it, and gets, on going, a year's pay; the normal number of major-generals is set at three and of brigadier-generals at six, and no appointments are to be made until there are less than three officers of the one grade and six of the other; and, finally, the grade of general ceases with Sherman, and of lieutenant-general with Sheridan. One other thing in the new law the country will approve, and that is, that officers are forbidden to wear brevet uniforms while on duty, and are never to be designated by brevet titles in official communications. The country would have been well pleased to see the whole brevet system abolished.

The high-tariff men who have actually killed American ship-building, and have done it as directly and more effectually than if they had burnt every ship-yard and hanged every shipwright, were of course very loud in opposition to President Grant's proposal that Congress should admit foreign ships free of duty, should remit the duties on foreign articles that enter into ship-construction, and should grant American registers to vessels whose European owners might wish to transfer them to our flag. With the help of the other high-tariff men, and with the advantage of the time in the session when the proclamation was sent in, the copper, iron, and cordage men were able to defeat the measure proposed. It might probably have been of less advantage than many expected, but that is a matter which it is not worth while to consider at present, now that it is not going to be tried, and it is the less worth while now that there are growing indications that the whole Congressional management of our shipping interest, as of the rest of the trade of the country, will in no long time undergo a very thorough overhauling from top to bottom. But it occurs to the reader of the proclamation and the debate upon it to ask why, if the free admission of material for ship-building and of foreign-built ships is likely to be profitable to this country during the fifteen months next to come—why would it have been of detriment during the fifteen months last past? Who would have been hurt in case the President's proclamation had been made law, except those few thousands of our forty millions of people who were clamorous against it on Friday in Washington?

Mr. Motley comes home from London, and Mr. Frelinghuysen, of New Jersey, a very able and competent man, takes his place. The cause of Mr. Motley's dismissal, for it is said he refused to resign, seems to be a radical difference of opinion between him and the President and State Department as to the mode of settling the *Alabama* question. The President and Mr. Fish, as our readers may remember, hold that the concession of belligerent rights to the rebels by England was simply an abuse of discretion; that the real wrong towards this country lay in subsequent open violations of neutral duty—an opinion which, we believe, is shared by nearly all the jurists of the civilized world who have ever heard of the question. Mr. Sumner, however, maintains that they are all wrong, and has managed, so runs the story, to impress Mr. Motley so profoundly with his view of the matter, that the latter refused to surrender it, even to Secretary Fish, and urged it on Lord Clarendon. This is unfortunate in all sorts of ways, because Mr. Motley, if not as sound a lawyer as might be found for the place, has a variety of other and hardly less valuable qualifications for it which are not easily supplied elsewhere.

Our chances of a quiet life in New York have been seriously diminished during the week by what we fear is the commencement of a series of Orange riots; or, rather, of Ribbon attacks on Orangemen. An Irish "Protestant Association" of this city went last week on a picnic to Elm Park, accompanied by their wives and children, and on the march displayed their Orange banners and badges, and played what are in Ireland known as "party tunes." They were peacefully feasting and dancing in commemoration of the Battle of the Boyne, when some hundreds of Catholic laborers who were in the neighborhood, hearing of it, at once repaired to the scene of gaiety, and, under the influence of a sense of duty, as the Catholic papers seem to think, began to pistol, cudgel, and stone the whole party, women and children included. The Orangemen resisted valiantly, in a style which would have done King William good to see; while the Papist onslaught, if made at Franklin or Trout River, would have sent the redcoats flying in every direction; that is, if the redcoats had been women, with long hair, or had had no arms, and had been taken unawares, Canada would by this time be a Fenian Republic. A second attack on the street-cars, after the Orangemen had dispersed, and were going home, in which women were again brutally beaten, and all sexes robbed with impartiality, closed a disgraceful day—one of the many days which is gradually bringing the civilized world to regard an "Irish patriot" as a sort of cowardly tiger, with the voice of an ass and the heels of a hare. Six persons were killed and over a hundred wounded. Is there nobody of sufficient influence and education among the Fenian leaders or the Catholic clergy to prevent these atrocities?

It is quite true that the Boyne was a victory of one race and one creed over another, and was followed by shocking oppression on the part of the victors; it is natural that Irish Orangemen should like to celebrate it, for it delivered them from what is popularly known as "a very tight place," and changed the course of both Irish and English history. But it is also true that it is bad taste and policy and citizenship to persist in the public celebration of any event which reminds one's neighbor of misfortune and humiliation, and the persistence of Orangemen in doing it comes very badly from such "Bible Christians" as they profess to be. On the other hand, we wonder whether it ever occurred to a Fenian that no political success, peace, or comfort is possible to any people which has no capacity for forgetting. A man who mourns over "six hundred years of wrong" confesses *ipso facto* that he is a miserable politician as well as a silly fellow; and anybody who is roused to such a degree by the celebration of a battle fought two hundred years ago that he has to throw paving-stones or flourish a knife, may know that he is born to be ruled by a calmer and graver people, that such as he can never found a state or administer a government, or be anything but a laughing-stock and a by-word. If all races found it such a dreadful thing to have the memory of lost battles and other long-past political misfortunes recalled, the civilized world would spend most of its time rioting, and calling names, and hurling defiance, and would soon cease to be civilized.

The Infallibility dogma has at last been carried in the Council, a minority of about 90 holding out against it; but this minority includes nearly all that is respectable for character, talents, learning, and influence in the Catholic Church, and represents by far the larger portion of the Catholic world, the majority being largely made up of Italian bishops, and bishops *in partibus*, who are literally dependent on the Pope for their bread and butter. The formal proclamation of the dogma, however splendid the ceremony may be made, will now excite but little attention, the public mind being fixed on the war. The Jesuit fathers, who have "put the thing through," to use the phrase of their brethren the politicians, begin to find that the vote in the Council by no means ends their troubles. A spirit of revolt has begun to show itself among both clergy and laity all over Germany, and even in Bohemia. The Prussian Catholics are especially rampant, and in the Swiss Catholic canton secession is openly talked of. In England, the effect promises to be not less disastrous. Father Newman has spoken out pretty boldly, and the leading Catholic layman, Lord Acton, has passed the winter at Rome, as one of the chiefs of the opposition. The worst is probably still to come, as the heretics, and schismatics, and scoffers, instigated by Satan, will probably now resort to comparisons of what the actual Pope says with what his predecessors have said, seeking thus to throw ridicule on the new article of faith. As long as Pius IX. lives, however, they will be handsomely cursed for their pains.

Talking of the Church, there has been a curious controversy in Dublin between the National Board of Education and Cardinal Cullen touching the morality taught to children in the school text-books. For instance, the Cardinal denies that it is right to teach children that concealing the truth to avoid unpleasant consequences is lying, or that "we are commanded by God to speak every man truth unto his neighbor." But to the following statement, which is made to the children in school, he specially objects: "We may say things which are not entirely false, but may bear a double meaning, or are true in themselves, but not true in the sense in which our hearers understand us, in which case we lead people to believe what is false. This is called equivocation, and is to all intents and purposes the same as a lie, and equally criminal." "This teaching is," he says, "not correct, and such doctrines ought not to be infused into the minds of children."

We have the best authority for contradicting the statement that Father Hyacinthe had obtained from Rome a regular dispensation from his monastic engagements, and had been registered among the secular clergy. In the prevailing tone of opinion at Rome, his secularization would not be accorded without a retraction on his part of his famous protest of 20th September, 1869. But, so far from withdrawing that, Father Hyacinthe abides by the convictions that compelled it, and even renews it the more energetically in face of the new excesses of the Ultramontane party, now so rampant at Rome.

WITH WHICH SIDE SHOULD WE SYMPATHIZE?

THERE could hardly be a more striking illustration of the shallowness of our civilization than the fact that one of the foremost nations in the world should at this moment be placing its blood and treasure at the disposal of a Bonaparte—of all men in the world—to carry on a war of succession. The reappearance of a Bonaparte on the throne of France was an express assertion and vindication on his part and on that of the nation of two doctrines—of which the attack which they are now making on Prussia is an open repudiation—viz., that every nation has a right to choose anybody it pleases for sovereign, and that no choice it can make gives any other good reason for either fear or complaint. The will of the people being the supreme law, the blood or antecedents of the person it chooses for its chief could not, we were told, affect its foreign policy. It was only Bourbons and other imbecile adherents of divine right, and of the theory of royal ownership of kingdoms, who would see in family alliances any necessary disturbance of international relations. The other powers of Europe frankly accepted this preaching in 1851. They remained perfectly tranquil while the head of a family which had been proscribed by the public law of Europe as dangerous to its peace put himself on the throne of France by a bloody revolution, and admitted that if France was satisfied nobody else had any right to complain. It is this man who is now plunging into an armed conflict, first of all, in denial of the right of the Spanish people to choose their king; and, secondly, in assertion of the old monarchical theory that the foreign policy of governments is regulated by the blood-relationships of its sovereigns; in short, we are witnessing in the nineteenth century a war of succession, in which the principal actor is an elected dictator.

The *World* last week endeavored, with a good deal of ingenuity, to show that so far as any claim to the sympathy of the American people is concerned, Prussia is on no better footing than France, owing to the despotic temper and thoroughly feudal antecedents of the reigning king. But it must not be forgotten that he has inherited both his temper and his position, and that he is a very old man, to whose vagaries the Prussian people submit, partly because they entertain a traditional affection for his house, and partly because his reign must at best be short. In fact, he is but a relic of the old régime—the last surviving monarch who believes in the divine origin of his own authority. His heir is a liberal, and, if not a "progressive man" in our sense of the word, is sufficiently so for all the purposes of Prussian progress, which, if not rapid, is one of the surest and strongest things the modern world has to show. Nothing else certainly has offered Europe thus far so comfortable an escape from feudalism; nothing else has been so successful in popularizing the government, while upholding the claims of knowledge and skill to the supreme control of human affairs, and in stimulating industry without creating a vast proletariat. The arrogance of the Prussians there is no denying, and the foreign policy of Bismarck has certainly been thoroughly unscrupulous; but then his unscrupulousness has been displayed in the execution of schemes to which every lover of his kind must wish success; in the deliverance of a great people from being the prey of despicable and voracious princelings; and in the infusion of activity, largeness of aim, and noble ambition into their national life. Frederick William and his minister will pass away. The work of their hands will last, and the Prussia they have aggrandized must certainly long remain that community of the old world to which those who are interested in the improvement of human character through political action will look with most hope. There is no enemy of standing armies, too—nobody who feels the magnitude of the evils which these vast isolated hordes of idle men inflict on the world—but must wish that when an army composed as the Prussian army largely is, takes the field in a good cause, victory may perch on its banners. An army in whose ranks ploughmen fresh from the field, clerks fresh from their desks, and professors fresh from their chairs, stand shoulder to shoulder, must always be an object of sympathy to those, of whatever country, who look forward to the time when the soldier will never be anything else than an armed man defending his home, and must, wherever its "vollied thunders" fly, make the spread of Cæsarism impossible.

That the present Government of France is a Cæsarist government —that is, a government of brute force, unhallowed by time and unsupported by traditions or sentiment—and that it can never be anything else, we suppose is now fully demonstrated. Nothing can be clearer than that the late concessions to liberalism were only a sham and a snare, intended to extract from France the vote which has encouraged the desperate gambler who occupies the throne to engage in another and unprovoked war, in the hope of securing his son the succession. There is no longer a vestige of constitutionalism in his policy or his methods. Unfortunately, he has this time hit upon the very surest means of rallying the French people to his standard. They would not be the descendants of the Gauls if any regard for political freedom caused them to hesitate seriously about following to the field anybody to whom either law or accident or usurpation had committed the national flag. Nevertheless, in spite of their antecedents, we are still loth to believe in the accuracy of the telegraphic stories of the enthusiasm with which this wicked war has been greeted. We may be sure that, however the ministerial press in Paris may shriek for battle, the cause of national progress, of political freedom, and of humanity has not been left without plenty of eloquent witnesses in France as well as elsewhere, and if they do their duty manfully, and the Prussians hold German soil stoutly, it may be that this will be the last time we shall see the French army doing the bloody work of reckless and unscrupulous adventurers. Nobody who knows anything of its many great qualities, of the courage, the science, the self-devotion which it always has to show, or of the almost pathetic worship of the point of honor of which even the rank and file are capable, can see it wasted in these wild forays without the deepest sympathy and regret.

THE NEXT CONGRESS.

THE political complexion of the next Congress is a matter of considerable speculative interest, in respect to which, even at this early day, it is possible to form some reasonable anticipations.

The political aspect of the Senate cannot be materially changed. The Republicans may, and we think will, lose one Senator from each of the States of Alabama, Arkansas, Louisiana, New Jersey, and North Carolina. They have in effect lost one each in Oregon and Tennessee. They *may* lose one in West Virginia; but they are more likely to gain one in Minnesota, and may possibly, through the colored vote, gain one in Delaware. There is a bare possibility of loss in Illinois and Nebraska; but this can only happen in case of a political deluge. In any event, the Senate would remain Republican by more than a two-thirds vote.

The House of Representatives is a body more open to change; and here the Democrats confidently look for success. This is, however, no new story, and proves nothing. We must consider the details of the approaching contest, with small regard for the vague expectations of excited politicians on either side. In order to arrive at a fair conclusion, we must consider the country in separate divisions, with reference to the peculiar wants and interests of each section. There is no general wave of feeling which is likely to sway the country as a whole. Indifference is the only feeling which is widespread at this time. In the New England States, we discern no indications of political discontent, and see no reason for expecting great changes. The doubtful district of New Hampshire is made reasonably safe by the fact that the Navy Yard is in it, and is controlled by Republicans, who doubtless understand, from the fate of Collector Grinnell, that they are expected to be vigilant politicians. The Republicans must, however, lose two districts in Connecticut, which they carried only by reason of the unpopularity of the last Democratic nominees, who were formerly Johnson Republicans. In New York, the war between the Fenton and Morgan factions seriously weakens the Republican party; and there are also other troubles in its ranks which have a very unfavorable influence. Governor Hoffman has pursued a line of policy which has strengthened him with his party in the rural districts, and has, upon the whole, strengthened his party as well as himself. The result will certainly be a loss to the Republicans of the 11th, 12th, and 30th districts, while they will run some risk of losing the 16th (Clinton), 18th (Saratoga), 21st (Oneida), and 28th (Monroe) districts. We do not believe, however, that they can lose all of these, though we incline to expect a loss of the 18th and 21st. Several other districts were lost at the recent judicial election, but that afforded no test by which the result of an election next fall could be measured. In New Jersey, Mr. Hill, who was elected by 79 majority, can hardly expect to succeed again. But, on the other hand, Mr. Haight, the Democratic member from the 2d district, may be defeated by the colored voters, who are very numerous in his district. In Pennsylvania, we judge that the present ill-feeling in the 3d district will cause the loss of Mr. Myers's seat. The 10th (Cake's) district is naturally Democratic, and will no doubt go that way this time. So will the 21st (Covode's). The 13th (Mercur's) is likely to be lost. The Republican majority has been diminishing there for some time, having been 1,287 in 1866, and only 311 in 1868; and the colored vote will be small. But the colored vote will, we think, gain the 5th district to the Republicans, and save the 16th, which would otherwise be doubtful. In the 17th, Mr. Morrell is running again, which means that he intends to be re-elected; and, in Pennsylvania, "where there's a will, there's a way." We consider Delaware and one district in Maryland doubtful, since the admission of colored voters; but shall, in our final estimate, leave them, as at present, Democratic.

In the Southern States generally, the financial mismanagement of many Republican officials will prejudice the party. But it has been made quite clear that nothing except intimidation will divert the colored vote from the Republican ticket. We do not therefore believe that any Republican who was fairly elected in 1868 from the South will be succeeded by a Democrat now, except in cases where the majority was very small. Mr. Heflin, of Alabama, was elected by 153 majority. Messrs. Roots, of Arkansas, and Van Horn and Dyer, of Missouri, were, we fear, counted in rather than elected. The operation will hardly be repeated. In Tennessee, the Democrats will doubtless gain five or six members, owing to the repeal of disfranchising laws. We allow them six. On the other hand, the colored vote will gain the St. Louis district, with at least two Kentucky districts, and save Duvall's in West Virginia, which would otherwise be unsafe.

In the West, the free-trade sentiment is not unlikely to be the cause of some division among the Republicans; but the course of the Western Congressmen has been generally shaped according to the interests of their respective districts, and is probably satisfactory to their constituents. The districts which were closest in 1868 are precisely those in which the colored vote will now be largest, except in the northern part of Ohio. By this vote we think that the Republicans will save, in Ohio, Stevenson's district (majority, 497), Schenck's (475) (he talks of declining renomination, but doubtless will not decline), Lawrence's (629), Smith's (343), and Moore's (956). But the colored people alone can hardly save Welker (462) or Bingham (416), and we doubt if they will suffice to save Winans (155) in the Columbus district, although colored people are numerous there. Mr. Winans is a free-trader, and there is much opposition to his nomination on that account. If he is thrown aside on that ground, the district will be lost. In Indiana, the colored vote would save all the Republican members, but for some domestic quarrels, which bid fair to lose two members. This vote will, we believe, save the Detroit district in Michigan, and may save the doubtful district in Illinois, though we should concede that to the Democrats. The Milwaukee district in Wisconsin will, we think, be lost by the Republicans this year.

We know of no reason for expecting any changes in California, Nevada, or Nebraska. But we put Nevada in the Democratic column, inasmuch as the Republican majority there has diminished since 1864.

The prospect for the next House, under these circumstances, appears to be about as follows:

	Rep.	Dem.		Rep.	Dem.
Alabama . . .	3	3	Indiana . . .	6	5
Arkansas . . .	1	2	Iowa	6	0
California . . .	1	2	Kansas . . .	1	0
Connecticut . .	1	3	Kentucky . . .	2	7
Delaware . . .	0	1	Louisiana . . .	3	2
Florida . . .	1	0	Maine	5	0
Georgia . . .	3	3	Maryland . . .	0	5
Illinois . . .	9	5	Massachusetts . .	10	0
Michigan . . .	6	0	Pennsylvania . .	14	10
Minnesota . . .	2	0	Rhode Island . .	2	0
Mississippi . . .	4	1	South Carolina . .	4	0
Missouri . . .	6	3	Tennessee . . .	2	6
Nebraska . . .	1	0	Texas	2	2
Nevada . . .	0	1	Vermont . . .	3	0
New Hampshire . .	3	0	Virginia . . .	3	5
New Jersey . . .	1	4	West Virginia . .	3	0
New York . . .	15	16	Wisconsin . . .	4	2
North Carolina . .	5	2			
Ohio	11	8	Total . . .	143	99
Oregon	0	1			

THE CURRENCY BILL AGAIN.

Most of our readers will remember the compound-interest notes, bearing six per cent. compound interest, of which several hundred millions were outstanding at the close of the war. These notes were legal tender for their face value, and the national banks held a large amount of them as a part of the "legal-tender reserves," which they are obliged by law to keep on hand for the payment of their depositors and the prompt redemption of their own notes. Of course, they were extremely valuable to the banks for this purpose, for the reason that by means of them the people were actually paying the banks interest on the money lying idle in their vaults, which they would have had to keep on hand under any circumstances, for their own protection, whether or not compelled by law.

Now, every United States Secretary of the Treasury has to have a hobby. Mr. Boutwell's hobby is to reduce the rate of interest on the debt—a praiseworthy hobby in itself, though rather mischievous when ridden blindly against the stone walls of fact. So Mr. McCulloch's hobby was to complete at any sacrifice the funding of the debt before the end of his official career. To do this it was necessary to induce the national banks to give up their six per cent. compound-interest notes without the unpleasant use of compulsion. These imperious national paupers insisted upon compensation, and as it seemed impossible to withdraw the national pap from them entirely, a compromise was effected. A new security was created for the benefit of the banks to take the place of the compound-interest notes, but instead of six per cent. compound interest the new securities bore only three per cent. interest, and instead of the banks being allowed to hold their entire reserve in them they were only allowed to hold three-fifths of their reserve in these new securities, which have since become known as the Three Per Cent. Certificates. By the Act of March 2, 1867, fifty millions of these certificates were authorized, and by a subsequent act permission was given to issue twenty-five millions more. But the full amount has never been issued, and by occasional cancellations the total amount outstanding has been reduced to about forty-five millions. It is these forty-five millions of three per cent. certificates that the so-called Currency Bill proposes to abolish.

To this extent the bill is a wise one. The existence of these forty-five millions of certificates is a constant and most serious, though perhaps remote, danger to the Treasury. They are virtually a call loan to the Government for an amount exceeding three or fourfold the entire cash balance of the Treasury on more than one occasion. If presented for payment under the pressure of unforeseen necessities, they might force the Secretary into an unwelcome issue of new greenbacks, involving a total reversal of the established financial policy of the Government. That the danger has not developed into disaster is due solely to favorable events, not to the perverseness of Mr. Boutwell, who is blind to everything except his own political fortunes as they may be advanced by his intended grand achievement—the reduction of the interest rate. This danger the bill is intended to remove. Beyond this commendable intention, there is nothing in it that is not inconsistent, futile, or downrightly mischievous.

This wonderful emanation of the joint wisdom of House and Senate orders the Secretary to redeem forty-five millions of three per cent. certificates. Of course, it tells him where he is to get the money from. Not a bit of it. According to his last balance-sheet he had on hand about twenty-nine millions of currency. His lowest possible working-balance is about nine millions, so that at best he would have twenty millions to spare for the redemption of certificates.

Owing to imperfect statements, it is not known how large a proportion of these twenty millions consists of national bank-notes, which are not available for the purpose; but we may safely assume that it is not less than one-fourth, leaving, say, fifteen millions of greenbacks to redeem forty-five millions of certificates—very fair arithmetic for Congress.

It may be asked, does the bill require the Secretary to redeem all the certificates at once and immediately? It does not. He is to redeem them as rapidly as certain new national bank-notes, provided for in the bill, shall be issued by new national banks. These may not be issued for a long time, but the very argument upon which the bill passed was, that the need of these new national banks was so urgent as not to admit of a moment's delay. According to the framers of the bill, these new notes will be issued with the utmost rapidity, and hence the Treasury will be called upon to redeem the certificates almost immediately, for which contingency the measure, as we have already shown, makes such admirable provision. Such legislation is humiliating to us as a people, and would ruin our credit abroad if the latter were to any extent based upon the wisdom of our legislators.

For our own part, we do not share the belief that many new national banks will be started, and hence are not alarmed about any danger arising to the Treasury from this source. The difficulty in connection with the three per cent. certificates, which may arise from outside events, and which we shall consider hereafter, has no direct reference to the Currency Bill. The essential question for the mass of the people is, Does the bill affect the amount of circulating medium, the currency of the people? and, if so, in what manner? It is in relation to this important question that so much misrepresentation has been practised. The true answer is: Nominally the Currency Bill increases the currency; practically it diminishes it: apparently it works inflation; in reality it is most decided contraction.

The first section of the bill provides that the Secretary may authorize the issue of fifty-four millions of additional bank-notes, and the next section provides that he shall cancel forty-three millions of certificates, which for all banking purposes are the same as greenbacks. *Apparently*, therefore, eleven millions more currency is to be issued than withdrawn. In reality, the effect is very different. The moment the Treasury withdraws a dollar of certificates, the bank holding the same is by law obliged to procure a one-dollar greenback to put in its place. Now nothing is so difficult to procure when wanted as greenbacks. Of the four hundred millions (in round numbers) of paper money issued by the Government, all the banks in the United States, according to their last quarterly statement, held precisely eighty-three millions. The balance, as we have repeatedly explained in these columns, is held by the people, who prefer them to national bank-notes and do not want to part with them. So decided is the preference given to greenbacks over national bank-notes, that, even when money is comparatively scarce, national bank-notes are sometimes superabundant, and can be passed among bankers in large lots only at a discount. The further issue of fifty-four millions of national bank-notes, already superabundant, will not add one dollar to the greenbacks, which are now in rather deficient supply. But the destruction of forty-three millions of three per cent. certificates imperatively necessitates the procuring of forty-three millions of additional greenbacks by the banks to take their place. Where are the banks to get them? There is but one answer. They must get them from one another—which is impossible—or they must do without them. In other words: The greenbacks are only needed by the banks for legal reserve against their deposits and their circulation. If they cannot get the additional greenbacks, they must diminish either their deposits or their own circulation. For every one-dollar greenback that they fail to get, they must, according to law, diminish their deposits or circulation *four* dollars. If, therefore, the banks cannot, by some process as yet undiscovered, induce the holders of forty-three millions of greenbacks to give them up in exchange for the same amount of national bank-notes, then the banks must reduce their present circulation or deposits by *four times* forty-three millions. To reduce their circulation thus would be to withdraw one hundred and seventy-two millions of old national bank currency in exchange for fifty-four millions of new. To reduce their deposits would require a curtailment of their loans to a similar extent.

We have purposely given the extreme case. Such a contraction as here described is utterly impossible; it would throw the whole business of the country into confusion. Indeed, the effect of the Currency Bill would not practically be as severe as we have described. In the first place, a certain amount of greenbacks is still always obtainable at a merely nominal premium; and, in the second place, the banks, at last accounts, held more than the reserve required by law, and thus they could lose a small portion of their greenbacks without serious inconvenience. So that, practically, the enforcement of the Currency Bill, even if it is at all likely to be enforced, would not have as serious an effect as we have described. But that any other view than ours, that it works contraction and not inflation, can be for one moment seriously entertained by any thoughtful banker, seems to us totally impossible.

We do not propose at this time to discuss the wisdom or unwisdom of the intended change. There are other features of the bill which claim our attention. The bill itself had its origin in, and is intended to remedy, the supposed injustice of the existing distribution of the national bank circulation among the different States. Whatever injustice and favoritism may have been at work in the original granting of bank charters, was of course injustice against the many in favor of the few. It was the individuals who benefited by the charters, not the people of the different States in which the banks are located. If a merchant in Texas has good security on which to borrow bank-notes, he can borrow them as cheaply from a national bank in Massachusetts as from a national bank in his own State. The great mass of the people in Texas will not find borrowing one bit easier by having new national banks started there. The only effect of redistributing the currency will be that, whereas heretofore certain individuals in the New England States have had the legal right to derive profits from their neighbors, that legal right will hereafter be shared by certain individuals in Texas and elsewhere. The supposed increased borrowing facilities for the Texas merchant is simply a delusion, which does not need to be explained again to readers of the *Nation*, and the Congressional measure to this effect will be about as effectual as Congressional measures often are.

Besides cancelling the three per cent. certificates, authorizing the issue of fifty-four millions of new, and redistributing the old currency, together with various minor objects, the bill also incidentally furnishes the means of returning at an early day to specie payments—means so ingeniously devised that, if we had specie payments to-morrow, this measure alone would be almost sufficient to cause an immediate suspension for five years at least. It is positively astounding in its recklessness. It authorizes the issue of an unlimited amount of coin-notes, on the deposit of United States bonds, and stipulates that, against every one hundred dollars of par value *in currency* of bonds deposited, eighty dollars of *gold* notes may be issued, *which the United States guarantees.* At the present moment, when our bonds are really worth nearly par in gold, this does not seem an extravagant risk. But there is no earthly need of the United States incurring any risk whatever in the matter; and, to recognize that the risk incurred is really a most grave one, we need only reflect that, less than nine months ago, our six per cent. bonds were worth less than seventy cents in gold. Where would the Treasury have been then, if this precious law had been in operation? Every dollar of these coin-notes would have been instantly presented for redemption, and banks and Treasury would have been involved in like wreck and ruin. It is very easy to say that such scenes as those of last September are not likely to be re-enacted soon; we do not ourselves believe that they will be; but the Fisks and Goulds are not all dead yet; there are plenty of sensible people who believe that gold will naturally rise again to very high figures; every year since the peace we have had periods of high gold, and on the outbreak of the Austro-Prussian war it ran up to 168. With such recent experience before us, it seems the wildest trifling for the United States Government to offer, without the slightest particle of consideration, an unlimited guarantee that gold shall never again advance beyond 130. Yet this is precisely what section three of the Currency Bill accomplishes. And there was not the slightest necessity for it. For nothing would have been easier than to require of the issuing banks a deposit of bonds sufficient, at their market value *in gold*, amply to secure the

Treasury. The worst of all is that these inadequately secured coin-notes are actually made a legal tender among all specie-paying banks, which is of itself enough to discourage any conservative institution from ever attempting to resume. Yet this bungling specimen of Congressional folly is everywhere hailed as a step towards specie resumption, and, unfortunately, banks are already preparing to organize on the Pacific coast in accordance with its provisions. It is to be hoped that, before serious evil can result, another session of Congress will modify this ill-digested and ill-considered measure, and thereby prevent more financial complications than any we have yet encountered.

THE RACE QUESTION.

There can be no question that a most difficult problem for the coming legislators of this country arises from the mingling of the diverse races under its government. Teuton, Celt, Mongol, and negro are already claiming place upon our soil and recognition in our social system. Types of existence belonging to each of the great continents of the Old World are struggling with the modes of thought and action peculiar to our own, and, if we do not add something from South America or Australia to our political caldron, it will be because the aboriginal types of those countries die out before we can get hold of them. It is the fashion to talk of our political system as if it were a new and totally original experiment. Self-government, much in the American form, is an old dream, and to a great extent an old reality; but those who think that we would be nothing unless peculiar can find a sufficiently original feature in what bids fair to be the polygenous character of our people in the future. Not excepting even India, that great eddy where the drift of humanity has been gathering ever since the Asiatic peoples began to move, has any country ever had as diverse materials gathered upon its soil as we now promise to have.

If any one questions the difficulty of this task of fusing diverse races into a harmonious political whole, let him look for a successful political experiment under similar conditions. We are much mistaken if he finds a case where a vigorous political or social life has ever been developed in a state composed of such heterogeneous materials. We are far from asserting that it is impossible to combine several races in one society, and have that society strong. We would only have our people recognize this problem as a difficulty requiring study to understand it, and great political skill to avoid its worst consequences. The strength of the governmental as of all other machines is the strength of the weakest part; it may have one class of its people in advance of the age, yet, if another is far behind in the scale of progress, it is impossible to have a nation of the ideal excellence. Now, in the case of a mixed people, the elements being too heterogeneous for ready fusion, the immediate result of the interaction of the several races is to form a caste system, certain portions of the social duties being delegated to each. There can be no doubt of the great danger to our whole political and social experiment should such a social stratification be the result of the mingling of the several races which are coming together upon our soil. There might be a great people built on such a plan, but few would care to risk the future on the result of such an experiment. We have only to look at the results of the Irish immigration to this country to see how readily a certain spirit of caste is developed. It is now well-nigh impossible to find a day-laborer born upon the soil; his dignity would be compromised by such occupation. Unskilled labor in the older parts of this country is entirely given up to foreigners. Fortunately, this people is of the same race as ourselves, and one or two generations in their new conditions obliterate the distinction. But with a permanent color and a permanent social character, such as the Chinese have, there can be no doubt that there would be more danger from this source.

It is not often that the other branches of thought cast much light upon the problems of social science, but natural history throws some upon this question of race. It is obviously of the first importance to determine how far these peculiarities of the different races are permanent, and what time and means are necessary to modify them in case they are not unalterable.

Applying to man the rules which we know to hold with other animals, we may get some information on this difficult point. The fundamental fact brought out by the researches of Mr. Darwin is that any characters which have been the property of a group of animals for a long time tend to perpetuate themselves. This tendency to revert to the ancestral type, which is the agent operating to prevent indefinite variations, is probably intense in proportion to the length of time to which the race has been subjected to the conditions which have produced and maintained its character. If this view be correct, and most observers of this class of facts can find something in their own experience to confirm it, we may expect to find those races of men who have been long exposed to the same conditions of existence more difficult to change than others which have been exposed to uniform conditions for only a short time. No one can look at the character of the several races which have distinct traits and a long history without the conviction that there probably is some value to be attached to this view. The most migratory of the races, the Aryan, is the most flexible, accommodating itself to the greatest variety of conditions, and varying most rapidly under the influence of its surroundings. One of the most stationary, the African, reared in a region of singularly uniform conditions for at least four thousand, possibly for five times that number of years, is the most rigid of the types of men, suffering greatly from changes of climate, showing but little tendency to seek new conditions, and less capacity for being modified by them.

Two and a half centuries of existence on this continent have produced very considerable changes in the Aryan race, as represented by our people. The same period, under far more pronounced differences of condition, have produced but little, if any, change in the physical status of the African. It is questionable whether, excepting where there is an admixture of white blood, the color or form have undergone any change. Unfortunately, we are in want of statistics concerning the relative physical condition of the American negro and the African negro, but it is evident that, at the rate of change of the last two centuries, it will require a much longer time than it is worth while for us to talk about to bring him into the condition of our own race.

The Chinaman comes of a stock having as much atavic force—if we may thus modify the word atavism, which Mr. Darwin uses to designate the tendency of a stock to hold to its ancestral type—as any other type of man except the negro. An old and indigenous people, they may be reckoned upon to remain essentially true to their type for any number of generations.

The world's experience with half-breeds is not such as should incline us to the experiment of a fusion of the three races of our future—if, indeed, the Mongols are going to come in such numbers as to form a large element of our population. With them, if they do come, and with the negro we must reckon upon dealing as heterogeneous materials, taking them for what they are, and trying to make them all they can be. In our effort to do the best possible for ourselves and for them, we should remember that, from the bottom to the top of the animal kingdom, allied races are almost invariably enemies; they dislike each other's very smell, and find in that an excuse for war; and it is probably this animal instinct which makes it so difficult to mingle races without having castes. Furthermore, we should remember that the two races are both well anchored to their peculiarities by the hereditary force—are among the most inflexible materials which could have been given to us. To keep out social stratification, and the attendant loss of power from a political system composed of these elements, may fairly be looked upon as a difficult though, in the darkness of inexperience, no one can say an impossible task. There is manifestly but one road to avoid the danger, and that is to educate, in the broadest sense of that word, each and all to the highest possible point, and to associate as intimately as possible each of these races in all the avocations for which their capacities may fit them.

THE SECULARIZATION OF THE CHURCH.

We spoke some weeks ago of the decline of the Church as an instrument of social reform. The comments that article has elicited make it worth while coming back to the subject.

A glance at the past discloses three distinct periods in Christian history. To the first belongs the primitive church—a body with purely spiritual objects, and wholly supported by spiritual power. Subsequently (in the Church of Rome), we see the Christian institution still true to its high moral and religious purposes, but sustained, and practically corrupted, by temporal power. The third era opens with the Reformation, when the Protestant church essayed the difficult task of avoiding mediæval debasement, while it yet reposed on the arm of the state. That the Reformers, like the Catholics, relied on the civil power is attested by English, Scotch, Swiss, Dutch, and Swedish history. It is true that Protestant countries have made earlier and more conspicuous displays of toleration than Catholic states, but even to this fact there are some remarkable exceptions. If it was not until after the French Revolution that Protestantism was permanently indulged in France, it was temporarily permitted by the Edict of Nantes, in 1598; while the Roman worship was not allowed in Sweden until 1781. It is also well to remember that, at the time the Puritans were burning for witchcraft, and exiling Roger Williams into the wilderness, the Catholic colony of Maryland had taken the most tolerant grounds with respect to liberty of conscience. At this day, every Protestant country in Europe (except perhaps the Swiss cantons) aims to depress all creeds but one by maintaining a state church, and, in so doing, falls short of absolute toleration.

With us the case is different. The principle of religious liberty, urged by Jefferson before the House of Burgesses in Virginia, and afterwards embodied in the statutes of that State, is now fixed by the Federal Constitution, and wrought into the household words of the people. Relieved from the coil of state influence and the curse of state aid, an enthusiast might have indulged the hope that the church would now return to her apostolic practice, and appear once more as a purely spiritual body, sustained by purely spiritual power. It soon appeared, however, that her mediæval training had not been in vain, and that she was not easily to be divorced from that temporal authority with which she had been so long and closely allied. Having lost all but the tradition of that self-contained energy with which she had laid the foundations of her immortal empire, she now sought to obtain from society that secular aid which she had grown to believe indispensable, and which she could no longer receive from the government. It may not be superfluous to detail a few of the methods by which (in part, perhaps unwittingly) she has absorbed, without reforming, worldly and unprincipled men—a policy by which she has added to her numbers and her wealth, but has given to her reputation, conventions, and moral conduct that unspiritual character described in our title as her "secularization."

In the first place, she has preached the restoration of that system of business support and social visitation *within* her communion that was the custom and necessity of early times, but which could then have been no allurement to the worldly, since she was, at the best, but a small and despised organization. Now, however, that her influence and her patronage are immense, it may well be questioned whether the false professions of faith to which a state church tempts the political aspirant are more corrupting than the same professions from those who only seek financial profit or social elevation. It is difficult to see why an unregenerate man, who does good work, is unworthy of Christian patronage, while it is very clear that, if it is denied to him, he will become either a hypocrite within the church, or a fierce enemy entrenched against her. It is also evident that general visiting, *merely* on the ground of a nominal religious fellowship, degrades the church into a means of social aggrandizement, and furnishes another worldly impulse to religious profession. The specious argument is sometimes offered that the union of temporal with spiritual interests does not diminish the latter, while it adds to the grounds of our church attachments. This position is, however, refuted both by psychology and history. In France, the Huguenots flourished during the persecutions antecedent to the Edict of Nantes, but when, under the administrations of Henry IV., Richelieu, and Mazarin, they were eligible to the highest civil and military posts, it became apparent that they were rapidly declining. The cause of this phenomenon is as deep as the roots of the heart. Two opposite motives cannot each be supreme, and, when temporal and spiritual interests are united, the former (because immediate) will almost invariably dominate. Hence, the French conversions to Romanism in the seventeenth century, and hence the multitude of worldlings in our existing church.

The marked efforts which are made to secure the "conversion" of rich and influential persons are, unfortunately, too notorious; while the indulgence which is displayed to their vices, when they are once within the fold, forcibly suggests the Feejeean custom of requiring twice the evidence to convict a rich man that would doom a poor one. It is a curious instance of moral compensations that the state church, with all its evils, is less liable to this frantic courtship of the high and mighty than those organizations which are not governmentally endowed. It may suffer from being degraded by the world, but it is not degraded by being itself a courtier. The free church of this country has further contributed to its secularization by indulging pew-holders who are not church-members with a vote in the election of its clergy. In this way, the world has frequently held the balance of power in so important a matter as the choice of a pastor, and has expressed its taste by filling our pulpits with carnal and sensational men—speculators in the Lord's vineyard, who foot up their so-called "conversions" as a banker does his accounts.

In some respects, the secularization of the church is to be lamented as one of the unavoidable effects of the age. Those social movements that have awakened the female mind from its former apathy to everything but emotional and domestic concerns have also roused it to the incalculably useful passion for management and combined effort. In short, women are beginning to experience the instinct for club organization, by which they can better effect their purposes, gratify their gregarious tastes, and display their individual powers in labor and command. The church, which may be considered as a religious club, is almost the only institution ready to receive them, and absolutely the only one which is fitted to their present tastes. Completely organized, it demands nothing of their fledgling skill, while the narrow but useful sphere to which it limits their exertions relieves them from a responsibility which they feel unable to meet. It is the vague yet impassioned desire to do something, to express themselves somehow, in some way to bind themselves to the outside world, which leads hosts of women to join the church, who, as men, would unite with a business, scientific, or social club. Of course, such characters reflect small credit on their religious profession, and, indeed, by their distressing combination of red-hot zeal in all church labors with unsanctified dispositions, wreck the happiness of many a way-worn shepherd. Another difficulty under which the church necessarily labors was suggested in these columns some time since, and arises from the refined and, as it were, unobtrusive vices of these times. The moral corruptions of our day break inwardly, and hence the guardians of Zion are specially subject to deception respecting the real character of those who would make a profession of faith.

The agencies above enumerated have been chiefly instrumental in bringing about that ecclesiastical secularization which is none the less disastrous because it has produced a delusive prosperity. In the sixteenth century, the Papal Church bent all her energies toward the erection of an unrivalled temple, that should for ever attest the splendor and the magnitude of her resources. St. Peter's was completed; but, to obtain the needful funds, those rash and unholy means were employed which were the proximate cause of the great religious rebellion, and which inflicted the first serious wound upon the Catholic Church. Thus, as the house which was "made with hands" developed the vain show of its superb proportions, the spiritual temple began to decay. This generation may learn from the past, and not imitate the example of those hasty children who blow their bubbles till they break with their increase and the shattered rainbow disappears in vapor.

Correspondence.

THE ENGLISHWOMEN AND THE CONTAGIOUS DISEASES ACTS.

To the Editor of the Nation:

Sir: Will you allow me, as a diligent and generally approving reader of the *Nation*—the letters of your London correspondent inclusive—to take marked exception to the first paragraph of his communication under date of May 13? The writer gives his testimony in favor of the Contagious Diseases Act, and states that "its operation has done much good to the troops, and to the population of the towns where it is in operation, and that it is more likely to be extended than to be repealed." He has a right to his opinion, but not to speak as he has done of the large number of English, Scotch, and Irish ladies who regard the *acts* (for there are *two*) as cruel, unjust, tyrannical, and immoral; who are laboring for their repeal, and are acting for this object with such unity, ability, devotion, and energy, and in such numbers, that they can hardly fail to succeed. You will agree with me that their success is at least probable when they have the countenance of such men as John Stuart Mill, Herbert Spencer, Rev. James Martineau, Professor F. W. Newman, Rev. F. D. Maurice, and many other eminent guides of English opinion, who differ widely on other subjects. Amongst the ladies, I will only name Harriet Martineau; Florence Nightingale; Elizabeth Pease Nichol; Jane and Eliza Wigham, of Edinburgh; John Bright's two sisters, Priscilla McLaren and Margaret Lucas; Helen T. Bright Clark, his daughter; Ursula M. Bright, his sister-in-law; Anna M. Haslam, of Dublin; Mary A. Estler, of Bristol; Madame Venturi, of London; and Josephine E. Butler, of Liverpool, who may be regarded as the recognized leader of the ladies of England in their opposition to the acts. This lady was until lately president of the National Association for the Higher Education of Women, a position which she resigned solely from a sense of duty, in order that she might devote herself more completely to her present far more arduous and invidious presidency of the ladies' association for the repeal of the obnoxious acts. She is also widely known as the editor of a series of admirable essays by various writers, lately published by Macmillan, entitled "Woman's Work and Woman's Culture," of which the very best portion is an introduction of remarkable literary excellence and moral beauty contributed by herself. These names are selected from a list of more than five hundred, many of whom are known to myself, and, as generally happens in all useful movements, a large proportion of them are members of or are connected with the Society of Friends. These are not the kind of people who do their work by *shrieking*, as your correspondent infers, nor by "unladylike appeals to buncombe;" nor are they of those who "think that argument is irrelevant, or that they see to the bottom of the complicated question by a species of intuition, and answer tables of statistics by texts from Scripture." Whilst many physicians favor the acts, very many of equal eminence agree with the women in abhorrence of their unjust operation and their immoral tendency. Of this number is a considerable proportion of the faculty in this city, which is celebrated as a school of medicine and surgery.

The term "Contagious Diseases Acts" is a decent name for measures assumed to be called for by the evils incident to the enforced celibacy of the rank and file of the army and navy. Their provisions do not attempt to limit prostitution, but to render it more safe for the debauched men, whilst they include severe and revolting enactments against the unhappy women. In conclusion, I would particularly beg your attention to "A Few Words in Reply to the Editor," in the May number of the *Fortnightly Review*. It is from the pen of Madame Venturi, one of those illogical shriekers whom your correspondent alludes to.

RICHARD D. WEBB.

DUBLIN, IRELAND, June 30, 1870.

[Our London correspondent would, we know, have a good deal to say in reply if he were here, and some of it we may be allowed to say for him. We do not believe it ever entered into his head to doubt the general goodness and purity and praiseworthiness of the ladies engaged in this agitation against the Contagious Diseases Acts. Everybody knows, too, that there are amongst them women of the highest character and social position, and women who have already done good service in the cause of humanity and science. But then all these things do not diminish the anxiety with which their methods inspire those who look forward to see women taking an active part in the work of legislation. We think we are not exaggerating when we say that nothing in this country, at least, has done so much to hinder, if not indefinitely postpone, the admission of women to the franchise, as the advocacy of it during the last two or three years by a body of women, of whom a large number enjoy, *as women*, the respect and esteem of everybody who knows them. We believe they have succeeded in satisfying a large portion of the community that female suffrage would be a great calamity; that if worse women than these acquired much political influence, they would increase greatly the abuses from which the body politic is already suffering; while if the best women of the present movement are fair representatives of the female politicians of the future, their exercise of political power would result in attempts to make the moral law, as they understand it, and the law of the land conterminous, thus reviving a system of government which has been the source of the greatest calamities which have befallen mankind, of which the government of priests is a fair specimen, and which among weak races would result in a state of society like that of China, and among strong ones in a state of society like that of Spain and Mexico. We shall not go into particulars in support of this view, because it would involve a discussion of the Contagious Diseases Acts, with which, we are glad to say, there is no occasion to trouble American readers. We may add that we are ourselves all but convinced of the inexpediency of this legislation; but we owe our conversion—if conversion it can be called—to the exceedingly able paper of Dr. Simon, the Medical Officer of the Privy Council. On such contributions as the ladies have made to the controversy we hope never to see legislation based in any civilized country, and we have read most of them—the principal ones certainly. Take, as an illustration of what we mean, one of the tracts of the association which Mr. Webb forwards us—a paper read by Mrs. Josephine Butler at "a conference of delegates from associations and committees formed in various towns for promoting the repeal of the Contagious Diseases Acts." The subject is "The Moral Reclaimability of Prostitutes"—a very interesting one, one on which the public naturally looks to these ladies for much light, and one bearing strongly on the matter in dispute. Mrs. Butler is an excellent lady, who has done much good work in her day, and who is probably known to American readers as the editor of the volume of essays of which Mr. Webb speaks; so we took up her pamphlet with a good deal of eagerness, hoping for some information as to the results of honest labor in this great field of human misery. What did we find? We shall present a list of the propositions she lays down, and, in doing so, shall scrupulously avoid any approach to caricature:

1. It surprised her so much to be asked to write a paper on such a subject "that it took away her breath for a moment." It was as if "she had been asked to write a paper to prove that trees regain their leaves in spring."

2. "It is a fact that such women are being constantly reclaimed;" but she questions whether the most powerful reasoning would convince anybody who believes in his heart that they are irreclaimable. If any one doubts it, the fault is in his heart and character. "A single look at a man's face is enough to tell her whether it is of any use to ask him to aid in the reclamation of fallen women." The best way of convincing people is to take them among the fallen women; but in many cases this would be useless, as the very presence of some persons "paralyzes the good there is in the outcasts." [In other words, the only use of arguing on this subject is to convince the convinced, and persons of unsatisfactory physiognomy are not worth persuasion. It seems to the unregenerate male mind, however, as if a few figures, such as M. du Camp gives in his recent articles in the *Journal des Economistes* on this subject, conveying the results of the labors of such institutions as those of the Dames Diaconesses and the Ouvroir de Notre Dame de la Miséricorde, and of the Nouveau Bon Pasteur in Paris, would reduce the most hardened infidels, if not to penitence and good works, at least to silence.]

3. "The minds of prostitutes are greatly distracted by speculations with regard to the profligacy of men," and they consider "the reclaimability of profligate men doubtful, because of the hypocrisy of their lives."

4. Humility is not infrequently found in the character of outcast women. They do not excuse or defend their sinful life.

5. It is "foolish" and "a crime" and "utterly silly" to generalize about fallen women. Many sin from hunger.

This is the whole of the pamphlet. We have faithfully reproduced every leading proposition it contains. The point treated at most length in it is the hypocrisy of men.—ED. NATION.]

DALL'S ALASKA.

TO THE EDITOR OF THE NATION:

SIR: Trusting to the proverbial justice of the *Nation*, I ask an opportunity in your columns of refuting some serious misrepresentations, and defending myself against an unmerited reproach contained in a criticism in your issue of the 7th on "Alaska and its Resources."

The points to which I refer are as follows:

1. The statement is made that I have left unmentioned the explorations of Capt. Raymond and their results; and the inference is directly drawn that it was done intentionally from unworthy motives. Was it want of care or of candor which omitted, after quoting the expression, "This completes the history of the explorations of the Yukon," to notice the qualifying phrase of the paragraph, five lines below, "previous to July, 1868, as far as is known to me"?

It was never my intention to carry the historical notes on the Territory beyond the date of the transfer, and at the time the above words were written Captain Raymond had not reached San Francisco on his return. The position of Fort Yukon was communicated verbally to me by that gentleman long afterward, and was then inserted in the electrotype plates which had already been cast. That I did not acknowledge this courtesy in the preface was due to the fact that it was already printed. His preliminary report, which, however, contains nothing new except the position of Fort Yukon, is duly referred to in the Appendix. It is to be presumed that his final report will not long be delayed, and in it we may anticipate a valuable contribution to North American geography.

2. The reviewer objects to my strictures on a certain map as "decidedly less than magnanimous" toward Mr. Whymper. Assuming the criticism to be made in good faith, it appears that he cannot have read my remarks nor examined the said map. Not a word can be found in the whole volume in any way reflecting upon Mr. Whymper or his work, and the assumption that I have so reflected is destitute of any foundation in fact. The facts are these: Mr. Whymper did not construct the map which accompanies his book, nor is there any evidence that he assisted in its construction. Mr. Arrowsmith, as I distinctly state in the remarks referred to (p. 291), and as the map itself bears evidence, constructed and drew it from Mr. Whymper's bearings and notes, and from Zagoskin's map; and, *in so doing, introduced several gross errors*, not appearing in the latter nor warranted by Mr. Whymper's notes, if, as I suppose, they agreed in substance with my own. This "more than reprehensible" carelessness in a professed geographer called forth my criticism, with the remark that it should be "a warning to future explorers to be careful into whose hands they put their information." How this can be twisted into "an invidious allusion to the legitimate labors of a fellow-traveller" passes my comprehension! The result for Mr. Arrowsmith is, however, that instead of being wrong to the extent of thirty-eight minutes in latitude and one degree and forty-six minutes in longitude (as my "few compass bearings and skilful guesses" brought me), he has gone wrong, from nearly the same data, to the extent of fifty-eight minutes in latitude and two degrees and twenty-four minutes in longitude, besides introducing several gross and *unnecessary* errors. I hope this will be sufficient to repel the baseless charge of petty meanness toward other explorers, which I feel the more deeply as my most earnest endeavor throughout the book has been to do the most impartial justice to every explorer who had visited the Territory up to the date of writing, "July 1868, as far as was known to me."—I remain, very respectfully, your obedient servant, WM. H. DALL.

WASHINGTON, July 9, 1870.

[We of course did not know that it was "never Mr. Dall's intention to carry the historical notes on Alaska beyond the date of the transfer." We presumed his purpose to be, as he defines it in the very first sentence of his preface, "to comprise in a small compass the most valuable part of the present knowledge of Alaska. His "qualifying phrase" was omitted by us because it does not affect, grammatically or logically, his unqualified statement that his account "completes the history of the explorations of the Yukon." The sentence in which it occurs, and the only one which it qualifies, *merely enumerates the white persons who, up to the date mentioned, had been upon the river.* The mention of the title of Captain Raymond's report, under the head of "Executive Documents," in the Appendix, does not invalidate our statement that the steamer expedition of 1869, in many respects the most remarkable journey ever made on the Yukon, is nowhere mentioned by Mr. Dall. If it was not proper to take notice of this exploration before the party got back to San Francisco, a sentence or two on the subject might have been subsequently added in the Appendix or elsewhere, together with other matter which Mr. Dall appears to have found no difficulty in introducing.

We were aware that Mr. Dall affects in his book to disclaim the application of his severe comments upon the map of Whymper and Arrowsmith to the former gentleman; and we must adhere to our opinion, nevertheless, that these comments do reflect upon Mr. Whymper. Accepting Mr. Dall's declaration of an earnest desire to do impartial justice, we must point out to him that the map in question was constructed from the notes of Mr. Whymper, presented by him to the Royal Geographical Society, and published in his book. Mr. Whymper is as much responsible for it as Mr. Dall for the sketch which accompanies his own book. If unnecessary errors should be discovered in Mr. Dall's map (and the course laid down for the Stikine River, though tardily atoned for in a note, might be called by a severe critic a quite "unnecessary" blunder), would it be fair to assail vehemently the person who constructed and drew the map, presuming that he did not follow the notes given him? Mr. Dall's strictures are none the less severe upon Mr. Whymper for being nominally directed against Mr. Arrowsmith. "Qualifying phrases" must be more skilfully applied if they are to turn aside the force of language so strong and clear. Moreover, Mr. Arrowsmith's experience as a map constructor is far greater than Mr. Dall's, and should protect him against such assaults of conjectural criticism.—ED. NATION.]

A QUESTION FOR MR. JAMES.

TO THE EDITOR OF THE NATION:

SIR: Has Mr. Henry James anywhere indicated the methods by which he would secure a substantial amelioration of the marriage state? I mean *practical* methods, such as plain people can understand, and within which they may at once begin to labor. If, for instance, he invokes the aid of legislation, what should be the nature and scope of the bill which a legislator, so minded, should propose? If he relies upon education, what book or books should a school committee, with his proposed reform at heart, prescribe as text-books? C. I. S.

ATCHISON, KAN., July 9, 1870.

Notes.

LITERARY.

MESSRS. LEE & SHEPARD announce three reprints of books for children, of which one at least will be welcomed. They are: "The House on Wheels, or the Stolen Child," which is translated from the French, and is illustrated with twenty engravings; "Letters Everywhere," consisting of stories and rhymes for children; and the last year's book of Mr. Lewis Carroll's—"Behind the Looking-Glass, and what Alice Found There," the Alice being the Alice of "Alice's Adventures in Wonderland," and the new volume being profusely illustrated by Tenniel.——Messrs. Sever & Francis will publish translations of a story by Björnson, entitled "Railroad and Churchyard:" of a story called "Old Olaf," by Thoreson, another Scandinavian writer; and of a story by Goldschmidt with the title of "The Flying Mail."——Harper & Brothers announce a volume to be called "The Life and Speeches of Charles Dickens." Here we may properly mention the fact that Mr. John Forster, the biographer of Goldsmith and of Landor, and a most intimate friend of Dickens, is understood to be engaged to write his life. People who have read the Landor, and not the Goldsmith, may by possibility have their doubts about Mr. Forster's being the best man to do the work; but those who know both the lives we mention will expect an admirable book. For that matter, the "Life of Landor," if imperfectly appreciative of Landor's character, and too eulogistic of his powers of mind and the value of his works, is nevertheless a very interesting mine of literary history, biography, criticism, and anecdote. The man on vacation who wants but one book with him could hardly find a better book than this one to put into his trunk, and it would last a lazy reader a reasonably long vacation too.——Messrs. Fields & Osgood announce that they will publish in book-form the sketches of an Englishwoman's life at the court of the late King of Siam, of which some, but not the best, have already appeared in the *Atlantic*.——Messrs. Roberts Brothers, who, more than any other of our publishers, convey by their selection of books for publication the distinctive impression of taste, are going to republish the now somewhat dimly famous "Margaret," by Sylvester Judd. All critics who have read it speak very highly indeed of this novel, and declare that, except Hawthorne, no one comes near Mr. Judd's excellence as a maker of the New England novel. There will, at all events, be satisfaction and refreshment in going back to the fountain-head again; certainly, for some time the lower parts of the stream of New England novels have afforded pretty vapid drinking. The same house will publish in the fall Jean Ingelow's new volume.——A novel which will deal with other than Eastern phases of American life is promised in the *Galaxy*. The West Point officer stationed in the West is to figure in it, we believe, and he is a comparatively new personage in any of the respectably high regions of fiction, though the Dime novels have had something to say of him. Mr. De Forest is the only good writer that we can recall who has had luck in depicting the West Pointer as he appears after having undergone a certain amount of frontier demoralization. The author of the new story is for the present anonymous.

—A correspondent writes to ask where he may find, if he may find at all, these works of Cooper's: "An Autobiography of a Pocket Handkerchief," "Gleanings in Europe," "Letter to my Countrymen," "The American Democrat," "Sketches in Switzerland," "Sketches in France," "Sketches in Italy," "Sketches in England," and "The Middle States of America." We think that all of these works are long out of print, if indeed it is not true that one of them, the "Autobiography of a Pocket Handkerchief," never was in print in book-form, but appeared only as a magazine story. The various tours are, we believe, in two volumes each, except the tour in Switzerland, which is in four volumes, and the whole set of them, eight or ten in all, may still be picked up in the second-hand bookstores. Mr. W. Gowans, for instance, of 115 Nassau Street in this city, could, no doubt, supply our correspondent with them, and also with the "American Democrat" and the "Letter to my Countrymen." These latter, which are more valuable than the others, as being very full of Cooper in his most aggressive self-assertiveness, and being roundly abusive and arrogant, and also as being marked books in our literary history, are of more than one edition; but the tours, which are of small interest, were never, we think, printed more than once. Still, as we say, all can probably be got. Messrs. W. A. Townsend & Adams, publishers, of this city, could perhaps give our correspondent some information on this point if he desires any. We observe that Allibone says that the old firm of which Mr. Townsend was the principal member, once made "a complete edition of Cooper's works." This statement is meant, we take it, to cover only the author's works in fiction, for on the next page, in a list furnished Mr. Allibone by Mr. Townsend's firm, we count just thirty-four titles, all of novels, and of all the novels; and we suppose that there was never a really complete edition of Cooper's works in every field of literature which he cultivated. But Mr. Gowans or Mr. Townsend, either of them, is better informed on the subject than we are. The neglect of Cooper, which our correspondent thinks remarkable and rather lamentable, seems to us not injudicious nor undeserved. Such of his works as are good are, we suppose, the most popular novels at all the circulating libraries—more popular than even Dickens's at the Boston Public Library, let us say. It is the trash which he wrote hastily, and which he should not have consented to write, that the world now very properly and very kindly allows to sleep.

—Mr. Steiger, a German publisher of this city, whose name must be known to most of our readers, has hit upon a scheme which is interesting and which bids fair to be very useful. Everybody knows who has any familiar acquaintance with our German fellow-citizens that though they are nothing like so clannish as the Irish, and for that reason, and for the further reason that people of American blood and people of German have so much in common, they, nevertheless, give up unwillingly their nationality, do not at once become Americanized, and do not easily reconcile themselves to the thought that their children are to be out-and-out Americans. Their press in this country does much to foster this feeling, which is, of course, a natural feeling enough, and the outcry was great when some time since, in his "History of German Emigration to America," Mr. Frederick Kapp asserted that the hope of building up a new Germany in this country is an idle one; that the German immigration to the United States comes in contact with a defined, well-settled, powerful nationality, which has proved its ability to absorb other races, and which now cannot succumb to any foreign elements, nor be held off from assimilating them. German influence is most visible now at the West, for there it has founded new townships; but there the powerful American influence is permeating more and more thoroughly day by day, and to dream of a Germanesque Utopia in America is, Mr. Kapp would say, merely to dream. We are all to be Americans together—the American of the future doubtless getting a new tinge from the various new ingredients that are mixing with the blood of his fathers and mothers, but still being distinctively American, and not a new order of German or Irishman or Englishman. These views provoked, as we have said, a loud outcry in the German-American press, and Mr. Kapp received a good deal of undeserved and hasty abuse, of which some was bestowed on what were really his views, but much more on an exaggerated conception of them. These themselves we have given, substantially; but he was charged with a wish to make all Germans at once turn Americans, and even give up the use of the German speech. The matter has set itself right by this time, we imagine, and we should say that there is a much more general assent given to the opinion of Mr. Kapp than was given when his work first appeared. It is proper, by the way, to say that it is one of several works by the same learned and philosophical author which ought to be more generally read by Americans than they are. The "Life of Steuben," the "Life of De Kalb," the "History of American Slavery," the "History of the Soldier Traffic by German Princes in the American Revolutionary Period," are historical works of real research and real ability. Probably it is to Mr. Kapp's "History of German Emigration" and the controversy thereupon arising that we owe the scheme of Mr. Steiger's devising which we have mentioned. He intends to give prizes for essays bearing on German life in America; the first essay to be a "Historical Sketch of the Intellectual Vigor and Progress of the German Population of North America, and especially of the Influence of the German-American Press upon American Institutions." This is a very interesting topic, and ought to be fruitful of good writing. The prize, too, is a good one, and sufficient to stimulate men of real ability, for it is the unusually large one of eight hundred dollars. Should the experiment turn out well, Mr. Steiger will follow it up by propounding for discussion questions kindred in nature to the one above given, and offering for each a prize of the same value. The result will not, we hope, fail to be a little library of very good essays. In the *Literarischer Monatsbericht* for July those who are interested in the subject will find full particulars.

—It is, no doubt, a useful custom which exists in many, if not all, of our colleges—that of compiling statistics of each class as it is on the point of graduating; but it has for some of its results things that are absurd and disagreeable. Perhaps if the spirit is there, we may as well have the letter—though this we doubt—but certainly the printing of statistics such as these, for example, does nothing to raise the reputation of American colleges. We copy from the "Statistics of the Class of 1870 of Yale College":

> "Turn we next to corrupted or abbreviated names and nicknames. In this particular our class can hold its own with any of its predecessors. Of the first class there are the following:
>
> "Back, Beack, Betsy, Bonus, Carp, Del; Nate, Joth, De, Fafner, Josh *alias* Fe, Hess, Hoad, Jenks, Janz *alias* Janst, Kel (2), Link, Phil *alias* Phlip *alias* Philander *alias* Philemon alias Lin, Tomp (-y), Cutch *alias* Scutch (-eon), Mart, Mase, Met *alias* Calf, Perk, Rile, Rob, Schaife *alias* Saif *alias* Skaife *alias* Scaipo *alias* Shafe *alias* Lauri, Shep, Silli *alias* Shyleman, Swain, Tom, Van *alias* Schoony, Word. Of the nicknames, a number are omitted, as being used rarely or by only one or two intimate friends. The following are considered worthy of record—in this, as in the preceding list, those most used being put first, when there is any choice: Pill *alias* Champion *alias* Shanks Lazy, Beer-barrel, Wicked Rascal, Bummer, Baron Von Mauch Chunk *alias* Barny the Baron *alias* Old Innocence *alias* Cook *alias* Doctor *alias* Nicky Nubble, Ricardi *alias* Charpont *alias* Carpe diem, Zack, Spoon, Stub, Pater *alias* Dad, Old Business, Jock, Pus *alias* Jack *alias* Dicker *alias* Das Grose *alias* Fat Rascal *alias* Squaw, Daniel, Judge, Fagan the Jew, Marcus Aurelius," and so forth and so forth, to the extent of a hundred more.

This is a sort of inane vulgarity to which one would suppose a four years' course of the humanities would make it impossible that young men past their majority should descend. It would hardly be pleasing to us to have applied here Mr. Matthew Arnold's principle of judging of the civilization and culture of a community by the names which its members bear. "The girl Wragg" was, we believe, the designation that gave him pause, and set him moralizing on the inherent delicacy and loveliness of British nature as made manifest even in its nomenclature. The strength of brain and the polish of our average undergraduate would no doubt afford matter for some of his peculiarly civil speculation if he were to come upon the list given above. Here is another item deemed important enough for publication. "C takes the lead in the line of surname initials, boasting twenty-three representatives, of seven of whom it has been bereaved; but B suffers most of all, having lost twelve out of twenty-one. J, Q, U, X, Y, and Z have been unknown in '70, and we regret to say that of the others all but E have lost some of their representatives, from one cause or another." The terms "bereavement" and "loss" refer, no doubt, to suspensions or expulsions, or both. Not so silly perhaps—though we are not sure about that—but perhaps more vulgar and offensive is a custom which, as we guess from the same "Statistics," Yale still keeps up, as also, we believe, Harvard does—the custom, namely, of collecting a certain sum of money—generally as many dollars as the number (above 1800) of the class's year of graduation—and holding it as a fund for the purchase of a cradle, which is given to the member of the class who shall first become the father of a child. Much more honored in the breach than the observance are all such customs, and it is a pity that there is hardly a college in the country which is not given over to a greater or less amount of such puerility and folly. Faculties are practically powerless in the matter, and there is nothing to be done but wait for the more thorough emancipation and culture of the average undergraduate.

—From the sensible part of the work of the Yale compilers we learn that the average age of the young men who have just been graduated is 22 yrs. 6 mos. and 14 days. The youngest of the 113 graduates of this year was 19 yrs. 5 mos. and 24 days; while the oldest was 27 yrs. 6 mos. and 3 days, and appears not to have entered college till after he had gone through the war—in fact, not till after he had gone through a term of imprisonment at Andersonville. Of the classes immediately preceding this one, the average age seems to have been about the same with that just given. The average age of the class of '69 was 22 yrs. and 29 days; of '68, 22 yrs. 4 mos. 28 days; of '67, 22 yrs. 3 mos. 19 days; of '66, 22 yrs. 4 mos. 17 days. Connecticut, New York, Pennsylvania, and Ohio furnish a very heavy majority of the graduates; while of the Southern States, only Louisiana, Kentucky, Maryland, and Tennessee appear in the list, and they are represented by but six men. Eighty, on the other hand, is the number of men representing the four Northern States we have named, Connecticut having 32 out of this number, New York 28, Pennsylvania 12, and Ohio 8. Massachusetts claims 9 of the 113. The New England element being thus strong, it is not surprising to learn that the class of '70 contains 52 Congregationalists—or at least persons who attend Congregationalist churches—31 Presbyterians, and 3 Baptists—a leaven of Calvinism which ought to keep all New Haven sound. Most of these Calvinists, too, are church-members; not less than 44 of the Congregationalists communicate, and of the whole class, 64 per cent. were members of some church. Unitarianism seems not to have existed in '70; but there were 17 Episcopalians, of whom 6 were communicants, 3 Methodists, 1 Universalist, 1 "Christian," 1 Lutheran, 1 Romanist, and 1 Quaker. 26 men "drink," 56 smoke, 8 chew tobacco, 7 "drink, smoke, and chew," 11 "smoke and drink," 87 play cards, and 83 dance—on the whole, not a bad showing, if the figures are accurate. But, then, doubtless the college communities are as free from vicious practices as any secular communities in the country. The vast majority of American college students work faithfully and behave themselves well. The average weight of these young Americans of twenty-two and a half years is 148 5-7ths pounds, and their average girth of chest something more than 36 inches. The average height is 5 feet 8 9-10ths inches. The predominant complexion would seem to be light, or, at any rate, not to be called dark. Blue and gray eyes were to hazel, brown, and black as 70 to 43; and men with black hair were but 18 in number, while those with red or light brown hair were 36, and those with darker brown 59.

—The American traveller who has seen Rome doubtless remembers the two colossal equestrian statues on the Quirinal Hill, or, as the modern Italians call it, Monte Cavallo. These statues bear respectively the inscriptions "Opus Phidiæ," "Opus Praxitelis," and, by general consent, have long been attributed to Praxiteles and Phidias. Winckelman gave this opinion the force of authority by adopting and advocating it. But archæologists and artists have since Winckelman's day exchanged doubts as to the generally accepted origin of these superb works, and now agree that not only were they not intended to represent Castor and Pollux, but could not have had the origin attributed to them. They were brought from Alexandria to Rome by order of the Emperor Constantine, and placed where they now stand by order of Pope Sixtus V. In 1865, Monsignor Falconieri, the editor of Nardi's *Roma Antica*, and the author of several treatises of recognized erudition, wrote a memoir upon these statues, in which he sets aside the Castor and Pollux theory, as also another which would make them represent Alexander taming Bucephalus, and shows that they were intended simply for horses in training by grooms for the public games and festivals of the day—a theory to us strongly borne out by our recollection of the total absence of nobility in the men's figures, which, although admirably executed, had received nothing at the hands of the artist intended to make them heroic. The whole subject is thoroughly discussed in an octavo lately published in Rome, "I Colossi di Montecavallo," which includes the memoir of Falconieri above alluded to.

—The mention of Sixtus V. reminds us that Baron Hübner, the well-known diplomat who for so many years represented Austria at the principal courts of Europe, has lately given the literary world an excellent life of that distinguished Pope. Sixtus V. will be remembered as Cardinal Montalto, originally the son of a swineherd, who by his talents elevated himself to the highest honors, and on being elected in the Conclave threw away his crutches, etc. These are some of the traits which, according to popular tradition, mark his history. Baron Hübner makes short work with these and all other stories not warranted by strict history. His work is confined strictly to the relation of facts supported by documentary evidence, much of which, from the archives of Vienna, Rome, Paris, and Simancas, is now for the first time given to the world.

—The chair in the French Academy vacated by the death of M. Sainte-Beuve, has been awarded by vote to M. Jules Janin. The vacancies caused by the deaths of M. de Pongerville and the Duc de Broglie have been filled by the election of M. Xavier Marmier and M. Duvergier de Hauranne. M. Marmier had for concurrents and opponents MM. de Loménie, Rousset, Jules Lacroix, Edmond About, Laya, and Léon Halévy.

—As reasonably certain as anything we know of the history of so remote a period as fourteen hundred years ago is the fact that Attila, King of the Huns, surnamed the Scourge of God, invaded the countries of Gaul in the year 451, sacked Treves, Worms, Mentz, Arras, and several other cities, and was finally defeated, with great loss, by the combined Roman and Visigoth forces under Aetius, Theodoric, and Thorismond. Two battles, it is said, were fought—one near Orleans, in which Theodoric was killed; the other at Mauriac. The second battle (Campus Mauriacus) was the decisive defeat, and while perfectly willing to believe that many Huns came to grief on that occasion, we decline accepting the statements of the chroniclers that Attila's loss amounted to 200,000 men killed. For the past thirty years a vehement archæological-historical controversy has raged in France as to the locality of those battles, and more especially of the Campus Mauriacus, to which Attila retreated after his first defeat. Twelve years ago, M. Amédée Thierry lavished a wealth of erudition on the subject in his "Histoire d'Attila;" and the titles alone of the various treatises and essays on Attila's invasion published in France since that period would fill one of our columns. They contain, it is true, a great deal of matter purely local, inasmuch as the question turns upon the identification of a geographical point; but the discussion has thrown many singular lights on a variety of interesting questions, such as the history and character of the prominent men of the epoch, the composition of the barbaric armies, the method of combat, the style and management of weapons and armor, etc. The last and one of the very best essays on the subject is entitled "La Campagne d'Attila: Invasion des Huns dans les Gaules en 451, par Anatole de Barthélemy."

WHAT IS GOING ON IN THE COUNCIL.[*]

ALTHOUGH this trenchant *brochure*, which has already reached a second edition, is published anonymously, it is no secret that it is from the pen of M. Jules Gaillard, an attaché of the Cabinet of the Minister of Foreign Affairs at Paris, a devout Catholic, but of the enlightened and liberal school of Montalembert, Hyacinthe, Gratry, and the Archbishop of Paris. Until the seal of secrecy shall be broken, and the interior history of the Council exposed to the world, we may accept this as the most thorough, exact, and searching analysis of the constitution, the motives, and the working of the Council likely to be made by any one not a member of it, and as even more honest and impartial than a member could be expected to give. A preliminary section treats of the unwisdom of convening a council for the general objects vaguely presented in the original bull of indiction; for, as to science, "the spirit of research and analysis will not be discouraged by anathemas, and the sanctity of the faith could only be compromised by theological incursions upon the domain of observation and of pure reason;" and, as to civil affairs, the political and social problems now in process of evolution in modern society are not sufficiently resolved for the church to pronounce authoritatively upon the relations of these to the faith; in a word, the external questions which the Council was summoned to determine, either lie beyond the competence of the church, or are too inchoate for a dogmatic judgment.

---

[*] "Ce qui se passe au Concile." Paris: Henri Plon, Imprimeur-Editeur. 1870. Pp. 212.

On the other hand, as Gaillard, like Hyacinthe, affirms, the church itself has need of a reformation in its own order and discipline—a return to the principle of diocesan autonomy, a revival of that synodal activity that for fifteen centuries was her strength and glory, and a modification of the Sacred College that would admit the various Catholic nations to their proportionate representation, and replace the Roman Congregation by delegates from the clergy of the entire world. For such reforms it might have been worth while to convene a council; but nothing was further from the thought of Pius IX. and his advisers, and nothing is more hopeless in the Council as now constituted and controlled.

Soon after the Council was resolved upon, the intentions of the Roman Curia began to develop themselves in the very extraordinary methods of anticipating and shaping its labors and decisions. Preparatory commissions, appointed by the Pope and convened in a mysterious silence at Rome, were to ease the reverend fathers of the discussion of vexed questions, by well-digested dogmas, to be submitted to their approval. At the same time, the memory of Bossuet began to be disparaged, and his disciples were assailed as unfaithful to the unity of the church; it was assumed that the session of the Council would be brief; that it would readily accept the doctrines of the Syllabus, and by a supernatural afflatus would declare the dogmatic infallibility of the Sovereign Pontiff; the Papal benediction was sent in advance to doctors, editors, and ecclesiastics who were forward to espouse this dogma, and those who showed opposition, or even hesitancy, were subjected to the petty annoyances which the Papal court knows so well how to direct against subjects that will not bend to its will. In these preliminary "symptoms," the direct urgency of the Pope for the dogma of Infallibility began to appear; but the whole scheme of the ultramontanists became patent in the composition of the Council, and the regulations imposed upon it by the three bulls promulgated at its opening—the *Multiplices Inter*, which deprived the fathers of the right of organizing their own body; the *Apostolicæ Pedis*, which revived the anathemas of the famous Bull *In Cœna Domini;* and the *Cum Romanis Pontificibus*, which commanded the indefinite adjournment of the Council in the event of the Pope's decease, though this last was according to precedent.

In analyzing the composition of the Council, Gaillard shows the alarming growth of centralization at Rome during the present century. One effect of popular revolutions resulting in the disunion of church and state, or rather in an antagonism between the state and the Papacy, as in South America, Italy, and Spain, has been to deprive the episcopate of a certain independence of Rome that it once possessed, and, by curtailing its resources and putting it under the ban of the civil power, to cast it absolutely into the hands of the Roman court. Bishops who once could use the temporal prince as an ally against the usurpations of Rome are now completely at the mercy of the Pope. Moreover, in England, Holland, and the United States, the bishops are of the Propaganda, whose discipline is like that of an army in the field. Of the 759 prelates having a voice in the Councils, 50 are cardinals, 100 apostolic vicars, 50 generals of orders and mitred abbots; more than 100 are bishops of the Propaganda; 276 are Italians, and of these 143 belong to the Pontifical States. Here are 580 presumably, with a few individual exceptions, in the interest of the Roman See, leaving but 180 representatives of churches—the German, the French, the Portuguese—that retain a certain autonomy. Of the 1,100 existing bishoprics in the Roman Catholic Church, 900 are to-day at the absolute disposal of the Pope. Well might *La Civilità Cattolica* boast in advance that "the bishops of the whole world would be in such accord upon the main questions, that the minority, however eloquent it might be, would not be able to keep up an opposition."

This prediction has been verified in the course of the Council upon the dogma of Infallibility. The remonstrants have been able and eloquent, but their motives have been traduced, their voices silenced, their dignities threatened. The Pope, who at first affected to be restrained by modesty from taking the initiative upon the question of infallibility, at length sent to the Council a *schema*, declaring that the infallibility of the Roman pontiff covers the same subjects to which the infallibility of the church now extends; and this was supported in various allocutions, letters, and official audiences, and by the devices of moral coercion in private. M. Gaillard shows that this dogma will work the destruction of the episcopate, and for bishops at the head of dioceses will substitute apostolic prefects. It will subject all forms of human science to the arbitrary censure of the Pope. It will annihilate within the church freedom of conscience and of will. It will lodge the power of anathema and of persecution in the caprice, and, it may be, the malice, of a single man, impersonating the Inquisition in the Pope. In one word, the proclamation of the infallibility of the Pope is *the consecration of theocracy*—the declaration of religious absolutism in its highest form—the Pope the only church, and the sole organ of the divine oracles.

THE POPULATION OF AN OLD PEAR-TREE.*

A MOST charming as well as instructive little book, with more excellence, marred by less error, than is usual in popular presentations of natural history. Since Réaumur produced the six ponderous volumes of his "Mémoires," a hundred and thirty years ago, many authors of all nations have aimed to describe the life of insects, so as to interest and amuse, as well as instruct. But while all their endeavors have been more or less praiseworthy and useful, there is not one, from the time-honored "Introduction" of Kirby and Spence to Figuier's "Insect World," which does not convince the reader that to portray the doings of animals in a manner at once attractive and true to fact is no easy task. One work is too big, another too little; one is too dry with barren statement, another deluged with baseless fancies; one author has copied what he finds in his too convenient city library, another has seen things strangely, for lack of outside help; one describes the doings of beetles and bugs which are more or less interesting to him, as they destroy his crops, disturb his rest, or accomplish wonderful things among themselves; another sees in them the embodiments of his own passions and faculties, and falls to moralizing upon humanity good or bad, so often and so copiously that the ordinary reader is unable to follow or appreciate him, and lays down the "Episodes of Insect Life" with the wish that the entomology had been condensed into two volumes, and the sermons and metaphysics left for a third, which he might read when in want of mental gymnastics.

Our author is not altogether free from this tendency, but the most serious objection to his work is the very unnecessary employment of supernatural means in order to exhibit the population of the old pear-tree. He has taken a walk, and lain down at the foot of the tree; he falls asleep. So far it is very matter-of-fact; but then he says: "All at once my senses became marvellously acute. . . . I now saw the face of nature under a quite novel aspect—from the point of view of the smallest members of creation. . . . This is no exaggeration; I really saw what I describe," etc. Now, we may grant, if we like, that he went to sleep, and there are not many incredible statements of what he saw while sleeping; but, if he did go to sleep, he certainly saw nothing except in dreams, and dreams are not over-accurate in matters of fact; and, finally, it was perfectly easy for him, or any one else, to see all he says he saw while in a fully wakeful state. If the introduction were pure fancy or pure fact, no objection could be raised, but to mingle the two is like placing a mermaid in a museum of natural history, or pretending that your baboon is a gorilla. We hope the time may come when scientific writers will faithfully acknowledge truth to be stranger than fiction, and when fantastic and impossible fancies shall no longer be thought an indispensable appetizer for a wholesome meal from nature's storehouse.

There is one other matter in the introduction which needs mention. On page 10, the author alludes to the pain which he caused some insects by treading upon them. As an entomologist, he doubtless knew that there is abundant evidence that insects suffer little, if any, pain from injury and mutilation; indeed, it may be doubted whether any other organs than the antennæ can suffer at all.

As was said at the outset, the statements are remarkably free from error; but a few corrections should be made. On page 13, it is said that the spider's mouth "bore a pair of mandibles and two hooks," and that these latter were "terminated each by a small hole;" more accurately, the hooks are the continuations of the mandibles or *falces*, and the holes are *at* the ends thereof. On page 14, the spinnerets are described as "four conical humps," with no allusion to the additional pair which all epeiridæ possess, concealed between the other two pair.

The sound made by the mole-cricket is described by our author (page 22) as like "the tinkling of a silver bell;" but Kirby and Spence say it is "low, dull, jarring, and uninterrupted." The transformations of the cockchafer are said (p. 30) to occupy four years, while three is by far the more usual number. Why the "waving" of wings should cause them to fall is hard to understand (p. 64), and it is more likely that a more vigorous and unnatural movement is required to enable the ants to dislocate them.

The "obsequies of a field-mouse" are most interesting, but in the text no allusion is made to the female necrophorus, and the male is credited with all the labor, even to *laying the eggs!* But the engraving represents three beetles, which is just one more than would be welcome at such a funeral ceremony. The intimation is also made that for a necrophorus to raise a field-mouse is an impossibility; we have seen one of them raise a good-sized *rat*, and shift it along, so as to remove it a foot in a short time, in order to reach the hole in which it had been previously buried.

---

* "The Population of an Old Pear-tree; or, Stories of Insect Life. From the French of E. Van Bruyssel. Edited by the Author of 'The Heir of Redclyffe.'" New York: Macmillan & Co. 1870. 8vo, pp. 221. $1 75.

So much for adverse criticism upon the text. The illustrations are wonderfully good—correct, and spirited almost to perfection; but they are in many places strangely misplaced for ten or more pages, and may thus confuse, if not wholly mislead, the unentomological reader. The cuts are not even numbered or named; a predatory beetle appears among the description of ants; a number of other coleoptera dance a jig at the opening of a chapter on hymenoptera; further on, in the same chapter, a beetle performs upon the guitar; and last, and worst of all, the mole-cricket, described upon page 24, appears upon page 37, directly under a reference to a cockchafer. These are very serious faults of arrangement, and there is no excuse for them; but were there ten times as many, the cuts themselves are so uniformly excellent, the descriptions so lively yet correct, and the whole spirit of the author so fully in harmony with the best of nature's teachings, that we can only repeat our opening words, and add that "The Population of an Old Pear-tree" is not only one of the prettiest but one of the best little books upon insects that we have ever seen.

HESEKIEL'S "BISMARCK."*

HERR HESEKIEL is as thorough-going an admirer of Bismarck as Mr. John S. C. Abbott is of Napoleon. He sees in him not only a most successful statesman, exalted high above others, and "able to maintain himself even at the elevation at which God the Almighty has placed him for the good of his native country," a Prussian patriot in whose bosom "the fountain ever freshly runs whence he draws continual renovation for the service of his king," but also—what very few observers of his career have as yet seen in him—"a thoroughly honest politician—honest to such a degree that his political adversary is sometimes puzzled, and suspects some snare in his very openness." He asserts this with a bold face almost worthy of his subject, ready to "demonstrate the proposition," but defends himself against the possible suspicion of flattering a great minister and patron, by stating that he merely acknowledges "that his honesty has been implanted in the nature of Bismarck by the Almighty, that it could not but develop itself and become a sustaining principle," which makes it clear that in praising Bismarck he only means to praise the Lord. So much piety can certainly not surprise us in a man of the *Kreuz-Zeitung*, which Herr Hesekiel is, nor can so much admiration of Bismarck surprise us in a journalist who has so long fought with and under him "against liberalism and . . . the Mamelukes of this most evil despot."

Our author does not waste too many pages in demonstrating his proposition, filling his book chiefly with unpolitical as well as unphilosophical notices and anecdotes concerning the ancestry, the estates, the youth, the travels, and peculiarities of his hero—details tolerably interesting, perhaps, to a large portion of the Prussian public, but hardly of any interest to readers who have no Königgrätz to give thanks for—and with letters and extracts from speeches, meant to be illustrative of times, character, and political events—but so little and so poorly illustrative, in fact, as to leave the reader not otherwise informed in almost total darkness regarding the true character of recent Prussian history and of the statesman who so conspicuously figures in it. Nor do we intend wasting words in disproving our author's proposition or in showing up the real merits and demerits of his historico-biographical sketch—for this can hardly be considered a serious literary production; but we cannot refrain from quoting one anecdote and one letter out of the many contained in the "Life," in order to show what stuff can find a place in a German political panegyric, and find, besides, a British translator and an American republisher. Nor is the following the worst trash presented us in the form of either anecdotes or letters:

> "Bismarck wished to reinvigorate himself by a thorough hunting-party; he conferred with the Privy Councillor Oppermann, one of 'the mighty hunters' of Prussia; this gentleman joined him with enthusiasm, and communicated through the Oberförstmeister von Wedell, in Schleusingen, to obtain a woodcock foray with the famous shot Oberförster Klingner. Bismarck and Oppermann left Erfurt one morning together. At the first stage the travellers refreshed themselves at Arnstadt, as keen sportsmen, thinking nothing of the caddish opinions of the day, by a plentiful breakfast at eight o'clock, of delicate groundlings, and drank 1811 Bocksbeutel therewith. At the succeeding station they whetted their appetites with trout and drank beer with them, as the nectar of 1811 would allow no other wines to attract the palate. On their arrival at Schleusingen, at 3 P.M., they had more trout and beer; then an interview and arrangements with the Oberförster, and in the evening more trout, which Oppermann ate with wine-sauce, Bismarck remaining true to beer despite of urgent dissuasions. At night, about 12 o'clock, the Oberförster made his appearance with a keeper, to take the gentlemen off to the forest. Bismarck, however, was in a very lamentable plight; the mixture of fish and beer did not suit his constitution, and he was in a feverish state. He was advised to have some peppermint and stop in bed, but it was in vain; the keen sportsman was not afraid of stomach-ache; he was soon dressed, and away they went. Oppermann fired and killed a bird, but Bismarck returned home with nothing. . . . ."

> "BISMARCK TO FRAU VON ARNIM.—Schönhausen, 28th June, 1850.—I write you a solemn letter of congratulation on the occasion (I think) of your twenty-fourth birthday. (I won't tell anybody of this). You are now really a major, or, rather, would have been so, had you not had the misfortune to belong to the female sex, whose limbs [*sic* for members], in the eyes of jurists, can never emerge from minority—not even when they are the mothers of the lustiest of Jacks. Why this apparent injustice is a very wise arrangement I will instruct you when, I hope some fortnight hence, I have you *à la portée de la voix humaine* before me. Johanna—who at the present time is in the arms of Lieutenant Morpheus—will have written to you what is in prospect for me. The boy bellowing in a major key, the girl in minor, two singing nurse-girls, wet napkins and milk-bottles, myself in the character of an affectionate *paterfamilias*. I resisted a long time, but as all the mothers and aunts were unanimous that poor little Molly could only be cured by sea-water and air, I should, if I resisted any longer, have my avarice and my paternal barbarity paraded before me on the occasion of every cold the child will catch till it is seventy, with the words: 'Don't you see! Ah! if the poor child could but be gone to the sea-side!' The little being is suffering from the eyes, which are tearful and sticky. Perhaps this arises from the salt baths; perhaps from eye-teeth. . . . ."

The above extracts will also serve to give our reader an idea of the merits of the English translation. Let us add that the latter, from beginning to end, swarms with most ludicrous Germanisms. The illustrations alone are faithfully reproduced, and, though of little merit, they form perhaps the most valuable portions of the book, excepting a few vigorously written and slightly instructive letters of Bismarck's.

Greek Lexicon of the Roman and Byzantine Periods (*from* B.C. 146 *to* A.D. 1100). (By E. A. Sophocles. Boston: Little, Brown & Co. 1870. Pp. xiv., 1188, 4to.)—Those who are busy counting up the sales of the last great novel by thousands and tens of thousands are probably not aware that a more remarkable book than the novel—in some respects the most remarkable book ever published in this country—has just been issued by Messrs. Little, Brown & Co., in a modest edition of less than three hundred copies. We are not using extravagant language when we say that Sophocles's Greek Lexicon does greater honor to American scholarship than any work in the combined fields of classical and sacred learning that was ever published. We doubt whether there is another man living who could have written the book; if there is one, we have never heard of him.

We have no hesitation in claiming this work for American scholarship. It is true Mr. Sophocles was born under the shadow of Mount Pelion, and spent part of his youth on Mount Sinai, and is withal much more familiar with the road to that mountain from the Nile than were ever the children of Israel; but we cannot feel that we have a slight claim on the fame of a scholar who came to America in his youth, entered as an undergraduate at a New England college, and has spent the greater part of his life in teaching Greek to American students.

Let no one imagine that this learned work is written for book-worms, or for men of profound learning only. On the contrary, it interests every one whose studies in the New Testament or the Septuagint ever carry him to the Greek; that is, it *ought* to interest every clergyman in America and England. Never was such a broad field of observation opened to the student of ecclesiastical Greek. Here is a scholar whose view comprehends the entire Greek language, in its unbroken course, from Homer to the newspapers of modern Athens. His erudition is not based merely on a university knowledge of classic Greek, and a study of the Sacred Writings themselves; but he includes in his studies a range of literature little known to modern theologians, which is of inestimable value in the early history of Christianity, and illustrates by its language every book of the New Testament itself. Viewed merely as a lexicon to the New Testament and the Septuagint, illustrated by references to all the contemporary literature, the work of Professor Sophocles is well worthy the attention of every clergyman, and of every student of the Bible. It is, in fact, by far the best dictionary of the New Testament that has ever been made; and the scholar who is without it is behind the age.

---

* "The Life of Bismarck, Private and Political; with Descriptive Notices of his Ancestry. By John George Louis Hesekiel, author of 'Faust and Don Juan,' etc. Translated and edited, with an Introduction, Explanatory Notes, and Appendices, by Kenneth R. H. Mackenzie, F.S.A., F.A.S.L. With upward of one hundred Illustrations, by Diez, Grimm, Pietsch, and others." New York: Harper & Brothers. 1870.

The present Lexicon is the result of many years' hard and patient labor. Even a native Greek cannot read Greek by the hundred volumes without time and patience. To any one who wishes to see the basis on which the work rests, we commend the twenty closely printed columns of "authors referred to" which precede the Lexicon. It would rather surprise us to hear of any one, except Mr. Sophocles, and perhaps some maker of a biographical dictionary, who is acquainted with all the authors in this list; and we should respect the learning of a man who knew one-fifth of them. It requires but a slight inspection of the Lexicon to see that Mr. Sophocles has made a thorough study of their language, and has used it conscientiously in illustration of his subject. Some of his articles are almost grammatical treatises, while, at the same time, the richness of illustration does not interfere with the systematic arrangement or the ease of reference. We would refer any mere classical scholar to the article *ἵνα*, for example, that he may see how far his classical knowledge would help him in understanding the later uses of this simple particle. This list of authors should especially gratify those through whose liberality Harvard College library has been able to supply so many books of reference; and if we are greatly indebted to the subscriptions of the gentlemen whose names are prefixed to the work for the means of publishing it, we must not forget the munificence of Mr. William Gray and Mr. Stephen Salisbury, to whom we are quite as much indebted for the means of writing it.

The first results of the studies of Professor Sophocles in this field were printed, in 1860, by the American Academy of Arts and Sciences, as Vol. VII. of their Memoirs, under the title "A Glossary of Later and Byzantine Greek." This work was really not published, as no copies were printed for sale, and the glossary itself filled only 480 pages of large type. The present Lexicon (apart from the introductory matter) fills 1132 closely printed pages, and is about three times as large as the Glossary. We find, for example, on opening the book at random, seventeen articles in the Glossary corresponding to fifty-two in the Lexicon; and the articles themselves, when repeated, are so enlarged and changed as to be really new. Once in a while we miss in the Lexicon a specimen of the author's peculiar exercise of his sense of humor which enlivened the less severe pages of the earlier work; for example, the definition of Στηλίτης as "an epithet given to those holy men whose love of admiration demanded that they should spend the greater part of their lives on the tops of pillars in the vicinity of large cities;" and that of *ἡ ὀρθοδοξία, orthodoxy*, as "usually equivalent to *ἡ ἡμέτερα δόξα, our opinion*." We must not omit to call attention to the valuable introductions which precede the Glossary and the Lexicon. These contain a history of the Greek language through its various fortunes, and will be an authority on many disputed points. The remarks on the *Troparia* (the hymns and chants of the Greek Ritual), which are given in full only in the introduction to the Glossary, are valuable to those who are interested in church music.

A Manual of Ancient History from the Earliest Times to the Fall of the Western Empire. (By George Rawlinson, M.A., Camden Professor of Ancient History in the University of Oxford. Oxford: At the Clarendon Press. 1869. 8vo, pp. 580.)—Mr. Rawlinson's "Manual of Ancient History" will be found a most useful book of reference. In respect to convenience of arrangement, clearness of statement, and general accuracy, it leaves nothing to be desired, and certainly has no rival in the field that it covers. We have found it especially satisfactory in the summaries that it gives of important groups or series of events, without entering into unimportant detail; such, for instance, as the legislation of Solon and the Gracchi, and the events of the Peloponnesian war.

In Oriental history, Mr. Rawlinson is himself an authority, and this outline will possess peculiar value. In Grecian history there are comparatively few obscure or difficult points, and the compiler has such good authority to follow in Grote, Hermann, and others, that there is little temptation to go astray. The Roman part, too, is excellent so far as events are concerned, but the internal history is strangely deficient; evidently Mr. Rawlinson has neither made a minute study of this subject—as indeed was to be expected—nor chosen the best authorities to follow. It would appear that, discouraged by the lack of agreement in later enquirers, he had thought the safest thing was to throw overboard all discussions since Niebuhr, and follow implicitly the views of that writer. At any rate his account is, in the main, that of Niebuhr, including points which are now almost universally rejected.

The account of the early patrician constitution is on the whole good, and does not require any remark. So with the Servian constitution; whether Servius established thirty tribes, as Mr. Rawlinson says, following Dionysius, or only four, as Livy has it, is a comparatively trifling matter. It is well known, at any rate, that the number in B.C 387 was twenty-one, so that, if there were originally thirty, there must be assumed a subsequent loss of territory of which we have no information. But we must object to the prominence which Mr. Rawlinson gives to the story that "it was said" that Servius intended to abdicate and establish a consular government—a wholly unlikely story, as it seems to us, and very far from being well supported by evidence. On page 348 this "is said," but on page 352 "Servius had designed," as if this alleged intention of a half-mythical king stood on the same footing of certainty with his centuriate and tribal organisms. On the other hand, we do not believe that Servius ever thought of *comitia* in connection with either the tribes or the centuries; it was not until the republic that these were used for legislative purposes.

The opinion that the first consul, Brutus, was a plebeian rests only upon the fact that the Bruti of the later republic were plebeians, and is wholly inconsistent with the general principles of the Roman constitution, as well as with the explicit statement of Livy (iv. 4), "*Nemo post reges exactos de plebe consul fuit.*" On the other hand, that plebeians sat in the Senate, both at the commencement of the republic and a hundred years later, is stated with equal distinctness (Liv. v. 12). Such a statement, therefore, as the following—even though supported by the great name of Niebuhr—ought not to be put forward categorically, seeing that it is at best nothing but an arbitrary and doubtful hypothesis: "No plebeian was allowed to enjoy the consulship after Brutus, and by degrees it grew to be forgotten that any but patricians had ever been regarded as eligible. No plan was adopted by which plebeians could obtain regular entrance into the Senate; and, as their life-members died off, the council of the nation was once more closed to them" (p. 353). So with the statement on p. 359, that, "prior to the Decemvirate, for above thirty years, the patricians had claimed and exercised the right of appointing, by their own exclusive assembly, one of the two consuls"—a view of Niebuhr's, which, as Becker remarks, "rests only upon a forced interpretation of single expressions used by the writers, while the sense of the whole passage is neglected." Mommsen indeed has proved, or at least shown it to be highly probable, that there was in the republic no exclusive assembly of the patricians at all.

Apart from these very material points, there are a few other expressions here and there that show a lack of exactness in Roman antiquities. On p. 353–4, he speaks of the *addicti* as "actual slaves," while it is clear, from the fact that an emancipated *addictus* did not rank as a freedman, that these were only *quasi*-slaves. P. 355, it is remarked that "the Roman was a volunteer army, not a conscription." Now the Roman army was a true militia; every freeholder between the ages of seventeen and sixty was obliged to serve. P. 356, he says of the Publilian Law of Volero that its "main importance" was "that it assumed the initiation in legislation, hitherto in the hands of the other order"—not even mentioning the purport of this law, which Mommsen pronounces "one of the most momentous in its consequences with which Roman history has to deal"! P. 431, in mentioning the restoration of the power of the tribunes among the measures of Pompey and Crassus, in B.C. 70, by which the legislation of Sulla was repealed, this is said to imply "the consequent resuscitation of the tribes"—as if the *tribes* had ever been abolished. Probably he means the *power* of the tribes, as exerted in their *comitia;* it is at any rate very inaccurately expressed.

A still stranger confusion is found in the list of the Roman provinces (454)—"Spain, Gaul, Germany, Vindelicia, Rhætia," etc. Now, admitting that Vindelicia was an independent province—it is made a part of Rhætia by such authorities as Marquardt and Kiepert—each of those others mentioned above was only a territorial name, the territory being in each case divided into two or more provinces; Spain into three (called by Mr. Rawlinson "portions"), Gaul into four (called by him "regions"), Germany into two (called by him "divisions"). Thus these five provinces were really ten or eleven.

But, while Mr. Rawlinson's view of Roman antiquities is defective, his Roman *history* is admirable. His views are sound, and he contrives to impart to it a remarkable degree of vigor and life for so brief a compend.

Seventy-five Popular Flowers, and How to Cultivate them. By Edward S. Rand, jr. (Boston: J. E. Tilton & Co. 1870.)—Mr. Rand treats of things new and old in an earnest way which enlists our sympathies and interest at once. Of course there can be but little actually now said about the seventy-five popular flowers, their friends and cultivators having so often described them and their merits; but that little may be found in this book. Mr. Rand has himself cultivated the plants he writes about, and has found how well they are adapted to our climate, how they may be planted to give the best effects, and how and where they can be most cheaply procured. His favorites are not always our favorites; but the whole list is well selected, and it covers all the herbaceous plants that are actually necessary to make a flower-garden gay from spring to fall. With all their merits, however, they are but a small part of the list he might have described, and probably will describe, at some future time. There are so many persons now who love and cultivate flowers, that a really good book ought to have a wide circle of readers, and we hope Mr. Rand may be rewarded for his pains by a large sale. The title of "Seventy-five Flowers," let us say, is very modest; for, whilst seventy-five species are discussed, so many varieties come under each one that they number several hundred individuals. We can heartily advise all who have a little flower-garden which they want to make glorious at a small cost, to buy this book and learn therein how to do it.

Only a Girl; or, A Physician for the Soul. From the German of Wilhelmine von Hillem.—To the merit of producing readable and spirited translations, Mrs. Wister adds that of showing good taste in her selections of originals. Miss Marlitt was a writer whose acquaintance was certainly worth making by American novel readers; and Miss von Hillem, who resembles her somewhat, although she lacks a little of that freshness and spontaneity which made "The Old Ma'mselle's Secret" such pleasant reading, has still made a good story, which may be read with interest as well for the sake of the subjects it discusses as for the manner in which it is told. It is the "Woman Question" which gets Miss von Hillem's attention, and though she treats it in a fresh way, and is clever, and shows a good deal of knowledge, we fear she is not likely to be treated with much reverence or consideration by our Women's Rights agitators, since her investigations of the subject appear to have led her to conclusions widely diverse from theirs.

Her heroine is a woman who as a child has been left to the guardianship of an uncle—a scientific man of great acquirements, who has been put under the bans by his former professional associates for some malpractice which showed dishonesty. His ward possesses a large property which, in case of her dying unmarried, will fall to her uncle. Not being a vulgar knave—being in fact a most extraordinary sort, we are asked to believe, of rascal—he conceives the idea of killing not her body but her soul; or rather, of wearing out the one by means of the other, and of doing this in a way which shall at the same time earn him the unsuspecting gratitude of his victim. She has a good mind, and he proceeds to train it awry, and at great expense to her physical strength—flattering her meanwhile with the idea that, though only a girl, she has the intellectual strength of a man, and that he will cultivate it to the end that she may help to emancipate her sex, who owe their inferior position merely to the injustice of men, who have systematically kept them in ignorance. In this way he hopes to make her an object of aversion both to her own sex and the other, while he relies on her really noble character and his own constant surveillance to save her from any vulgar errors. He makes her an atheist and an ultra advocate of the rights of women, and when the time comes for her to make her sentiments known, which she does by attacking in well-written essays all forms of religious belief, and by seeking admission to one of the universities, she justifies the wisdom of his calculations by inspiring both men and women with horror. She is nevertheless beautiful and pure-minded, and Miss von Hillem of course rescues her from her entanglements, gives her for a lover one of the manly men one finds in women's novels, and humiliates her pride by countless trials to the point of her owning her love for him and accepting him in marriage, and makes her see by her utter failures and mistakes the sheer folly of her atheism. All this is managed well enough, if once one overlooks the ridiculous improbability of the main conception and is not repelled by the deliberate and gradual bringing about of a foregone conclusion.

THE PICNIC.

A Delightful Cantata,

WITH

Charming Solos and Brilliant Choruses of Easy Execution!

BY J. R. THOMAS.

Designed for Schools, Singing Classes, and Social Gatherings. For Mixed Voices, and also for Female Voices, with Sparkling Piano Accompaniments. The most pleasing Cantata for Musical Festivals published.

Price, in boards, $1. Sent, post-paid, on receipt of price.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., New York.

Philadelphia Evening Bulletin.

PUBLISHED DAILY, SUNDAYS EXCEPTED.

No. 607 Chestnut St., Phila.

The EVENING BULLETIN offers special advantages by its Large Circulation in Business and Family Circles, for all departments of Business Advertising. As the oldest and best Philadelphia evening paper it is the most desirable advertising medium, and is printed on fine paper, large quarto, forty-eight columns, containing the fullest Telegraphic News, Commercial and Financial Reports, Foreign and Domestic Correspondence, Literary and Art intelligence, and all the requisites of a first-class Business and Family Newspaper.

Published by PEACOCK, FETHERSTON & CO.,
607 Chestnut St., Philadelphia.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

PAMPHLETS of every description, embracing Prospectuses, Statements, and Reports of Corporations, Statistical, Scientific, and Literary Papers, Law Pleadings, etc., etc., will receive the same attention as books, and be printed with especial care.

JOB WORK, in all its details: Cards, Circulars, Programmes, Bills, Receipts, Forms, etc., will be promptly dispatched, with taste, and in the newest varieties of type.

NEWSPAPERS, MAGAZINES, and other Periodicals will be printed on reasonable terms, and strictly upon time.

In short, the Proprietors undertake to satisfy first-class custom in all that pertains to a general Printing Business.

Orders may be sent to THE NATION PRESS, 27 Rose Street (a few doors North of Frankfort), or to this Office, and estimates will be furnished at either place.

JOHN ROSS, Manager.

CHARLES DICKENS.

TO BE SOLD, a PRESENTATION COPY of THE CHRISTMAS CAROL, with the following inscription, in Mr. Dickens's handwriting: "W. M. Thackeray. From Charles Dickens (whom he made very happy once a long way from home). Seventeenth December, 1843." This book, which has Mr. Thackeray's book-mark, and was purchased by its present owner for £25 10s. at his sale, forms a touching souvenir of these two great authors.

Address, post-paid, B. G. L., care of Messrs. Street Brothers, Serle Street, Lincoln's-inn, London, where the book may be inspected.

HARTFORD, CONN.,

Daily and Weekly Times

Have widespread circulations throughout the Connecticut Valley, and find ready admission to thousands of families as regularly as the return of the seasons. The *Times* was established in 1817, and there is not a State in the Union, or hardly a civilized country on the earth, to which copies are not sent.

TERMS: $2 50 a year, or to Clubs, $2, for Weekly; $8 for Daily.

*** One of the best mediums for advertisers in New England. Address "*Daily Times*, Hartford, Conn."

LIFE AND LETTERS OF CAPTAIN JOHN BROWN. Edited by Richard D. Webb, and published by Smith, Elder & Co., London, 1861. In all respects the best life of John Brown ever written. Illustrated by a photographic portrait without a beard, showing perfectly the character of the lower part of the face. Cloth, 12mo, price $1 50.

Sent post-paid on receipt of price. Address PUBLISHER OF THE "NATION," Box 6732, New York City.

The Nation.

NEW YORK, THURSDAY, JULY 28, 1870.

The Week.

The most remarkable piece of war news is the revelation of a secret treaty, said to have been proposed by Louis Napoleon to Bismarck in 1866, by which France offered to acknowledge the validity of the recent Prussian acquisitions in Germany, and to acquiesce in the consolidation of North and South Germany, Austria excepted; Prussia, in return, to consent to, or assist in, the annexation of Luxemburg and Belgium to France. The authenticity of the document seems to be generally acknowledged, and was not denied by either Mr. Gladstone or Lord Granville in the British Parliament. There is no information as to the manner in which the proposition was received by Bismarck, but the impression seems to prevail that he considered it and rejected it, and that both parties have been guilty of great duplicity towards England and Belgium, to say nothing of other powers. The treaty has, however, all the air of a plan of Napoleon's for getting out of a bad scrape without fighting. One may be sure he would not have gone to war if Bismarck had shown signs of falling in with it. The effect of the revelation in England has been plainly exasperating, and will, doubtless, scare all the smaller powers. It throws a flood of light, too, on the causes of the Napoleonic quiescence in 1866, and the total failure of the scheme shows how thoroughly France was outwitted by Bismarck. The latter, who has probably kept the treaty ever since hanging over the Imperial head, has now shrewdly communicated it to the London *Times* as a "tickler" for England and Belgium. It seems likely to complicate the situation greatly, as it proves Napoleon to be even a more dangerous and ambitious schemer than he was generally supposed.

It is hardly necessary to point out that these incessant efforts to rearrange Europe, in which France has been engaged for nearly a century and a half, are the direct results of her keeping an enormous standing army at the disposal of the reigning sovereign, and exacting "brilliancy" from him as the condition of his tenure of office. With such an instrument in his hands, a man would be more than human if he refrained from attempts to use it. By the way, in view of the situation, what do our Woman's Rights friends think of the theory that there is no longer any necessary connection between "the ballot and the bayonet?"—that is, between political responsibilities and military duties? The painful truth is that the last twenty-two years have been, although not a period of incessant wars, one of the bloodiest periods in the history of the civilized world. It has had in it, besides the revolutionary struggles of 1848, four great wars and two little ones.

The facts of the situation, stripped of what is evidently absurd, sensational, or rhetorical in correspondents' and telegraphers' accounts, seem to be that Lebœuf, Bazaine, and MacMahon are with the main French army or armies, whose position seems to extend from Strasbourg on the Rhine to Thionville on the Moselle, having Bitsch, Sarreguemines, St. Avold, and Boulay for connecting points, and Metz and Nancy for chief base. This position offers the French the advantage of threatening at the same time a campaign in South-western Germany, possibly involving the occupation of Carlsruhe, Heidelberg, Mannheim, Darmstadt, and Frankfort, and an invasion of the Rhenish Provinces of Bavaria and Prussia and the flanking of Luxemburg. To meet this double menace, the Prussians mass their forces on the strong defensive line along the Rhine, between the fortresses of Coblentz and Mentz, with advanced positions on the Saar, an affluent of the Moselle, running parallel with the above-mentioned section of the Rhine. Their most advanced—and, perhaps, most endangered—fortified supports are Rastadt, in Baden; Landau, in the Rhenish Palatinate; and Saarlouis, which faces Thionville and Metz. The Prussian headquarters are reported at Kreuznach, on the Nahe, an affluent of the Rhine, running parallel with the Moselle. The Prince-Royal, Prince Frederic Charles, and Herwarth von Bittenfeld are to command the left, center, and right, respectively, of the Prussian army; Von Falkenstein is to meet the French army under the Duke de Palikao, destined to operate on the coasts of the North Sea and the Baltic, in co-operation with the French fleet. Ostensibly for the latter purpose, a French fleet is concentrating at Dunkirk. The Cherbourg fleet has been reinforced by the fleet from Toulon. The main armies receive reinforcements from Algeria, and the evacuation of Rome, too, is said to be resolved upon. The fortifications of Paris are put in a state of defense. The departure of Napoleon to join the army is daily expected. The imperial guard has arrived at Nancy. The *garde mobile* is called out. Reports from either side boast of upward of a hundred thousand volunteers enrolled since the declaration of war, for the just cause.

There can hardly be any further doubt that Prussia has by this time the full control of the armies of the South-western German States—Bavaria, Würtemberg, Baden, and Hesse—and, to a degree, the sympathies of a majority of their inhabitants. It matters little whether Bavaria was, as the French say, or was not, misled into active co-operation with Prussia by a false announcement of Count Bray, her Prime Minister, that French troops had invaded Bavarian territory. Out of Germany and France, down to the ominous publication of "the proposed treaty" for joint Franco-Prussian land robbery, neutrality was the general watchword on the European continent, excepting, perhaps, Denmark. Not only Sweden, Holland, Belgium, and Switzerland had declared for it, but also Spain—according to the *Moniteur*, by forming an alliance with France for its protection—Italy, though at the same time calling out two classes of reserves as a precautionary measure; and Austria and Russia. These two empires, however, do it with a reserve which seems to spring from their mutual relations, which are not much more friendly at bottom than those of France and Prussia. The Czar, in a note to the French Government, says "he will remain neutral as long as the interests of Russia do not suffer," meaning by Austrian interference. Count Beust, in a ministerial circular, couples with the assurance of entire neutrality that of "omitting no measure tending to guarantee tranquillity to the European peoples," whom the interference of Russia might menace. Turkey, too, arms for peace.

"Turkey has called out her reserves," says the Cable, "and stopped the telegraphs in all directions." This latter announcement is in the best Cable style; so is the following: "Upon the arrival of the steamer *Cimbria* at Havre, on Saturday, on her regular trip from Hamburg to New York, 500 Germans who had paid their passage to America, hearing of the declaration of war, left the ship, returned to Prussia, and enlisted in her armies." (Query: How many passengers were there altogether, old men, women, and children included?) And so is this: "Germany makes the dethronement of the Bonapartes its *ultimatum*," which is apparently corroborated by "G. W. S.'s" special announcement in the *Tribune* that "it is perfectly understood in Berlin that the German army, if victorious, will march to Paris." This marching "to Paris" can be no hard affair, as the same gentleman telegraphs the following to the same paper, on good special correspondent authority: "The crowds on the boulevards, ready to die for their country, have disappeared. Troops traverse the streets without eliciting a single cheer. Soldiers joining their regiments walk about in groups, almost all drunk. The bourgeois stare at them and shrug their shoulders." Unfortunately, however, the Cable informs us, on the contrary, that "the first regular battle will be a disastrous conflict, as both sides will fight with desperation"; and "G. W. S." himself telegraphs that "Marshal Bazaine is sending everywhere to buy maps of Bavaria"—which, by the bye, he ought to have done long ago—as if an offensive advance were still thought of by the French, in spite of their terrible demoralization afore telegraphed. And the "French officers," he tells us, "boast that they have a million men between Thionville and Strasbourg." This, however, may be slightly exaggerated, as the "special correspondent of the *Tribune* . . . describing the movements of troops," found only "10,000 at Fortsach [Forbach], 7,000 at Saint Avold, 3,000 at Sarreguemines"—total, 20,000, in the centre. How many he found at Metz, which he places on the Meuse, is not stated. Should France possess many such sons as that Mulhouse (or Münchhausen?) manufacturer who, according to the Cable, "has offered to equip 5,000 volunteers, and to supply them with rations during the war," the million boasted of might soon be completed in that locality. Anyhow, one last resort remains to Napoleon for baffling a coalition march "to Paris." He will, as indiscreetly heralded by the friendly New York *Times*, "proclaim the republic throughout Europe."

The Cable news has, however, on the whole been tamer than heretofore. Two skirmishes are the utmost extent of the hostilities, and, considering that war was declared suddenly and unexpectedly, it is not likely that the armies can be concentrated or get into collision for a week or two to come. The speculations of the news collectors as to the probable point of contact are, of course, worthless or next to worthless. It is not likely they possess a secret for which either Moltke or Bazaine would give millions. It is safe to anticipate, however, that the Prussians will leave it to the French to begin, and that a Prussian army, acting on the defensive and on its own soil, will hardly afford its assailants an opportunity for anything very brilliant in the way of a début. Another good specimen of the kind of reports which are considered worth telegraphing is to be found in a "special Paris despatch" which the *Tribune's* London correspondent actually sent to New York—"that a body of Prussian troops passing through the Black Forest [which is all on German soil] towards Basle, had several detachments stopped by the Swiss, who have a corps of observation numbering 25,000 men." The meaning of this rubbish seems to be that the Swiss invaded South Germany, and meeting in Baden or Würtemberg with Prussian troops marching south-west, stopped them by force, which would be a nice exploit for a "corps of observation."

The preparations of the daily press for reporting the war are nearly as active and vigorous as those of the soldiers for carrying it on, but it seems as yet very unlikely that we shall have any very clear or distinct accounts of it from any quarter. The *Sun*, of this city, has secured the services of Mr. W. H. Russell, of Crimean fame, as its special telegrapher; but if it be he who has appeared in the French lines as correspondent of the London *Times* also, he will hardly be able to act, as he has been arrested and sent away. The *Tribune*, on the other hand, announces that its special correspondent, so far from being sent away or molested, has "visited three fortified camps round Metz," and "been allowed to inspect the fortress of St. Quentin," the officer in charge "giving full information," which surprises us. The correspondent must be the same gentleman who saw the Emperor secretly cauterizing his back with a lighted candle. These camps and fortifications are hardly likely to be exhibited with such frankness to any less highly favored person. The French press has petitioned in vain for permission to send correspondents to the front. The military authorities announce that they will furnish "the war news" themselves, and the French public have thus the consolation of knowing that it will never be depressing. On the Prussian side there will probably be more indulgence; but correspondents will not be high in favor in either camp, and the chances are we shall not know very much about the operations till they are all over.

The death of Prévost-Paradol, almost immediately after reaching his post, was one of the many tragic results of the prevailing heat, and perhaps the saddest. We suppose there can be no reasonable doubt that it was its effect on a brain already excited by the news from home, and the novelty of his duties, which drove him to his doom. The stories of his remorse, on hearing of the war news, are good to tell, but absurd on their face. The course the Emperor was following was plain enough before Prévost-Paradol left France, and there was nothing in the news that was not more likely to strengthen his attachment to the Empire than to weaken it. His relations with it were very curious. It is only four short years since he bitterly and contemptuously assailed it; and his selection for a high diplomatic position—particularly as he did not belong to the profession—was as striking a proof as the Emperor has afforded of his desire to win over the literary class. M. Prévost-Paradol was neither a strong writer nor a strong thinker, but he was brilliant and graceful. His latest work, "La France Nouvelle," showed that his ideal was a constitutional monarchy, with a strong infusion of English or American morality.

Chicago, we are sorry to say, promises to be a scene of very gross corruption some time next month. The Fenians of all branches are going to hold another congress there, to see whether they cannot extract from the present European complication some support for their own cause; and the two belligerent powers, hearing of it, and knowing the weakness of most of the "Centres" for money, and being each anxious to get the Brotherhood on its side, will doubtless send plenipotentiaries laden with gold to seduce the delegates. We shall accordingly probably witness the repetition of the scandals which marked the liveliest times of the Polish diet. It is as well for Bismarck to know, however, that the body thus far inclines to France, and is indeed "demonstrating" fiercely in her favor, with that singular aptitude for getting on the wrong side of the fence—that is, arranging themselves in opposition to the great body of the liberal party throughout the world—which the Irish nationalists have displayed ever since O'Connell's death.

It would appear, or at least it is generally believed, that Mr. Motley was removed in order to spite Mr. Sumner, to whom he mainly owed his appointment, but who had offended the President by his opposition to the St. Domingo treaty. Senator Wilson wrote a pathetic letter to the President, begging him not to disturb Mr. Motley, which is ascribed not to any personal interest of Mr. Wilson in the manner in which the mission to England should be filled, but to his desire to have the rights of his colleague, in the matter of patronage, respected. We confess we think it is, or ought to be, ridiculous to dismiss Mr. Motley because of Mr. Sumner's behavior in a matter with which Mr. Motley had nothing whatever to do, but then it is a legitimate result of the system under which Mr. Motley was appointed, and which is every day becoming more firmly established. The obligation which rests on every senator or representative "to take care of his friends," creates a corresponding obligation on the part of "his friends" to suffer for his faults; therefore, when a senator, by pushing any man's claim to an office, formally declares him one of his "friends," and enters his name in the account he keeps with the Administration, the friend, on accepting the office, becomes what the French call "solidaire" with the senator—that is, becomes, as it were, part and parcel of him, and agrees, by implication, if need be, to bear a share of any calamities which his political errors may bring upon him. The relation between them, in short, bears some resemblance to that which used to exist between certain savage kings and their warriors, or between Hindoo Brahmins and their wives.

Senators now insist on not only confirming the nominations of the Executive, but on making the nominations; and the only mode of exercising any influence over them, or indeed over the public service at all, which the President retains, lies in the power of dismissal. In this way he avenges his wrongs, and snubs, and humiliations. The consequence is that when the report goes abroad that a senator or representative is at loggerheads with the Executive, the dozens of poor devils he has got places for begin to shake in their boots, or look about for other means of support, for they know they will be sacrificed in expiation of the great man's sins. It is only in very grave cases, however, that the sacrifice of an ambassador is called for, and we must conclude that Mr. Sumner's conduct in the St. Domingo business was of a peculiarly atrocious description. He will know better than to oppose an annexation another time. "Rotation in office" is a beautiful system, but then it is full of sorrows and uncertainties, like all other human institutions. There is hardly a day one does not see rows of "men inside politics," who are never tired of praising or defending it, weeping bitterly by the roadside over some of its reverses, the picture of misery, and the 'cute look quite gone.

The heat of the weather, which has now for nearly a month been excessive, and not here only but in Europe, is not unlikely to exercise an important influence on the fortunes of the campaign, as in France, at least, it is accompanied by a long-protracted drought, which has done terrible injury to the crops and threatens a large portion of the agricultural population with ruin. In this country, and particularly in this city, it has already caused serious loss of life, and, in the tenement-houses, untold suffering. Whether or not the magnetic storms, or, to speak more familiarly, the "spots on the sun," have anything to do with producing it and the pending war, is a subject of frequent debate among our daily contemporaries. The New York *Times* declares that some of the astronomers predicted the heat some time ago as the result of their solar observations, and at least hinted at the probability of a war as a consequence of the size of "the spots." The *Evening Post*, on the other hand, maintains that they did not; and the failure of any of the philosophers to come forward and claim the honors of the occasion certainly supports the *Post's* position.

The *Times*, by the bye, has now several times recommended the introduction of "punkahs," or huge fans attached to the ceiling, into our sleeping and sitting rooms, as the means of mitigating the effects of the heat; but it has always avoided saying how they were to be worked. Punkahs do not go of themselves, and if everybody worked his own, we doubt much whether the use of them would spread. We think most people would prefer enduring the worst ravages of the temperature, night or day, to agitating a powerful punkah. In India, where these instruments are most used, servants who do not mind heat are plenty; here, it would be almost as easy for a man to provide himself with a snow-bank to sleep in as an attendant, either alien or citizen, to sit up all night and fan him. We question, too, whether even the notion that anybody is really relieved by fanning himself is not a delusion. Doubtless, it is possible to lower the temperature of one small portion of your person in this way, but the exertion raises it elsewhere. The true democratic remedy for the heat would be big public fans in the style of a winnowing-machine, and worked by steam, into which anybody could go and get himself cooled off at the expense of the city, or for a small charge; or the punkah might be introduced into all houses, as the Croton water is, and kept in motion by a Punkah Department, with one Head Wallah—we believe that this is what the fan-worker is called—at a salary of $10,000, and about a thousand Assistant-Wallahs, all elected on ward tickets, and with strict regard to "their services to the party," and with nine months' vacation every year.

The woman suffrage question has come up before the Connecticut Legislature in the shape of a majority report, written for the committee by Mrs. John Hooker, and a minority report, written by Mrs. Cowes, we believe, one in favor of an amendment to the State Constitution extending the suffrage to women, and the other against it. Mrs. Hooker's report contains the arguments with which our readers are already familiar; Mrs. Cowes's we have not seen; but the Legislature shelved the whole matter with some appearance of levity. The movement, indeed, appears to have got as far as it is likely to get, either here or elsewhere, without more support from the women themselves, and, as far as our observation goes, their interest in it is less than it was a year or two ago. The men are largely hostile, but more largely indifferent. We will make one suggestion to its advocates which we think they will find serviceable, and that is, before using Mr. J. S. Mill's arguments any more, and referring to him as a crushing authority, to get from him a reconciliation of the rules for reasoning on political and social questions laid down in his "Logic" with the purely *à priori* method pursued in his essay on the woman question. His disregard, or seeming disregard, of his own canons has puzzled a great many of his male admirers, and continues to puzzle them, although it apparently makes no impression on his female followers. They cannot have a weightier authority at their back, but his feelings seem to be enlisted in this cause to a degree which, in the opinion of many who owe him much, has made him a very unsafe guide.

Numerous mishaps attended the racing between the colleges at Worcester last Friday, and the only thoroughly pleasing thing to an outsider was the victory of the Brown University Freshman crew, who beat the Harvard and Yale handsomely, and were begrudged their unwonted honors by nobody. An Amherst Freshman crew, too, put in an appearance, and it seems clear that the Oxford and Harvard race of last year has produced an impression favorable to boating on the undergraduate mind. The Yale and Harvard University Crews were the victims of a "foul," of which the reporters of the various papers give conflicting accounts. The fact is, there ought to be nothing said about such a matter after the judges have once heard evidence and decided. "Pay up, and shut up," is the only good line for a sportsman to take when his freely elected umpires have declared results. And as for the newspaper men, they have no business to be partisan, and should talk either of what they have seen with their own eyes or in accordance with what the referee and judges have decided. No good comes to anybody, however, by an agitation of the pros and cons, and calling names.

As to the true state of affairs in North Carolina, it is not easy to come to a certain conclusion. We can say, however, for our own part, that, while we cannot feel confidence in what is said in the Democratic papers—no one of which has established a good claim to be believed without corroborative evidence, and every one of which has the satisfaction of knowing that it may cry "Wolf" with its expiring breath, and disturb not a living soul; yet, on the other hand, we want corroborative evidence, too, when Governor Holden's organs come to us with a tale of Ku-Klux outrages on men whose only offence is Republicanism. That we do not believe. The counties which have been put under martial law are near the Virginia line and in the neighborhood of Danville, Virginia, and during the war were, of course, secessionist, but were never without a large number of Unionists. This state of things, of course, gave rise to the bitterness of feeling that marks neighborhood wars, and the bitterness was intensified tenfold when, in the latter months of the war, the rebel part of the population assisted in bringing in from the woods the "outliers"—that is to say, Confederate deserters from the army, or passive resisters of the conscription. But then, all that was six or seven years ago; and that there is murdering going on in Caswell County on that old score now, when even Tennessee is quiet, and when Caswell County was quiet as long ago as 1865 or '66, is more than we are going to believe till we have better authority for believing it than the Governor's proclamation. Yet that society in Caswell and Alamance and the adjoining region is in a state of comparative disorganization seems clear, for United States officials have, on request that they would forward true accounts, reported murders and beatings and rapes as frequent and audacious, and the punishment or detection of the criminals rare. But they charge Governor Holden's militia with being also the cause of great disorders; while third parties, as much entitled to credence as the Governor, assert that the lists of rapes and murders might be just about doubled if the Governor had added the list of conservative victims to the list of the people killed or ravished for their radicalism. However, there is something utterly wrong in somebody's management of the judiciary and constabulary of the disturbed region, or there would be no such open disregard of law and order as is now seen in a part of North Carolina inhabited by just as law-abiding and intelligent a people as any other community in the State, and more so than some others. Political significance, we believe, the lawlessness has none. As United States troops have been ordered into the counties under martial law, we shall probably hear what are the true causes of the trouble.

"SYMPATHY."

ONE would imagine, from the severity of the rebukes and admonitions with which a portion of the American press is visiting the enthusiasm which the Germans in this country are displaying in the cause of Prussia in the pending war, that it was a time-honored custom of the American public to regard foreign wars with a cold, judicial serenity, and that there was nothing our newspapers and politicians more sedulously avoided than any expression of feeling about conflicts in which the United States had no immediate material interest. Indeed, to read some of the articles which have appeared during the last week, one might fairly conclude that the notion that "sympathy" had any place in international relations had just been concocted by the German-Americans for the purpose of dragging the United States into some sort of demonstration against France, and that the term was unknown in our politics.

The fact is, however, that there is no country in the world in which the sympathetic habit of mind is so zealously cultivated, and in which one or other of the parties to nearly every quarrel is so sure of having the founts of feeling made to play for his benefit. It is just as much as the Government can do, whenever a convulsion of any sort breaks out between any of the principal powers of the world, to prevent the eruption of a sort of supplemental conflict on American soil, or the introduction of the controversy into American politics as "an issue." The chairman of the House Committee of Foreign Affairs, indeed, stands constantly on the watch, pocket-handkerchief in hand, for the purpose of pointing out to the nation some cause to take up or some victim to weep over. One does not need to be very old to have swum through half a dozen floods of sympathetic tears. The country went nearly crazy over the Hungarians, and, indeed, over one party of the Hungarians which Hungary has since rejected. The Young Ireland martyrs also about the same time threw a good many people into a melting mood. Since then, the patriots whom Maximilian kept from establishing "truth and justice, religion and piety" in Mexico have been fêted and caressed. The bands of Greek robbers and politicians who got up the Cretan insurrection found no difficulty in having a regular organization established here to aid them, with the accompaniment of a newspaper, public meetings, and subscriptions, and music, and the press resounded for months with frantic praises of them. The Fenians —the heroes of Trout River, and Franklin, and Elm Park—were able to command so much "sympathy" that the Foreign Committee of the House reported and the Republican majority of the House voted for a bill, the avowed object of which was so to modify the neutrality laws as to permit large bands of cut-throats and thieves to pass our frontier to murder and rob the Canadians, and that the leading organs of the Republican press fiercely abused the President for doing his duty by stopping them. We need not say anything about Cuba— the latest object of our "sympathy." We have all been sympathizing with that island for the last year, some of us for love and some for money, and it seems as if our compassion for her had no limits.

But do we exact from others what we are so ready to bestow? Yes, we do. Her failure to sympathize with us, during the late rebellion, has so affected our relations with England as to make our differences with her almost incapable of adjustment, and to have sown the seeds of bitterness that will probably bear fruit for generations. On the other hand, the ready accordance of sympathy on the part of Russia has so fixed that power in the affections of a large portion of the American public, that we shut our eyes to the extraordinary inhumanity, to use a mild term, of her policy towards the Poles. With such a record as this open before us, it is needless to say that there is not much use in calling on the Germans to be silent and impartial witnesses of a struggle which is to drench their old homes in the blood of their fathers and brothers, and on the result of which the place and influence of their race in European civilization is to depend. Moreover, although we condemn, as strongly as anybody can, all attempts to commit the United States Government to any participation in the controversy, or to make difficult the rigid performance of its neutral duties, and though we confess we think neither Mr. Carl Schurz nor any other United States Senator is in his place in going about the country delivering speeches on either one side or the other, we are not inclined to exact from the Germans that complete casting-out of the old German Adam, and that complete transformation into pure and judicial-minded American citizens, for which some of our contemporaries are calling on them. Germans are men, like the rest of the world, and there is no magic in naturalization to convert them into anything else. When their kinsmen bleed, they must feel sad; when they triumph, they must rejoice; and when they watch the struggles of the nation to which they once belonged, and which nothing short of a miracle can prevent retaining a large portion of their tenderest affections, they would be more or less than human if they could suppress all sign of interest in the progress and result of the strife. We confess we think they are not worse but better American citizens for uttering all they feel.

As to the attitude of native Americans towards the struggle, we believe a good many excellent people refuse to see any claim to our sympathy on either one side or other, simply because they have got into what we cannot help calling the depraved habit of mind of thinking that no struggle can have any interest for Republicans if carried on by monarchs, and that, to make a cause holy or respectable, its supporters must be "rebels." This was not always so. During our rebellion, we saw the rapid growth of the idea that all rebels must be bad men, a striking illustration of the confusing influence which words so often exercise on ideas. So also in England, thousands justified their sympathy with the South by simply alleging that the South was "the weaker side," or the minority, and seemed to think that rational beings, making a profession of Christianity, were not called upon, before they patted a combatant on the back, to ask whether he had the right on his side. Intelligent men, however, before passing judgment on a war, ask, not simply what are the names and titles of the belligerents, or what is their relative strength, but what are they fighting about, and what is their fighting likely to result in? "Emperor" and "king," "loyalist" and "rebel," are but signs by which the great problems of politics are worked out; it is with the result that the rest of the world is concerned.

Applying these tests to the conflict on the Rhine, it is difficult to see where an enlightened American can find an excuse either for indifference or neutrality. The result of a French victory it is not hard to foresee. The Emperor, after eighteen years of a degrading tyranny, was driven, last winter, by a series of military and diplomatic reverses, and the scandalous financial abuses of his adherents, into making certain concessions to liberalism. He had no sooner made them than he deprived them of all value by the same cunning manipulation of universal suffrage by which he secured the popular approval of the *coup d'état*, and he thereupon rushed into war, with the hope, which events show to be well-grounded, of turning the popular mind away from questions of internal reform, and reconciling the nation to a renewal of the military régime. His triumph over Prussia would certainly put an end to all talk of further changes in the direction of freedom. It would lead to the open restoration of personal government; the open revival of that contempt for the writers and talkers—that is, for the mind of France—which the court and its followers were never tired of proclaiming between 1851 and 1866; the renewed coercion of the press, and the elevation of the army once more to the first place in the government. It would wipe out the memory of the crimes, frauds, extravagances, defalcations, and slaughters by which the eyes of the French people were being gradually opened to the real character of imperialism, and probably fix the yoke on their necks so thoroughly that the "young Augustus," who is now going to play at war, like Louis XIV., on the Rhine, under his father's eye, would be able to take the reins and the whip, and mount without further trouble or molestation.

Prussia, it is true, has a strong leaven of feudalism in it; but it is gradually and rapidly getting rid of it; in any case, not only has feudalism rendered good service to mankind, but every trace of it is disappearing, and nowhere more quickly than in North Germany. There is no state more "modern" in the best sense of the word than Prussia; none in which an intelligent human being counts for more, or in which brains exercise so much influence on politics. It was very true, as Ernest Renan said, that "it was the universities which conquered at Sadowa." We have little doubt they will conquer again on the Rhine; at all events, we feel bound in the interest of civilization to hope so. If any power is to have more weight in the family of European nations than another, we are all interested in its being the power whose armies contain most readers and writers, and which when it goes to war has to call most intelligent citizens from their homes. It has been a favorite saying of the Bonapartes that "bayonets don't think." Bayonets are, however, beginning to think; and the more they think the less chance will there be in the world for the class of adventurers of which the Bonapartes are the most illustrious members. The Prussian army is fighting for a free press, a free parliament, popular education; for the supremacy of reason over brute force, of the citizen over the soldier, of law over imperial "decrees," of an armed people over hired armies, of industry over gambling. In other words, they defend modern civilization against the worst and latest of its enemies.

THE FUTURE OF THE MONEY MARKET.

We have had so long-continued a period of financial calm and easy money that it seems almost time to enquire whether past prosperity has not lulled us into false security. The threatening aspect of affairs in Europe, and the not altogether remote possibility of our becoming seriously interested in a struggle necessarily involving the safety of Spanish colonies on this continent, make the enquiry even more pertinent. The prevailing low rates of interest, and the standing figures of the daily papers, showing week after week that the banks hold a large amount of legal-tender reserves in excess of the requirements of law, have induced a somewhat careless confidence, which we do not propose to shake very rudely, but which warrants us, we think, in calling the attention of our readers to some points in the situation which it is not altogether safe to disregard. So great is the prevailing confidence that people seem unwilling to believe in the possibility of a change, and that, when last week brought a slightly increased activity in money, which was somewhat aggravated by unwarranted bank speculation, our best financial authorities persistently shut their eyes to the natural movement, and attributed the change wholly to the manipulations of a corrupt bank management. Yet the natural movement was by far the most important.

It is an unfavorable feature in our money market that, all through the dull summer season, at a time when speculation is notoriously dormant, the loans of our banks have steadily increased, are higher than in the busiest winter and spring months, and are to-day within one per cent. of the highest figures of the year. The inference to be drawn is twofold—either that the regular business of the country is unusually active for the season, or that mercantile credits are less liberal than usual, and that the banks are called upon to furnish a proportionately larger share of the general credit facilities. Both these causes have probably had a share in producing the result. The losses of last year in many branches of trade have undoubtedly led to more than usual caution in mercantile credits; and, as far as one at least of our leading interests is concerned—the grain trade—it is well known that it has been extraordinarily active throughout the summer, owing to the gradual forced sale of the accumulated crops of last year and the year before. These causes satisfactorily explain the present high figure of bank loans—what indications do they furnish us for the fall?

While accounts generally agree in reporting in the main a healthy business throughout the country, there are too many minor indications of local unsoundness to warrant the anticipation of any liberal increase in the lines of commercial credits. The Pacific Coast is suffering from a terrible reaction, after years of almost unexampled prosperity. The far West has to settle down from the feverish excitement of excessive railroad-building. Nearly all sections of the country have some pet real-estate delusions to shake off before they can be quite healthy. Everywhere the gradual dying-out of the fires of speculation is leaving the ashes only of imaginary fortunes, and begetting frugality and caution. On the whole, the indications point to extreme conservatism in the granting of mercantile credits, and a corresponding demand upon the banks for continued facilities.

How are the banks prepared to meet the demand? Although money in the New York market continues extremely easy, and the rates of interest have advanced but slightly from the lowest figures of early summer, it cannot be denied that the position of the banks is one of unusual expansion. If the present grain movement continues through the rest of the summer, as it seems likely to do, and we should have large crops this fall, our banks may experience a strain upon them to meet the usual increase of business in the autumn, which may seriously trench upon their reserves. According to the National Bank Act, they are obliged to hold on hand 25 per cent. of the amount of their deposits and circulation, in legal-tender money. With ordinarily prudent management, such a reserve would be safe, except in times of exceptional calamity. According to the Bank Statement of July 9, the New York City banks ought to have on hand a reserve of about 63 millions. They actually had a reserve of over 88 millions, which seems a liberal margin to carry even into an active fall season. But it is precisely here where the habit of security is apt to betray us. What do these 88 millions of reserve consist of?

Thirty-six millions consist of coin. For the last years our coin export has been so moderate that we have entirely forgotten how untrustworthy it is as a bank reserve, in our present condition of specie suspension. In 1866, the outbreak of the German war caused us to export in less than five weeks over 35 millions of dollars of coin, nearly equal to the total amount of gold now in our banks. We have already, during the past week, shipped over six millions of dollars in consequence of the European troubles, and the indications, as we write, are that the shipment this week will likewise be considerable. It is true, our position at the present moment is very different from what it was in 1866. It is highly improbable that we shall have an equally heavy specie export. Yet it behooves prudent bankers to bear in mind that more than their entire surplus of reserves is liable, under certain contingencies, to be suddenly whisked off to Europe, leaving them in a position where nothing but violent and disastrous contraction could save them from heavy loss and possibly renewed suspension.

While thus 36 millions of reserve consist of coin, which is subject to most serious inroads from abroad, only 26 millions consist of actual greenbacks, a startlingly small reserve upon which to carry 280 millions of loans! Last week but one, the New York banks, in the ordinary course of trade, lost, in one week, three millions and a half of legal tenders. How long would 26 millions last in case of alarm? It is true that, in addition to these actual greenbacks, the banks hold about 28 millions of the three per cent. certificates (referred to at length in the last number of the *Nation*), which the Treasury is obliged to redeem in greenbacks. But it is precisely these which give to the entire situation its most serious aspect. In quiet times, these certificates were of no importance. In times of trouble they become a source of danger. We have repeatedly pointed out how easily they might work mischief. If, from any one of the many possible complications arising out of the pending war in Europe, any unusual demand should spring up for any part of our bank reserves, our bankers would very soon be obliged—might certainly be easily tempted—to present their certificates for redemption. As long as the surplus greenbacks now in the Treasury vaults held out, relief would be certain; but as soon as the present limited supply was exhausted, the Treasury would have no means of getting a fresh supply except by sales of gold or bonds. Whichever they sold, the greenbacks to pay for them would have to come from the banks themselves, so that presenting their certificates for redemption, far from affording relief, would actually aggravate their troubles. It is on this account that the certificates are so thoroughly objectionable. Their redemption, if it can only be accomplished by the Currency Bill without further trouble, would make the faults of the rest of that wretched measure seem almost light and venial. But, at the moment, their redemption is not likely to be accomplished without serious strain upon our financial machinery.

It is peculiarly unfortunate that to these pre-existing causes of financial disturbance, aggravated as they seem likely to be by the war abroad, there should have been added the violent contraction which, as we recently explained, is sure to result from the ill-advised banking features of the Currency Bill, which the public seems almost to have forgotten. It cannot fail seriously to complicate financial affairs, adding one more to the uncertainties of the situation, at the very time when confidence is apt to be otherwise disturbed, and when it is especially desirable for prudent men to be able to see correctly the various influences likely to affect the stability of the market.

On a survey of the whole ground, there seem to us to exist sufficient elements of uncertainty in the immediate future of our own money market to warrant the utmost caution among the banking interest, while we see absolutely nothing to justify the belief so generally and so confidently expressed, that a war in Europe would be beneficial to us, financially or otherwise.

ENGLAND.

JULY 8, 1870.

I WRITE upon one of these sultry July days which occasionally come in this foggy island, and generally forbode a change of weather. Three hot days and a thunderstorm is supposed to be the definition of an English summer. In this year, however, as in 1868, we have had far more than our allowance of heat and less than our fair share of fog. The parks are an arid and dusty wilderness, and the English turf on which we are apt to pride ourselves is scarcely more refreshing to contemplate than a worn-out door-mat; pasturages are a melancholy sight for the agriculturist, and we groan over the prospects of winter food for our cattle. A few showers that have lately fallen have indeed helped a little to bring up the average; but we pray for rain, and try to console ourselves with the old adage that drought never brought famine to England. To talk of the weather is supposed to be a national privilege, though, to say the truth, I have heard a good deal of conversation upon that topic beyond the limits of my native land.

I might, however, justify myself for referring to such a topic by the vast commercial importance of rain at the present moment, and I will really allege a more satisfactory reason in its bearing upon political interests. Parliament has seldom had before it so many questions of really vast importance. Matters which have been considered weighty enough to justify the devotion of a session have sunk into an actually secondary position. It has been proposed, for example, by Government to introduce vote by ballot—one of the points which has a kind of official position in the Liberal platform, and which is supposed to excite the most bitter antipathies. Yet I do not believe that anybody, with the exception of a few steady-going old political hacks, really cares two straws whether the measure is passed or abandoned. Meanwhile, however, the House of Commons is working with an energy which does it, or the Government, some credit. In this burning weather, respectable elderly gentlemen, who would give their ears to be far away on Swiss mountains or Scotch moors, are plodding on, night after night, trying to lick the Education Bill into shape. The matter has now gone so far, and the credit of Parliament is so deeply involved, that it is probable that, in one way or another, it will be forced through in the present session. We are all languid and weary and anxious to be at rest, but the work has to be done, and two or three dogged reformers continue to show inexhaustible vigor. Without admitting that I share in the languor—for the correspondent of a newspaper should be superior to such merely human frailties—I shall make your want of interest in the details an excuse for not plunging too deeply into the discussion. The religious difficulty, of which so much has been said, has been finally got out of the way, and the present controversy turns upon rather minute points of rating and providing local machinery, which are, it is true, of great importance in their bearing upon the successful working of the machinery, but which it would be difficult and not very profitable to expound at any length in your columns. The main questions are as to the degree in which the proposed schools are to be helped by the national funds, and as to the constitution of the boards which are to manage the local rates and contributions. There is, however, a very general desire to see a successful conclusion to the measure; there are few direct party divisions, and, in short, it seems to be tolerably clear that in another week or so the bill will be sent up to run the gauntlet of the House of Lords.

This result is, I think, creditable to the substantial patriotism of the present House of Commons. In spite of a good many vagaries and a deal of talk, more for the benefit of their constituents than for any reasonable ends of debate, they mean business, and they prove it by laboring so doggedly through a season in which London is becoming well-nigh intolerable. The only question remaining is as to the probable action of the House of Lords, and I think it may be said with some confidence that they will not prove themselves refractory. The action which they have taken in regard to the Irish Land Bill is a sufficient proof that they know their proper position. Opposition is, of course, in a majority amongst the peers, and goes as far as it dares, but the daring is not of a very outrageous quality. A good many changes, indeed, have been introduced, and, of course, in the conservative sense, one of the principal amendments was carried by Lord Salisbury. Government proposes that the benefits of the bill should be conferred only upon farmers who paid a rent of less than £100 a year. Lord Salisbury moved that the figure should be reduced to £50, thus exempting from its operation a number of men who, as he argued, were sufficiently able to take care of themselves without special legislation, but who, as it was replied, had a strong claim to be conciliated in the fact that they were the natural leaders of their class. In fact, the change was thought to be of great importance, and the Duke of Richmond, as titular leader of the opposition, would not take the responsibility of carrying it. Lord Salisbury, however, is a man of energy, accustomed to the hard fighting of the House of Commons, and by no means resigned to the more placid atmosphere of the serene regions above. Accordingly, he took the bit between his teeth, and carried with him a sufficient number of his party to change the Government scheme. Lord Salisbury has declared with great emphasis that the House of Lords should not become a cipher, and that it had a right to enforce some degree of respect for its opinions. Doubtless he was irregular at the victory which he had thus won, as Nelson obtained some of his most glorious successes by a signal disregard for discipline. But with the next day came cooler reflection. The opposition trembled at what they had done. They felt like schoolboys who had been very brave so long as their master was absent, and who withdraw from an incipient mutiny with more haste than dignity on the first appearance of the authority they had defied. In short, the peers resolved that it would be more dignified to surrender before they were summoned, and so to preserve some appearance of independent action. They abandoned the objectionable amendment on the bringing up of the report, in spite of a rather faint protest from Lord Salisbury, and have, in that, shown themselves amenable to reason. They will, doubtless, listen to its voice in regard to the other amendments and in the questions connected with the Education Bill; and, in short, it is highly improbable that Lord Salisbury, with all his undeniable vigor, will ever impart enough of it to his colleagues to spur them on to a general conflict with the lower House. The retreat on the Irish Church was their Sadowa, and it is pretty well understood that their opposition in future will be confined to putting on the drag with very great moderation. When the country has given so emphatic a support to a Liberal Parliament as is at present the case, the peers are pretty much in the position of Giants Pope and Pagan in the Valley of the Shadow of Death: they bite their nails, but they don't act to any purpose.

There is, indeed, one measure in regard to which it is reported that they will make a more effective protest. The bill for abolishing religious tests in the universities has passed the House of Commons, by very large majorities, in a more strenuous form than it had ever before received. If the peers should accept it as it stands, every dissenter will be able not only to receive a university education (for that, under the queer system of compromises which have been adopted, is already the case) but to have a share in the government and in the chief emoluments of Oxford and Cambridge. There is, indeed, one exception to this statement. Many of the fellowships are at present tenable only by clergymen of the Established Church or by laymen for a shorter tenure of years than by clergymen. With these it is not proposed at present to interfere, and they supply a convenient threat to hold *in terrorem* over the House of Lords. Accept the bill as it stands, it is said, and we will give the clerical fellowships a respite. Decline to accept it, and we will next year bring in a measure abolishing clerical fellowships as well as tests, and force you to pass it whether you like it or not. Of course, the alternative is not proposed after this blunt and uncompromising fashion, but it is tolerably well understood. Now it is said that the House of Lords mean to meet this difficulty by temporizing; they will refer the bill to a select committee, which means practically postponing it for another year, under pretense of obtaining further information. Considering that the question has been discussed from all sides for the last ten years, and that everybody knows everything that can possibly be said about it, the pretext would seem to be rather a shallow one. But with two measures of primary importance before them the Lords naturally imagine that they may strain at this gnat without swallowing a brace of camels. That queer body, Convocation, has been meeting and recommending the bishops to oppose the measures. If so, the question will be asked once more, What is the use of having bishops in the House of Lords? A motion against the system was lately introduced in the House of Commons, and though put aside by the Government, received a sufficient number of votes to show that the feeling might at any moment become too strong to be resisted.

The mention of the House of Lords reminds me to add that one more of the old school of statesmen has passed from among us. Lord Clarendon died at the age of 70. He has received the due amount of newspaper panegyric, and will soon pass from the memory of the public and of most men, except his personal friends and the student of diplomatic history. He was personally very popular amongst his order; was a thorough gentleman and an able diplomatist. In our opinion, at least, he gave a good specimen of his powers in the controversy with Mr. Fish on the *Alabama* question; and the worst fault to be found with him was that on one or two occasions, and especially in denouncing the free press of Belgium, he was a little too closely in sympathy with absolute rulers on the Continent. Lord Granville, who succeeds him, is naturally adapted for the place by many qualifications. If he makes himself as agreeable to foreign powers as he generally does to his countrymen by a happy mixture of common sense, humor, and suavity, we shall be well satisfied with his appointment. Mr. Forster has earned by his efforts in promoting the Education Bill a fair right to the seat in the cabinet which has just been granted to him, though that honor has not, I believe, been previously conceded to men in his position. I may repeat, however, what I have noticed once or twice before, that he has a kind of straightforward directness of purpose which has won for him the confidence of the House of Commons, and has already made him the most rising politician of the time. He looks like a rough North countryman, but has plenty of ability and of rather uncultivated eloquence. If he continues as he has begun, he will doubtless rise to a yet higher post.

Correspondence.

MR. DALL'S "ALASKA" ONCE MORE.

To the Editor of the Nation:

Sir: You will oblige me by inserting *verbatim* a paragraph which has been twice misrepresented in your columns. After describing the general exploration of the main river, stating (p. 277) that ours was the only party, up to 1868, which had descended from the Upper Yukon to the sea by the river, and mentioning the explorations of Byrnes, Smith, and Dyer, it reads (p. 278) as follows:

"In the spring of 1868, the writer descended the Yukon from Nulato to the sea, and then proceeded to the Redoubt.

"This completes the history of the explorations of the Yukon. Zagoskin, Surgeon Adams, and Lieutenant Barnard, of H. M. Enterprise in 1851, the servants of the Hudson Bay and Russian American Companies, one or two missionaries, Robert Kennicott, and the explorers of the Western Union Telegraph Expedition, are the only white men who had visited the Yukon, previous to July, 1868, as far as is known to me."

It would seem as if the intent (if not the logic) of the above was sufficiently evident, and that there could be but one interpretation consistent with common sense. But from the critical acumen which holds one man responsible for what he had no hand in doing, and another for saying what he never said, much cannot be expected. I remain your obedient servant,

Wm. H. Dall.

Washington, D. C., July 24, 1870.

[We print this cheerfully in order to satisfy Mr. Dall, but are still unable to see where his paragraph has been "misrepresented" in our columns. The last sentence of his letter, we confess, we find very mysterious.—Ed. Nation.]

THE WHITTEMORE CASE.

To the Editor of the Nation:

Sir: In the *Nation* of the 14th inst., page 18, it is stated that "the House has done itself credit by its treatment of Whittemore, whom it refused to readmit, though it is doubtful whether, owing to its failure to expel him formally the first time, its position now is technically sound."

What is especially remarkable in Mr. Whittemore's case is, as it appears to me, not that the House is inconsistent in its treatment of it, but that its action shows a want of sound policy and correct general principle in the conduct of the war and in the framing of the "reconstruction measures," so called, which have grown out of that want of a sound policy.

The fault in the policy of the war-administration was that it did not treat the question of the political franchise as a part of the war issues, as it legitimately was, and establish it on the basis of an education in our common schools, at an early age, at a time when it is possible to shape the human mind, in the aggregate, to the form of American institutions.

To give every man the right to vote, whether he is fitted for it or not, and then reject the delegate whom he elects to represent him in Congress, is something worse than a mere failure of being "technically sound." It is an attempt to correct an error of policy by an abuse of power. The action of rejecting Whittemore was right when measured by moral principle and right reason; but the trouble is that the measures of Congress are not always in accord with such principles, and its course of procedure, therefore, is often inconsistent and unreasonable.

When the conditions of the franchise have once been established by law, Congress should have no power to reject a member chosen in accord with that law, for causes known before election, whatever his moral character may be. If Congress assumes to reject on the ground of moral expediency and right reason, its own policy and measures should first be established on that ground likewise.

The evident fault in Mr. Whittemore's case is that his constituency are not fit for the political franchise, and that the action of the Government has been impolitic, unstatesmanlike, and wrong in bestowing it upon them so indiscriminately. For every such measure there will be necessitated a corresponding abuse of power, and a consequent loss of liberty.

J. W. Phelps.

Brattleboro, Vermont, July 15, 1870.

Notes.

LITERARY.

On Saturday next will begin a new series of the *National Standard.* The *National Standard* used to be the *Anti-Slavery Standard*, but in April last, when the name was changed, it became a monthly magazine instead of a weekly newspaper. It is to keep its new name, but on and after the 30th inst. it will be a weekly again. Mr. Aaron Powell is still to be the editor, and the contributors are the well-known list.

—With a certain small number of the readers of the last two or three generations—readers who may be called learned readers, rather than men of learning—"Plutarch's Morals" has been a favorite work. It has not been the less a favorite with many of its admirers that the English dress in which they have known it has had the quaintness of two centuries ago; nor, to tell the truth, has it been less a favorite because it was in many parts translated so extremely ill that its lovers might have used twice all love's power of divination and still have had not the least notion of what author and translator between them had tried to say. Perhaps, then, such admirers will not be as grateful as they ought for the new translation, as it may be called, which Professor Goodwin, of Harvard College, has now almost ready for them. The best-known English version was published in 1684–94, and has appeared in five editions, the latest being published in 1718, at which date we may perhaps well enough place the end of what may be termed the era in English literature of translations from the classics. This version was made by "several hands," and is of a kind very suggestive of the days when a Curll or a Lintot got together a complete translation of a poet, or orator, or what-not, by getting perhaps one oration, or one book of a poem, from a scholarly student, living recluse at the university, who did the translation as a labor of love, and getting another from a wretch in a Grub Street garret, working for sixpence a day, or perhaps from a poor devil like Christopher Smart, who literally hired himself out on contract to a bookseller, and did coolie work by the year, or rather term of years. Some of the essays are well translated into elegant English; some are not done into English, unless meaningless collocations of English words constitute English; one is paraphrastic to the degree of being an essay suggested by the topic of which Plutarch treats; and some are literal to the degree of putting into brackets such words of rendering as are not absolutely given in the text of the original; some are learned, and some make such blunders as to declare, where Plutarch says that a certain water, being stirred, produces bubbles (*πομφόλυγες*), that a certain water, being stirred, produces a new metal called Pompholyx. Of course, to amend thoroughly such editing as this without beginning at the beginning and reforming the version out of existence, would be hopeless; but to amend the translation must be easy except for the enormous amount of amendment necessary. Professor Goodwin has gone over all the essays with care, and made innumerable corrections, preserving, as far as was possible, the language of the period; and the existence of an earlier version (1603–1657) rendered this an easier task than it otherwise would have been. But even were there more manifest patchwork than there is, this edition, it is pretty safe to say, would still be the one best worth having, for, whatever may be the pleasures of literary epicurism, nothing atones for a lack of correctness. Mr. Emerson, with whom Plutarch counts for much both as moralist and historian, or rather as essayist in morals and formative biography, is to prepare an introductory essay, and when that is ready, Messrs. Little & Brown will publish the work, which will be in five octavo volumes, and will emphatically be a book which "no gentleman's library should be without," and which will, we hope, find a place on the shelves of many fine libraries, public and private. It is only the owners of such that can encourage as it deserves the liberal enterprise of publishers who make such ventures. And then, a man might worse prepare for the pleasant passage of the decline of life than by laying in the stock of reading here offered him, and this whether he read for pastime merely, or for spiritual profit.

—One of the lectures in the course delivered in Boston, last winter, under the auspices of the American Social Science Association, was an essay, by Mr. F. L. Olmsted, on Public Parks. This now appears in book form, and surely could not have come more timely—all the world panting as it is for coolness, and nothing to be thought of so delightful as absolute rest in deep shade, unless, indeed,

"Under the glassy, cool, translucent wave."

Doubtless it would be very hard to exaggerate the physically sanitary effects, to say nothing of the morally sanitary effects, of the Central Park in this city during the last few weeks. It has been almost the sole means of escape from the blistering streets to tens and hundreds of thousands of people, young and old, who only there can get good air and green grass, and a free view of the heavens. Old physicians tell Mr. Olmsted, he says, that since the Park was opened they have been in the habit of ordering patients to go there for a daily drive or walk, instead of away into the country, and that thus they have frequently saved overworked men from breaking down entirely; and the patients without physicians, those who have ordered themselves thither, taking prevention before they required cure, would make a little army. However, it has almost ceased to be necessary, one would hope, to insist on the almost inestimable advantages to health, morals, manners, intellectual ability, and happiness which parks confer as surely as they add to the beauty and wealth of the towns which possess them. Following the example of New York—whose Central Park Commissioners, fighting so hard as they had to fight, won a battle of national importance—Brooklyn now has nearly ready a noble park; Philadelphia has one under way; Boston meditates a beautiful one; Chicago beautifies herself with boulevards, and scores of the smaller towns have followed, or are about to follow, these examples. "There will be room enough in the Brooklyn Park, when it is finished," says Mr. Olmsted, "for several thousand little family and neighborly parties to bivouac at frequent intervals, without discommoding one another or interfering with any other purpose." Incomplete as the park was last year, there were many thousands of these parties during the summer, and frequently there would be companies of school children, a hundred or more together, on a picnicking excursion. "Tables, seats, shade, turf, swings, cool spring-water, and a pleasing rural prospect, stretching off half a mile or more each way, unbroken by a carriage-road or the slightest evidence of the vicinity of the town, were supplied them without charge; and bread and milk and ice-cream at moderate fixed charges. In all my life, I have never seen such joyous collections of people. I have, in fact, more than once observed tears of gratitude in the eyes of poor women as they watched their children thus enjoying themselves." And, as to the children themselves, there is no doubt that to many a New Yorker of the next generation some of the happiest memories of his youth will be of summer days and cool days in autumn spent among the trees and beside the ponds in the Park. "The enlargement of towns," a subject kindred to the other, and one closely allied, is also discussed in the essay, and discussed philosophically enough to make this pleasant pamphlet instructive reading, as well as pleasant. The American Social Science Association print it, and it may safely be commended to everybody for perusal, but particularly to town authorities; and to all people who feel philanthropically inclined; and to such, also, as are looking about for some way of keeping their memories green among their fellow-men. It is better to make a public park than to make another new American college; and it is almost better, one would think, than even to add to the income of any American college already existing.

—We have now and again had something to say about the curious dialect known as Pennsylvania Dutch, but have never, we believe, said anything about other dialects to be found in the composite Keystone State, whose various ingredients have not yet been long enough exposed to the welding power of the common-school system to have become altogether homogeneous. The eastern end of the southern border of the State—Delaware and Chester Counties—was chiefly settled by the English; but going west, in Lancaster County, which lies next to Chester, and in York County, which lies across the Susquehanna from Lancaster, we find the so-called Dutch element predominating. Yet the first settlers of this part of the Susquehanna Valley, says a writer in the *Educational Monthly*, were Scotch-Irish Presbyterians, and there still exist in that region, in common use, many words and idioms taken from Scotland to Ireland, and brought from Ireland here. There are many to-day, says the writer, but fifty years ago there were more; and he sets down some which he noted at that period, selecting such as were new to his ear, he being a Yankee born. Many of them are recognizable as good Scotch or Irish, and some are evidently borrowed from their English neighbors on the east, but some we do not make out. "My feet are starved," the best fed of them would say if his feet were very cold. A hanger-on in kitchens, in the way of the women, was called "a regular old cot" (cotquean), and very likely was told in the frank fashion of half a century since, "You'd better mosey"—a phrase which needs no interpreter certainly, whatever may be its need of a pedigree. "Vamose" would seem the probable parent of it. "It's time to get piece" was the way of saying it was time to prepare luncheon, "piece" being still the term for a child's luncheon in the north of Ireland; and if at lunch-time too much was offered the eater, he declined by saying that "he wouldn't choose such a parcel," and the word "parcel" he would use though it might be cream that was offered him. A bad carver was said to "mammock" the joint—a good English word once, but to be called obsolete now, we suppose, or provincial, though Milton has it. "Infare," accented on the first syllable, was the term for the home-bringing of a bride and the wedding-reception; while, on the other hand, it was the Scotch probably who furnished the word for the departure of a household—the "flitting;" though in the north of England also the family's removal from one place to another is its "flitting." Genuine English of Shakespeare's time, from the French of Chaucer's, is the participle applied to the boy who played truant, and good Scotch, we suppose, is the "scutching" that he received for his "miching," which also is still a north of Ireland word. A "scutching" as flax is "scutched" is also what he was likely to get if he waded ankle-deep or "over shoe-mouth" in a puddle. Recess, as we say now, the young "micher" of fifty years ago called "little noon," while "big noon" was the interval between the forenoon and afternoon sessions of the school. In "strict" families the younger folks must not use the brusque "what?" in addressing their elders and betters, but the word "nan?" ("anan"). Natty Bumpo, our writer points out, was aware of this usage, and in addressing his superiors followed it. "Hippen" (hip-band?) was the polite term for portions of the drapery of young children, and "mosey-sugar" was their great delicacy when they grew a little older and could take their pennies to the shops. It was a black molasses candy—not cake, as Bartlett says—scalloped at the edges like our cakes of maple-sugar. The molasses candy which had been "worked" till it became white went by another name which we shall request permission to set down. "Belly-guts" was the name it bore—so unpolished was the Pennsylvanian of a former generation. Possibly he may have twisted the French *belles gouttes* into this not very dainty term of his, but possibly, too, this derivation is an effort of the refined. The "native English undefiled" is, if we recollect right, still in use in Pennsylvania. Here is a queer use of a phrase: "It don't signify, but I'm tired;" "It's very warm, it don't signify;" "It don't signify; this won't do." And what is the origin of the word "saddy," which Bartlett guesses to be a child's corruption of "thank ye," uttered in acknowledgment of a gift or favor, and accompanied by a courtesy? He would seem to do better in his definition of the word, which he makes a verb that means "to bob up and down, to courtesy like a child." But it used to be almost always a noun in Pennsylvania, our writer says; the child was directed to "make a saddy." Yet he admits that among Quaker children in Philadelphia "to this day the only known word for 'thank you' is 'saddy.'" Perhaps its origin is to be sought in some one of the early forms of our "sit" or "set," and the name refers to the sitting-down motion of the courtesy-maker. That is, at all events, as good a guess as that "saddy" is a corruption of "thank ye," which seems the guess of a philologer in the last stage of botheration. We should say, to help conjecture, that in pronouncing the word the first syllable (whose flatness is marked by the double d) is lengthened out to four times the length of the last syllable. We give briefly a few more of the rare words: to be "nesh" (pr. "nash") was to be in delicate health; to have a "brash" was to have a sick turn; "chellers" were the comb and wattles of a cock; to "ruck up" was to rumple; variable weather was "brittle weather;" a stirring, active housewife was "work-brittle;" "rootching around" was meddling with what did not concern the meddler; to be "bunty" was to be squat in stature; to be "morphewed" or "morphed" was to have freckled or blotched complexion; a "fouty" thing was a trifling thing; to be "bushed" was to be tired; to "sock" is to hit, as with a ball; and, finally, to be "overing the bilious" is to be getting well of the bilious fever.

—Some figures are going the rounds of the press which purport to give the circulation of the leading English papers, but which can hardly be better than conjectural, except as they relate to what is called the "stamped circulation." When sent through the mails, English papers are prepaid, the publishers sending to the post-office authorities as many blank wrappers as they have mail subscribers, and the authorities, after putting on the red stamp, returning them to the office of the newspaper. The *Times*, however, by special arrangement, has a Government clerk in its own office, and the stamp is affixed there. Of the *Times*, the number of stamped copies during the last year was 6,700 daily. Next came the *Standard*, a penny paper that we never hear of on this side of the water, with 5,033. The *Pall Mall Gazette*—which, however, must have a good many mail subscribers for its weekly edition, the *Pall Mall Budget*—had for its daily number of stamped copies 1,253; the *Morning Post* had 623; and the *Daily News* 220. Doubtless the mail subscription list of the *Times*, with its large foreign circulation, and the weight it carries in the various provincial centres and in the country houses, is larger in proportion to its unstamped circulation than that of any of the other papers; and, possibly, though it has no mail subscribers at all, the *Telegraph's* boast of its having more purchasers than any other English daily paper may be true. The whole London circulation of a paper goes without stamp, and so does all of its circulation which it gets by way of the newsdealers and expressmen. The guesses as to the total circulation of the London journals give the *Times* 65,000, the *Standard* 65,000, the *Standard* 45,000, the *Pall Mall Gazette* 10,000, the *Morning Post* 7,000. The *News* is set down at 3,000; but that figure seems preposterous, as does 220 for its mail subscription list. The *Telegraph* is thought to be somewhere between the *Times* and the *Standard*. Of the weekly papers, the story goes that the *Spectator* has in all about 4,500 or 5,000 subscribers, while for the *Saturday Review* 20,000 are claimed. 15,000 would probably be nearer the mark. Neither of these papers would be an extraordinarily good property in virtue of its subscription list alone; both are kept in what the publishers call deep-water by the fact that the advertiser in them reaches a wealthy purchasing class. The number of the *Saturday Review* before us, for example, has twenty pages of advertising matter, and it charges for each page just about twice as much as any similar American periodical charges. One of the advertisements, we observe at a casual glance, is addressed to people who have "castles and mansions" which may need repairing. And the *Spectator*, in its circular to intending or possible advertisers, calls their attention to its great popularity and extensive circulation, "chiefly among the nobility and gentry, members of both Houses of Parliament, the clergy, and professional men generally."

—This is that well-known time of the year when, commencements being in season, the "live men" of the newspaper offices each takes up his parable against the college graduate. Just as, about this time last July, we were called on to observe how the college graduate in five minutes settles the weightiest political and moral problems of the age; and how severe he is on the ambition of Julius Cæsar, even so about this time next July will some satirical genius be scathing upon the college graduate, and ask us to observe how he denounces Philip of Macedon, and how he is strong on all political and moral questions, but especially on the moral. In short, we listen yearly to much exquisite wit and humor, whose freshness, year by year, is as good as anything else about it, but which, for all reasons, is creditable to the minds that produce it. Occasionally it is varied by an "earnest word," such as the *Tribune* uttered the other day in its remarks about "Bloodlessness"—remarks which in various ways suggested the saying of a certain gentlemanly and sagacious editor, that "of all horned cattle, he least liked to see in the office of his newspaper a college graduate." "We do not seem yet," says the writer in question, "to have got beyond the impression that a professor is to be a dry, sharp, thin, waspish man." . . . "More than endowments, more than scholarships, our colleges need a race of manly, hopeful professors." . . . "Whose fault is it that Harvard has but two of its graduates in the Senate and two in the House?" Professors should be hearty, and the young men whom they send out will then leave college hopeful and cheerful—instead, is it, of being the dejected, hopeless creatures that they are now? The man who annually gets himself to his task of spinning out small and vapid jokes on the valedictorians, does no particular harm, and means none, but only to be facetious in a permitted and, indeed, prescribed way; but the writer of such an article as we have been quoting from does positive harm wherever his influence reaches. In the first place, he writes of something about which he knows nothing or but little, and that is something that an honest man will not do. In the second place, what with defective knowledge, and what with his not having thought his subject out with any carefulness, he gives his readers false impressions, as, for example, that distinction in our ordinary politics is not often got by men whom there is no necessity of our respecting overmuch; that the influence of our college-bred men on our higher politics has not been very great indeed; that the making of laws, the administration of justice, and diplomacy have not been largely in their hands; that our best soldiering has not been done by men whose training was strictly academic; that, finally, the portion of the country where common schools—of which colleges are the mothers—have most thoroughly moulded the opinion of the country, has not been very influential (whether it got into Congress from the East or from the West) in shaping the policy and destiny of the country. As to all these matters, we say this writer gives such of his readers as take what he says for truth impressions utterly false. Then, in the next place, he has led himself astray to doubt that it is primarily a professor's business to teach—not to be "genial," or "manly," or anything else in the advanced thinker's and advanced feeler's catalogue—but to teach, and so to teach that those who study with him shall learn, and learn well—learn gladly, indeed, but learn well and thoroughly. He is there mainly to teach what he knows, as they are there with him to be taught his special branch of knowledge. All over the country there are platforms full of "genial" men; and everywhere there are editors' offices full of "manly" men—who discuss the woman question by unmanly and ungenial and indecent references, by name, to two or three women; of "genial" men whose idea of wit is thin flippancy, whose good nature is to give a puff to some cheap rascal, while their idea of invective is to call liar after an opponent, or coin some sneaking anonymous report against him; of "earnest" men, not of the "bloodless, academic mind," who discover "Prince Charles, of Roomelee;" who make Napoleon ardently support the claims of Prince Charles, of Hohenzollern, to the Spanish throne; who invent triple alliances that, perhaps, might deceive a Santa Fé editor; who support funding bills that might convulse a curbstone broker with laughter; who talk in bewilderment Mr. Henry Carey's political economy. Full of such men the country is; and not to the detriment of its vulgarity and folly. Whether he does it out of simple ignorance or malice or recklessness, or out of femininity of intellect, incapable of real labor, and hating the exactions of masculine standards, the man is nothing less than a public enemy who does anything to increase the inevitable tendency of us Americans to be "genial" and "manly" and "earnest," after the platform fashion; to disregard sound learning and hard study; to pay too much deference to pretension, whether loudly vulgar or consisting in a veneer of so-called culture; to give too little honor to experts. The case, however, grows better from day to day.

—The recent announcement that a manuscript containing some of the missing books of Livy had just been discovered in a Silesian monastery was made with an air of authority, and assurances were given that this time at any rate there was no *canard*. The manuscript has been examined by competent authorities, however, and is pronounced worthless, as containing nothing not long known, and as being a copy of origin comparatively recent.

EARL STANHOPE'S "REIGN OF QUEEN ANNE."*

THE reign of Queen Anne, though not fraught with so deep an interest as some other periods of English history, forms a very good subject for a historian. The nation, after the series of revolutions and counter-revolutions which terminated in 1688, is in comparative repose; but the intellectual activity awakened by the great struggle remains, and displays itself in other spheres. A brilliant though somewhat shallow literature, of which Addison, Swift, and Pope are the leaders and the types, gives the period the name of the Augustan age of England. Science produces its Newton, learning its Bentley. The era of parliamentary government now commences, and a lively political drama is formed by the struggle of factions and the play of personal rivalries. Political and literary tastes, even political and literary eminence, are combined by the leading men in a singular degree. Marlborough's wars supply a military pageant of the most splendid kind. The costume, the manners, the art, all the accessories of the scene, are well marked, and, though artificial and formal, picturesque in their way. This attractive theme has long waited for a writer to do full justice to it; and we are obliged to say that, in our judgment, it waits still. Lord Stanhope is a good historical writer, of the school which confines its narrative mainly to political and historical events, and attempts little in the way of philosophy. He is a man of the world, knows society, and has taken part in government; he is well informed and accurate; he writes clearly and with ease; his manner is pleasant and undogmatic; his moral judgments and sympathies are always those of a man of honor; and, though his writings are pervaded by aristocratic prepossessions, against which we find it necessary to be always on our guard, he is never tempted by party feeling to withhold or distort a fact. These qualities are all apparent in his larger work, in which we have sometimes found relief after the glare, the dogmatism, and the exaggeration of Macaulay. But it is evident that he has taken up the reign of Anne rather because he felt it his duty to fill the gap between Macaulay's history and his own, and perhaps, also, to complete the unfinished work of his friend, than because he was impelled by a lively interest in his task. When we saw that his history was to be in a single volume, we feared that it could not fail to be dry and meagre, knowing that his style was not that of Tacitus, and we find our fears fulfilled. We do not mean merely that the history is unsensational, for that we should esteem a great merit. Hardly anything is given us beyond political and military details, and even these sometimes in very niggard measure; the negotiation for the Union between England and Scotland, for example—a display of ability on the part of Somers and his colleagues in peace which forms the full counterpart of Marlborough's achievements in war, and has been of far more lasting importance—suffers from inadequate treatment. Even the composition shows want of care, being, contrary to Lord Stanhope's habit, often awkward and sometimes ungrammatical; while the text, in important passages, is sometimes defaced by the insertion of trivial remarks which, upon a second thought, could have been thrown into a note. Lord Stanhope could not treat of a period of history with which he is so conversant without adding to our knowledge; but, we repeat, the reign of Anne still waits for its historian.

---

* "History of England, comprising the Reign of Queen Anne until the Peace of Utrecht. By Earl Stanhope, Corresponding Member of the Institute of France. 1701-1713." London: John Murray.

During the first portion of the reign, the scene is filled by Marlborough, Macaulay's character of whom we looked with special interest to see revised by Lord Stanhope. Lord Stanhope, however, though evidently more favorable to Marlborough than Macaulay, leaves the material facts pretty much as they were; indeed, he rather adds to the evidence of the duke's double-dealing, and shows that it was prolonged to the very end of his public career. The betrayal of the Brest expedition is recognized as an undeniable fact; and, if the betrayal of the Brest expedition cannot be denied, Marlborough must have been a villain. Honor and shame must have been extinct in the breast of the man who could be guilty of that crime. Had the perpetrator actually foreseen the fate of the gallant Talmash and his comrades, it would have added but a shade to the darkness of his guilt. As to the ignoble avarice which was a chief root of evil in Marlborough, there can be no question. Of a servant who had saved him out of the hands of French freebooters, he complains that the man "had cost him fifty pounds a year ever since." Nor does it seem to us that his receipt of enormous sums from army contracts, and as perquisites on subsidies, is justified by the plea, which was very fully supported, of usage, or by the somewhat contradictory plea that the sums were applied to the public service in obtaining secret intelligence of the enemy's designs. There is no doubt that Marlborough did pay high for secret intelligence; but, if the whole or the quarter part of the money in question had been so expended, an account of the expenditure would surely have been forthcoming when the duke was accused of malversation.

As in the case of Bacon, so in that of Marlborough, we must accept the anomaly, if it be an anomaly, of a low moral nature combined with the highest intellectual gifts. He sprang from the worst element of the Restoration, and was a type of the public morality of the court of Charles II. But for a villain he was a superb creature. His noble beauty, the mingled majesty and gentleness of his manner, the social graces, in which Chesterfield thought him peerless, and which must have been trebly graceful in the god of war, made so profound an impression on the men of his time that through their feelings we seem ourselves almost to feel his inspiring and bewitching presence. His serenity, never disturbed by any trial or by any peril, inspired Addison, in the only good passage of the "Campaign," with the image of the Angel of the Storm "calmly driving the furious blast." People wonder how any one who had once experienced Marlborough's perfidy could have trusted him. But they should rather wonder how any one could have brought himself to show mistrust in a being at once so fascinating, so august. Marlborough's victories were won as much in the cabinet as in the field; and the diplomatic address with which he subdued the heterogeneous and refractory elements of the most motley of coalitions, and induced them to furnish him with the means of great achievements, is perhaps without a parallel in history. He had brought himself to the point of regarding the pride and waywardness of other men simply as material obstacles, to be surmounted by address and flattery, as he would have passed a ditch with fascines. By handing a napkin to the upstart King of Prussia, he removed all difficulty for the future with regard to the Prussian contingent, and by flattery unspeakably gross, but, as he rightly judged, not too gross for egotism verging on insanity, he averted the intervention, which would certainly have been fatal, of Charles of Sweden. Had General McClellan studied the history of Marlborough, he might have learned that it was one of the most essential duties of a great commander to keep on good terms with those on whose hearty support the vigor of his operations must depend. Voltaire said with literal truth of Marlborough as a general, that he never fought a battle which he did not win, nor besieged a town which he did not take. Yet some of his operations were hazardous in the highest degree; so hazardous that, in order to be at liberty to undertake them, he had to hoodwink his own allies. But his calm and profound intellect always exactly measured both his own forces, inadequate as they sometimes appeared, and the forces of the enemy; and the results on which he had calculated never failed to come to pass. In the field, too, he displayed some good native qualities of heart, untainted by his intrigue; chivalrous courtesy towards captives, magnanimity in sharing his laurels with his allies, and, above all, a regard for the wounded which was remarkable in an age when, in some of the European armies, the difference between being killed and wounded was only that between a speedy and a lingering death. He seems to have been really made ill by the sight of the carnage and of the sufferings of the wounded at Malplaquet. His ravaging of the country round Munich to force the Elector of Bavaria to terms was not an act of extraordinary atrocity for that age, and therefore his expression of sorrow at being under the necessity of burning the homes of innocent peasants to overcome the obstinacy of their prince, ludicrous as it now seems, may be set down to his credit. He seems in war to have been even religious; before the battle of Blenheim he received the Sacrament, and passed a great part of the night in prayer.

Marlborough's life was ruled by the single principle of self-interest; but the game he played was a complicated one, and his course was tortuous, and sometimes in appearance wavering accordingly. He absolutely ruled Anne through his wife, who was thus the pillar of his fortunes—a fact which perhaps partly accounts for his more than uxorious submission to the temper of a termagant. To see Anne upon the throne was therefore his first desire; and the birth of the Prince of Wales, on which James II. so much congratulated himself, was probably fatal to him in two ways—by driving the nation to despair, and by closing the door against the ambitious hopes of John Churchill. Macaulay seems to have detected Marlborough at the bottom of a conspiracy which would have hastened Anne's accession by overthrowing the government of William and Mary. But after the revolution a second object arose. From that time it was Marlborough's aim, by intrigues with St. Germain, to secure himself in the event of that second Restoration which the politicians of the day, misled by a false analogy, seem to have deemed inevitable, and their expectation of which is the clue to most of their sinister proceedings. Probably, when he had risen to supreme military power, the example of Monk was before his mind. He sent professions of good-will to the Prince of Wales through De Biron, one of the prisoners of Oudenarde; and Lord Stanhope holds it to be proved that he supplied money to the Pretender in 1715. Paramount over all, however, was the necessity of attaining high military distinction, which sometimes crossed Marlborough's other lines of action, inasmuch as the power against which war was to be made was France, the patroness of the Stuarts. Altogether he wove a tangled web. He was accused of obstructing the negotiations for peace in order that he might retain his command, and the immense emoluments attached to it. But, on the other hand, he had strong motives for ingratiating himself with Louis XIV.; and it does not appear, so far as we can discern, that he gave any decided impulse in either direction to the policy of the country. Lord Stanhope seems to consider the question settled by Marlborough's protestations to his wife of his desire to be relieved from command and return to domestic happiness. Such protestations are worth little in any case, and least of all in the case of Marlborough. But they are accompanied by complaints of failing strength and loss of memory which were probably sincere. It was the penalty of the double-dealing, which justly repelled the confidence of William, that, though the great soldier had more than once revealed himself, his appearance in high command was put off to his fifty-second year, when, though his intellect was in the fulness of its power, his body could not bear seventeen hours in the saddle at a time so well as that of a younger man. Probably the decay which soon followed his retirement from command was the consequence of his overstrain. Great bribes were dangled before his eyes by the French king in the course of the negotiations for peace. "It is painful," says Lord Stanhope, "to think that such offers were actually made; but we may rejoice that the great duke met them exactly as his warmest admirers would have wished; Torcey informed the king that whenever, in their private interviews, he reverted to the points of personal emolument, he saw Marlborough redden, and without reply change the conversation." Perhaps the great duke's warmest admirers might have wished a little more; they might have wished that, instead of allowing the offer to be several times repeated, as it appears it was, he had on the first occasion so replied that the offer could never have been made again. After all, it is not the height of moral glory for a man in Marlborough's position to have refused a direct bribe; and the acceptance of it, with such a game as he had then before him, would have been folly as well as dishonor.

As to the difference between opposite sets of political principles and opposite political associations, it was to the great duke simply the difference between one military position and another. A Tory at first, if he was anything, he became a Whig because the Whigs supported the war better, and he was ready, as soon as it served his turn, to become a Tory again. Never did tacticians commit a greater blunder than was committed by Harley and Bolingbroke when they estranged by inexpiable injuries and insults the military chief in whose aid lay their only hope of success in their treasonable designs, and who, if wisely approached, would have been ready to lend that aid. But the moral infirmities of Bacon do not detract from the value of the "Novum Organum," nor does the political double-dealing of Marlborough detract from the great services which as a soldier he rendered not only to his country, but to Europe, by preserving the independence and the free development of nations from the domination of the French despotism, then instinct with the senile bigotry of Louis XIV., and as reactionary as the despotism of Philip II. Among the services rendered by Marlborough to his own country may fairly be reckoned the Union with Scotland. That event, following close upon the battle of Ramilies, was evidently a consequence of the victories which cut off from the Scotch Jacobites and Disunionists the hope of aid from France. Lord Stanhope has failed to notice this connection; but he gives the final blow to the belief so firmly fixed in the mind of Sir Walter Scott, that the Union was carried by bribery. In the charge itself there was nothing incredible; but the only evidence, that tendered by the Jacobite Lockhart of Carnwath, when examined, comes to nothing. It had already been nearly demolished by the Scotch historian, Mr. J. H. Burton, and Lord Stanhope completes the work.

In all that follows the Peace of Utrecht we are referred to the author's other history, which itself deals somewhat perfunctorily with that period. Lord Stanhope hastens on to a general chapter on the age of Anne, and hastens through that chapter in a way which leaves a good deal to be desired. The account of Defoe is not only most inadequate but unfair, and makes us a little angry. Defoe seems to be introduced merely as a foil to the author's ancestor, General Stanhope, an honest politician for that day as well as a meritorious officer, but not so great a man that we can afford to immolate Defoe to his shade. It appears from a letter in Lord Stanhope's family archives that during the impeachment of Sacheverel, and while the High Church mob was pulling down Dissenting chapels in honor of that idol, Defoe tendered to Stanhope, who was one of the managers of the impeachment, evidence to the effect that Sacheverel was not personally the saint his worshippers took him to be, nor so loyal a friend to the constitution as he solemnly declared before the House of Lords that he was. Lord Stanhope has the pleasure of telling us that his relative "took no heed of these ignominious counsels, and invited no further communication from Defoe." No doubt Defoe had better have held his tongue; as, we may add, Stanhope had better have kept out of the Sacheverel impeachment. But this single incident, coupled with the remark, which to the mass of readers will be more than vague, that the genius of Defoe was superior to that of Oldmixon, is surely not a satisfactory account of the first political writer of an eminently political age.

On a general review of the period, Lord Stanhope comes to the conclusion that, in spite of all modern improvements, the English people in the reign of Anne enjoyed a larger measure of happiness than the English people at the present day. He forgets the vast increase of population and the purpose or the means of subsistence which it entails. But his ideas of social happiness are extremely conservative and squirarcheal. His social paradise is a community of land-owners, undisturbed by radicals, and living on terms of gracious familiarity with an attached, respectful, and, above all, contented tenantry. Contentment is his great virtue, and he does not consider how much easier it is to a man of rank and fortune than to a peasant with a large family, and earning two dollars and a half a week. The growth of manufactures he regards with an evil eye, though the state of the "loveliest village of the plain" would, by this time, have been far from Elysian, if the surplus population of the English rural districts had not been absorbed by the great manufacturing cities. At the time of the Corn Law struggle in England, the manufacturers met the aspersions cast by the squires on the factory system by exhibiting, in the Free Trade Hall, at Manchester, a pair of breeches taken from a peasant, which literally stood on end with patches and grease, and the weight of which was astounding. "The laws," says Lord Stanhope, "in the reign of Anne were not so good as at present, but the people were better satisfied with them." If the people in those days were not satisfied with the laws, and with the Squire Westerns who administered them, they were summarily whipped or set in the stocks. For persons of quality, the state of things in Anne's reign was satisfactory; but a glance at the penal code of those days, or even at the low-life pictures of Hogarth, is enough to show that the world in general had good reasons for moving on.

HAWTHORNE'S ENGLISH NOTE-BOOKS.*

THE editor of these note-books informs us that from the extreme delicacy and difficulty of writing a biography of Hawthorne she has felt compelled to refuse compliance with the many requests for a biography that have been made her. Moreover, she says that "Mr. Hawthorne had frequently and emphatically expressed the hope that no one would attempt to write his biography." These are certainly sufficient reasons why no member of his family should make a life of him; and they ought, perhaps, though it is a little difficult to say, to be sufficient to prevent any of his acquaintances; though they could probably give the world nothing it does not know. Except his family, and one or two very intimate friends, no one could do more than make a life that should be, as to one side of it, a purely surface affair, concerned only with the outward facts of his life, and, on the other side, a criticism of his character as that is revealed in his books and in these notes. But perhaps Hawthorne had something of Burns's rather morbid dislike of any possible biography of himself, and would have opposed, if he could, the appearance of any sort of one. He can hardly have expected to escape such a one as that we speak of, however; cyclopædia articles and ordinary reviews of his works will give such, as already they have given them. And, indeed, such lives of him are probably about as good for practical purposes as anything we should get even from a relative. We have a notion that in that case we should seem to get a little closer to him than he permits us in his romances and in the revelations, such as they are, of the diaries, but also we imagine that the greater nearness of approach and closer intimacy would be seeming rather than real. In fact, one would say that the revelation is pretty complete already, and that we lose little but the knowledge of his affectional life, and of the traits of his behavior, as distinguished from the traits of his character. Should the editor of these notes give us a volume of formal memoirs, we should have materials in some ways fuller for forming an estimate of him; but we imagine that a true and very definite estimate of him may well enough be formed by any one who should read all the books, and then all these details of his thoughts and feelings, and then the best criticisms by his contemporaries of him and his works. To literary men who study his methods, and would get at the heart of his mystery, of course every scrap of testimony would be welcome; but, as we say, probably they would not get, from those who knew him best, anything that would essentially change the estimate that may be formed on what is already extant in print; while, for the ordinary reader, the romances are the main thing to be cared for. In the decision which has been reached by the author's family, the public may, then, willingly acquiesce, even were diaries less interesting, and biographies more interesting than they are.

---

* "Passages from the English Note-Books of Nathaniel Hawthorne." Boston: Fields, Osgood & Co. 1870. 2 vols. 12mo.

Perhaps as striking, to be at the same time new, as anything in the volumes before us, is the mingled sense of relief and oppression which the two Englands that he saw gave our observer—the England of the cathedrals and castles, and the England of the beadle and parson; the England of Battle Abbey, and the England of the coroner and policeman and gin shop; the England of immemorial hedge-rows and gardens and parks, and the England with sluggish ponds for lakes, and with "forests" in charge of keepers; the England where American "majorities" distress no one, but where there is a "populace"; the England of ordered ranks and fixed degrees and civility in servants, and the England of privileged classes, and of citizens in whom civility degenerates into servility, and of classes stolidly and squalidly brutish, and brutally dangerous; the England that respects genius, whether or not it has achieved a consulship, and the England that respects a genius rather more if he has achieved the Liverpool consulship, and that looks down a little even on a consul, if, after all, he is only a Yankee consul; the England that knows so well how to eat and drink and be comfortable, but whose men are apt to be beefy and paunchy, and whose women, if one is disposed to be uncivil, one may style, collectively, "Mrs. Bull." These two Englands seem to have inspired Mr. Hawthorne with the mingled satisfaction, pleasure, respect, and gratitude, on the one hand, and dislike, soreness, and contempt, qualified by pity, on the other, which is probably the natural state of feeling that the mother country must produce in the Anglo-American and poet, who, at the same time, cannot forget that he is Yankee, and Democrat, and Puritan. No one passage, perhaps, shows our author in this precise attitude, but the books constantly imply it, and doubtless with all the more certainty that they contain not his deliberate judgments, but his first impressions, and statements of these to himself.

After all, Hawthorne's nature must have been, in a manner, morbid. To have seen but one England was not in him. Doubtless we are not to call him "gloomy and morbid," as those words—which the editor expressly repels as a characterization of him—are commonly understood. How should such a man be sour, or unkind, or inconsiderate, even if underneath his gentleness and pensiveness there might be discernible a sterner texture than exists in those to whom the name of gentle is ordinarily given, and not unseldom because they have the yieldingness and softness that go with weakness? But the sort of morbidness that, so to speak, is not individual in its causes, nor strictly personal in its expression; the sort of morbidness which is the accumulation of generations, and which makes a nature unhealthy by reason of the peculiar form which its ancestors', perhaps healthy, activity has impressed upon it; this, it seems plain, is a morbidness that Hawthorne had. Perhaps it constituted his very genius. Or perhaps the case is that genius, the analytic "telescope of truth," was the cause of the morbidness. The former way of putting it seems to us least calculated to convey a false impression. Hawthorne is always—though, characteristically, he condemns it—turning over the stone, surrounded with violets, it may be, and showing beneath it, and near the flowers, the creeping things that there evade and shun the light. Genius, which is, perhaps, best defined as only insight into the inner essential nature of things, is, in its truest development, "joyous, not grievous." At the last, we are not sad over the "Antigone," nor when Othello makes his end, nor over Lear and Cordelia, nor over Job—even before the cattle and sheep and camels have come back in greater numbers than ever. But the "Scarlet Letter," and the "Blithedale Romance," and the "Marble Faun," these have to be pronounced, on the whole, fine and rare as they are, depressing and not cheering. It is as if to the cradle of the most gifted descendant of their judges, among the spirits bringing him so many good gifts, there had come, also, more potent than their brighter companions, the ghosts of the witches executed by his Puritan ancestors. His gifts and graces of imagination and fancy appear as if dominated by some spell compelling them to face always the sinfulness of sin, to busy themselves with the spiritual depths, not of man, but of man under the curse of total depravity and foreordained to wrath—with the depths of human nature in corruption. It becomes impossible, then, to dissociate his morbidness from his genius, and to avoid saying that his morbidness constitutes his genius, and that in his case, in no other, "genius is a disease."

Another thing that will catch the attention of the reader, perhaps, before he has noted the sad double vision, as obviously exemplified in our author's views of England and the English, is his apparent rawness as regards many matters of which his delicacy and fineness in his own chosen field would lead one to infer him skilled. Who would have expected to hear him pronouncing the Nelson monument "very noble"? Or, at least, if ignorance in these things may be excused—goodness of taste being something largely to be learned, as some say virtue itself is a habit to be acquired—who would not have expected him to be a quiet learner and to avoid laying down dicta? It was, no doubt, in a moment of wilfulness, or peevishness, or playful perverseness, that he set down his wish that all the remains of ancient art could be pounded into mortar; no one deliberately speaks in that way of things which, whether he knows about them or not, have been venerated by many generations of the best men. But it is calmly enough, and with the air of a man who conceives his opinion to be of some value, to himself, at least, if not to others, that he records his disapproval of Turner and other English painters, and his belief in Murillo as the greatest of artists, while yet, at the same time, the Nelson monument and the London Monument and the works of Haydon come in for praise. It is true that he appears to grow more discerning the more he studies, and perhaps a shade less dogmatic. The same rawness one suspects in reading the very numerous descriptions of cathedrals and churches and ruins—descriptions so many and so minute that one thinks the writer could not have read of such things before, nor known how infinitely much has been written about them. To be sure, it was all twenty years ago; and was done by a man who, whatever his genius, got the cultivation of it, as a young man, in the New England of fifty years ago—a land and time that are now, as regards such things, further away than we of to-day can easily imagine.

Of course, there is here and there jotted down, as if for future use, some weird or sombre or beautiful germ of a romance, and these at once throw over the reader the full charm of our author, when he is essentially the Hawthorne whom the world admires; and one wakes to the feeling that, if he has been walking in prosaic ways with a companion who has not been too enlivening or helpful, he has, nevertheless, been journeying with one who has the spell for showing a vision of fairy-land beyond the next hedge.

There remains to be noted the occasional shrewdness of observation; some anecdotes of men like Buchanan, Thackeray, Jerrold, and Lord Houghton; a few good descriptions of show-places in England and Scotland, and, finally, the general readableness, in virtue of the writer's celebrity, as well as of the skill with which he does the work in hand, and the intrinsic interest of the things he writes about, which make these note-books perhaps the most interesting work of the season. We append a few passages of various sorts, selected almost at random—some, we may fancy, that our author would have been ready to print, and some that he might not, but all of use to the student of his character, and pleasing to the ordinary reader:

> "I am not quite sure whether I saw all these pictures in the drawing-room or some of them in the dining-room; but the one that struck me most—and very much indeed—was the head of Mary, Queen of Scots, literally the head cut off, and lying on a dish. It is said to have been painted by an Italian or French artist, two days after her death. The hair curls or flows all about it; the face is of a death-like hue, but has an expression of quiet, after much pain and trouble—very beautiful, very sweet and sad; and it affected me strongly with the horror and strangeness of such a head being severed from its body. Methinks I should not like to have it always in the room with me. I thought of the lovely picture of Mary that I had seen at Edinburgh Castle, and reflected what a symbol it would be—how expressive of a human being having her destiny in her own hands—if that beautiful young Queen were painted as carrying this dish, containing her own woful head, and perhaps casting a curious and pitiful glance down upon it, as if it were not her own."

> "I grew weary of so many people, especially of the ladies, who were rather superfluous in their oblations, quite stifling me, indeed, with the incense that they burnt under my nose. So far as I could judge, they had all been invited there to see me. It is ungracious, even hoggish, not to be gratified with the interest they expressed in me; but then it is really a bore, and one does not know what to do or say. I felt like the hippopotamus, or—to use a more modest illustration—like some strange insect imprisoned under a tumbler, with a dozen eyes watching whatever I did. By-and-by, Mr. Jones, the sculptor, relieved me by standing up against the mantel-piece, and telling an Irish story, not to two or three auditors, but to the whole drawing-room, all attentive as to a set exhibition. It was very funny."

> "The 'Diary of a Coroner' would be a work likely to meet with large popular acceptance. A dark passage-way, only a few yards in extent, leads from the liveliest street in Liverpool to this coroner's court-room, where all the discussion is about murder and suicide. It seems that, after a verdict of suicide, the corpse can only be buried at midnight, without religious rites."

> "'His lines are cast in pleasant places'—applied to a successful angler."

> "A woman's chastity consists, like an onion, of a series of coats. You may strip off the outer ones without doing much mischief, perhaps none at all; but you keep taking off one after another, in expectation of coming to the inner nucleus, including the whole value of the matter. It proves, however, that there is no such nucleus, and that chastity is diffused through the whole series of coats, is lessened with the removal of each, and vanishes with the final one, which you supposed would introduce you to the hidden pearl."

> "I called again the next morning, and introduced Mrs. ———, who, I believe, accompanied the ladies about town. This simplicity in Mr. ———'s manner puzzles and teases me; for, in spite of it, there was a sort of self-consciousness, as if he were being looked at—as if he were having his portrait taken."

> "I wonder how the English ever attain to any conception of a future existence, since they so overburden themselves with earth and mortality in their ideas of funerals. A drive with an undertaker, in a sable-plumed coach!—talking about graves!—and yet he was a jolly old fellow, wonderfully corpulent, with a smile breaking out easily all over his face—although, once in a while, looking professionally lugubrious."

> "I think I have been happier this Christmas than ever before, by my own fireside, and with my wife and children about me—more content to enjoy what I have—less anxious for anything beyond it, in this life. My early life was perhaps a good preparation for the declining half of life; it having been such a blank that any thereafter would compare favorably with it. For a long, long while, I have occasionally been visited with a singular dream; and I have an impression that I have dreamed it ever since I have been in England. It is that I am still at college—or, sometimes, even at school—and there is a sense that I have been there unconscionably long, and have quite failed to make such progress as my contemporaries have done; and I seem to meet some of them with a feeling of shame and depression that broods over me as I think of it, even when awake. This dream, recurring all through these twenty or thirty years, must be one of the effects of that heavy seclusion in which I shut myself up for twelve years after leaving college, when everybody moved onward, and left me behind. How strange that it should come now, when I may call myself famous and prosperous!—when I am happy, too!"

RED CLOUD SEEN THROUGH FRIENDLY EYES.*

IN the country which lies between the Missouri River and the headwaters of the Mississippi, the early explorers of the Northwest found a nation of Indians, numerous and warlike, whom the Ojibways called Nadouessioux (whence, according to Charlevoix, the nickname "Sioux"), but who designated themselves as Dakotas. For a number of years they have occupied the attention of the American people, more perhaps than any other tribes, and sometimes in a very disagreeable way. Quite lately, they have come before us in a new light, as represented in the person of Red Cloud and his fellow-braves, in the drawing-room of the White House and on the platform of the Hall of Cooper Institute.

In 1835, a mission was established among these heathen of the Northwest by the "American Board." A history of this mission has appeared, written for the most part by Rev. Stephen R. Riggs, one of the earlier missionaries—a gentleman well known to students of the Indian languages by his very creditable "Grammar and Dictionary of the Dakota Language," published by the Smithsonian Institution in 1852. Mr. Riggs in the Preface, and Secretary Treat in the Introduction, enter a sort of apology for the deficiency of the "popular" and "thrilling" element in the new volume; but no one whose critical faculty has not been "thrilled" into a state of demoralization will consider any apology necessary for a style which is remarkably straightforward and free from affectation—sometimes, indeed, singularly colorless and simple, but, on the other hand, frequently powerful by its suggestion of a power held in reserve. Mr. Riggs furnishes a truthful and sufficiently vivid picture of missionary work in a field as fruitful of intermingled trials and joys as any in which brave men have labored across the seas; and not only of missionary work, but incidentally of frontier warfare and all the vicissitudes of pioneer life. The account of the massacre in 1862—the full history of which has been written by Captain Heard—is well given from the missionary point of view; and the chapters on the civilization and education of the red men, and the remarks on the duty of the Government toward them, exhibit just such a combination of Christian charity and Anglo-Saxon indignation as we should expect from a sensible man who had spent his life in endeavors to elevate and "save" them.

But the book is more than a narrative of missionary work; it contains a considerable store of information for the student of American ethnology, especially for him who would collect accurate data for that branch of this fascinating science which is just now coming forth into such prominence, "comparative mythology." In some of its details it has been anticipated by Mrs. Eastman's "Dahcotah"—a book published more than twenty years ago; but for a systematized and authentic account of those facts in Dakotan life which concern the student of aboriginal American religions and customs we must look to this unpretending volume rather than anywhere else. We have, in successive chapters, a condensed but accurate statement of the ethnography of the Dakota tribes; a general characterization of the Dakota language, intended for the popular rather than the philological eye; a description of the everyday life of the Dakotas, especially of their amusements, plays, games of chance, and dances; and, lastly, a detailed and careful account of the Dakota theology and rites of worship. These subjects occupy a hundred pages of the book; and there is, besides, an appendix of fifty pages, devoted to an account of Dakota medicine, by Rev. T. S. Williamson, M.D., and of Dakota songs and music, by Rev. Alfred L. Riggs. The younger Mr. Riggs is also the author of the chapters on the Dakota mythology and worship.

Apart from the testimony it affords on the disputed question of the utility of missions to the heathen, the chief value of the book, to thoughtful readers, will consist in the authentic record it thus furnishes of the inner life of the Dakota people, as manifested in their customs, their religion, their songs, music, and dances. We have here—what the student of religions would welcome so eagerly from other Indian nations—a full, connected, and trustworthy account of a national mythology; and we see how entirely it stands by itself as a quite peculiar embodiment of that religious sentiment which exists in all nations alike. The term "Tahkoo Wakau," which serves as the title of the book, as well as of the chapter on the Dakota religion, means "that which is supernatural or mysterious." Of this, the Dakotas seem to possess a very vivid and abiding conception; and it is this, under a large variety of forms, that they consciously and confessedly worship: "No one term can express the full meaning of the Dakota's *wakaú*. It comprehends all mystery, secret power, and divinity. Awe and reverence are its due. And it is as unlimited in manifestation as it is in idea. All life is *wakaú*. So also is everything which exhibits power—whether in action, as the winds and drifting clouds; or in passive endurance, as the boulder by the wayside" (p. 56). The religion of the Dakotas—the outgrowth of this broad conception of the supernatural in nature—is a curious mixture of fetish-worship on the one hand, and pantheism on the other.

Mr. Riggs speaks of their gods as "innumerable," but selects nine or ten as calling for more extended notice because of the prominent place they hold in the Dakota pantheon. Each of these unique creations of the aboriginal imagination is worthy of close study; but we must confine ourselves to an item here and there. A fact well worth noticing is that the worship of the *Tonkan*, or stone-god, seems to belong to a "less corrupted religion than that which prevails in the present age among the Dakotas," and that the god is considered the oldest "because it is the hardest"—an Indian's reason. Very curious is the account of the *Hayoka*, or anti-natural god—a deity which Dr. Brinton, in his "Myths of the New World" (p. 151), seems to confound with the *Wakeyan*, the thunder-god. But Dr. Brinton's mistake—whoever is responsible for it—ought to be readily forgiven; for it seems that one of the varieties of *Hayoka* "carries a drum, and for a drum stick holds a small *Wakeyan* god by the tail, striking the drum with its beak." The *Hayoka*, all things considered, is the embodiment of a most singular conception. He seems to represent the perverse and paradoxical in nature, and certainly illustrates the perverseness of man's imagination.

> "He expresses joy by sighs and groans and a most doleful countenance, and sorrow and pain by the opposite sounds and looks. Heat causes his flesh to shiver and his teeth to chatter, while cold makes him perspire. In the coldest winter weather, when the mercury congeals, these gods seek some prominence on the prairie, where they put up bushes to shield them from the rays of the sun, and under which they sit naked, and fan themselves as they swelter with heat. But in the oppressive heat of summer, they wrap around them robe on robe, and lean over a rousing fire, snivelling and shaking with the cold, like one in a fit of the ague. They feel perfect confidence when beset with dangers, and quake with fear when safe. With them, falsehood and truth are reversed. Good is their evil and evil their good" (pp. 67, 68).

Yet, strange to say, it is one of the *Hayoka* gods that takes the place of

---

* "Tah'-koo Wah-kaú; or, The Gospel among the Dakotas. By Stephen R. Riggs, A.M., Missionary of the A. B. C. F. M., and Author of the Dakota Grammar and Dictionary. With an Introduction by S. B. Treat, Secretary of the A. B. C. F. M." Boston: Cong. Sabbath-School and Publishing Society. (No date.)

Zephyrus of the ancients, manifesting himself “at times in the gentle whirlwind, and sometimes, visibly, in the delicate waving of the tall grass on the prairie.” The capricious in nature is represented also in the *Tahkoo shkan-shkan*, or moving-god; yet, by what seems a strange caprice of his worshippers, his residence is supposed to be in the firm-set boulder; “so that boulders are universally worshipped by the Dakotas.” These few references will serve to show how peculiar and complicated is the mythology of this rude people, how remarkable as the product of savage minds, and, at the same time, how incongruous and absurd, it is, and how accurately it reflects the mind and life of a race standing face to face with the vast unknown, and contending for ever with the inclement forces of nature.

Scarcely less interesting than the chapter on the Dakotan mythology is that on the Dakotan worship. There is a good account of the “sacrifices,” or, rather, the bloodless offerings and gifts, in which the superstitious fears and desires of the Indian find so frequent expression; of the cruel ceremony of self-immolation, which Mr. Catlin, in his “O-kee-pa,” has described as he found it practised among the Mandans—a tribe of the Dakotan stock; of their feasts and dances and rites of purification; and of their medicine-men or sorcerers, and the “order of the sacred dance.” Mr. Riggs favors the opinion that the religion of these aborigines is neither more nor less than demon-worship, thus taking issue with Dr. Brinton (“Myths,” p. 59); but the logic by which this conclusion is reached is certainly somewhat lame: “For the worship of the Dakota does not fall on vacancy, but is consciously paid to spiritual beings, which can be none other than the spirits of darkness” (p. 93). The resemblance, however, which he traces between the Dakotan beliefs and practices and the system of modern “spiritualism” is well worthy of notice. No one can read of the performance with knotted ropes in a closed lodge (pp. 96, 97) without thinking of the Davenport Brothers, and of spiritualistic *séances* as reported from time to time in the newspapers. But, on the other hand, it is not “spiritualism” to give every human being four souls, and then to have “no particular concern as to what may become of them after death”!

We have taken the more pleasure in calling attention to the substantial contributions to our knowledge of aboriginal life which this volume contains, because it is so thoroughly unpretentious, and is issued under such auspices that scholars might be apt to overlook it. There are parts of it, as we have seen, which are well worth the scholar's attention; and other parts, we may add, which we should be glad to commend to those in authority, in Washington and on the frontier, as containing the testimony of one who knows, against the methods which our Government and its agents have thus far pursued, together with wise suggestions—valuable not because of their novelty, but because of the large experience upon which they are based—respecting our future course. In the meantime, while the immediate extermination of the red race is urged by representatives of the great American people, it is fair to listen and hear from a missionary's widow (p. 182) “how delicately her need of a shawl was supplied by a Dakota woman, who came up behind her and placed one on her shoulders.”

A GERMAN-AMERICAN CYCLOPÆDIA.[*]

PROFESSOR SCHEM's “Conversations-Lexicon” is an enterprise of considerable dimensions, utility, and merit. It is to embrace eight volumes, of eight hundred densely-printed octavo pages each, and thus, as to extent, will occupy a middle place between the two last similar publications of Brockhaus, the larger of which embraces fifteen and the smaller four volumes of nearly the same size. It promises to furnish “the German inhabitants of the United States, as well as all Germans specially interested in American affairs, all the information presented to them in the ‘New American Cyclopædia’—including its supplement, the ‘Annual American Cyclopædia’—in the American edition of ‘Chambers's Encyclopædia,’ and in ‘Zell's Popular Encyclopædia’”—exclusive, of course, of the lexicographical contents of the latter—in addition to all they can find in the best-known collections of the same kind issued in Germany. It devotes special attention to the German populations of the various American countries, and chiefly to the biography, literature, and interests of the German citizens of the United States—subjects the importance of which the “Vorwort” somewhat grandiloquently expatiates upon. To do all this in whatever way—and were it only by compilation and condensation from the most accessible sources—requires an amount of careful labor which must tax the powers of an editorial staff of the best calibre, and we must do our editor and his co-laborers the justice of acknowledging that the general correctness, fulness, and freshness of the new “Conversations-Lexicon” reflect no little credit upon their ability and energy, and that its first volume in more than one respect very favorably compares with the corresponding parts of the English cyclopædias published in this country. We need hardly add that, in thus fully appreciating its merits, we do not judge it by a standard such as the asserted “use of all German, American, English, and French sources” would suggest to our mind, but—what under so many unfavorable circumstances it can hardly fail to be—as a compilation from compilations, generally done without an attempt to enquire into the correctness of the statements found in one or more of the compilations copied from or abridged, and but here and there enriched by original articles on special subjects. The works chiefly made use of by the German-American “Conversations-Lexicon” are the cyclopædic publications of Brockhaus and Appleton, and Lippincott's “Gazetteer.” Even a superficial comparison will show how closely these guides have been followed—we are sorry to say, without acknowledgment. The following extracts, from the article “Alleghany Mountains” in the volume before us and the corresponding “Appalachian Mountains” in Appleton's “Cyclopædia,” may serve as an illustration:

> “Gesammtname eines Gebirgsystems Nordamerika's, das sich von dem zwischen den Neu-England-Staaten und dem Flusse St. Lawrence gelegenen Theile Canada's durch ganz Vermont, den westl. Theil von Massachusetts und die mittleren Atlantischen Staaten nach dem nördl. Theile Alabama's hinzieht. Den Namen Appalachian Mountains erhielt das Gebirge von den Spaniern unter De Soto, die denselben von dem Namen benachbarter Indianer ableiteten; Alleghany Mountains nannten es die ersten engl. Ansiedler nach einem indianischen Worte, das ‘*endlos*’ bedeuten sollte. . . . . Weder im Norden noch im Süden lässt sich ein Endpunkt genau bestimmen, da es an beiden Enden in den hügeligen Regionen, die ihm folgen, nach und nach aufgeht und ausserdem im Süden seine Gneissformationen in den Kreidelagern jener Gegenden allmälig verschwinden. In seiner ganzen Ausdehnung bietet das Gebirge sowohl in Bezug auf die Höhen, als auch hinsichtlich der Richtungslinie eine eigenthümliche Gleichförmigkeit, indem die Höhe der Gipfel nur wenig variirt und die einzelnen Bergrücken durchaus keine besonderen Formationen, die sie vor den übrigen auszeichnen könnten, erscheinen lassen. . . .”

> “These are the great range of mountains . . . . which extend from that part of Canada lying between the New England States and the St. Lawrence River, through the whole length of Vermont, across the western part of Massachusetts and the middle Atlantic States, to the northern part of Alabama. The name Appalachian was given to the mountains by the Spaniards under De Soto, who derived it from the neighboring Indians. The name Alleghany was given by the English settlers of the north, which they received from the Indians, and which was supposed to mean Endless . . . . At either end its termination is not well defined, the mountains sinking away and being lost in the hilly country that succeeds to them; and at the South its gneissoid and other ancient rocks gradually disappearing beneath the cretaceous formations of this region. In all their extent the Appalachian Mountains are remarkable, not for their great elevation, nor for their striking peaks, nor for any feature that distinguishes one portion of them from the rest, but for a singular uniformity of outline, particularly of that which defines the summit of the ridges, as well as that which marks their direction. . . .”

The temptation to abridge the articles of the larger Brockhaus, or to amplify those of the smaller, with as little alteration in style and composition as the desire of avoiding strict copying would permit, was but too natural under the circumstances, and, appreciating, as we do, the comparative value of those articles, we cannot object to their half-literal reproduction. What we condemn is, first, the omission of the acknowledgment due to the meritorious guide; secondly, the eviscerating of some of the articles in a manner destructive of the correctness of the reproduced parts—as done, for instance, in the article “Albertinische Linie” by the omission of all that refers to Duke Maurice and the changes operated by his career in the relative position and territorial possessions of the two Saxon lines; and, lastly, the injudicious alterations introduced merely for the sake of somewhat modifying the original phraseology. Thus, in the article “Albertus Magnus,” the insertion of the word “geistlichen” before “Orden” is entirely unnecessary, and the omission of the word “Ordens” before “Schulen” detrimental, to the right understanding of the phrases otherwise literally copied from Brockhaus: “trat in den *geistlichen* Orden der Dominikaner” and “lehrte in den [Ordens-] Schulen zu Hildesheim, Regensburg, Köln und Paris.” The easy process of abridging and transcribing has probably suggested the unsatisfactorily explained rule according to which in geographical articles concerning America, England, and the British possessions all over the world “M.”

---

[*] “Deutsch-amerikanisches Conversations-Lexicon. Mit specieller Rücksicht auf das Bedürfniss der in Amerika lebenden Deutschen, mit Benutzung aller deutschen, amerikanischen, englischen und französischen Quellen, und unter Mitwirkung vieler hervorragender deutschen Schriftsteller Amerika's, bearbeitet von Prof. Alexander J. Schem.” Vol. 1. New York: F. Gerhard. 1869.

signifies an English mile, and in those concerning "Germany and the other countries of Europe, the German." What it signifies in articles on non-British Asia or on Africa is not stated. The article "Africa" shows an amusing alternation of the German and English miles; the length and breadth of Asia are stated in English miles, not designated as such; the area of Egypt is given both in English and geographical miles, which are, however, strangely converted; while the distance of Athens from the Piræus, as given, shows that the general rule has not always been observed. Worse than all this is the carelessness with which the first meridian of longitude has been left entirely undetermined. The longitude of Arabia is reckoned from Greenwich, that of Egypt from Ferro; the longitude of Algeria from Ferro, that of the city of Algiers from Greenwich—without anything to denote it. In general both longitude and latitude remain unmentioned, even where most needed, as in the articles on Alexandria, Abyssinia, and Archangel. This is another result of the easy way, followed in most cases, of abridging without further research. Haste in doing it has been productive of many a slip of the pen. The value of the original articles varies considerably. The life of Alexander II. of Russia is of all we have noticed by far the best.

SOME PREHISTORIC DATA.[*]

We bring together here two little books which, with no direct affinity of themes, are yet cognate in this—that they attempt to work up the beginnings of human history, especially on its religious side, from the traditions of far-off times, concerning which there is no very positive nor connected record—"The Monks before Christ" and "Traces of Picture-writing in the Bible." If one could have the easy faith of the author of the first of these books, there could hardly be a function for the critical spirit in history; and it is curious to observe how sometimes the spirit which is so critical in testing the earlier narratives of the Old Testament will not scruple to accept as authentic history traditions and conjectures purporting to come from a far more remote antiquity, and which exhibit, to say the least, no surer traces of verisimilitude. Upon data almost wholly conjectural, Mr. Johnson sets before us a chronological chart, upon which the course of ancient civilization is mapped out with the certainty of an ordnance survey, and the date of each advance is given with the precision of a Greenwich time-table. That Southern Arabia was in a state of civilization at least 10000 B.C., that "this Cushite civilization extended to the valleys of the Nile and Euphrates not later than 7000 B.C.," and to India soon afterwards, or at least as early as 5000 B.C.; that the same civilization passed over from North Africa into Spain about 5000 B.C., and "was carried to Greece from Egypt 3000 B.C., and to Italy at nearly the same time;" all this is written out upon the chart that forms the frontispiece of the volume, and expanded in the book itself, as if, amid all the confusion of uncertainty in prehistoric dates, thus much at least may be assumed with reasonable certainty. Now, though it is evident that the chronological scale usually attached to the Hebrew Scriptures must be revised and extended in order to adapt it to newly discovered facts in archæology, yet there is hardly a date in the remote antiquity of Egypt, Arabia, or India, so well established that one can construct, as Bunsen attempted to do, a world-scheme of chronology; and it is unwise to concede to conjecture the vast reaches of time that Bunsen's scheme assumes.

Apart from this easy-going assumption and concession in matters of fact, there is little to criticise and much to commend in Mr. Johnson's book. It gives a brief account of different orders of monks, pagan and Jewish, before Christ, with a view rather to exhibit the essential spirit of monkery than to compare details of administration. The author comes to the conclusion that Christ had no connection with the Essenes, and borrowed nothing from them, and that the spirit of his teachings and the very genius of his system are contrary to the spirit of monasticism, which is "the selfish avoidance of all moral responsibility," resulting at last in spiritual apathy. "The first impulse of a man, spiritually moved, may be to connect himself with a monastic order; but, as his religious experience deepens, he sees the refined selfishness of such a course, and realizes that his heaviest cross is to be sought in the world, and in bearing with the infirmities of his fellow-men."

Mr. Johnson was moved to write his book by a somewhat intimate knowledge of the monks of Bavaria and Italy, and he proposes to treat hereafter of Christian monasticism. In order to do this successfully he should guard against hasty generalizations. What well-read student of the Reformation, understanding the use of theological terms, would accept literally his statement that "Protestantism maintained that godliness was entirely independent of works, and could be attained by faith alone"?

The object of Dr. Miles in his "Picture-writing" is to show that, inasmuch as in the early stages of most nations picture-writing preceded the formation of an alphabet, therefore the Hebrews must have had a system of hieroglyphics which left their impress upon the subsequent language. With no claim to original investigation, nor to a new philosophy of language, Dr. Miles has nevertheless stated very well the most plausible theory of the origin and growth of language as developed by Whitney and others of the modern school of comparative philologists; but when he attempts to frame a theory of the Hebrew, finding no facts to support it, he substitutes conjecture and assumption for facts. His reasoning is to this effect: almost all primitive nations used hieroglyphics before they had alphabetic writing; it would be a solecism in the history of man if the Hebrews did not; therefore they did.

Happily the author has not been beguiled by the vagaries of Mr. C. Forster, who discovered in the Sinaitic inscriptions a system of hieroglyphics which he translated into a mongrel of Hebrew and Arabic, out of which he attempted to construct "the one primeval language." The absurdity of his scheme has been thoroughly exposed by Beer, Tuch, and other philologists, who have shown that these inscriptions belong to the Christian era, and have no trace of a Jewish origin. The method of supplying conjectural data as the basis of a theory is unscientific.

Apart from his theory, however, Dr. Miles suggests some ingenious and plausible interpretations of pictorial phrases in the Old Testament; and no doubt Hebrew exegesis has much yet to learn from the genius of oriental metaphor and from the picture element in primitive languages. His essay has opened enquiry that may lead to fruitful results.

A HISTORY OF CRETE.[*]

The island of Crete has a history of three thousand years, and almost at no epoch, from the time that Homer sang of its ninety cities down to our own, in which its desolation by internecine struggles, both of races and religions, has reached a point perhaps never witnessed before, has its fate ceased to be interesting to the civilized world. At the remote periods when civilization drifted from the coasts of Egypt, Phœnicia, and Asia Minor, towards the northern shores of the Mediterranean, it formed, according to circumstances, a natural bridge—with Rhodes, Carpathus, Casus, and Cythera—connecting the extreme west of Asia with continental Greece; a neutral station where the various cultures of the Nile, of Syria, and of Phrygia could take root, meet, and fuse, before assuming a Hellenic shape; or a dividing rampart between the Libyan Sea and the Ægæan. It became the seat of "diverse people" and "intermixed tongues," as Homer tells us; it was the cradle of heroes and divinities—of Zeus himself among others. Destined by its position, as already Aristotle observed, to rule over both seas and lands, it required only the hand of a powerful centralizer and conqueror, such as we see depicted in Minos, to develop that *thalassocratia* of which the legends of the heroic age of Hellas are full. When the labyrinth of Cnossus ceased to be an object of real or imaginary terror to the coasts all around, art, developed by Dædalus, or figuratively represented under that name, spread from the much-admired seats of Cretan power and wisdom, and Cretan colonies flourished in various countries. But soon a reflux took place, and the Dorians of the Peloponnesus carried their victorious arms and feudal institutions into the island. The organizations, laws, and customs of the Dorianized cities of Crete, in many respects resembling those of Sparta, attracted the curiosity of the philosophical minds of Greece. While the great struggle between Asia and Greece was raging, Crete stood aloof. Internal feuds distracted it for centuries. When Rome first began to extend her sway eastward, the island became entangled in alliances; but it was only after the fall of Macedon, Achaia, and Pontus, that the Romans destroyed its independence. Early Christianized, it also became an early prey to Saracenic conquest, and then first began the deadly grapple between the crescent and the cross for the possession of the island, which, renewed after a long interruption, has not ceased to this day. Reconquered by the Byzantine emperors, it was wrested from them, on occasion of the fourth crusade, by the Venetians, who kept it for upwards of four centuries, and whose rapacity and cruelty in stifling insurrections could hardly be surpassed by their successors in power—the Turks. The struggle for its possession between the Republic of the Adriatic and the Sultan, which was decided two hundred years ago by the surrender of the city of Candia to the Osmanlis, was witnessed with utmost interest and anxiety by the whole of Christendom. And so was the bloody insurrection to which a fanatical hatred, accumulated in long ages of oppression, remembrances of a glorious past, and the spectacle of fighting Greece, drove the Christian Cretans in 1821—an insurrection which almost converted the island into a desert, though it was once more to gather strength to renew the strife, with the same disastrous result.

[*] "Précis de l'Histoire de Crète depuis les temps les plus anciens jusqu'à la fin de la domination romaine. Par G.-C. Bolanachi et Henri Fazy, Associé correspondant de la Société des Antiquités de France." Paris, etc. 1869.

"Précis de l'Histoire de Crète pendant le moyen âge et les temps modernes. Par G.-C. Bolanachi et Henri Fazy, Associé, etc." Paris, etc. 1869.

Of these three thousand years of checkered history, the two volumes of MM. Bolanachi and Fazy present a detailed and instructive sketch. They are, however, unequal both in size and in merit. The ancient part, which we presume to be almost entirely the production of the last-named writer, is in every respect more comprehensive and elaborate than the second, to which M. Bolanachi, a Cretan emigrant, contributed the principal materials. The archæological résumés present, in a pleasant and lucid form, the results of the learned researches of Belon, Meursius, Tournefort, Pococke, Olivier, Savary, Sieber, Höck, Pashley, Spratt, Thénon, and others. This part of the work is, however, far from being, what the author intended to make the whole of it, a popular history, though well-chosen extracts from the classics and a style free from all pedantry render it agreeable reading to students of antiquities. The modern history is too briefly told; the narrative of the first Cretan struggle for independence in this century is both incomplete and poetically colored; the story of the struggle just closed is not given. We doubt whether this learned double "Précis" is apt to achieve, what the author aimed at, a considerable quickening of our sympathies for bleeding Crete. The main lesson to be learned from it is that the modern Cretans are as unlike the people of Minos as any Christian people can be; that the Christian Republic of Venice could be as terrible in its oppression and revenge as Moslem Stamboul ever was; and that the independent Cretans of antiquity committed, in warring with each other, all the atrocities, and in peace practised all the vices, which ever disgraced modern history or society, free or oppressed, Christian or Moslem. This is a sad lesson, but, of course, it does not impair the justice of the claims of the Cretan Christians to freedom and self-rule, nor the merit of their fruitless heroism.

Lectures on Art. Delivered before the University of Oxford in Hilary Term, 1870, by John Ruskin, M.A., honorary student of Christ Church and Slade Professor of Fine Art. (Macmillan, London and New York.)—This volume contains seven lectures, of which the first is an inaugural address; for the Slade professorship of Fine Art, at Oxford, is a new foundation, and Mr. Ruskin, the first professor, has only this year begun his duties. The other lectures are initiatory to an elaborate system of practical instruction. Three of the lectures are generally critical, and discuss the relation of art to religion, to morals, and to use. The others are immediately connected with the production and judgment of works of art, and are severally concerned with line, light, and color.

In the inaugural before us the founding of the Slade professorship is declared to be the accomplishment of the first group "of a series of changes now taking gradual effect in our [English] system of public education, and which are the sign of a vital change in the national mind respecting that education." Mr. Ruskin declares himself a warm friend and a friend of long standing of "the new education," and he defines it tolerably well, making of his definition itself, however, a piece of advocacy of the new state of things. "It was formerly thought," he says, "that the discipline necessary to form the character of youth was best given in the study of abstract branches of literature and philosophy, but it is now thought that the same or a better discipline may be given by informing men in early years of things it cannot but be of chief practical advantage to them afterwards to know. That is to say (for the "elective system" must of necessity, as our lecturer himself hints, go with the attempt to utilize all studies), decide first which way your boy should push his preparation for active life, and then begin the preparation at once, seeking discipline and culture for him in the studies which are necessary parts of it. But we have the assurance, too, that our lecturer at least knows where and how the pursuit of "useful knowledge" is to be modified for the sake of intelligent culture. "The object of instruction here," he says, "is not attainment, but discipline; a youth is sent to our university not to be taught a trade or advanced in a profession, but to be made a gentleman and a scholar."

In accordance with these clearly avowed opinions, we may look to these lectures for the foreshadowing of a matured system of teaching to amateurs the criticism and the practice of art, a system intended to give to students just that knowledge of the principles of judgment of works of art which will be most useful to them as members of an intelligent and thoroughly cultivated society of the future; and just that power of drawing and (perhaps) modelling as will help best to that result, and to such insight into the beauty of nature as can be given only in that way. The practical part of it is hinted at only; we find that the students are to draw from works of art as well as from nature, that Leonardo's treatise on painting is to be used as an almost infallible guide to the right way of working, that the observation of the practice of the greatest painters is quoted constantly as of use even to beginners, that an enormous amount and variety of noble art is brought before the students, and the best of it all, so far as available, put permanently into a collection or series, for the permanent guidance and instruction of successive generations of students. Of this collection, whether complete or only in progress, a catalogue will be published, to which catalogue notes in the book before us occasionally refer.

It is evident, then, that there is a serious attempt now being made, at Oxford, to teach art to persons not artists nor meaning to become artists, and to teach it in an ideally perfect way. Mr. Ruskin, the teacher, occupies the peculiar position of having studied art more thoroughly and continuously than any living man not professionally an artist, and in a more varied and general way than any artist can. He is in the position, moreover, of a collector with abundant means and the best opportunities, and of many years' standing; and not only that, but he is a trained practical workman, and one of the first living draughtsmen of landscape and still life. One may expect in this book to find statements with which he will not agree, transcendental subtilties of thought which may seem to him strained and violent, and dreams of social economy whose realization may seem wildly impossible; but a patient and intelligent reader will know what to do with these. If the reader, besides being intelligent and patient, wishes to learn something of art, how to judge of it, and perhaps how to go to work to learn to draw, then he will wish he had Mr. Ruskin for a teacher, and in default of that he will study this book carefully and keep all he can of its more direct and simple instructions.

Smith's Wealth of Nations, edited by James E. Thorold Rogers. Vol. I., II.—*A Manual of Political Economy for Schools and Colleges*, by James E. Thorold Rogers. (Macmillan & Co. 1870.)—We believe it is the general opinion of the economical world that, in spite of the appearance of the Honorable Horace Greeley's great work, Adam Smith will long continue to hold his own, as the principal founder and greatest master of the science. It would now be almost as difficult to rob him of his pre-eminence and authority as to obscure Captain Cook's fame as a discoverer. It has, after seventy years' vigorous discussion, been found that, in the few cases in which other writers have ventured to differ from Smith, he has mostly been found to be right, and he has furnished the principles by which even those fields of social science which he did not touch, or knew nothing of, have to be explored. There has been until now no really good edition of the "Wealth of Nations," McCulloch's being printed in small type, and laden with notes which were more copious than valuable. Professor Rogers has therefore conferred a great benefit on all students by editing, and Messrs. Macmillan by bringing out, the handsome volumes before us. The Professor's notes are confined either to the elucidation of Smith's meaning, by the aid of fresh illustrations, or to pointing out the cases in which the labors of later observers have clearly shown his deductions to be erroneous.

Professor Rogers' own little work, the Manual, has, we are glad to see, gone into a second edition; but we confess, valuable as it is both for colleges and for the general reader—on the whole, perhaps, more valuable than anything of the kind we know—its fitness for schools we doubt very much, and do not recommend it for beginners. It assumes a knowledge of the operations of trade and commerce, and of the structure of society, which hardly any boy or girl possesses.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*
Edgar, B.D., (John H.), The Threefold Graces of the Holy Trinity..............	(J. B. Lippincott & Co.) $1 50
Stephens (Mrs. Ann S.), Married in Haste..............	(T. B. Peterson & Bros.) 1 75
Stiles (Henry R.), History of the City of Brooklyn. Vol. III.....	(By subscription)
Two Englishmen, Reminiscences of America in 1869....	(Scribner, Welford & Co.)

The Nation.

NEW YORK, THURSDAY, AUGUST 4, 1870.

The Week.

THE war news is plentiful, but, as to quality, exceedingly poor. The attack on Saarbrück by the French in superior force, followed by a vigorous repulse, turns out a Prussian hoax. (The report of a French victory at the same place reaches us at the moment of going to press.) Several slight skirmishes have taken place here and there, but these not only have no military significance at all, but do not even serve as indications of the relative positions of the armies preparing for the great contest. That the Prussian troops are chiefly massed on the Rhine, between Coblentz and Mentz, on the Moselle, and back of the Saar, seems to be beyond doubt, but reports were also current that an invasion of French territory, in the direction of Mulhouse and Belfort, was intended from the Prussian position on the Upper Rhine, near Basle. Very little can be gathered concerning the incipient movements of the French, owing to the rigorous exclusion of all curious lookers-on, of whatever rank or nationality; but various indications seem to point towards the Rhine, and Carlsruhe, and Landau, rather than towards the Moselle and Treves; and the reported falling back of the Bavarian advanced posts upon the Lauter, coming as it does from Berlin, looks like a sign of operations actually opening in the former direction. Both the Emperor of the French and the King of Prussia are now at the seat of war. Regarding the numbers of the opposing armies, the darkness in which we grope is almost complete, the statements telegraphed us about them being full of the most absurd exaggerations, and wildly contradictory.

One day we are told that the Prussians "concentrated behind the River Saar have 400,000 men and rather too much cavalry," while "the opposing force of the French numbers about 300,000." Next day we read: "The French can hardly have been acquainted with the weakness of the Prussian force in Saarbrück during the last few days. It is not now so much at their mercy." This latter announcement comes from the "special correspondent at Saarbrück" of "the only newspaper in the United States fully represented by special correspondents with both Prussian and French armies, and at the leading capitals—the only paper receiving full special despatches," etc., etc. It reminds us of the following perfectly analogous statement by the "special correspondent at Cherbourg" of the same "only newspaper in the United States": "The defences of Cherbourg have been strengthened within a few days; but had a Prussian fleet attacked the place last week, it might have entered through the Western pass, burnt the arsenal and the town, and retired through the Eastern pass without receiving a shot." The "special correspondent at Metz" of the same "only newspaper" puts "800,000 down as the lowest number the Emperor means to have under his hand, and in complete communication at the entrance of the campaign," and believes "the concentration now to be within forty-eight hours of completion." The "special correspondent at Saarbrück," aforesaid, on the other hand, seems to be ignorant of what his fellow-special knows, for he expects a triple aggressive advance of the Prussians on Strasbourg, Nancy, and Metz. Or, if he knows the French to be about a million strong in those vicinities, he relies upon their bodily weakness, for deserters whose "appearance confirms their report," for "they are half-starved and woe-begone," "say they have nothing to eat." A million of soldiers that have nothing to eat ought to be beaten by half a million well victualled. It is true "some French infantry entered Prussian territory at 3 o'clock to dig up potatoes," but "they were driven off without any potatoes"—we are not told at what o'clock. "Potato-digging has been attempted at intervals all along the frontier," but attempted only. The French soldier without his potato must be devoid of all enthusiasm for "la France" and "la gloire," while even "the Polish soldiers" of Prussia are "conspicuous by their patriotic manifestations"—not for Poland but for Prussia—"and vehement hatred of the French." This novel piece of information, too, we owe to a special correspondent of our "only newspaper," which, in spite of all its boasting, deserves credit for its exertions to satisfy the public craving for news.

One other piece of war news, by the Cable, deserves special and separate mention—and that is, that the Prussians have "mined the banks of the Rhine." This, we think, shows that military science has not made the progress among the Prussians we supposed it had. If they were really equal to the occasion, they would set the Rhine on fire, and in this way it would be impossible for the French to get across. Another despatch declares, in substance—supposing it to have any meaning, which is doubtful—that the French people wanted to have General Sheridan take service in the French army, but that the French Government told Dr. Evans, an American dentist in Paris, that they would not receive the General at the seat of war except as a "military spectator." We doubt if any one will ever get at the bottom of this story. We believe General Sheridan goes over on his own account, and intends to be the only thing an American officer can be, a simple looker-on.

The movements of the French fleet are shrouded in mystery, and have as yet resulted in no hostile action of any importance. We hear of it at Brest, near the coast of Scotland, at the mouth of the Elbe, and off Copenhagen; but the reports are vague. Whether its presence in the waters of Denmark will drive that kingdom into an alliance with France, an alliance clamored for by the more reckless portion of the Danish press, but opposed by strong influences and reasons, is still to be seen. Belgium appears to have been roused by the lately divulged schemes against her to more energetic measures for the defence of her independence and neutrality, in which she will have the lively sympathy of England, but possibly no more, in spite of the intense excitement which agitates the British people and Parliament. That England should have invited Russia to join her in defending Belgium by force of arms is highly improbable. The report of the Florence *Nazione* of negotiations going on between England, Italy, and Austria, for an alliance of common neutrality, is more likely to be correct, though counter exertions on the part of France may easily baffle the consummation of all such schemes.

Both Bismarck and the French Government have now published their account of the secret treaty. Bismarck says it was entirely of French origin, but was proposed long before 1866, as well as just previous to the war of that year, but at once rejected, and its existence was in the meantime concealed in the interests of peace. The original draft is preserved at Berlin, in M. Benedetti's handwriting. To this the French reply that it was the wicked Bismarck who proposed the scheme, and it happens to be in Benedetti's handwriting simply because that gentleman took it down at Bismarck's dictation—which is a very unlikely story indeed. On whichever side the truth lies, it must be admitted that Bismarck has got the better of his old friend on this occasion at least. Indeed, it is hard to see how the American admirers of "smart men" can stand by the Emperor any longer after this revelation. The wrath of the German press with England seems to grow stronger as the weeks wear on, and the English Ministry takes no decided step to call France to account, and the English coal-dealers continue to supply the French steamers. Mr. Gladstone, however, did intimate, at the Lord Mayor's banquet, that the service of a fleet by colliers might be equivalent to furnishing it with store-ships.

Perhaps the most interesting piece of foreign news received during the week—and there is every reason for supposing it to be authentic—

is, that the French are evacuating Rome, as part of the price of Italy's good-will, or at least neutrality, the balance to be paid in money—$12,000,000 being talked of as the amount. That this result has been hastened in some degree by the general disgust excited by the performances of the Œcumenical Council, there is little doubt. This, and the adoption of the dogma of infallibility, will prove a far heavier blow to the Papacy than anything that has happened since the Reformation. The Pope's behavior, if half the stories told of him have been true, can only be accounted for or excused on the ground, and the very likely ground, that his faculties are weakened by age. His violence of language and outrageous abuse of his temporal power towards the members of the opposition converted the latter sessions of the Council into a disgraceful farce. Secession is talked of in Hungary; and it is doubtful whether many of the opposition bishops will promulgate the dogma in their dioceses.

Thanks to independent communication by telegraph with the two belligerents, the facts of any great event of the war cannot long be concealed by either party. The daily bulletins from Paris and Berlin serve to correct each other, and the reader's common sense to correct both. The French censorship, therefore, as regards Prussia, is limited to French soil, and that this is a matter of congratulation may be judged from the sudden cessation of news from Spain unless of a sort which it suits the French Government to transmit. As the innocent occasion of a ferocious assault on a friendly power, Spain, were it at one with itself, and not financially prostrated, would in honor have hastened to ally itself with Prussia; and, notwithstanding the good behavior of France in restraining the Carlists, it is improbable that there should not be at Madrid a strong feeling of resentment at an insult first offered to Spain and afterwards to Prussia—that of interference, namely, with the deliberate choice of one nation, and the passive assent of another. Of all this, however, if it exists, we hear not a word, but instead reports of friendly neutrality or alliance with France. That these represent the actual attitude which Spain is in prudence forced to preserve, there can be little doubt; but a genuine expression of the Spanish view of the war is still to be heard.

There is preliminary activity in politics throughout the country; but, as a rule, it moves in secret channels, and is not obvious to the general eye, and in the North consists almost wholly in sedulous letter-writing, and in presenting in the newspapers the names and claims of gentlemen who would take nominations. In the South, in the two Carolinas, things are a little further advanced, and North Carolina holds her election to-day and elects a State Legislature, a full Congressional delegation, and an Attorney-General. In South Carolina, nominations are not fully made. Governor Scott is likely to be re-elected, for there is little or no hope that the Reform party—which, of course, is largely Democratic—will carry the State, though they will here and there gain a representative in the Legislature, and possibly one or two Congressmen. Mr. Cardozo, a light mulatto, of good abilities, is talked of for the United States Senate, and one or two negroes will probably be returned to the House. So will Mr. Whittemore, who appears to grow and increase in impudence, and who works so hard for a prosecution in the courts and a place in the penitentiary, that it ought to be no longer denied him. The Reform candidates are making speeches, and profess belief in their success; but their day is not yet, it is to be feared. Meantime, our old friend Niles G. Parker, State Treasurer, has become involved in a little controversy as to whether or not it is true that "no one can tell what has become of the State Treasury." One thing appears to be clear amid the dust of the conflict—namely, that the State Treasurer, being charged with allowing bonds of the State to go to protest, and with having thus dishonored the State, replies, in so many words, that "there are no bonds of the State past due and dishonored," and further says that the Comptroller-General does not affix his signature to the State bonds, and that it is easy to see how much his accuser knows of what he is talking about. Thereupon the accuser produces a letter from the agents of the Barings, which avers that in 1868 there fell due £109,000 in South Carolina bonds which went to protest, and that both the principal and the one year's additional interest on the dishonored bonds remained unpaid on the 26th of last month, though due on the 1st. And all this, though the impoverished farmers of South Carolina are staggering under enormous taxation.

In North Carolina the war still continues, or rather Colonel Kirk still holds some scores of the principal inhabitants of two or three counties under arrest, and stands ready to make war if only somebody would resist, which nobody does. His forces are not the regular militia of the State, but a specially levied body of men, mostly black; and he himself seems to be a wandering adventurer, trained to command by bushwhacking in Tennessee. From the shouting and bawling of the Holden "organs"—the trumpet-calls to the faithful, as they are termed up in this region, when the men and brethren are on the eve of voting—we should imagine that there may have been some need of what one of the North Carolina judges called this "small electioneering dodge" of the Governor's; but we suppose the State is safe to go Republican, and that at least one colored member of Congress will appear in the House. Still, that the Legislature should be of a certain stripe may very likely be of great importance to the success of various schemes that will come up next winter. The probable colored member of Congress is Mr. James Harris, of Raleigh, a sensible man, and by no means despicable in point of ability. He is the man who two years ago refused to let himself be put in nomination, thinking it injudicious. But it will be observed very soon, or may be observed now, that there is to be very little more of that kind of reserve.

Neither is it to be desired that men like Mr. Harris should postpone their claims to the claims of men like many of the leaders of the colored men. The Northern people are beginning to understand the carpet-bagger tolerably well, and he is on his last legs, no doubt, but every month by which his final end can be hastened is precious; and it is to be hoped that light from all sources may be thrown on his figure till there may not be a man in the Republican party who does not justify the South in its hatred of him, and see why the South is to be partly excused for hating us. A typical carpet-bagger may actually have been a few years ago a bankrupt saloon-keeper, of the ability usual with his class, whose saloon decayed because of a vehement suspicion that it was a house of assignation, and an absolute certainty that it was a very unsatisfactory place in which to eat and drink; he may have been more than half-believed to have set his saloon on fire for the sake of getting the insurance money; he may then have been a soldier, known for currying favor, and a petty officer hated for small tyrannies; he may have always been innocent of more education than goes to the reading of the *Ledger;* and yet to-day he may be lieutenant-governor of a State with a prosperous "ring"; or he may be a Congressman and a seller of cadetships; or—and here is a chief concern of ours with him—he may be a representative of Northern civilization, an instructor of the negro voter, making him rotten in legislative rascality before he is ripe for the suffrage, an agent in reconstruction, and a fruitful source of the hearty hatred for the North which has so long delayed the peace that is essential. And worse cases than this could be cited. Every Southern State has had its share of them, and the Republican party has suffered in consequence about as much as it is wise to attempt bearing.

Georgia just now sees him characteristically employed. The intention is avowed to get the law so construed as that Governor Bullock shall keep his office for two years longer. The argument is that he became only a provisional officer when Congress last interfered in the affairs of the State, and that, as he did nevertheless make a successful canvass of the popular vote, he must be held to be an elected Governor also, and the constitutional two years' term must be held to have begun when Congress finally took the State out of its provisional condition. This subterfuge deceives no one, but there is a reasonable prospect of its giving Bullock the State for two years longer. If so, it will be heard of next winter in Congress, and not from Democrats alone, for although, in some way that cannot be explained, the last of the Georgia bills was ambiguous, and shirked this question of Bullock's claim to prolong his power, nevertheless, Senators very warmly declared that the construction now sought to be put upon it the committee did not intend it to bear. No wonder that Mr. Thurman and Mr. Trumbull, with Bullock's transactions with Forney fresh in mind, might indignantly deny a willingness to lengthen such a person's lease of power. They let it be done, however, or did not prevent it.

There is another little "Butler imbroglio" brought to light in the courts in Washington. One Whitney asks for an injunction to prevent one Ames getting from the Treasury a balance due to him on a gun contract till he first pays him, Whitney, a fee of $5,000 for "professional services;" but Ames answers that the fee was promised for the professional services of B. F. Butler, whose clerk, or "head man," Whitney is, and that the services to be rendered by Mr. Butler were his bringing about, through his position as a member of an investigating committee, a withdrawal of the opposition offered by General Dyer, the Chief of Ordnance, to the payment of Ames's claim. We hope the case will not be "settled" till we have heard more about it, and particularly till General Dyer is examined.

We have, though not naturally cruel, taken some pleasure of late in watching the way in which some of our *à priori* politicians, who have for some time been trying to substitute the Declaration of Independence for the Constitution, have been dealing with the Chinese question. What with their desire to reconcile "the natural rights" of the Chinese with the "natural rights" of "the workingman" already here, their situation is enough to draw tears from a gorgon. One after another has tried to take the bull by the horns, and got badly gored. The latest attempt has been made by Wendell Phillips, who advocates, in the *Standard*, letting the Chinese come in gradually, so as not to lower the wages of the American laborers here. So that, according to this plan, the United States is, we suppose, to station officers on its coasts, whose duty it will be to let in as many Irishmen, Germans, and men of all Aryan races as choose to come, without regard to the effect their arrival will have on wages; but whenever five Chinamen present themselves, three are to be driven back. But, suppose the three rejected Chinamen produce the Declaration of Independence, and read the passage about people being all "born free," and then produce a batch of Anti-slavery, Woman's-rights, and Negro-suffrage speeches, by leading Republican philanthropists and politicians, and read them, and then say that all they ask is liberty to work hard and peaceably in a half-reclaimed continent, of boundless resources—what answer shall we make them? Who of all the declaimers against "distinctions based on race or color," and against the right of society to restrict the suffrage, is going to have the hardihood to drive them away from untilled fields and unworked mines?

The Nathan murder, like the Rogers murder and various other murders of the same character, calls forth more or less denunciation of the police, and complaints, not only of its want of vigilance, but of the smallness of the force. But this sort of talk only draws away attention from the real source of any insecurity for life and property from which New York may be suffering. It is not possible to police any city so that a man shall run no risk of being murdered or robbed in his own bedroom, or at his own street door. Such cases will occur under any police system, and no amount of vigilance will always lead to the arrest of the criminals. What leads to the perpetration of crime is uncertainty whether crime will be punished; and into this the condition of the courts and of the penal code enters far more largely than the remissness of the police or the smallness of the force, as any one may satisfy himself who compares the number of arrests with the number of convictions. It is increased, too, and greatly increased, by the heinous—that is the word—sympathy of the public with criminals; the readiness of respectable persons either to sign their names to petitions for pardons or to let pardons be obtained without opposition, when they know good reasons why they ought not to be granted. We should like to know, for instance, how many of those who, when Officer Smedick was murdered, testified to his good conduct, good temper, and general efficiency, have stirred hand or foot to traverse the charges which Real, his murderer, has been bringing against him during the past fortnight, in aid of the attempt to procure commutation of his own sentence. Governor Hoffman's final reply to Real's counsel is an admirable public lesson and rebuke.

The superannuated "fraud" known as the American Colonization Society has had a falling out with the New York State Society, hitherto a branch of it, but now to all appearance irrevocably parted from it. The grievances of the latter, as set forth in an extremely lively document made public this week, arose from the refusal of the parent society to withdraw its soliciting agent from the New York field, which he had been by courtesy allowed to farm for three years, though in virtue of a common understanding the State Society had final authority in the premises. Having inflicted this wrong, the American Society turns round and in its annual report this year abuses the New York Society, boldly charges it with having been revolutionized by the election of "new men" hostile to the American, complains of discrepancies in its alleged contributions and actual receipts, and indulges in other pretty statements, which are of course pronounced "groundless and calumnious." These are epithets that used to be often heard from the Abolitionists when the Colonization Society was seeking to remove the free negroes of the South from the immediate neighborhood of the slaves, and at the same time making philanthropic professions of a lofty character. Age and the loss of a legitimate occupation do not seem to have improved the Society's scrupulousness, and we grieve to say that the New York Society has added one more to the numerous exposures of the "parent." After all, however, a charity once established is hard to kill, and we presume this little "onpleasantness" will work no particular harm to the guilty party, and that hereafter, as heretofore, enough of people will be found to contribute to the expenses of a society which spends $68,000 per annum with the magnificent result of shipping every other year from one to two hundred negroes to Liberia; and that the New York Society will have no difficulty in raising funds to educate over there the ignorant emigrants thus transported.

A contemporary quotes our remark that the newspaper men at Worcester, who took sides in the dispute as to the "foul," do what they had no business to do, and, having quoted it, enquires what would become of the *Nation* if it did not take sides in disputes about things which it had not seen with its own eyes. The newspaper men of whom we spoke were reporters, and it being a reporter's true business to get the facts in any given case, as it is an editor's business to express opinions, the "pertinent question" put to us is seen to be not pertinent. The fact is that reporters are accorded a license which makes many of them untrustworthy in their report or causes it to be mingled with other matter out of its scope, and which makes the most of them insufferable blackguards. Take, for instance, the wretch who the other day, out of revenge for having been refused admission to the house of Mr. Nathan, then occupied by the women of the bereaved family, goes away and makes a circumstantial charge of parricide against the young man who had declined to show him over the house and exhibit to him the corpse of his unfortunate father. Yet this ruffian's whole work, had he been attached to a properly conducted newspaper, would have been merely to report facts, and he would have had no more opportunity to air his opinions and impose his scoundrelly and shocking inventions on the public than a private soldier to dictate the plan of a campaign. This is an extreme case; but the unbiassed reporter, on the other hand, who tells what he sees and hears—no more and no less, is about as rare. Reporters and correspondents are too seldom *edited*, unless, indeed, they are edited to the bad extent of being "inspired" by the editor, and made to his order. How bad the result is, and how very bad indeed it used to be, as, for instance, when every anti-slavery speaker was a saintly hero or a weak-headed, wicked ignoramus with "free-love" tendencies, everybody knows who knows the press.

ENGLISH NEUTRALITY.

There is probably nothing which the European public has been watching with so much interest during the last fortnight as the effect on England of the revelations made by Bismarck of Louis Napoleon's views of her weight in European politics, and of the value of her guarantee to such small powers as Belgium. The unexpected coolness with which her Government has received the publication of the projected treaty is apparently exciting more or less exasperation in Germany, which has already found vent in the Berlin press, and, curiously enough, is fastening on her continued commercial dealings with the French, and especially the sale to them of coal, as proofs of something worse than indifference to French treachery; the exact nature of neutral obligations being apparently totally misunderstood by nine-tenths of the writers who shape public opinion about them. There is evidently not much disposition on England's part to be stirred up into anything more than an attitude of suspicion towards France, indicated by some "activity in dockyards" and the concentration of the fleet in home waters. There is plainly no inclination on the part of the ministry to put an unfavorable construction on the French conduct, or to force the Emperor into a corner. After making all due allowance for official reserve, it is difficult to avoid the inference that both Mr. Gladstone and Earl Granville were rather unwilling to admit that the proposed treaty was authentic; and—now that there is no longer any doubt on this point—that it is of very great importance after all; and they are fortified in their indifference by the amusing conflict of veracity which is now going on between Bismarck and the Emperor as to which of them drew up what both are now agreed is an abominable arrangement.

Nevertheless, there is nothing in the political system of the European Continent to the maintenance of which England is so strongly and solemnly committed as the independence of Belgium. If she would not resist the destruction of this, she would resist nothing. If its destruction should be attempted, and successfully—and that her passiveness when Denmark was attacked in 1866, in the teeth of the Treaty of London, suggested to Louis Napoleon that he might safely presume on her patience as much as Prussia had done, there is little reason to doubt—it would remove her definitively from the class of "great powers," to whose hands usage as well as force has so long committed the task of arranging the affairs of the Continent. The treaties of 1815 having been all overthrown, and her guarantee having been set aside in the case of Denmark, the only portion of the political status in Europe for which she remains formally bound is the independence of Greece and of Turkey. The former of these is not likely to be menaced; and, if we may judge from the tone of English opinion with regard to the Crimean war and its results, there is no chance of any further attempt being made to save Turkey from any fate which may be in store for her.

The control of the Continent would then pass completely into the hands of France and Prussia. Belgium having disappeared from the map, Holland would soon follow, and it is difficult to suppose that Scandinavia would long escape the maw of either Prussia or Russia. Austria would hold together just as Turkey has held together—just so long as the three great powers could not agree as to the manner in which it should be divided; and of all the nationalities, or rather races, which it contains, probably not one is possessed of sufficient strength and vitality to furnish a substitute for the curious mediæval contrivance called the Austrian Empire. Russia is assuming too heavy a load of responsibility in the East, is undertaking the civilization of too many barbarous races, and the reclamation of too much wilderness, and has too great a task before her in the reorganization of her own institutions, to make it probable that for generations to come she will say "Ye [illegible] to say "No" when two such powers as France and Germany bod- [illegible] y of s [illegible]s." The world has probably not yet seen, indeed, a political [illegible]anized" [illegible]uch *weight* as Germany will be when consolidated and "Prus- [illegible]

The independence of England, when completely shut out from Continental politics, and stripped of all the prestige left her by the wars of the empire, and with Ireland still discontented, and a heavy burden on her shoulders in the shape of colonies and provinces, and with the part of pure seamanship in naval warfare greatly reduced, would rest largely on the forbearance and morality of the Continental powers; and although all civilized powers, doubtless, have within fifty years made great advances in morality, it is impossible for any calm observer to say, after what has been witnessed in Germany and France within the last ten years, that the corrupting influence of the possession of great material strength on the mind either of nations or individuals has so far diminished as to render it safe to trust much to the mercy or honor or justice of any government. Anybody who reads Louis Napoleon's last address to his army will find in it, except the comical reference to "liberty and civilization," nothing which Julius Cæsar might not have put into a similar document.

Most of these considerations are evident enough, as one may see by the press, to the minds of most thoughtful Englishmen. The number of those who like to contemplate the future of the kingdom, supposing things to go as they are going, diminishes every year. Hope, in short, which is by far the most important element in national vitality, makes less figure in English politics every year, though nobody doubts that the nation, if put to it, is capable of making as tremendous efforts as ever. But then, there stands in the way of a vigorous or independent foreign policy the fact that as Europe now is no nation can play a first-class part in European politics, or even be sure of preserving its dignity, without a large and highly organized standing army, or, at all events, a militia or reserve, so drilled and disciplined as to be capable of acting against a standing army at short notice. The English army, as at present organized, counts for nothing in European politics. Whenever it has made a figure in Continental wars, it has either been employed against a foe most of whose attention was directed elsewhere, or has been surrounded by a powerful body of auxiliaries, and in days when the armies of all the great powers were comparatively small. Now, when three powers at least can mobilize nearly a million of men, it is almost ridiculous for England, whose disposable home force does not reach over forty thousand, to expect to exercise any serious influence in European politics; and Englishmen themselves see it, and, curiously enough, the aristocracy, once the most warlike and aggressive portion of the nation, are now the meekest and most resigned to a peaceful and obscure rôle. The reason is that the reorganization of the army, so as to make it rest on the nation, and put into it the whole of the national force, would involve the introduction of the conscription, to which the people would not submit, unless it were democratized—that is, unless the officering of it, like the civil service, was thrown open to all classes, and ceased to be, as at present, a monopoly, confined to men of wealth and good family. The army and the church are the only two institutions now left in the hands of the upper classes, in which their younger sons can find a genteel livelihood; and they vastly prefer, if they have to choose, to have England retire from Continental politics to consenting to a change such as the reorganization of the army, which would in reality do more to invite "the transfer of power" than anything which has yet occurred. Probably nothing would do so much to convince the middle and lower classes that they are really the nation as to see men of humble birth riding at the head of regiments, and wearing decorations, and seeing all classes serving in the ranks—a sight which England has not beheld since "The New Model Army" made its chief the foremost man in Europe.

SOME OF THE CAUSES OF THE WAR.

In his "Idée Napoléonienne," Louis Napoleon quotes from his favorite history of the First Empire, Bignon's, the following: "One day people will ask, Why did Napoleon, in the last six years of his reign, show himself so pitiless towards Prussia? The reason is: Prussia was the power that harmed him most, for she compelled him to fight and destroy her, while his desire was to extend, to strengthen, and to aggrandize her." We do not know whether the author of the "Idée Napoléonienne," who has now with so much vehemence drawn the sword against Prussia—old, infirm, and generally passionless as he is—has either the desire or the ability to treat her pitilessly and to destroy her; but—granting Bignon's view to be correct—we cannot fail to notice the analogy between the Prussian wars of the two imperial reigns arising from the fact that Napoleon III., too, sees himself compelled to fight Prussia after some endeavors "to extend, to strengthen, and to aggrandize her."

The object of Napoleon I. in giving Hanover to Prussia, after Austerlitz, was, as Bignon expresses it, "to ensure, by her aid, the immobility of Russia and Austria, to give to the Continental system an irresistible development, and thus to force England to make peace." Besides, Napoleon received some territorial compensations for what he took from the King of England and gave to Prussia. The object of Napoleon III. in conspiring with Bismarck for the aggrandizement of Prussia—by the absorption, among other territories, of the same Hanover, as chiefly required for her consolidation—was to bring about a final disruption of Germany, which would render her powerless to resist the natural expansion of France—as the French call Cisrhenan conquests—whether at the expense of Belgium or of Prussia herself, should a protracted war have crippled her resources equally with those of Austria. And, low though our opinion be of the unselfishness of the living Napoleon, we cannot refrain from acknowledging that his intentions concerning Prussia were more sincere than those of the great conqueror. For the latter aimed at universal empire over Europe, and could therefore tolerate no respectable power besides his own, while the former would be fully satisfied to be acknowledged mightiest among the mighty.

Prussia compelled Napoleon I. to fight her by refusing to be his abject slave. She has compelled Napoleon III. to fight her by her victory at Sadowa. This victory by its suddenness has frustrated the schemes of French expansion, and made Prussia almost the equal of France in power. It has eclipsed Sevastopol, Magenta, and Solferino—which were the dearly bought compensations in *gloire* for endless sacrifices of *liberté*—and partly effaced even the remembrances of Jena and Wagram. It has aroused the vanity of the French to a degree which makes them both restless and restive. The trophies of Miltiades will not allow Themistocles to sleep; from the day of Sadowa France has enjoyed no rest. She has actually begun to doubt whether she is after all *la grande nation*. A great revolution and great victories long ago procured her that glorious title; she sees it now rapidly becoming vain-glorious merely. She must have new victories or else a new revolution. Napoleon has not been slow in comprehending the changed situation, the changed temper of France. And where revolution or war is the alternative, he cannot hesitate in his choice. While playing or struggling with an incipient revolution, he has prepared for war—and Europe will be drenched in blood. It is idle to speculate how far, in throwing down the gauntlet to the rival of France, he is actuated by motives of personal interest, looking to the preservation of his dynasty, and how far by feelings inspired by the interests of the nation whose ruler he is. Whether equally imperative or not, regard for the safety of his throne and regard for "the honor of France" command him to fight.

Among the personal considerations looking to the preservation of both throne and fame, we may mention the advantage, so obvious under the actual circumstances of the Second Empire, of breaking by a powerful series of warlike deeds the chain of historical remembrances now uppermost in the mind of the French people. The seventeen or eighteen years of the personal rule of Napoleon, beginning with the *coup d'état* of Dec. 2. 1851, form a connected period of usurpation and hypocrisy, preceded by three years of wire-pulling and presidental betrayal of trust. This period is that which the generation that knew the reign of Louis Philippe and the Revolution of 1848 is constantly contemplating and meditating about as the worst part of their country's history in this century; as a long-stretched inglorious present to which the late imperial concessions, crowned by a plebiscitum of a strangely dubious character, seem to form a continuation rather than a concluding and reconciling epilogue. Nothing would be more apt to impress upon the recent constitutional change in France the character of such an epilogue than the suddenly following opening of a new series of events, sufficiently dramatic and heroically tragic to strike the imagination of the people with the idea of entirely novel, grand performances, with the impression of a new era opening in the history of their country. Should speedy victory perch upon the imperial eagles, the new era would be hailed, as such, with all the rapture of national vanity; should a long war with varying success ensue, the multiplicity and intensity of the new impressions would the more easily cast the late past into comparative oblivion. In either case, Napoleon would appear in the new light of a champion of France in a grand contest with an envied rival.

Nor have the provocations to hostility, on the part of Prussia, been slight in the eyes of Napoleon. Not only has she dared to conquer beyond all measure compatible with "the honor of France"; not only has she used and abused her victory exclusively for her own benefit and without any regard to the claims and remonstrances of the monarch who at first aided her by his council and connivance; but she has also crossed and baffled some of his most favorite schemes in an almost atrocious way. It was he who proclaimed himself the protector and regenerator of the decayed Latin race, from the Pontus to the Pacific. It was he who brought about the union of Moldavia and Wallachia in the shape of an all but independent Roumania. It was he who worked with Cavour and fought with Garibaldi for the freedom of Italy, "from the Alps to the Adriatic." It was he who encouraged O'Donnell to revive the ancient glory of Spain on the soil of the Moors and to restore her sway in the Antilles. It was he who erected and defended, as a shield of the Latin race against the Anglo-Saxon, the imperial throne of Maximilian in Mexico. Surely it was a great dream, this universal Latin protectorate of France. And how has it vanished? Excepting Mexico, where it ended in a tragedy, Prussia has turned it into a mockery everywhere. She has placed a prince of her royal house, Charles of Hohenzollern, on the throne of Roumania. She has conquered—at Sadowa—the Italian quadrilateral of fortresses, which her arming in 1859 prevented Napoleon from assaulting, and has surrendered it and Venice to Italy—through his own hands. And now she has arranged to set another Hohenzollern prince on the throne even of Spain. Are not all these provocations, put together, too destructive of the prestige, too insulting to the pride of a Napoleon to be submitted to calmly, to be borne without an attempt at revenge? We presume they have weighed heavily in the scales in which the Emperor of the French lately weighed peace and war.

COLLEGE TROUBLES.

WE publish elsewhere an answer from a competent hand to an onslaught made by Mr. W. W. Phelps, of this city, at the late commencement at Yale College, on "Old Yale" on behalf of "Young Yale;" or, in other words, to an outpouring of the griefs which the younger graduates—that is, those of the last ten years—declare themselves to experience whenever they contemplate their Alma Mater. The trouble in Young Yale's case is that, although profoundly discontented, it is not able, when pushed to the wall, to state in set terms what is the matter with it. It does not like the state of things at the college, but yet finds an apparently insurmountable difficulty in defining the defects of the system of which it complains, and usually ends by demanding the removal of the six Congregational ministers from the governing body as the very least that will satisfy it, although loudly praising the Faculty. To this, however, the ministers and their friends have the ready reply, that the Corporation does whatever the Faculty pleases, and that if anything be wrong, it is the Faculty which is to blame; but the malcontents have praised the Faculty; therefore, etc. Mr. Phelps came near touching what is, we suspect, the seat of the trouble, by complaining that General Grant's son had gone to Harvard, and that distinguished foreigners, including British peers, not unfrequently figured at the Harvard commencement dinners, and that it had distinguished poets among its professors. This gives "M. A." a fair chance for a laugh; but it expresses in a vague and distant way the Young Yale feeling that their university is wanting in "style," and does not maintain satisfactory relations with the culture of the world without. The difficulty it finds itself in is somewhat analogous to that from which doctors escape by telling their patients that they want "tone." It would like to have the atmosphere of the place improved, and cannot think of any way of doing it so good as expelling the ministers, though if you ask it what it means by "atmosphere," it is puzzled a little. "M. A." probably renders Young Yale some service by mentioning the defects of the college on the literary side, which, of course, are due to want of money; and probably, if the whole matter were thoroughly investigated, it would be found that most of the complaining graduates could be satisfied if the general fund of the college were larger, and it could indulge in more professors.

It is not the graduates of Yale, however, who alone are complaining about the colleges. These institutions are a source of profound trouble and disappointment to many of the newspapers, and especially to our esteemed contemporary the *Tribune*. That paper excited a good deal of merriment among some of its readers a few weeks ago, by complaining, *apropos* of "commencement exercises," that the youthful orators would persist in writing and talking about things they did not understand, or only half-understood. This was an unkind cut, because, unless we are mistaken, as we have never been before, we have discovered nearly every week distinct and well-defined marks of the undergraduate hoof in the columns of some of our daily contemporaries. Some of those profound views on international law, social economy, foreign politics, canon law, and ecclesiastical history with which our journals fill the stomachs of their readers we have certainly met with before now in "themes" and other compositions, which bear to the commencement oration the same relation that the calf bears to the full-grown ox, or the blossom to the fruit. The *Tribune* has many good points; but we are sure that, on reflection, it will not claim credit for exact knowledge, or a thorough comprehension of every subject which the necessities of journalism compel it to discuss, and will, therefore, acknowledge that the young fellows who undertake to reveal the secrets of the universe at commencements are entitled, at least, to forbearance at its hands.

It is not the shallowness of the commencement orator only, however, which is complained of, but the "bloodlessness" of the professors, who are suspected of keeping down the glow and fervor of the undergraduate nature, or, at least, of preventing it from finding vent in the exercises through which these gentlemen are supposed to be acquiring the art of expressing their thoughts in good English. We gather from one article on this subject in our contemporary's columns, that a fiery and ornate rhetoric is in some mysterious manner the result of richness of blood, and that anybody who does not admire it must be an unhealthy person, unfit to take charge of the instruction of youth. If we remember rightly, a doctrine somewhat similar was preached in the *Atlantic* a month or two ago, by Colonel T. W. Higginson, who there and then went into a kind of mild ecstasy over the rhetoric of the Hon. P. L. Slider, M.C., which he declared it did him good to hear, as, although of the spread-eagle variety, and strongly charged with gunpowder and whiskey, and produced with much bodily effort, it was, nevertheless, a sign that Slider and his kind were fresh, vigorous, and healthy, and was going to make the world somehow or other a great deal better. In other words, Colonel Higginson laid it down in pretty plain terms that blatherskite was a healthy symptom; and, so far from being repressed, was to be encouraged or borne with for the sake of the inward and spiritual grace which it indicated; and he hinted plainly that anybody who expressed dislike of blatherskite, and desired Slider to come down off the stump, shut his sonorous mouth, and betake himself to some productive industry, was a cold, malignant, bad person, who would probably not hesitate to rob a church or defraud a widow.

Now, we differ on this point from the New York *Tribune;* we differ, too, from Colonel Higginson, though we admit that differing from Colonel Higginson exposes one to the suspicion of being of a still more cruel, not to say diabolical, nature, than if he were differing from the *Tribune*. Nevertheless, in the face of these two worthies we have no hesitation in assuring graduates and undergraduates of all colleges, male and female, that blatherskite, whether written or spoken, is a bad thing; that far from being a health-giving eruption, it is a symptom of disease; that so far from being a sign of rich or vigorous nature, or of very red blood, it is simply a sign of ignorance and barbarism. The reason why the Hon. P. L. Slider talks blatherskite, and works himself into a perspiration while he is doing it, is that he does not know any better. Spread-eagle oratory is not peculiar to "new countries," and is not a mark of a vigorous national life. It is simply a mark of want of culture. If you give a French country *maire* a little practice in public speaking, put him on the stump, and tell him to discourse of the destiny of France, he will treat you to just such harangues as you hear from Mr. Slider on the Fourth of July. If you ask an English mechanic to declaim at a debating club on the rights of labor, or the evils of primogeniture, his rhetoric will exhibit all the flowers from which Colonel Higginson draws such pleasant inferences as to the fertility of the soil. The Attica of Pericles and Demosthenes was in every sense of the word a "new country"—far newer than any State in this Union is now, or has ever been: but this did not prevent the Parthenon from being a perfect building, the Philippics the despair of the modern orator, and the style of Thucydides as good a style as the world has yet seen. Nothing can be more preposterous than the notion which associates rant with vigor or earnestness, or excellence of form with weakness or apathy. The best work of the world is done by culture, and has always been done by culture, and will always be done by culture; it is amongst the uncultivated that most apathy, and indifference, and obstructiveness are now found, and have always been found; and one of the marks of culture is the careful adaptation of means to ends, or, in other words, skill in the use of one's weapons. It is the duty of professors who teach the use of language to teach young men first of all to be accurate and truthful—that is, not to say five when they mean three, and to avoid discoursing on stumps, in lyceums, and in monthly magazines, on themes they do not understand, inasmuch as this is a species of imposture which hurts the soul; to cultivate clear thinking as the essential condition of clear writing, and therefore to avoid situations in which they will be called on to rant, or talk against time, or maintain paradoxes, for the amusement of a crowd; to remember that the world has always been happy and prosperous in proportion as it has been governed by reason and not by noise; that, next to tyrants, the worst foes of mankind have been talkative and maudlin demagogues; that men and women are as much responsible for the use they make of their tongues as of their other members; and that the great difference—the greatest—between man and the lower animals is, that he uses his voice to express thought, they theirs to show how they feel.

Correspondence.

YALE COLLEGE AND ITS GOVERNMENT.

TO THE EDITOR OF THE NATION:

SIR: The question whether the graduates of Yale College shall be admitted to a part in the management of that institution, and, if this shall be thought expedient, in what form the change should be made, has become a topic of lively controversy, as the proceedings at the late Commencement at New Haven sufficiently prove. Allow me to set down a few observations bearing on this subject, and, for the sake of brevity and clearness, let me place them in distinct paragraphs.

1. This proposition has met with no resistance from the existing authorities of the college. It emanated from President Woolsey, the head of the Corporation as well as of the Faculties. Before he made the suggestion in the *New Englander*, no demand of the sort was ever made, and, it may be added, no complaint on the subject was ever heard. An able writer (in the *New Englander* for April, 1869) brought forward objections to the plan of electing trustees by votes of graduates, but he did not resist the admission of graduates to the Corporation by a method that he considered less likely to breed faction and to be attended by other mischievous results. Of the committee whose report was discussed at the recent alumni meeting, Professor Porter did not express himself in opposition to the proposed change, but preferred to leave the question entirely at the disposal of the alumni themselves. Mr. Evarts and President Stillé declined to recommend the adoption of the plan first suggested by President Woolsey. There is no ground, therefore, for the supposition, if there be any who entertain it, that the Corporation or the professors have exerted themselves in opposition to the effort to bring the alumni into a more active connection with the administration of the college. They probably have their opinions, and, perhaps, a variety of opinions, as to the just and feasible method of accomplishing the end; but the end itself they have no wish to defeat.

2. It is a matter for regret that the resolutions calling for the appointment of a general alumni committee, and looking to a permanent organization of the graduates for the purpose of aiding the college and influencing its policy, were postponed until next year. Had not the previous discussion been so prolonged as to weary the meeting, and had the interpretation that would naturally be put upon a vote of postponement been anticipated, the decision would probably have been different. It is to be regretted, also, that the friends of the measure did not appear at the proper time and place to oppose the postponement, instead of denouncing, when it was too late, the doings of a meeting at which they might have been present to maintain their cause. But the point to which I wish to call attention is, that the resolutions came from the resident alumni com-

mittee, which is largely composed of professors, and they were introduced by Professor Porter.

3. Reflections upon the clerical portion of the Corporation on account of alleged faults in the administration of the college—I say nothing of the propriety of such attacks as a question of taste—are unjust. These attacks are coupled with earnest laudation of President Woolsey. But President Woolsey is the leading and most influential member of the Corporation. He has never been thwarted or hindered by that body in any of his plans and measures for the improvement of the college. He has, moreover, himself, on every occasion when he has suggested a change in the constitution of this body, taken pains to declare his full confidence in the qualifications of the clerical members for their office, and given emphatical testimony to the falsehood of aspersions cast upon them. He founded his suggestion of a change on one consideration, and one only—namely, that six of the alumni would be likely to be more efficient and useful than the six *ex-officio* members from the State Senate. It is well known that in Yale College the president and faculties have a larger measure of practical control over its management than is the case in most other colleges; and I believe that the growth and prosperity of the institution have been very much due to this fact. Censure of the clerical members of the Corporation is, therefore, misplaced.

4. The clerical members of the Corporation are the representatives of founders; they have guarded the funds of the college with unexampled success; they have administered its affairs, on the whole, with unsurpassed wisdom and efficiency. If anybody supposes that by hard and contemptuous words they can be moved to abdicate their rights, and hand over the institution which they and their predecessors have carried to the present condition of strength and usefulness, to persons who think themselves wiser, he will learn his mistake. Such a course on the part of the advocates of "reform" will be much more likely to awaken among the sober-minded graduates of the college, who are scattered over the land, a spirit of indignation and of resistance which will baffle, for the time at least, even the reasonable hopes of change. The alumni should come into some relation to the college, by which their counsels can be heard and their influence felt in all the weight that is due to it; but this desirable consummation will not be furthered by flippant reflections upon the present legal guardians of the college, or by futile attempts to dislodge them from their places. Good sense, disinterestedness, and education are not confined to cities, nor are they the exclusive possession of young lawyers.

5. The analogies of Harvard College should be cited with caution in considering the case of an institution which, though like it in many respects, is still different in its constitution and traditions. The Board of Overseers at Harvard is not the primary governing body, but a body possessed of inferior authority. The President, with the close corporation of five persons, initiate measures and appointments, and hold the government mainly in their hands. The choice of the Overseers by the alumni was a means of separating the college from what were there the positive evils of a partial subjection to the State. Besides, Harvard has the advantage of having a great part of its alumni in its immediate neighborhood, with the means, consequently, of keeping up an acquaintance with the condition and wants of the college; and many of these are engaged in literary pursuits. In each of these particulars Yale is differently placed. Her graduates are dispersed throughout the Union. Many of them are closely identified with other colleges, and, for this reason, obviously disqualified from sharing in the government of Yale. Facts might easily be given to illustrate impressively the nature of this disqualification. I make these remarks simply by way of caution to the individuals who seem to think that it is only requisite to ascertain what has been done at Harvard, and who thus find their satisfaction in inapposite precedents.

6. It is to be hoped that these *quasi*-political discussions—discussions about the structure of the government—will not withdraw attention from the immediate necessities of the college. There is room for improvement, and suggestions in this direction may be made and urged, even before the projected change in the government is effected. Professor Dwight, in the *New Englander* for July of this year, has pointed out the need of a work of unification, by which the various schools and departments of the university shall be brought into better connection and relations with one another. To this end it is necessary that the time and attention of the president should not be to so great a degree absorbed on the undergraduate department, but that he should preside over the university as a whole, making the interests of each and every department an object of equal care. I venture to point out the need of another improvement, and the way in which it may be made. Yale College is strong in philology; it is strong in science; the school of theology has made rapid progress of late; the art-school has been set in operation. Notwithstanding the criticisms which are freely thrown out in various quarters, the last fifteen years have witnessed a noble progress at Yale—a progress of which any university might be proud. Where Yale is not so strong as it should be is in modern literature, English and Continental. There is need of a reinforcement in these studies by an addition to the number of professors. In fact, an increase in the number of professors, in other branches also, in the undergraduate department, is a prime necessity. It must be refreshing to the little band of hard-working professors to be publicly lectured by youthful graduates upon the duty of seeing more of the students individually and cultivating the society of their pupils! But I promised to say how the improvement in question may be made. It is by an increase of the rate of tuition. If fifty dollars were added to the present rate (which is only ninety dollars), twenty-five thousand dollars would be added at a stroke to the income of the college. If it were deemed requisite, ten thousand dollars of this amount might be set apart for the relief of students who are not able to pay the additional sum. This would pay the fifty dollars for two hundred students, and leave a fund sufficient to support, at the present rate of salaries, five new professors. The departments of history and modern literature might thus be strengthened; and I do not believe that a student would leave Yale, and I doubt whether a student would be deterred from coming to Yale, in consequence of the change. It is strange that a college which urgently needs more professors and cannot adequately support such as it has, refuses to charge a great body of students, who have abundant pecuniary means, more than a fraction of the cost of their education, when it could (comparatively speaking) enrich itself, without adding a feather to the burdens of the class of students who are poor. I presume to make one more recommendation. By reference to the annual catalogue, it will be seen that the Sheffield Scientific School is one section of what is called the "Department of Philosophy and the Arts." There is a second section, described on page 62 of the catalogue, the section of "Philosophy, Philology, Mathematics." This is a post-graduate or university department, but, unhappily, it has little life, except on paper. It should be developed and put in efficient operation. It is true that the work of the professors in this field would be, for the present, mostly a labor of love, and a work for which they have little time to spare. But the importance of organizing this branch of the university is great enough to counterbalance all difficulties and objections. If courses of lectures by Professors Whitney, Hadley, Porter, and others were established, and the fact widely advertised, so as to be brought to the knowledge of graduates of other colleges, of teachers, and the public generally, no one has a right to say that success would not follow. The example of the Sheffield Scientific School shows what may be done where there is faith, and faith attended by works—by energetic efforts.

These are some of the channels through which improvement should be sought; and they are preferable, as I humbly think, to sensational devices which have been recommended—including that of running after President Grant's son, and that of securing the presence of titled foreigners at the family festivals of Alma Mater. Yale has had a worthy history. It has had, and still has, as large a proportion of qualified and successful teachers as any other similar institution. And of these, many of the most eminent, let me add—as is also the case at Harvard—have been selected in their youth and have grown up in the college. The names of Day, Silliman, Kingsley, Fitch, of the former faculty; such names as Woolsey, Hadley, Whitney, among the active instructors to-day, prove the assertion. If the management of the college hereafter shall be as good as it has been, on the whole, in the past, the graduates will not have cause to feel ashamed of the institution where they were trained. M. A.

MR. FESSENDEN'S SUCCESSOR.

To the Editor of the Nation:

Sir: The contest for the United States senatorship, shortly to be vacant in Maine—the successful candidate for which will be Mr. Fessenden's successor, since the present occupant of the chair was only appointed until the expiration of the term—has about it such peculiar elements, both political and personal; there is so great probability that it may be an early step in the organization of a reform party, destined, sooner or later, to control the legislation and reform the politics of the country, that it may be profitable, with your permission, to review the previous career of the several candidates for the nomination, and to give a summary view of the present aspect of the struggle.

Mr. Morrill, who was appointed to fill the vacancy left by Mr. Fessenden's death, is the most prominent candidate for the succession, if by that expression we may understand that he has the greatest chance for success. He is a man of fair but not remarkable ability; an early, firm, and consistent Republican, when to be Republican was apparently to belong to a hopeless minority; a Republican right or wrong—that is to say, one whose highest political idea appears to be a desire for the success of the Republican party rather than for the success of the political theories to the consistent advocacy of which the Republican party alone owes all the success which it has ever had, and all the good reputation which history may accord to it. Though we may be mistaken in our estimate of Mr. Morrill, we certainly do him no injustice when we say this *appears* to be his idea, and the record of his votes in late Congresses affords fair ground for the opinion. Mr. Morrill has represented his State in the Senate for several terms, being defeated at the last canvass by Mr. Hamlin—a result which was rather due to the superior "management" of his competitor than to any want of confidence on the part of his constituents. For the rest, he is a protectionist, and has certainly given no public indication that he approves of civil service reform.

A second candidate is Mr. Israel Washburn, formerly member of Congress, afterwards, for most of the war, a most energetic and successful governor of the State, now for several years collector of Portland, one of the best offices in New England. He is of the "Washburn family," which has won such various distinction all over the Union. Mr. Washburn is considered, by those who know him best, decidedly the ablest member of this remarkable family. He is, at any rate, a man of marked ability and legislative experience, and, so far as these qualities go, would be no unworthy successor even to Mr. Fessenden. Unfortunately, however, he, like Mr. Morrill, is not in active sympathy with the new ideas which are now to give meaning and vitality to politics. It is believed that Mr. Washburn is stoutly opposed to that change in our system which we call revenue reform, and he has never declared himself in favor of a reform in the civil service. The gravest objection to his candidacy is, that he is said to be not the candidate of the people, but of a ring; for even in the Puritan State of Maine the Republican party has become so demoralized by long success as to share even this last ignominy of politics. Whether this is true or not, it is admitted on all hands that Mr. Washburn is not the spontaneous choice of the majority of the Republicans of the State.

The third candidate in the Republican party is General Chamberlain, now governor of the State. General Chamberlain's brief career is now so well known to the country, that a brief recapitulation of it only is all that is necessary for our purposes. A professor in Bowdoin College at the outbreak of the war, he early received the position of lieutenant-colonel in a volunteer regiment, rising with rapidity to the distinguished honor of a promotion to general on the field of battle. At the conclusion of the war, General Chamberlain was nominated governor at a convention of the Republican party, against the bitter and hardly concealed opposition of all the wire-pullers of his party. He has now held the office for four terms, and has administered it with such thorough ability and independence that, without wavering in the slightest degree from the firmest Republican principles, he has won the approval of candid men of all parties. During all these years, however, the politicians have waged unceasing war upon him. Not being able to mould him to their own narrow views, they have attacked him in every possible way, and have only been defeated in conventions by their fear of opposing the openly expressed opinion of the majority of the party. At the last convention of the Republican party, Gov. Chamberlain was not a candidate for governor, having retired from the canvass for reasons of his own, and under the advice of his friends. He is, however, a candidate for the Senate, and has friends enough to give him no inconsiderable place in the contest. To render our view of the situation complete, it is necessary to say that the younger members of the Democratic party of Maine, composing the majority of its last State convention, have publicly declared their willingness and their wish to accept Gov. Chamberlain as an independent candidate for governor, if he would only accept such a nomination. Hitherto this flattering offer has been declined, although it carries with it apparently the certainty of an election to the United States Senate on an equally independent platform.

Such are the three candidates for Mr. Fessenden's succession in the Republican party. We mention no Democrat, it being admitted on all sides that the choice must be made from the names which we have mentioned. On the one hand are two old politicians, who may be said to divide between themselves all the party organization of the State—Mr. Morrill, from his long and intimate connection with State politics, having a very powerful body of adherents, among whom are some of the most astute politicians in the State; while Mr. Washburn, aside from the very considerable force which, in virtue of his office, he has at his command, is also understood to have the potent alliance of Vice-President Hamlin—a man who has hitherto been the great political power of the State.

The situation, it will be seen, is somewhat peculiar. Here are three candidates, against whom little can be urged on the score of character or qualifications, and in view of such a state of affairs it would certainly seem that the chances for Chamberlain's success were decidedly few. All the "organization" of the party is against him; all the "war-horses" and wire-pullers are opposed to him; and there is not a single member of Congress who will dare to declare himself in his favor. In spite of all these disadvantages, his prospects are by no means unfavorable. This will not seem strange to any philosophical observer of politics since the happy conclusion of the war. The times have changed, and we change with them. The questions which now divide intelligent and thoughtful voters are very different from the vexed questions of 1861 and 1869. The division line between honest Republicans and honest Democrats is at last a vanishing line. The issues upon which the Republican party was originated, for which it fought its fight, and for which it will always be gratefully remembered by the country, are now settled, and the other issues, which are the questions of to-day and to-morrow, have nothing whatever to do with the principles of either the Republican or the Democratic party, as they have hitherto been stated. What holds together the Republican party of to-day? Does anything else than the memory of past successes deservedly won, the force and power of a complete and thorough organization, and a frantic and desperate desire to retain possession of the offices which it now holds? What is the Democratic party fighting for? Is it actuated by any sincere desire for a reform in the administration of affairs, or is it only struggling for the control of the innumerable offices of whose revenues it has been so long deprived? These appear, at any rate, to be the only aims and ends of these two great organizations, and it is therefore not unnatural that honest and thoughtful men of both parties should be looking about for some common ground upon which they can unite in this emergency without doing violence to each other's opinions. Many young Republicans of Maine—and we know that their ideas are not unlike those of many old and young Republicans elsewhere—have determined, so we are informed by some of them, who, we have good reason to believe, fairly represent the friends of Gov. Chamberlain, upon a simple platform, which may be briefly summarized in these propositions:

1st. That civil service reform is vital to the existence and prosperity of the country.

2d. That tariffs should be arranged with a view to the collection of revenue only.

3d. That special legislation of all kinds should be absolutely prohibited.

Upon such a plain declaration of principles, the friends of Gov. Chamberlain may reasonably hope to unite all honest men who believe in these ideas, and for such a platform there can be no doubt that a large majority of the Republicans of Maine would vote if they could only be emancipated from partisan dictation. It has been said that the State of Maine fairly earned the motto of its coat-of-arms, "Dirigo," in being the first State in which the Republican party was successfully organized. Let us hope that it may renew its claim to the device, in taking the first active and successful steps to the formation of the great reform party of the future.

M. M.

PORTLAND, July 20.

PENNSYLVANIA IDIOMS.

TO THE EDITOR OF THE NATION:

SIR: Your literary note on p. 56 of No. 265, and some other notices of local words which have occasionally appeared in the *Nation*, have raised the hope that you will some day, in a more serious article, warn your readers of the importance of losing no time (too much has been lost already) in gathering up the fragments that remain of the ancient speech of our fathers. It is a work in which every one can assist if he will but be accurate, confine himself to what he hears, and give us, beside the meaning, the exact habitat and pronunciation of the word. In this last will probably be found the greatest difficulty. No system of phonetic spelling has yet been devised which is quite satisfactory, and in this country, where there is such variety in the vowel sounds of different "sections," the difficulty may be greater even than in England, where some of the very best authorities are now at work on the problem. All that I would venture to do is to call the attention of the excellent philologists who sometimes write for the *Nation* to the value of the material which, for want of collectors, we are in danger of losing.

Many of the words which the writer in the *Educational Monthly* whom you quote ascribes to the Scotch-Irish settlers of a certain portion of the Susquehanna Valley are by no means peculiar to that region, but I have been familiar with them, from my youth up, in Philadelphia and in Burlington, N. J., both settled in great part by English Quakers.

"Cot-betty," not "cot," was what our old cook called us when we bothered her in the kitchen—perhaps "quean" had too opprobrious a meaning, and "betty" was simply feminine, without being necessarily bad. "Mosey" I have often heard; "piece" never, in the sense you give. "Parcel," is not unusual here. "Mammock" is new to me, though the dictionaries have it. "Infare" I never heard; "flitting" only amongst the North-Irish and the Scotch, it does not belong to our dialect. "Scutching," "miching," "little noon," "big noon," are unknown to me, except the first, and that only in one family. "Nan" was not infrequent when I was a boy, but it has lately become obsolete, or very nearly so. "Hippen" does not belong to us. "Belly-guts" still survives. (Your *belles-gouttes* is very ingenious.) "It don't signify" is pure Philadelphian. So is "saddy," though I never saw it spelt before. I remember once asking my mother what it meant, and her reply, "save ye," but I have since learned that the more plausible an etymology is, the more likely it is to be false. Possibly the "*salve præceptor*" of the schoolboy had something to do with it—we stuck to our Cordery pretty late in this slow place. If "*salve*," however, was generally a word of salutation or of parting, yet it sometimes did have the effect of a "God bless you," as to one sneezing, for example. "Nesh" is old English—"for love his herte is tender and neshe" (Chaucer, Court of Love)—but I never heard it used here. "Brash" I have met with amongst farmers in some parts of the interior of the State, not in the city. "Chellers" I know not. To "ruck up" is common here; so is "fouty." See the latter in Todd's Johnson, syn. "despicable." The definition of "ruck" n. s. *Ib.* is also to the point, and that convenient little book, "Jenkins's Handy Lexicon," I see also gives the adjective, "rumpled or wrinkled." To "sock" is certainly "to hit with a ball," and is the only single word in use in these parts, as far as I know, to express this action.

If some competent person, or say some society, will undertake to receive the contributions of word-collectors, a good deal may be done. It will be necessary, especially in large towns, to distinguish carefully between the new-comers and the descendants of the first settlers. The unadulterated Philadelphian, for instance, is not so common as he used to be, but I believe that I can detect him and his inherited idioms, without any doubt. T. S.

PHILADELPHIA.

Notes.

LITERARY.

DR. D. G. BRINTON's article, in the *Bibliopolist*, on the ancient phonetic alphabet of Yucatan, has been reprinted by Mr. Sabin in pamphlet form. It is valuable as containing the alphabet of Bishop Landa, which, imperfect as it is, seems destined to prove the key to the inscriptions and manuscripts in the Maya language, the former of which abound almost inexhaustibly in the peninsula. We have also received from Dr. Brinton a copy of M. H. de Charencey's "Attempt to Decipher a Fragment of an Inscription at Palenque," extracted from the first volume of the "Actes de la Société Philologique," to the importance of which Dr. Brinton calls attention in his own brochure. It is, in fact, a fine specimen of scientific and critical interpretation, and if the result reached is sound, it fixes the antiquity of the monuments bearing the inscription—an antiquity much less than might be supposed, considering the convulsions of nature to which the cities of Yucatan were subjected. "Palenque's period of splendor," says the French author, "we may be sure goes back no farther than five or six centuries before the Spanish conquest." M. de Charencey's views of the origin of the American races, which he seems to intimate will shortly form the subject of an elaborate treatise, will be looked for with interest, based, as they will no doubt be, on philological deductions.

—Virginia has been a not wholly agreeable spectacle since the close of the war, but the conduct of her young men in filling anew her colleges must have given real satisfaction to all who have observed it. We count it not a bad symptom, either, that fewer of them came North to be educated; and though they or their parents may have hoped they would thus be guarded against Northern ideas, there could not be, we all know, a more harmless illusion. Gen. Lee's College, and the University of Virginia, and the College of William and Mary, are co-workers with Yale and Harvard, distinguishable only on the scale of efficiency. The oldest of the three, the College of William and Mary, being an Episcopal establishment, and a sort of "seminary of ministers of the Gospel," according to its foundation, is least frequented. Its vitality, however, under repeated reverses, has made it remarkable, and might easily excuse a bequest from one who had no particular sympathy with its sectarianism. An interesting sketch of the history of the College from its commencement in 1693–1700, has been published by Messrs. John Murphy & Co., of Baltimore, from which it appears that its main building has been three times destroyed by fire—in 1705, 1859, 1862—and as many times restored on the same site and with the same walls, the original plan of which was Sir Christopher Wren's. Their British Majesties bestowed upon the College, with other gifts, twenty thousand acres of land, in consideration of an annual payment, to the Governor or Lieutenant-Governor of the Dominion, of two copies of Latin verses; and so many liberal benefactors followed the royal examples, that in 1776 the College was the richest in America. The library that was consumed in 1859 contained "many rare and curious books, with some manuscripts, chiefly presented by Kings, Archbishops, Bishops, and Governors;" and with the cabinet of apparatus were lost instruments more than a century old, the gift of the Colonial House of Burgesses. During the Revolution the College was forced to suspend, in 1781, and before the siege of Yorktown its buildings were occupied alternately by the British, French, and American troops. Eighty years later it again suspended, on account of the rebellion—ninety per cent. of its students imitating Bishop Polk in taking the field. The Confederates used it while they might as a barrack and a hospital till Williamsburg was evacuated in the peninsular campaign (May, 1862), and it appears certain that some Pennsylvania troops who then held it, and suffered themselves to be surprised by the enemy, on recovering their ground set fire to the College, as if in revenge. Not even did this put an end to it; and we are led to infer that it has now as many pupils as ever it had, and, thanks largely to Northern justice and generosity, a better equipment. It still adheres to its charter in employing only six professors, whose chairs, it may well be imagined, have undergone some strange alterations in name in order to keep pace with the growth of science. While eminently successful in turning out Presidents and statesmen, the College was less fortunate with its Indian protégés, to whose instruction it was, like Harvard, partly dedicated. "Abundance of them used to die," often, as was surmised, "for want of proper necessaries, and due care taken with them," and the rest relapsed "into idolatry and barbarism." Mr. Sibley's Harvard biographies, by the way, will contain the life of one (we believe the only) Indian graduate of that University.

—The literature of the religious press certainly furnishes now and again some things that are amazing. The *English Churchman* last month described the sufferings of the country under the stress of drought, and recommends prayers for rain, and then puts the following question: "Is it going a step too far to regard the national distress in respect of these things as a divine judgment on the nation for having plundered the church of God in Ireland last year?" The *Pall Mall Gazette* points out that there ought to be a more visible connection than this would argue between the sin and the punishment, to the end that the lesson might be the more conspicuous and the good effect proportionately greater. The sin was done in 1869, the *Gazette* points out, and the penalty is not inflicted till 1870. To this the *Churchman* might, however, readily reply, that not only is the *Gazette's* way of treating the subject odious and repulsive by reason of its irreverence, but also is silly in point of sense and judgment. For droughts you must take the summer, and the wickedness of the late summer or early autumn of 1869 must clearly be settled for in the summer next ensuing and not the preceding summer. The suggestion which would probably have then come from the *Gazette*, that a hard winter would have done just as well as a dry summer, the *Churchman* might fairly have disregarded as an attempt to pry into the secrets of the counsels of Providence. What appears at first blush a better point the *Gazette* makes when it calls on the *Churchman* to observe that France, which had nothing to do with disestablishment, has been suffering even more than

Great Britain for want of rain. But how can the *Gazette* know, the *Churchman* may well enquire, that in the latter part of 1869, or winter of 1869–70, France did not do something quite as heinous as disestablishment? Certainly, nearly all her higher clergy opposed the promulgation of the dogma of infallibility, and there is high authority for believing that opponents of that necessary article deserve all manner of roasting.

—Messrs. Tinsley & Co., of London, have reprinted a series of letters written for the *Times* by a gentleman who made for that paper a study of the state of religious thought in Germany. His letters were extremely interesting, and very well worth reproduction, though it is, of course, impossible to say that he is absolutely correct in his conclusions, and easy to see that his subject is one in the treatment of which there is a peculiar liability to mistake. When we hold a religious belief, we are apt to hold it hard, and to overestimate, if not its eternal, at least its temporal importance. Doubtless, a man who looks at Universalism, say, or Ritualism, from the outside, may think that movement a mere eddy in which the Ritualist or the Universalist sees a main current of influence. There are, we suppose, more men to-day than ever before since the Christian era, who are absolutely indifferent, unbiassed, impartial, as regards the claims of the various churches, and who are all but utterly indifferent to all religion. They are not many, however; it is still one of the rarest things in the world to find an observer of religious phenomena who can make of them an unbiassed observation and a colorless report. But the correspondent we mention appears to be quite honest, and there is, at least, some confirmation from other sources of the story which he tells. In brief, he announces that all educated Germans are atheists. Everybody will recollect that, a while ago, a young fellow, named Biland, walked into a church, and, when the clergyman was about to read the creed, shot him. Biland had himself been intended for the ministry, but was extremely averse, as we may imagine, to the pursuit of that calling, and not finding it easy to get a living in any other, and seeing before him no other prospect but preaching, he determined on rectifying and settling his affairs in the manner above-mentioned. On his first trial, he avowed himself an atheist, expressed his contempt of the clergy, and his opinion that their extermination would be well for mankind, but said that, if set free, he would not repeat his attempt at murder, because he had come to the conclusion that to kill one minister only would do no good. Now, the educated Germans, says the *Times* correspondent, differ from young Biland only in not being fanatical. They do not propose to kill clergymen; but that they are unbelievers they avow. "A Christian teacher is to them pretty much as a teacher of Buddhism or Mohammedanism. He is the official advocate of an effete superstition kept up by the authorities for political purposes, and is either an ignorant fanatic or a transparent hypocrite." So the Berliner smokes his pipe and drinks his beer and laughs, and, though he has not a pistol for him, will point you to Pastor Knak, who tells the world that the men of science may say what they like about the world's going round the sun, but he reads his Bible, for his part, and knows better, and "is as happy as a child." The state, in Prussia, is closely connected with the church, and the Prussian school system is made, to a great extent, subservient to the church, so that, our authority says, it is not unusual in some places for four times as many hours to be spent upon religious instruction as upon secular. But when the young man goes to the university, he is taught that all this religious instruction is based upon exploded theories, and he casts off his belief. We are not told what is the result in the case of young men who do not take a university course, but seemingly it is not much different; in Berlin there is a population of 800,000, and there is church accommodation for 25,000, and the churches are not filled. The writer gives it as his opinion that, were the state and the church divorced, the latter would fall into complete contempt. It is apparent that it would not have to fall far. Such being the state of things in the birth-place of Protestantism, the Roman Catholics, of course, exert themselves to catch souls in the rebound, and have good success in tendering to a certain sort of people a thoroughgoing faith in place of continual free enquiry. Fifteen years ago, the number of monks and nuns in Prussia was 960; six years ago, it was 5,259. It is expected, but not, we should think, with probability, that the promulgation of the infallibility dogma will be of injury to the Catholic cause among the Germans, and the more liberal German Catholics opposed it, as we know; but the rationalists tell both parties, and the Protestants also, that they may twist texts as they like, but there is really nothing they can do to make themselves more or less acceptable, for they are alike radically irrational, and with nothing to choose between them.

—Among noteworthy scientific works of recent publication in Europe, we may mention, first, "Travels in the Philippine Islands," by Prof. Semper. The author spent seven years of study and research among these islands, whose fauna had already been described by Cuming. Starting with the project of merely filling out some portions left incomplete by that author, Dr. Semper gradually extended the field of his labors so as to include a full account of the fauna and zoölogy of that region. The work, which is to be completed in six volumes, with one thousand illustrations, is published by Kreidel at Wiesbaden. Another professor at Würzburg has written a new work on land and fresh-water shells, in which he acknowledges notable aid and contributions received from Deshayes, of Paris; Matheson, of Marseilles; Roulet, of Toulouse; F. Edwards, London; and Tschermak, of Vienna—all distinguished conchologists. A kindred work is a catalogue *raisonné* of the inland mollusks of Germany, by Carl Kreglinger. A more remarkable book than any of the preceding is on the cephalopods of the Silurian regions, an octavo volume of 480 pages, written in the French language, and published in Prague. The author, M. Joachim Barrande, a distinguished graduate of the École Polytechnique, was for many years tutor of the Duke of Bordeaux, and followed his royal pupil into exile. Establishing himself at Prague, he resided for some time in the imperial palace of the Hradschin, and gave the long and patient devotion of years to his favorite science, geology, for the study of which Bohemia presents peculiar facilities by reason of the remarkable continuity and development of its primitive formations. Drawings of an immense number of fossils discovered by M. Barrande, and the greater part of which were until then unknown, are given in the work, together with descriptions following the chronological order of the strata in which they were found. The cost of the original work—the result of thirty years' labor on the part of its author, and of valuable contributions from other distinguished men of science—is stated to be from 150,000 to 180,000 francs per volume. At such a price it is within the reach of large libraries only, and M. Barrande therefore presents this *resumé* (an octavo of 480 pages), in which the fossils are enumerated and described according to the horizontal or vertical divisions of their origin, thus enabling the student to follow them in synchronistic deposits.

—One of the latest of many histories of German literature is by Hettner. Its first volume was published five years ago, and the third is lately out. The author gives notable extension to the limits and elements we have been accustomed to assign to the famous *Sturm und Drang*—storm and pressure—period. He includes, as within its influence, Herder, Gerstenberg, Goethe (as far as his "Italian Journey") and his imitators; also, "Maler" Müller and Heinse, Schiller (down to 1787), the dramatic school represented by Schröder, Fleck, and Iffland; the novelists, such as Hippel, Miller, Lichtenberg, and Merck, besides the sentimental philosophers and the pietistic enthusiasts. This view of Herr Hettner certainly opens room for discussion; for, although it is very certain that Schröder, Hippel, Miller, Merck, and many others *ejusdem farinæ*, may be properly catalogued under a *Sturm und Drang* title, it is also very doubtful if Iffland, Lichtenberg, and Musæus should be. Wolfgang Menzel somewhere says that Goethe's "Werther" is nothing more than Jean Jacques Rousseau's "Nouvelle Héloïse" in a German dress. M. Hettner appears to entertain the same idea amplified, when he says that Rousseau's religion of nature (*Naturevangelium*) is to be regarded as the radical idea (*die eigentliche Wurzel*) of the *Sturm und Drang* period.

—Two late works equally interesting to the artist, the archæologist, and the historian, have just appeared in Paris. One is: "La Colonne Trajane, interprétée par Wilhelm Fröhner, Conservateur-adjoint au département des Antiques au Musée du Louvre." The other is: "Les Frises du Parthenon, par Phidias. Vingt-deux planches." In 1861 and 1862, by order of the French Emperor, the bas-reliefs of the column of Trajan were all taken in sectional casts, and reproduced by a galvanoplastic process, and then photographed in the Louvre with great care and marked success. These photograph plates again reproduced on copper have been beautifully printed and given with M. Fröhner's work. The pictorial history of Roman conquest in Dacia and of the victorious march of Trajan's legions may now be read with greater ease and far better result than it generally has been by the American traveller in Rome just emerging from fruitless application at the Pontifical post-office for letters from home. In such cases, we have frequently remarked, he generally sought consolation in contemplating the column. The work will be completed in fifty-four monthly numbers at ten francs each. The figures in the plates are one-fifth the size of those in the column, so that every, even the smallest, detail is reproduced. The illustrations of the Parthenon friezes are prepared by the same artists (Arosa & Co.) who print the Trajan bas-reliefs, and are beautifully rendered in chromo-lithography.

PRIMITIVE MAN.*

AN energetic protest has lately been made in France against "popularizing science," and it would seem that the protest was needed in some quarters, and in particular by the author of "Primitive Man." We say this with sincere regret, and against our own expectation. The previous works of M. Figuier ("The Insect World," "Ocean World," "Vegetable World," etc.) were, in spite of many defects and inaccuracies, very readable and instructive. The present work is confused, verbose, illogical, and in many cases misleading, and, aside from the detail of bare facts, presents us with only two points of value: first, the historical account of the various discoveries and investigations upon the subject (though even this lacks a complete reference to their date and manner of publication); and, second, excellent and apparently trustworthy figures of implements of war, the chase, agriculture, etc., which were found with the remains of prehistoric men and animals. Perhaps the beautiful representations of the people themselves and their surroundings are equally worthy; but their style is confessedly "Raphaelesque" to an absurd degree, and there is an almost laughable incongruity between the perfect beauty and grace of the faces and forms of these primitive men and women and their rude, not to say filthy, manner of life. However, the graphic character and real artistic excellence tend to redeem the general dulness of the text. We are aware that many otherwise excellent books are annually printed lacking that most essential feature, a copious index. But we were wholly unprepared for its absence in a work purporting to be written, translated, and revised by competent hands, and issued by a leading publishing-house. We trust the time is not far distant when a good index shall be a prerequisite to the printing, reviewing, and reading of all other than works of pure fiction. Carefully to review a book without an index is, indeed, an impossibility, and in order to test fairly the merits of "Primitive Man" we have spent much time in making a rough index for reference to the principal matters; but lest it be thought that this extra labor has biassed our judgment of the work itself, we will now allude to some of the leading subjects of criticism.

The statements of *facts* are, in all cases, made upon the authority of original investigators, but they are unsystematically presented and few references are given to enable us to verify the accuracy of the translation or transcription. The *opinions* of our author, however, and his conclusions from the facts stated we are compelled to call in question as often unfounded, and still more often as wholly inconsistent with opinions or statements elsewhere given.

Most of these examples occur in connection with the question of the mode of origin of men and animals, to which the author devotes the whole of Chapter I., and to which he refers on pages 39, 82, 183, and 290, although he was not obliged to discuss it, and offers no fact on either side. He "strongly repudiates" the doctrine that man, by insensible transformation and gradual developments and improvements, is derived from some other animal species, and "particularly the ape" (p. 26). He cites Lamarck as the originator of the theory in 1801, whereas it was first propounded in 1775 by De Maillet. The opinions of those who believe in derivative theories he calls the "allegations of certain anatomists imbued with contrary ideas." These "certain anatomists" are demolished by him in the persons of Huxley and Vogt, who are certainly very able and aggressive derivationists, but who also are the least likely to find themselves so easily "beaten" as is stated on page 27. Most of Chapter I. is devoted to quotations from Quatrefages and others against the derivation theory, which is variously styled a "degrading explanation of our origin" (p. 39), "absolutely worthless" (p. 37), and only true in the "false and trivial judgment of those short-sighted savants" "who seek to veil their absurd ideas" of the "genealogical filiation between man and the ape" under "grand scientific phrases" (p. 183). Now all this is simply amusing, since, whether the derivative theory is "false and absurd" or not, nine-tenths of the present leaders in science are inclined to adopt it in one form or another. Moreover, M. Figuier, like nearly all violent opposers of "derivation theories," has not discriminated between them, and hurls his anathemas at all alike. Now the fact is that the hypothesis of Darwin is very different from that of Lamarck, and both differ from that of Owen and Parsons, while these and all others are unlike that of Ferris in that this last supposes the change to be a sudden one and *independent of the ordinary generation*, the creative influx flowing *directly* into germs produced by females of lower species so as to give rise to higher, just as at the beginning it caused the simplest organisms to spring from the womb of mother earth. The necessity for some such hypothesis as this is dimly hinted at by our author (p. 32). We may leave this subject with the remark which will surely be agreed to by all searchers for truth who, like ourselves, are not yet committed to any theory of the origin of species, that if the various derivative hypotheses are as yet unsupported by a single "solid fact" (p. 37), the same is to be said of any other theory as to the manner in which the bodies of men and animals first came to exist. And we may all bear in mind the words of Professor Gray: "In respect to very many questions, a truly wise man remains long in a state of neither belief nor unbelief; but your intellectually short-sighted people are apt to be prematurely clear-sighted, and to find their way very quickly to one or the other side of every mooted question."

Man's primitive condition bears close relation to all theories of his origin, and here, curiously enough, we find the dogmatic assertion that the latter question must now be "decided as far as regards any unprejudiced minds" (p. 38), confronted (p. 39) by the statements that, "at the earliest period of his existence, man could have been but little distinguished from the brute;" "his only food must have been fruits and roots." All of which is an alarmingly favorable opinion for his simial origin. In view of this, it is strange that the author does not call attention to the curious fact that no bones of monkeys have ever been found with those of prehistoric men, excepting in a Brazilian cave, as given by him on page 9, where, however, he fails to notice that the original memoir states that the single specimen, like all existing American Cheiropoda, had *thirty six* teeth, whereas the men of both hemispheres have but *thirty-two*, like the apes and monkeys of the Old World. But, on the other hand, this is only negative evidence, and it may be said that the first men not only lived upon roots and fruits like their apish progenitors, but also, like them, left their dead to decay so that no traces would remain. For it may be remarked that the most conclusive evidences of prehistoric man are the presence of human bones in caves or artificial tombs in conjunction with the bones of fossil animals which had presumably served as materials for funeral feasts.

Nothing can better illustrate the unscientific character of "Primitive Man" than the contrast between the vehemence of our author's opposition to all derivative ideas, and the utter lack of individual opinion upon a question far more easy of solution—the ethnological characters of the Engis and Neanderthal skulls; having no prejudice in this matter, he offers a confused statement of the contradictory opinions of Lyell, Huxley, and Vogt. Some other inconsistencies remain to be noted; the existence of transverse cuts upon bones near the points of insertion of tendons, is thought conclusive evidence of the use of those tendons as thread (p. 93), while presence of cuts or notches upon bones found in tertiary strata is an "accident hardly to be depended upon in proof of the existence of men in those times" (p. 20). Statements equally at variance are made upon page 99 respecting the use of grooves upon arrow-heads. On page 85 is made the astounding assertion that "created beings diminish in size as they improve in type;" but the satisfaction of small people must be damped by the statement at the top of page 238, that "the common sheep, the goat, the horse, and the ass have assumed much more important dimensions" in the "bronze" epoch as compared with those of previous times.

Passing now to what seem to be unfounded statements, we find on page 25 that "man, no doubt, first came into being on the great plateaus of Central Asia and thence was distributed over the globe. The action of climate and the influence of the locality which he inhabited have, therefore, determined the formation of the different races—white, black, yellow, and red—which now exist." The itinerant metallurgists of Lower Languedoc are said to be the descendants of the travelling metal-workers of the "bronze" epoch, whose own existence in early times is not shown by evidence. The paragraph on page 90 respecting the probability of men having used native vegetable food in the "second" epoch is at least unnecessary, in view of their exclusive fruit and root diet in the beginning, and it is equally uncalled for by any evidence that it had not been used in all times. The minute accounts of the burial ceremonies (pages 116 and 200) are not founded upon evidence given or alluded to. Equally unjustified and improbable is the theory (p. 208) as to the production of bronze from a mixture of the *ores* of tin and copper; it is also difficult to see how it can be affirmed that the same material was used over and over, as stated on page 212. It is not shown why the use of *sails* must have depended on a knowledge of *metals* (p. 172); and the origin and development of war is not made clear by argument, although assertions are given upon pages 178, 219, and elsewhere. We are glad to say that the absolute errors and inconsistencies are fewer than what may be looked upon as mere inaccuracies, some of which are doubtless due to the translator, revisor, or printer. But there is nothing in the historical introduction to justify assigning "forty" years as the period during which the ancient chronology has been in doubt. Twenty years is a more correct estimate, dating from the general acceptance of man's antiquity by the English scientific community; while seventy, one hundred, and even one hundred and fifty-five years may be variously given, as more or less stress is laid upon the several steps in the investigation. The use of the word "ape" on page 9 is unfortunate, since every naturalist considers it to signify a tailless anthropoid rather than a Platyrrhine monkey.

---

* "Primitive Man. By Louis Figuier." Revised translation. Illustrated. New York: D. Appleton & Co. 1870. Pp. 350.

Unless we qualify the statement made upon page 15, we must conclude that our first ancestors devoured not only the stag, horse, and rhinoceros, but also the wild-cat, wolf, and hyena. On page 41, we are led to regard the production of fire by friction of two sticks as an accident, and both text and engraving on page 87 indicate the existence of very fair log-sheds in the "second" epoch, whereas log-houses are not mentioned distinctly until the lake-dwellings of the "fourth" epoch are described. There is an uncomfortable lack of definiteness in the allusion made to the "disgusting practices" so common in certain "great cities of *America*" (p. 239); but we leave this and other inaccuracies to be regarded as each reader may please, and pass at once to note one of the serious defects of the work, namely, the lack of any adequate reference to American archæology. Although this work makes allusions to European investigation made during 1869, and although it bears the imprint of a prominent American house, there is no intimation that either author, translator, or revisor was aware of the founding of a museum of archæology in the United States; nor does this volume contain the slightest reference to the labors of the most eminent of American comparative anatomists under whose direction it has been placed, and whose extensive researches into the shell-heaps of the Atlantic coast are familiar to all original investigators of prehistoric remains. This is in itself a matter greatly to be regretted, since it lessens the value which the work would otherwise possess as a compilation of the existing information concerning primitive man. But it also emphasizes the other evidence of the haste with which the book has been prepared. Yet perhaps we are asking too much. The author of an "Ocean World," a "Vegetable World," an "Insect World," and a "Primitive Man," all which have appeared in this country within four years, has never, so far as we know, found the leisure for any original investigation in natural history; so it is really not strange that his productions bear the marks of extreme haste in the diffusiveness of their style, their lack of systematic arrangement, and the illogical character of their arguments, to which attention has been called.

MR. ROBERT BUCHANAN'S NEW BOOK.*

In previous volumes, Mr. Buchanan has published verses which were not precisely good poetry, and which were not very agreeable reading, but which, nevertheless, showed that he had in him something of poetic power. The imagination in them was of the purely sympathetic order, and was unaccompanied by any but a weak and futile way of thinking, and was unaccompanied, too, so far as appeared, by any perception of the beautiful or sense of the humorous. The impression given was of a thoroughly Scotch mind and nature, flushed with a good deal of that hectic which has consigned a great many young Scotchmen to poetry and an early grave. But for all that—though he was conceited and bumptious, pragmatic, unideal, of unrefined taste, not well educated in the higher sense of the word, nor perhaps in the lower—he nevertheless had the genuine insight which sympathy gives into the sufferings and joys, but especially into the sufferings, of certain of the humbler of his fellow-creatures, and he was able to express it in a form that made it effective upon others. A consumptive artisan in an alley pining for green fields; a prostitute in her chamber, with a heart hardened but sore and sick; a fisher-wife, deserted by her seducer; an old couple who lament in their cottage the loss of the son that was to be a scholar—people like these Mr. Buchanan gives us, or used to give us, with real power. It was not, one thought, a very good choice of subjects; but it was, one saw by many signs, a wise enough choice if the man who made it was to do his best, or was to do anything worth while in literature. Nor was it absolutely bad either; if not the best, it was still not bad, and many of the poems produced when our author was working this vein are of value and capable of giving pleasure.

But in the volume before us Mr. Buchanan goes out of the field in which he has had success, and makes exhibition of all his faults and of no one of his merits. A more laborious and ambitious attempt at doing something beyond one's strength—or rather entirely foreign to one's nature—and a more decided failure, is not often made.

The author's intention in "The Book of Orm"—which is styled "A Prelude to the Epic"—would seem to be to state in a poetical manner his notion of the old, old problem of man's relations to God. What does it all mean; how is this important soul of mine, this gifted soul of mine, to discern the inner reason of things and also be saved; why am I thus tormented; is not this deep sadness of mine a proof that I am a being of immortal brightness; why then am I thus sad; wherefore is there death; what is this mystery of sorrow; how comes it to pass that knowledge is vain, that human wisdom is to know human ignorance and confess human weakness; is evil really evil, or is the devil one day to be dead, or else converted; why cannot we look into the unseen; why does not a personal God reveal himself to man, who hungers and thirsts for him, and is not sure that he exists and would so much like to be sure; what is the ocean saying; what mean these eternal stars that shame our puny and transitory race?—these questions, which have been stormed about and wailed about and groaned about by the weaker poets of the last twenty or thirty years as if they were new questions, and have caused public wringing of the hands and beating of the breast and slapping of the brow and dashing back of the hair and avowed anticipations of the tomb, to an extent that most people have regretted to see or hear, are the questions which Mr. Buchanan, in the "Book of Orm," dashes back his hair about, and stamps about, and fixes sad eyes on the stars about, and over which he becomes moody and sulky and resigned and impious and trustingly pious, and all the rest of it.

Such is the weightiness of the book considered as thought. If its manner and method of presentation be considered, the result will be equally unfavorable to Mr. Buchanan's reputation. Everything is hollow and forced and artificial; and there is as much fluent life of the imagination in it as in wooden waves or in toy forests carved in Nuremberg. Yet there is a most offensive strenuousness of effort to be grand and fine. There is an expensive machinery of hoary pilgrims, and star-voices, and Voices within the Temple, and Spirits, and Spirits of Sorrow, and Veils, and Shadows; but all comes to nothing, and serves only to suggest how hide-bound is the imagination of the poet when to be sublime he must fall back on capital letters and on stage properties long worn-out in the service of "Festus" and other persons much afflicted by the universe.

"The Book of Orm" appears to be poems written by a certain bard called Orm the Celt, who, however, in spite of the mythic and ancient look of his designation, must be conceived of as a Celtic bard of our own time:

> "There is a mortal, and his name is Orm,
> Born in the evening of the world, and looking
> Back from the sunset to the gates of morning.
>
> "And he is aged early, in a time
> When all are aged early,—he was born
> In twilight times, and in his soul is twilight.
>
> "O brother, hold me by the hand, and hearken,
> For these things I shall phrase are thine and mine,
> And all men's,—all are seeking for a sign.
>
> "Thou wert born yesterday, but thou art old,
> Weary to-day, to-morrow thou wilt sleep—
> Take these for kisses on thy closing eyelids."

This dismal prelude is the appropriate antechamber to the poems that follow; but perhaps better as showing more clearly the unhealthy frame of mind in which the book was planned, and as foreshadowing the pretentious feebleness of it, is the affected and melancholic "Inscription:"

> "Flowers pluckt upon a grave by moonlight, pale
> And suffering, from the spiritual light
> They grew in: these, with all the love and blessing
> That prayers can gain of God, I send to thee!
>
> "If one of these poor flowers be worthy thee,
> The sweetest Soul that I have known on earth,
> The tenderest Soul that I can hope to know,
> Hold that one flower, and kneel, and pray for me.
>
> "Pray for me, Comrade! Close to thee I creep,
> Touching thy raiment: thy good eyes are calm;
> But see! the fitful fever in mine eyes—
> Pray for me!—bid all good men pray for me!
>
> "If Love will serve, lo! how I love my Friend—
> If Reverence, lo! how I reverence him—
> If Faith be asked in something beautiful,
> Lo! what a splendor is my faith in him!
>
> "Now, as thou risest gently from thy knees,
> Must we go different ways?—thou followest
> Thy path, I mine;—but all go westering,
> And all will meet among the Hills of God!"

---

* "The Book of Orm. A Prelude to the Epic. By Robert Buchanan." New York: Geo. Routledge & Sons. 1870.

We had supposed the fashion had gone out of being publicly sad-eyed and ruined in hopes. It is going out certainly, if it has not quite gone, and this performance of Mr. Buchanan's will help it to its burial. Nothing could well be in worse taste.

Orm sings first of The Veil:

"In the beginning,
  Ere Man grew,
The Veil was woven
  Bright and blue"—

and it hid The Face. When The Face is pressed closest to The Veil the heavens are bright, and when it is withdrawn they darken:

"But when, grown weary
With long downlooking,
The Face withdrawing
  For a time is gone,
The great Veil darkens,
And ye see full clearly
Glittering numberless
  The gems thereon"—

that is to say, the stars. Equally imaginative and coherent with this account of day and night, and the way in which Nature interposes between man and the maker of the universe, is Mr. Buchanan's conception—to call it so—of the way in which Nature first fell into her present condition of giving dumb intimations, as it were, but no full revelation of God:

"For oft, in the beginning, long ago,
Without a Veil looked down the Face ye know,
And Earth, an infant happy-eyed and bright,
Look'd smiling up, and gladden'd in its sight.
But later, when the Man-Flower from her womb
Burst into brightening bloom,
In her glad eyes a golden dust was blown
Out of the void, and she was blind as stone."

We have given our guess at the interpretation to be given the author in this first poem. But it is like guessing at the interpretation of a jumbled, bald dream; the thing needs an interpreter; but when you have got it, the interpretation is nothing.

Next after "The Veil" comes "The Man and the Shadow"—a poem, some of its critics have said, calculated to make the flesh creep, by reason of its weirdness and ghostliness, but better calculated, surely, to give "goose-flesh" by reason of its weakness to most readers of good taste and good sense:

"On the high path, where few men fare,
Orm meeteth one with hoary hair,
And speaketh solemn and afraid
Of that which haunteth him—a shade"—

namely, of his own shadow, with which Orm endeavors to impress on us awe and fear. Precisely the emotions which, as a matter of fact, agitate the breast of the reader while he goes through this piece, we would rather not state. He will, however, find some pretty descriptions of scenery amid much rubbish about the rainbow, which does duty as a bridge, by way of which Orm, with his usual happiness of invention, makes the spirit of the Hoary One pass into heaven. The "Songs of Corruption" which follow "The Man and the Shadow" are much the same in character as their predecessors, but not quite so devoid of merit. They get their name from having been written, or because supposed to have been written, by Orm in a lonely graveyard, and because, too, of their being in subject appropriate to such a place of meditation. Then we have a lonely interview that Orm has with Satan, whom and whose works Orm defies. The old style of conversation is still in use at these ceremonies, it seems:

"SPIRIT.
Thou knowest me now.
ORM.
I know thee.
SPIRIT.
And thy cheek
Blanches not?
ORM.
Nay, by pride, and by despair,
I fear thee not—we are too much akin."

After much discussion the dawn breaks, Satan departs with a request that Orm pray for him and for all

"Strong spirits that are outcast;"

and Orm declares that evil is not disguised good, but is evil.

There is more in the volume, but none is better than these poems we have mentioned, and the whole work is as weak and pretentious, and every way unprofitable, as any book of poems that has come within the last ten years from the hand of a person of any repute. It is irredeemably feeble and secondary.

BAIN'S LOGIC.*

MANY works on logic have lately appeared in our language, and a few of them are of considerable importance. The one before us is a school-book of the dryest description, but it is impossible that the best living English psychologist should produce any book which has not the stamp of originality, and which is not deserving of attention. In point of fact, Mr. Bain distinctly proclaims himself a rival, although also a follower, of Mr. Mill. The first thing that we notice in all the English logicians, and Mr. Bain is no exception, is their ignorance or ignoring of all logical writings not English. This is the more reprehensible, as logic has by no means received its greatest development in England. Nothing in the present work will lead the student to suspect that there are any such writers as Trendelenburg or Beneke, although the latter entertains opinions which are more or less in harmony with Bain's own. Trendelenburg has made an elaborate study of Aristotle's categories, the results of which are undeniably of high importance, even if they are not to be regarded as fully established. But Professor Bain does not find it worth while so much as to mention them in his account of the same subject. The exclusively English character of Mr. Bain's work is well illustrated by his making the old distinction of extension and comprehension belong to Hamilton, and by his giving the same writer credit for the symbols S, M, and P, for the three terms of a syllogism.

The chief peculiarity of this treatise is its elaborate treatment of applied logic. One-fourth of the whole book is taken up with "Logic of Mathematics," "Logic of Physics," "Logic of Chemistry," "Logic of Biology," "Logic of Psychology," "Sciences of Classification," "Logic of Practice," "Logic of Politics," and "Logic of Medicine." The word logic in these phrases is taken in a very much wider sense than that in which Dr. Whewell spoke of the logic of induction. Logic in general is defined by Mr. Bain as "a body of doctrines and rules having reference to truth." He regards logic, therefore, not merely as the *via veritatis*, but as including everything which bears upon truth, whether it relates to the investigation of it or to the testing of it, or simply to what may be called its statical characters. Accordingly, the logic of a particular science is the general description of the nature of that science, including not merely its methods, but also its fundamental conceptions and doctrines. As an example, let us take the logic of chemistry. The author begins by stating the essential characters of chemical attraction. They are three: first, that the proportions (misprinted *properties*; the book is full of misprints) are definite; second, that in combination heat is evolved; third, that the chief properties of the elements disappear. He next divides the propositions of chemistry into two classes: first, those which relate to the general conditions of chemical change; second, those which relate to the chemical changes of special substances. He next divides chemistry into organic and inorganic. (Few chemists would now maintain that this division has more than a temporary validity.) He then proceeds to the classification of the elements. The first great division is into metals and non-metals (this is antiquated). The general properties of each group are enumerated, as, for example, that no opaque non-metal has lustre except selenium (forgetting iodine and carbon). He then gives a classification (very unscientific) of the non-metals. He then says how he thinks a chemical substance should be described in a text-book. He seems to be thinking all along of how a text-book should be written, and not of how the subject should be investigated or conceived in the mind of the chemist, for he urges it as a recommendation to the uniting of oxygen and nitrogen in one class that it gives an opportunity for dwelling on the mechanical peculiarities of gaseous elements. He then states the characters of chemical laws. They are two. The first is that such laws are empirical. As an example, he cites the so-called law of Berthollet, in evident ignorance that this law has been entirely disproved. The other property of chemical laws is that they must express the most general conditions of the redistribution of chemical force. He next remarks that most of the hypotheses of chemistry are representative fictions, and concludes with a few elementary observations upon chemical notation. Such an account of a science as Mr. Bain here attempts would certainly be of the greatest value. It is very unlikely that any one man could successfully accomplish the task for all the sciences. At any rate, he must be profoundly versed in them, and must have quite another than a schoolmaster's conception of science in order to make his work of any use at all. But to attempt to write the logic of mathematics, for example, when one is so ignorant of the work of mathematicians as to be capable of saying that the celebrated axiom concerning parallels is "deducible from the definition of parallel lines, and ought to appear among the theorems of the first book," we must say, smacks of conceit.

---

* "Logic, by Alexander Bain, LL.D., Professor of Logic in the University of Aberdeen." Part First, Deduction. Part Second, Induction. 2 vols. 8vo. London: Longmans. New York: D. Appleton & Co.

Another principal feature in the book is the treatment of definition. Like many of the old logicians, the author separates the process of forming a definition from reasoning, a separation which ought not to be made, because analysis of the former proceeding shows it to contain the same elements as the latter. His attaching a very high importance to definition is more in accordance with the tendencies of natural science than it is with the doctrines of that nominalistic school of metaphysics with which Mr. Bain is affiliated. He rightly insists that the characters of the object which are enumerated in the definition should be such as are *important*, but his analysis (usually weak) fails to detect in what the *importance* of a character consists. A sentence which he has quoted from Sir George Cornewall Lewis might have furnished him with a hint. "By including in monarchies," says that writer, "and excluding from republics, every government of which a king is the head, *we make every true general proposition respecting monarchies and republics impossible*." An *important* character is obviously one upon which others depend, that is, one the inclusion of which in a definition renders true general propositions concerning the object defined possible; and the more such propositions a character renders possible, the more important it is. In the same way, a natural class is one which can be so defined that something can be predicated of it which cannot be predicated of the genera included in its definition. Mr. Bain endeavors to make the logical definition identical with the scientific definition—a most worthy aim; but we fancy that zoölogists and botanists are already so much advanced in the knowledge of classification beyond the mere logician, that Mr. Bain's maxims will have little weight with them.

In treating of causation, Mr. Bain includes in the pure logical principle the law of the conservation of force, which according to him, in opposition to the physicists, refers not to *vis viva* but to *momentum*.

He gives a long account of the systems of De Morgan and Boole, but not such a one as they would approve, and he makes some serious mistakes.

As a school-book the work has some advantages, but even where the author's thought is perhaps not itself vague, his manner of expressing it is not calculated to inculcate precision in the mind of the pupil.

THE MAGAZINES FOR AUGUST.

LIPPINCOTT'S MAGAZINE for August begins with an interesting article not without value, on a comparatively new subject, and one of importance, which the essay before us cannot be said to exhaust; still, it is worth attention, and will be found instructive. "Southern Society" is the title of it, and the writer undertakes to show in what society at the South differs from its condition before the war. The difference is not an improvement, he thinks. The Southern heart is still bitter, he says, with the memories of the war; the farmer sees his land covered with mortgages, and taxed almost beyond endurance; the desire to drown the remembrance of the past, and to emulate the great fortunes that have been made in the North, leads to an insane haste to be rich which is sadly in contrast with the old repose of spirit and freedom from material standards; the women hate the Northerners, good and bad alike, who have gone among them; the fathers and sons, with the facility bred of alternate triumph and defeat in the war of politics and the war of battles, have more or less well adapted themselves to Northern rulers and companions, but the wives and daughters remain implacable, and carry discord abroad, and too often make the home life also a life of dissension or discomfort, all being drawn into the women's wars; the relations between the debtor class and the creditor class are, in a vast number of cases, productive of estrangement and hatred, and the legislation which has made it possible to avoid settlement of debt has given opportunity to the dishonest, and thus aided to make and keep men enemies: the contrast between the rich and poor is far greater than ever before; large fortunes, once very rare in the South, are now not uncommon—the products of speculation; the great plantations are going, and with the incoming of small farms, there is a decrease of hospitality and of good breeding; the negro no longer has a friend; the poor whites, especially the young growth of the past ten years, are coming up in utter ignorance; the kindly relations between white and black that were due to the mingling of persons of the two races in the large households will no longer exist now that the families of employer and employed live isolated, and the negro wet-nurse is much more rarely employed.

There is food for reflection in this view, which, doubtless, is in many points not far from correct. But doubtless, too, our author writes with some of that despondency as to the future which naturally accompanies deep regret for the departure of the old order. Besides, such transition as the South is now going through can hardly fail to be worse in many respects than that which is displaced, or than that which is to come. The colleges of the South are full of young men; the negro is learning to work and learning to read; immigrants stand ready to fill up the waste places; the memories of the war must, sooner or later, fade in the fiercest hearts and the most untaught heads—and if not, there is another generation soon to occupy the seats of this; manufactures are to diversify the industry of the South, and all the weightier indications of her future would seem to point to a new South better than the old if different from it. "Laws and learning, arts and commerce" are not dead, in spite of Lord John Manners, even though "our old nobility" has undergone reverses.

The *Catholic World* begins with a second paper on Mr. Froude's "History," and makes a clever and successful attack on that pictorial and partisan and incorrect writer—whom, perhaps, his assailant overrates. Still the work is likely to be popular, and its errors to be widely accepted for truths. And the partisan history is a thing that has got to be offensive beyond measure to gods and men.

"In the Greenwood" is a very pleasant and lively little story; or rather, it is a very lively and pleasant sketch, partly or wholly true, we suppose, of the adventures of a pair of ladies in a backwoods cabin in Maine. There is a queer freshness in it, as if it had been done by an American woman whose training had been in many ways different from that of the ordinary American girls, but yet had much, too, in common with it. At all events, while a little raw in some places, as too strong in others, it is very bright and agreeable, and will be read with pleasure, as many more like it might be. Another good article in the *Catholic World*, about an admirable author, too little known, is the review of Gerald Griffin's works; and interesting is the article on Andreini's "Adam," a work little known, but alleged to be, as regards many particulars, greater and lesser, so nearly like Milton's "Paradise Lost" that the English poet must be held to be certainly indebted, and not a little indebted, to his Italian forerunner. So this examination of the rare work in question would seem to show. These three articles make the *Catholic World* for August a very good magazine; and there are besides, whether they make it better or worse, articles about "The Superstition of Unbelief;" "The First Œcumenical Council of the Vatican;" Janus's "Pope and the Council"—which bothers the Catholics much; and "Matter and Spirit in the Light of Modern Science."

Hours at Home tells something new about the educational work carried on in Syria. Few people know of this, but it is important and interesting. Three years ago, the American Board of Foreign Missions opened a College at Beirût. It has five professors, who teach the several departments of Arabic language and literature, modern languages, Turkish law and jurisprudence, the natural sciences, and mathematics. It is not a proselytizing institution; it might, in fact, rather be called a medical school than a religious seminary, for the study of medicine is made very prominent. A large dispensatory and a hospital are attached to the college, and patients are treated gratuitously. Such an institution in a land cursed with quacks, and full of dense ignorance, educating in modern learning its sixty or seventy youth annually, some of them Druses, some Papal Greeks, some Orthodox Greeks, some Maronites, some Jews, some Armenians, and sending them out among the hundred millions or more of the Arabic-speaking peoples, must do a vast amount of good, and appeals strongly to the wealthy for aid. The corporation which has founded the Syrian Protestant College is, we understand, chartered by the State of New York.

We had occasion, a month or two ago, to ask Professor Schele de Vere, apropos of his novel of "The Great Empress," three questions, which he has never answered. One was, "Did Mr. De Vere write the article in *Blackwood?*" Another was, "If not, have both authors copied or translated from a common author?" The third was, "Has Mr. De Vere simply plagiarized from *Blackwood*, and altered the original in a few trifling particulars?" The object sought to be gained by these questions was an explanation of the fact that pages 40 and 42 of "The Great Empress" are, nearly identical with pages 411 and 412 of an old number of *Blackwood*. In short, Mr. De Vere was, on that occasion, a plagiarist, and it is a little surprising to see him permitted to turn up in two of the magazines of the month. *Putnam's* lets him in as well as *Hours at Home*. It is rather amusing to the baser mind to find that, in *Hours at Home*, the Professor is much concerned about the lack of originality in American literature.

Harper's has a very good paper by Mr. M. D. Conway—another of his

MALDEN PUBLIC LIBRARY

"South-Coast Saunterings"—in which he writes, exceedingly well, a mixture of antiquarian lore, guide-book details, personal sketches of distinguished men, and criticism. Some of Mr. Mill's conversation is the personal element in this month's paper, and another pleasant thing is a hymn, made by "the late W. J. Fox" out of Chaucer's famous death-bed lines. It might very well indeed go into Unitarian hymn-books, and ought to be adopted for general and, we should hope, frequent use in the churches of that denomination.

The new story in the *Galaxy* is called "Overland," and begins very well in the city of Santa Fé. It will please novel-readers, certainly; for the rest, it is too early to say anything about it, except that, in this first instalment, it is spirited. Good, too, is Mr. Grant White's critical essay on the styles of Disraeli and Dickens, which are compared much to advantage of the latter, who, indeed, with all his faults, is far superior in point of correctness, as well as of skill and power, to the indolent, gaudy carelessness of the Ex-Premier's writing. Mr. Justin McCarthy makes a just estimate of Bulwer's claims to respect as a man of letters, and has some talk about his character, which may or may not be correct, but which sounds plausible—and perhaps a little out of place.

The August *Atlantic* is a good number, though not a great one by any means. The poetry is about as bad as usual, and "Mr. Hardhack on the Sensational in Literature and Life" is an inconceivable sort of a thing for the perfection of its cheapness. But Mr. Howells's "Day's Pleasure" is thoroughly good; and there is something very pleasant about Mr. Lowell's "Virginian in New England Thirty-five Years Ago," though it was a disappointment to find that Mr. Lowell is only to edit a journal instead of writing something of his own. As has been suggested, the old-fashioned Virginian, of the good kind, may very well get more of our attention and regard than we of the North have been giving him since 1865.

Speeches, Letters, and Sayings of Charles Dickens. (New York: Harper & Brothers. 1870.)—This volume has been hastily put together, and contains much that is very well worn, and does not contain much of the new matter that might have been, and sooner or later will be, gathered together; but it nevertheless is a pleasant book to read and a good one to keep, and will give pleasure to every admirer of Dickens. Newest in it is the collection of after-dinner speeches, comprised in some eighty or ninety pages, and giving a hundred or more of those admirable performances, in which their author was, in his lifetime, without an equal. There are also some letters, and parts of letters, to Lady Blessington, to Washington Irving, and to Douglas Jerrold, which, we take it, have been printed before, but which will be fresh to most readers. And, besides the speeches and the letters, there is an appendix containing some rambling remarks—not too true and not too new, but not entirely lacking, either, in truthfulness of criticism and freshness of information—which are Mr. G. A. Sala's characteristic tribute to the genius and character of his friend and patron. The rest of the hodge-podge is made up of Dean Stanley's recent funeral sermon; of an anonymous "Introduction," which is good in its way; and of some specimens of Dickens's poetical work, or verse-making rather.

One of the best things in the volume is a story that Dickens narrates to Douglas Jerrold, writing to him from Paris in 1847:

> "I am somehow reminded of a good story I heard the other night from a man who was a witness of it, and an actor in it. At a certain German town last autumn there was a tremendous *furore* about Jenny Lind, who, after driving the whole place mad, left it, on her travels, early one morning. The moment her carriage was outside the gates, a party of rampant students, who had escorted it, rushed back to the inn, demanded to be shown to her bedroom, swept like a whirlwind up stairs into the room indicated to them, tore up the sheets, and wore them in strips as decorations. An hour or two afterwards a bald old gentleman, of amiable appearance, an Englishman, who was staying in the hotel, came to breakfast at the *table d'hôte*, and was observed to be much disturbed in his mind, and to show great terror whenever a student came near him. At last he said, in a low voice, to some people who were near him at the table, 'You are English, gentlemen, I observe. Most extraordinary people, these Germans! Students, as a body, raving mad, gentlemen!' 'Oh no!' said somebody else; 'excitable, but very good fellows, and very sensible.' 'By God, sir!' returned the old gentleman, still more disturbed, 'then there's something political in it, and I am a marked man. I went out for a little walk this morning after shaving, and while I was gone'—he fell into a terrible perspiration as he told it—'they burst into my bedroom, tore up my sheets, and are now patrolling the town in all directions with bits of 'em in their button-holes!' I needn't wind up by adding that they had gone to the wrong chamber."

As all the world knows, telling stories, and telling them dramatically when he could, was a favorite amusement and a great accomplishment of Dickens's, and we may imagine him always on the look-out for them, and their appearing constantly in his letters as well as in his conversation. Here is one about Rogers, which Dickens writes to Irving:

> "Holland House has four-and-twenty youthful pages in it now—twelve for my lord and twelve for my lady; and no clergyman coils his leg up under his chair all dinner time, and begins to uncurve it when the hostess goes. No wheeled chair runs smoothly in, with that beaming face in it; and ——'s little cotton pocket-handkerchief helped to make (I believe) this very sheet of paper. A half-sad, half-ludicrous story of Rogers is all I will sully it with. You know, I dare say, that, for a year or so before his death, he wandered and lost himself, like one of the Children in the Wood, grown up there and grown down again. He had Mrs. Procter and Mrs. Carlyle to breakfast with him one morning—only those two. Both excessively talkative, very quick and clever, and bent on entertaining him. When Mrs. Carlyle had flashed and shone before him for about three-quarters of an hour on one subject, he turned his poor old eyes on Mrs. Procter, and, pointing to the brilliant discourser with his poor old finger, said (indignantly), 'Who is *she?*' Upon this, Mrs. Procter, cutting in, delivered—(it is her own story)—a neat oration on the life and writings of Carlyle, and enlightened him in her happiest and airiest manner; all of which he heard, staring in the dreariest silence, and then said (indignantly as before), 'And who are *you?*'"

The following letter to Jerrold it is good to read, and to remember that the sentiments expressed in it found as hearty expression in the writer's life as in his correspondence:

> "MY DEAR JERROLD—This day week I finished my little Christmas book (writing towards the close the exact words of a passage in your affectionate letter received this morning; to wit, 'After all, life has something serious in it'), and ran over here for a week's rest. I cannot tell you how much true gratification I have had in your most hearty letter. F. told me that the same spirit breathed through a notice of 'Dombey' in your paper; and I have been saying since to K. and G. that there is no such good way of testing the worth of a literary friendship as by comparing its influence on one's mind with any that literary animosity can produce. Mr. W. will throw me into a violent fit of anger for the moment, it is true; but his acts and deeds pass into the death of all bad things next day, and rot out of my memory; whereas a generous sympathy, like yours, is ever present to me, ever fresh and new to me—always stimulating, cheerful, and delightful. The pain of unjust malice is lost in an hour. The pleasure of a generous friendship is the steadiest joy in the world. What a glorious and comfortable thing that is to think of!"

Mr. Sala—whose opinions as to excesses of various kinds would probably not pass muster with Dr. Cuyler of Brooklyn, or the Rev. Mr Fulton of Boston—has this to say about Mr. Dickens's personal habits:

> "It is idle at this time to enquire whether he took too much exercise, and whether, in some cases, Nature will not resent unvarying regularity in the observance of her laws, or refuse to respond by the gift of health and long life to the most rigidly-pursued system of hygiene. If Charles Dickens erred in this respect, he erred with Cornaro, with Franklin, and with Prescott, all of whom lived by line and rule; measuring the sands of their time by the grain, weighing out their sustenance by the ounce and the gill, adjusting even the weight of the garments they wore in summer or in winter to the minutest flections of the balance. Charles Dickens was a man who never exceeded in aught save pedestrianism; whose nature, strongly impulsive as it was, seemed to have been brought under an inexorable discipline."

And just as we conceive of Rogers as breakfasting; and of Tommy Moore as sitting at a piano in some one else's parlor; and of Johnson rolling his burly form through London slops and fogs, or sitting oracular and disputatious in a club-room arm-chair; and of Scott, in his library filled with old curiosities, or walking out with his dogs, so we may think of Dickens as carrying his keen eye and reporter's memory and energetic figure into all the haunts of London life:

> "The towering stature, the snowy locks, the glistening spectacles, the listless, slouching port, as that of a tired giant, of William Makepeace Thackeray, were familiar enough in London, a few years since, but, comparatively speaking, only to a select few. He belonged to Club-land, and was only to be seen sauntering there or in West-end squares, or on the road to his beloved Kensington, or in the antique hall at Charterhouse on Founders' Day, or on Eton Bridge on the Fourth of June, or sometimes, haply, on the top of a Richmond omnibus, journeying to a brief furlough at Rose Cottage.
>
> "Thackeray in Houndsditch, Thackeray in Bethnal Green or at Camden Town, would have appeared anomalous; as well could we picture Carlyle at Cremorne, or Tennyson at Garraway's; but Charles Dickens, when in town, was ubiquitous. He was to be met, by those who knew him, everywhere—and who did not know him? Who had not heard him read, and who had not seen his photographs in the shop-windows? The omnibus-conductors knew him, the street-boys knew him; and perhaps the locality where his recognition would have been least frequent—for all that he was a member of the Athenæum Club—was Pall Mall. Elsewhere he would make his appearance in the oddest places, and in the most inclement weather: in Ratcliff Highway, on Haverstock Hill, on Camberwell Green, in Gray's Inn Lane, in the Wandsworth Road, at Hammersmith Broadway, in Norton Folgate, and at Kensal New Town.

"A hansom cab whirled you by the Bell and Horns at Brompton, and there was Charles Dickens striding, as with seven-leagued boots, seemingly in the direction of North-end, Fulham. The Metropolitan Railway disgorged you at Lisson Grove, and you met Charles Dickens plodding sturdily towards the Yorkshire Stingo. He was to be met rapidly skirting the grim brick wall of the prison in Coldbath Fields, or trudging along the Seven Sisters' Road at Holloway, or bearing, under a steady press of sail, through Highgate Archway, or pursuing the even tenor of his way up the Vauxhall Bridge Road. He seemed to prefer for mere purposes of exercise the lengthy thoroughfares of our exterior boulevards to narrow and intricate streets. They offered, perhaps, a better opportunity for fair and honest walking, and for the performance of that self-appointed task of pedestrianism which for so many years he had undertaken daily, and which well-nigh undeviatingly, and wherever he was—in London, at home at Gadshill, in France, in Italy, or in America—he performed to the last rood and furlong of a mentally-measured route. It was one of Mr. Dickens's maxims that a given amount of mental exertion should be counteracted by a commensurate amount of bodily fatigue; and for a length of years his physical labors were measured exactly by the duration of his intellectual work."

An English Greek Lexicon. By C. D. Yonge. With many new articles, an Appendix of Proper Names, and Pillon's Greek Synonyms. [To which is prefixed an *Essay on the Order of Words in Attic Greek Prose*, by Charles Short, LL.D., Professor of Latin in Columbia College, New York.] Edited by Henry Drisler, LL.D., Professor of Greek in Columbia College, editor of "Liddell and Scott's Greek-English Lexicon," etc., etc. (New York: Harper & Brothers. 1870. Pp. cxv. 663, cxv.)—Twenty years ago we went into a bookstore, and asked if "the new English-Greek Lexicon" was published. We were told that it would be out very soon, and that a copy should be sent us at once. That copy has come at last, all the better for its long delay. Most of our classical teachers, we think, have asked the same question, and we trust they have all received the same answer—and the copy, too, at last.

Hitherto, our students have had access to no English-Greek lexicon which satisfied the demands of modern scholarship. The costly English works which could be obtained, made even more costly by our high tariff on all means of knowledge, were practically beyond the reach of the majority; and Greek composition has therefore been studied without a lexicon or left to subside altogether. Ignorant and unsystematic teaching has done much harm in this as in every other department of American school instruction; but few teachers will deny that composition, when properly employed, is one of the most efficient means of impressing a class with the general principles as well as the nicest distinctions of a language, and of changing an ancient language from a dead abstraction to a living reality. The appearance of this lexicon supplies the want so long felt in this department, and leaves teachers no further excuse for neglecting Greek composition.

Professor Drisler's preface hints at the delays and discouragements which have kept the public so long waiting for the lexicon, sufficient indeed to have prevented a less persevering man from publishing the work at all. But we cannot doubt that these delays, and the necessity of doing much of the work twice, have greatly increased the value of the book. It is now based on a new edition of the original, and we may assume that we have the second edition of the editor's improvement. What distinguishes this work from all others of the kind is the constant reference to the authorities for each word, or at least to the class of writers who use it. This will prevent students writing Greek exercises from translating into a mixture of Homer, Thucydides, and Plato; and also from indulging in a curious habit that they have of invariably choosing the *last* word in a list of unfamiliar Greek terms—a habit which often gives a Greek exercise the style of scholiasts and grammarians.

Professor Short's elaborate treatise on the Order of Words in Attic Prose adds greatly to the value of the work. This has, we believe, never before been made the subject of a special treatise, and the present essay is the result of much careful study and a thorough investigation of the structure of the Greek sentence. It is hard to bring the rhetoric of Demosthenes under definite rules for arrangement of words; but this work proves that it is not impossible.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*

VAN NOSTRAND'S

Eclectic Engineering Magazine.

No. 2, Vol. 3, For August, Now Ready.

CONTENTS.

A Glance at Aeronautical Science. On the Motion of Water in Rivers and Canals. Filtration of Town Sewage. The Japanese Railways. Variable Expansion Gear for Winding Engines. The Conveyance of Town Sewage. Manufacture of Iron on Puddling. Guns *vs.* Turrets. The Iron and Steel Institute. The Metallic Mineral Resources and Precious Stones of Russia. Coal-Burning Locomotives. Modern Architecture in Western India. Small Portable Engines. Experiments on the Resistance of Iron and Steel. The Fleet of the Future. The Boutet Balancoire. The Strength of Boiler Plates. Description of the Rock-Salt Mines and Salt Manufacture in Cheshire. Drinking Fountains and Pure Spring Water. The Victoria Stone. The Val-de-Travers Asphalt Paving for Stones. A Mountain Railway in Hungary. The Abrading and Transporting Power of Water (Illustrated). Experiments for Making Brick Masonry Impervious to Water. The Strength of Iron and Steel. Experiment on the Evaporation of a Corliss Boiler. Cold Blast, Warm Blast, Hot Blast. The Structural Utility of Iron. On Some Recent Improvements in Pistons (Illustrated). The Forecasting of Storms. Heat by Means of Illuminating Gas. Formulæ for Strains in Trusses and their Practical Application (Illustrated). Two-storied Railway Carriages. Double Steam Boilers, etc.

PARAGRAPHS.—Iron and Steel Notes. Railway Notes. Ordnance and Naval Notes. Engineering Structures. New Books. Miscellaneous.

TERMS—Issued monthly, at $5 per annum. Single numbers, 50 cents.

Nos. 23 MURRAY STREET and 27 WARREN STREET.

LOUISA M. ALCOTT.

The *Nation*, a weekly literary journal published in the City of New York, in noticing "An Old-Fashioned Girl," very truly says "her (Miss Alcott's) stories have been read by an immense number of girls and boys," and follows up this remark by saying, "but girls and boys read anything and everything, and are easily pleased"—a slander which every girl and boy in Christendom will resent.

It is a notorious fact, however, that the

Million Readers,

MORE OR LESS, OF

LITTLE WOMEN

AND

An Old-Fashioned Girl

are composed largely of adults, grown-up papas and mammas, who, if the *Nation* is correct, are easily "tickled with a straw."

Price of "Little Women" (60th 1000), $3.

Price of "An Old-Fashioned Girl" (34th 1000), $1 50.

Sold everywhere. Mailed, post-paid, by the Publishers,

ROBERTS BROTHERS,

BOSTON.

SLAVE SONGS OF THE UNITED STATES. A Unique Collection of Original Melodies—words and music—obtained among the negroes of the South; preceded by an account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal, by Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50.

Sent post-paid on receipt of price. Address PUBLISHER OF THE "NATION," Box 6732, New York City.

TRÜBNER & CO., of 60 Paternoster Row, London, have for sale two copies of *Nordheimer's Hebrew Grammar*, 2d edition. One of the copies is bound in two volumes, interleaved with notes by the late Prof. W. W. Turner, intended for a new edition. Offers are solicited for these copies.

Bishop Percy's Folio Manuscript Ballads and Romances. Edited by John W. Hales, M.A., Frederick J. Furnivall, M.A., assisted by Professor F. J. Child and W. Chappell, Esq. 4 vols. A few copies are left of the large quarto edition, printed on Whatman's best ribbed paper, which are now offered at £10 10s. sterling, net. LONDON: TRUBNER & CO., 60 Paternoster Row, London.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

PAMPHLETS of every description, embracing Prospectuses, Statements, and Reports of Corporations, Statistical, Scientific, and Literary Papers, Law Pleadings, etc., etc., will receive the same attention as books, and be printed with especial care.

JOB WORK, in all its details: Cards, Circulars, Programmes, Bills, Receipts, Forms, etc., will be promptly dispatched, with taste, and in the newest varieties of type.

NEWSPAPERS, MAGAZINES, and other Periodicals will be printed on reasonable terms, and strictly upon time.

In short, the Proprietors undertake to satisfy first-class custom in all that pertains to a general Printing Business.

Orders may be sent to THE NATION PRESS, 27 Rose Street (a few doors North of Frankfort), or to this Office, and estimates will be furnished at either place.

JOHN ROSS, Manager.

The Nation.

NEW YORK, THURSDAY, AUGUST 11, 1870.

The Week.

IN exactly eighteen days from the formal declaration of war, after one slight skirmish, and two days of heavy fighting, the Emperor, who has for four years been scheming and preparing for this contest, who entered upon it with the haughtiness and peremptoriness of a foregone conqueror, who was so eager for it that he seized upon the weakest of occasions for bringing it on at once, and appeared as if he could not get it soon enough; who has done nothing well if, in the army which has held down France and threatened Europe, he has not an army invincible in battle—in just eighteen days of war, and three days of actual fighting, he finds his soldiers outmarched and outfought, his marshals and generals outmanœuvred; the chassepot and a Frenchman no match for the Prussian with his needle-gun and bayonet; his armies driven back with the inevitable force which drove the Austrians in upon Vienna in 1866; his capital in a state of siege, and himself compelled to confess disastrous defeat, and call upon the people not to illuminate their houses for the occupation of Berlin, but to prepare to fight under the walls of Paris first, and man them afterwards. It was astonishing to the world to see a historic monarchy, illustrious like Austria, tumbled down in a seven weeks' war; but, till this campaign of less than a week, nothing like the performances of the elder Napoleon at his best has been seen in Europe.

To be sure, all is not over, even as between France and Prussia alone, to say nothing of European complications, involving other powers, which, however, are far more likely to come after a peace has been conquered than to come in either a hostile or peaceful form till the work is essentially done. There would seem, as we write, to be little doubt that the Prussians have but to show the skill and efficiency which they have shown already in such an extraordinary degree, in order to make so speedy an end of the war as hardly to afford opportunity for decisive interference. The result so far is probably mainly due to the presence at the front of the Emperor himself, notoriously vacillating, and, to say the very least, not proved a fair soldier; but it can hardly be that all the mismanagement can be attributable to him; nor, if that were so, that the sudden apparent collapse of the French army is due wholly to mismanagement on the part of him or the other French leaders. It looks very much as if the Prussian soldier were a heavier and quicker hitter than the French, and as if the mitrailleuse and the chassepot—which have been vaunted in a manner not very suggestive of the old French self-confidence—were inferior to the improved Prussian arms. As to the leaders on the two sides, the superiority is certainly with the Prussians.

On Tuesday, Aug. 2, the French army, to use the words of the official dispatch, "took the offensive, crossed the frontier, and invaded the territory of Prussia." It carried the heights which overlook Saarbrück, and the artillery drove the enemy from the town. It was a division of Gen. Frossard's command which achieved the feat. Napoleon himself was present, with "Louis" in front, "where the bullets fell." And "Louis keeps a ball he picked up." The soldiers weep at the sight of the boy's admirable coolness. The Emperor, having witnessed his boy's "baptism of fire," returns to his headquarters at Metz, and Metz is illuminated; so is Châlons-sur-Marne, the headquarters of Marshal Canrobert. The Empress goes with her ladies to Notre Dame des Victoires, to render public thanks to Heaven for the success achieved. Reports spoke of the splendid *élan* of the victorious troops, and of the wonders worked by the mitrailleuses. In short, the campaign was opened by a feeble *coup de théâtre*. The fact was, the heights overlooking the Saar and the small town of Saarbrück were taken almost without a struggle, the insignificant Prussian detachments stationed there being neither inclined nor ordered to make a useless resistance to an overwhelming force.

The real opening of the campaign was to take place at another spot, and it was the Prussians who were to make it. On Thursday, the 4th, a strong force belonging to the left wing of the Prussian army, the Prince Royal's, and consisting of Prussians and Bavarians, crossed the frontier river Lauter, between Lauterburg and Weissenburg, surprised General Douay's division of the First French Army Corps—MacMahon's—and under the eyes of the Prince assaulted and carried the fortifications of Weissenburg and the heights beyond them. The victory was dearly bought, but the rout of the French was complete. Gen. Douay—who, however, must not be confounded with the general of the same name commanding the Seventh French Army Corps at Belfort—was killed. A considerable number of prisoners fell into the hands of the victors. The affair was hailed by the Prussians as the auspicious beginning of a powerful move designed to pierce the excessively long French front line, and to cut off MacMahon's corps from its connections with the French centre and left. At Paris and Metz, the news, following so rapidly upon the farcical Saarbrück performance, fell like a thunderbolt. The prestige of the French arms was gone if Weissenburg was not immediately retaken. The task of retaking it was MacMahon's.

MacMahon, the bulk of whose army corps was concentrated in the vicinity of Hagenau, between Strasbourg and Weissenburg, was not slow in recognizing the danger which threatened him, and, without loss of time, advanced to meet the Prince Royal. Neither did the latter hesitate in moving forward to reap the full fruits of his victory before the French could recover from the stunning effects of their first defeat. The march of the two armies was plainly indicated by the circumstances. The Prussians, to achieve the isolation of MacMahon, advanced south-west, from Weissenburg; MacMahon, to obviate it, north-west, from Hagenau. They met on Saturday, the 6th, near Wörth, a place almost equally distant from Weissenburg and Hagenau, and, like these towns, belonging to the Alsatian department of the Lower Rhine. We have few details of the great battle that was fought there, nor do we know, even approximatively, the number of troops engaged on either side. Probably, the army of the Prince had received reinforcements, after its Weissenburg victory, from its reserves near Landau and Carlsruhe. MacMahon, we know, had been reinforced by several divisions of the Fifth French Army Corps, Failly's, concentrated around Bitsch. The result of the battle was the total defeat of the French. The Prussians captured thirty cannon, six mitrailleuses, two eagles, and four thousand prisoners. The remnants of the beaten army, not to be entirely cut off, abandoned their Alsatian base, and retreated westward, thus entirely uncovering Strasbourg. The Prince Royal reported them moving towards Bitsch, where they probably expected to join the remainder of Failly's corps. This junction, however, did not immediately take place.

On the same day, Saturday, the 6th, another battle was fought on the Saar, between the forces commanded by Gen. Von Steinmetz, of the Prussian army commanded by Prince Frederic Charles, and the Second French Corps, commanded by Gen. Frossard. The latter had begun a retreat, made imperative by the threatening advance of the Prussians, when the enemy, naturally anxious to prevent his command from joining Failly, and thus menacing the right flank of the Crown Prince, came up with him, west of Saarbrück, near the Spiehren hills. Gen. Kamers, with the Fourteenth Division, immediately began the attack on the strong position of the French. Hearing the sound of the cannon, portions of other divisions hastened to his assistance. Gen. Von Goeben took command, and a fierce and bloody struggle raged until nightfall. The heights of Spiehren were carried at the point of the bayonet, and the French thrown back on Forbach. Here, too, they were overtaken—the Fifteenth Division of Von Steinmetz's command, which had advanced on a different route, coming up with them. Night covered the further retreat of the French, who left their camp equipage and many prisoners in the hands of the enemy. The whole advanced French line was now thrown back. The remnants of Frossard's command retreated towards Metz; those of MacMahon's and Failly's fell back, in an almost opposite direction, upon Saverne, thence to continue their retreat to Nancy. The armies of the two Princes immediately began a vigorous pursuit, the advance of Frederic Charles for a while interrupting all communication between the beaten left wing of the French and the corps collecting under the eyes of the Emperor around Metz.

The sick Emperor seems to have been entirely unnerved by these unexpected and terrible blows. The situation was, indeed, perplexing in the extreme. Around him, fragments of beaten or half-formed corps; before him, two rapidly advancing victorious armies, followed by fresh floods of invaders; behind him, discontented reserves and Paris almost in a frenzy. The truth could not be concealed. He spoke it out without reserve. He possibly magnified the danger. Through lugubrious appeals issued by the Empress Regent, he implored the people to save the threatened capital—to "save the country." He was going to place himself at the centre of the military position; the Empress promised to be first where the danger was greatest. The people of Paris were implored and warned not to indulge in agitations, and promised a vigorous defence. To give effect to both warning and promise, the state of siege was proclaimed in the capital. The Senate and Corps Législatif were convoked. The expeditionary force which was to sail with the Baltic fleet was summoned back to join in the defence of the interior. Marshal Bazaine was appointed Commander-in-Chief, and Gen. Trochu, instead of Lebœuf, Major-General of the army. Works were hurriedly begun to strengthen the fortifications of both Paris and Metz—a great battle in front of this fortress being regarded as imminent. And according to latest reports, the Emperor's headquarters have been removed from that fortress to Châlons-sur-Marne, the Prussian advance having passed St. Avold.

The conduct of the Parisians during the excited battle week was entirely worthy of the spirit of childish recklessness with which they had rushed into the war vortex after such stupid leaders as Paul de Cassagnac and his fellow German-eaters, and such well-known lying prophets as Émile de Girardin. The boulevards resounded night and day with war clamors and the bellowing of the Marseillaise, which, by the bye, is as appropriate a war-song for the followers of Napoleon on a campaign of invasion as the Song of Poland would be for a horde of Cossacks fighting the countrymen of Kosciuszko. People suspected as sympathizers with Prussia were hunted in the streets, and even threatened in their houses. There was no end to the elation of the mobs when false reports announced successes. This elation turned into rage as extravagant when the official organs first withheld the news, and into mad fury when the true course of events was made known. The Marseillaise was now sung with a different intent. Poor Ollivier was compelled to announce to a mob collected around his mansion that the unfortunate man who had spread the news of a French *victory* would be severely punished. The excitement has since taken a more decidedly revolutionary and, as it seems, a more patriotic turn, encouraging the more respectable leaders of the opposition to come forward. A number of deputies, assembled at the Palace of the Corps Législatif, have signed a declaration demanding the immediate arming of all citizens of Paris. Among the signers are mentioned Jules Favre, Crémieux, Esquiros, Garnier-Pagès, Arago, Pelletan, Picard, and Jules Simon. And the ministry are compelled to warn Paris against "rising." The terrible word "abdication" begins to be whispered in higher circles. [As we go to press a report comes of the fall of the Ollivier ministry amid much confusion in the Chambers and ominous proposals from the opposition of all shades.]

We are glad to be able to call the attention of our readers to the letter from the Rhine, written by Mr. Friedrich Kapp, which we print elsewhere, and which will be followed by others. Despite the Cable's contradictions, and despite surveillance, the telegraph has rendered entirely obsolete the sending by mail of mere news. But Mr. Kapp, who has access to the very best sources of information, will send facts of a kind that will be useful when the immediate news of the day will be of no interest.

As we suspected last week, the noise of the Holden party papers in North Carolina and their loud exhortations to the faithful, and the Governor's course in levying troops in what seemed an entirely causeless way, were all foreshadowings of a Republican defeat, to call it so, and a Democratic victory in the State. Yet North Carolina gave Grant more than twelve thousand majority a year and a half ago; the people of the western part of the State, strongly against secession in 1860 and good Republicans up to this last year, went anti-Republican; in the counties that the Governor put under martial law, and which would presumably have gone Democratic, there was a pretty general abstinence from voting on the part of the Democrats. So whether really to call this a Democratic victory it is not easy to say. The truth, so far as we can make out, is about this: In North Carolina, as elsewhere in the South, the majority of the whites have lost all confidence in the honesty of the dominant party; the North Carolina Legislature no more than that of South Carolina has escaped the charge of extreme rascality and waste, though the reputation of the South Carolinian is of course much worse than that of the other; the Governor is thought not free from complicity with certain railway jobbers; Judge Tourgee, a Republican judge of the Supreme Court of the State—whose district is in the region part of which is under martial law—testifies that there has been commission of outrages, yet says that the Governor's course in levying troops "did not meet with his entire approval;" and what the Judge says of the Governor in print we may be sure thousands of obscurer men said to each other, and, voting accordingly, the State, whether or not it has gone Democratic, has been very deliberately taken out of the hands of the people in whose hands it has been for the last few years. That these people were Republicans is so much the worse for the Republican party. Over the immediate result no decent Republican need bemoan himself, and it is gratifying to see how few the party papers are that keep up the regulation talk of four years ago about loyalty. Mr. Aaron Alpeoria Bradley would not to-day, we fancy, be received with boisterous cheers in Cooper Institute, though we fear that still for a year or two Mr. Harrison Reed, of Florida, and Mr. Richard Busteed will be invited to seats on the platform. Of the seven North Carolina representatives, five are "Conservative" and two Republican—a Republican loss of four; the Legislature is Conservative, and that ensures the loss of Senator Abbott, who indeed is no great loss.

If a thing to be learned from the North Carolina election is that Southern Republicanism must be more honest and intelligent than it has been of late, and that the Northern Republican, as well as the benighted Democrat, has certain "dead issues" to get out of the way, the thing to be learned from the South Carolina nominations is, that negro senators and representatives may be looked for regularly, and that the colored man has definitely decided that he will no longer "take a back seat." Mr. C. C. Bowen's district he is to contest with a mulatto named De Large, who will probably be returned; Mr. Hoge, and one or two more, give way to negroes; the State Convention was presided over by a negro who is an intimate friend of Mr. Whittemore; and there are other indications besides the proposed election of Mr. Cardozo to the Senate that the colored voter has decided on striking high. In Kentucky, where the negro has just become a voter, but where the opposition to his voting would be as great as anywhere else in the country, he has added about twenty thousand to the Republican strength in the recent election. In Tennessee there are Democratic gains.

In the Fourth Congressional District of Missouri, there is some trouble in the Republican party in regard to the new nomination to Congress. Some members of the party wish to nominate an avowed protectionist, he giving none but general pledges of "soundness on the main question"—of some years since. Special pledges are scouted. He is a good Republican, always "served the party," and pushed the Amendment, and to ask him whether he voted to reduce taxation on sugar, or steel rails, or salt, or to ask him to pledge himself that he will vote for revenue reform, would be, it is held, an "insult to his record." That he should go up to Washington unpledged and vote for Mr. Dennis McCarthy's salt monopoly in return for Mr. McCarthy's vote for his iron monopoly or "land-grab," seems to be thought a proper way to recognize his love for the negro and his services to the country when many were succumbing to the slave power and despairing of the Republic. But there are many people who never succumbed to the slave power, nor despaired of the Republic, who think Mr. McCarthy's salt-works a mere robbery of the people, and who think, in general, of the protectionist system, that the wit of Solomon could not frame a plan of protection whereby all "interests" may be protected; and that no man with a thousandth part of the wit of any average man can fail to see that, where there is to be any actual "protection," nearly all businesses must be taxed to pay a bounty to those really protected. Which is injustice to all, and favoritism to a few at the expense of the many. One such man, sound on the main question of 1865, and on what is to many people the main question of 1870, lives in the district above-mentioned, and there is talk among some of the Republicans of putting him in nomination for the vacant seat, and asking the Democrats to vote for him. Hereupon there is outcry, and charges are made that these people aim at smashing up the Republican party. How, is not stated. If a sufficient number of Democrats can be got to vote for a Republican without shame and without reproach—and all the more likely to be if he is independent enough to be a revenue reformer or free-trader in a high protectionist district—it is not at once perceptible how Republican principles are sacrificed. The question is not of sending a Democrat to Congress in place of a Republican, but sending there a person who is not of the opinion held by some Republicans, that a protective tariff is a necessary or even useful plank in a Republican platform. That other question is coming up, however, and Republicans not tender in the answers they make to questioners are ready, we see, to give it a harsh answer.

Nowhere else in the world, surely, could such a case have occurred as that of young Real, who was hanged last week in this city. It shows in clear light the workings of our present system of municipal government. Real was an illiterate young Irishman, known as a petty thief and as a desperado, and he was an influential politician of one of our up-town wards. When he died he really had some excuse for thinking himself ill-used because, instead of being hanged for murder, he was not holding a place in the Court of General Sessions like the murderer Jackson, or "resigning" a clerkship in the Common Council on account of having committed a rape in the council-room. Two years ago he killed in cold blood a policeman whose life he had previously attempted—an attempt for which he was, at the time of the murder, under bail. Nearly two years ago he was convicted of this crime on the plainest of "evidence," and the judge who sentenced him was publicly praised for his courage in daring to do so. Perhaps he deserved praise—pleasing as it is to think so—for his court-room is said to have been filled with roughs, threatening death to judge and jury if Real was sentenced; and perhaps, it is said, he did not. Real was "known to be out of favor with Tammany," and to have favored Mr. H. C. Murphy for Governor of the State instead of Mr. Hoffman. He was hanged at last, showing, by the bye, a degree of nerve and a force of will that gave the lie, as emphatically as his three shootings did, to his tale of long-endured abuse at the hands of the man he killed; and his death was the occasion of the publishing of a "last appeal," which is a mere "electioneering document," issued when all hope had gone, prepared by the politicians who surrounded him, perhaps not so much as signed by him, and, plainly, on the face of it, given to the world to hurt the "chances" of Hoffman and Hall—whose chances it indeed will, no doubt, to some extent hurt. His funeral took place on Sunday, and the body was attended to the grave by more than a hundred carriages, and by several thousands of people in procession, of whom some will remember him when they come to vote. "Tammany let him hang," the cry was among his friends; or was the cry that was put into their mouths. The whole case, in all its circumstances, is a perfect specimen of "politics," as politics flourish in this city. An essential distinction between the "politics" of the other attendant circumstances of the affair and the triumphant procession of Sunday, the apotheosis of lawlessness as opposed to law, may not be easy to find. But, at best, the latter was more within the immediate grasp of the police, and Superintendant Jourdan, or whoever could take order in the matter, might very well have had the murderer's body buried in the jail-yard or elsewhere in secrecy. As it is, Real's funeral counteracted ten times over any good effect his execution may have had.

Gen. Banks's views of the war in Europe might have been expected to be original and profound. He had a chance to air them last Friday at the annual reunion of the Society of the Army and Navy of the Gulf, in Boston. There was no particular reason, he said, why we should sympathize with either of the belligerents, our sympathy being regulated by the facts that "our Constitution, as interpreted by the supreme judicial tribunal, makes it impossible for us to acquire territory by war," and that "Denmark, Sweden, Switzerland, Hungary, and probably Russia, sympathize less with" Prussia than with France. This is still further enforced by the doctrine that "our interest is not with imperial dynasties, but with the people, and the small progressive states of Europe," namely, those just enumerated, plus Italy, Holland, and Belgium. "Wherever they lead," says this extraordinary Chairman of Committee on Foreign Affairs, "our sympathies may safely follow; but until they make their sign, neutrality is our line of duty." In two of these states the "sign" has certainly not been ambiguous, and we should like to see Gen. Banks's "sympathies" following at one and the same time the lead of Denmark and of Belgium. It would be tolerably difficult to follow the sympathies of Italy alone, she being under the greatest obligations to both France and Prussia, and, therefore, entertaining feelings which are properly somewhat mixed. In short, the rule laid down by Gen. Banks, if attempted to be carried out, would land a man in the lunatic asylum in forty minutes.

The Chinese question also received passing attention in the same "oration," in one of those sounding but utterly empty phrases which Massachusetts politicians are accustomed to laugh at in their sleeves when sitting on the platform behind Gen. Banks. He apparently considers the problem less a consequence of fortnightly steam service between China and San Francisco, or of the Pacific Railroad, than of reconstruction, with which he clumsily connects it. After saying that the Congressional policy towards the South has rested too little on "popular intelligence and the voluntary consent of the people," and too much on abstract theories of political justice, he continues in this lucid manner:

> "Its tendency is in some measure to paralyze emancipation, as it stimulates and is held by some persons to justify importation of laborers to such extent as to reduce the industrial classes from the elevation they have attained by slow degrees and patient effort in this country, to a degraded standard, recognized only in overpopulated Asiatic empires. The extension of the rights of citizenship, which consistency is said to require, to such imported servants, degrades freemen who have earned the rights they enjoy, and endangers the liberties of the country."

The non-committal character of this utterance may not be detected at once by those unfamiliar with Gen. Banks's ease in fence-riding, and certainly he could not complain of injustice if one who was studying the tendency of the Republican party in regard to the Chinese question should allege that in Massachusetts Gen. Butler, "General" Wilson, as he is familiarly called, and Gen. Banks have now all declared themselves against the Chinaman. Three more strenuous defenders of "abstract theories of political justice" this country has not lately seen, nor three politicians who will run less risk of offending their constituents—in each case largely a mechanic population. As we have before said, the humor of the spectacle lies in the dismay of those who have longest and loudest preached human equality, and we have not refrained from laughing to see Mr. Phillips, at sight of the North Adams Chinamen, pack away in his trunk the beautiful figure of Trajan's Column which has so often served him as the type of his idea of modern American civilization.

EUROPEAN WAR AND AMERICAN FINANCE.

At the opening of the month of June, the entire civilized world was in profound peace. The condition of the financial and commercial markets was everywhere deemed healthy and satisfactory. The European continent had, it is true, been afflicted with a serious, extended, and protracted drought, which threatened deficient crops; but the abundant stores of the United States being just at that time freely offered at declining prices, owing to a universal indisposition here to aid in the long-continued and injurious grain speculation, no great uneasiness was anywhere experienced on account of the unfavorable crop prospects. The rate of discount at the Bank of England had stood for some time at 3 per cent.; that of the Bank of France as low as 2½. The Bank of Berlin, for some reason not at that time understood, but since sufficiently explained, had been conspicuously anxious to discourage foreign investments and speculation of every kind, and maintained its rate of discount at 4 per cent. The coin reserves at the leading bank centres were steady, or even gradually increasing. There was no export demand for coin anywhere, and that wonderfully complicated machine—the business of the world—seemed progressing so quietly and steadily that its movement was scarcely noticed. The financial relations of the United States with all other nations were regular and easy. We were actively engaged in sending to Europe the rest of our last year's cotton crop, and in forwarding an unusually large amount of grain and flour to supply European deficiencies. There was no evidence anywhere of a large commercial or financial indebtedness to Europe. Our Government securities were in high credit there, and stood at nearly the highest prices ever reached. Gold in our own markets was nearly as low as it had ever been since its first serious rise in 1862. Our stock of specie in the Treasury and in the banks was larger than it ever had been since suspension, and our regular weekly export of gold and silver bullion was just beginning to undergo its usual summer increase.

In the early part of June, the French purchases of flour and grain in this market became noticeably large, and it was even remarked that prices were occasionally paid here that did not show any profit on the published quotations of the French markets, indicating that the purchases were not made for merchants, but probably for the Government; or, at least, in consequence of official intimations as to the probable future. At the same time the Paris Bourse showed a noticeable weakness, which the known state of affairs seemed scarcely to warrant. Rumors were afloat that persons high in the Emperor's confidence were large sellers, and a feeling of uneasiness began gradually to spread abroad. But no great heed was given to it. The English money market remained perfectly unaffected. Gold continued to flow steadily into the Bank at London. Consols remained firm between 92½ and 93. Our 1862 bonds were steady at 90 and over in London, and at 95½ to 96 in Frankfort currency. Flour and wheat, which should have advanced in case of trouble, continued to decline with the decline here. Only the Paris Bourse and the Liverpool cotton market, which latter had been the scene of some unhealthy speculation, showed any real signs of weakness.

Such was the condition of financial affairs at the close of June. The first statement of the Bank of France in the month of July showed a loss of over four million dollars in coin—a remarkable loss for the season—followed by fresh uneasiness and a further decline on the Paris Bourse. On the 6th of July, the French Minister of Foreign Affairs, the Duc de Gramont, made a very excited speech in the Corps Législatif, which was a virtual threat of war against Prussia on account of the pretended attempts of the latter to secure the throne of Spain for a Hohenzollern prince. A tremendous excitement on the Bourse was the immediate result. The rentes fell from 73 to 71½, and all other securities fell far more largely. Frankfort, until now the principal financial centre of Germany, but most unfavorably situated near a hostile and debatable frontier, became at once most seriously alarmed. Apart from the indirect effects of war on its financial affairs, it was actually liable to become the scene of almost the first conflict should peace not be preserved. Every one was seized with the desire to turn his property into money, and, as usual, every one rushed at first to sell that which was most readily salable. The best and safest securities were thus the first to be forced upon an excited market; and hence United States 1862 bonds, which before Gramont's speech had been in demand at 96¼, immediately afterwards were unsalable at 94, and in four days had fallen to 91.

The alarm which the keen Frankfort bankers, always studious of the political horizon and now thoroughly alive to the temper of the French Government and the Prussian people, had so readily taken, was at first confined to a very limited circle. England declined to believe in war. From July 6, the date of Gramont's apparently intemperate but really well-studied speech, to July 12, English consols declined less than one per cent. The American bonds which Frankfort was so anxious to sell, were readily bought in London at a very slight decline from previous prices, and even the New York Gold Room, according to popular belief ever eager for a pretence to advance the premium, was at first inclined to disregard the Hohenzollern complication, and closed on Saturday, July 9, at 112⅝, not one-half per cent. above the opening price of the Monday previous. Americans generally disbelieved in the war, and even those who were inclined to expect it were unable to see how war could materially affect us. On excited and perhaps exaggerated accounts of the Frankfort panic, on the 11th of July the premium suddenly advanced to 115, but on the 13th fell back to 112, as the relative position of the different European markets and our own did not admit of any bonds being brought back here for sale. The slight decline in London was followed by a corresponding decline in the prices of bonds here, so that no bonds could be returned from England, and as long as frightened Frankfort bankers could sell their bonds in England, there was no need of sending them here.

Up to this time, although France and Germany were rapidly tending to financial panic, neither England nor the United States appeared to be materially affected by it; and especially as far as we were concerned, so entirely had the speculative spirit disappeared among us, that even the hourly growing evidence of imminent conflict could not induce operations of any kind in advance of legitimate wants. But on the 14th war was declared, and the situation rapidly changed. The Bank of Prussia raised its discount from 4 to 6 per cent. Frankfort immediately became disorganized with panic. Business was at a standstill. Sales were impossible. Our bonds fell from 91 to 88, and there is no telling how low they may have sold in the midst of the confusion. The panic in Paris was even worse. Rentes fell from 71½ to 64½. Whoever had good and desirable securities sent them post-haste to England for sale. So great was the rush of securities there that the drafts drawn against them, usually in active demand on the Continent, became totally unsalable, and specie had to be sent from England to pay for them. The withdrawal of this coin from the Bank of England caused the latter to advance its discount rate from 3 to 3½ and 4 per cent. Consols declined from 92½ to 89½ in three days, and during the same time American bonds fell in London from 85 to 80½. Although bonds in our markets fell during the same time 2 per cent. and more, yet the price yielded so slowly that for several days New York was a better market to sell in than either London or Frankfort, and, as a natural consequence, quite a large amount of bonds were sent here from both these cities and sold on telegraphic orders, deliverable as soon as received. The foreign bankers to whom these were sent for sale immediately purchased a corresponding amount of gold to ship to Europe in payment of the bonds as soon as they should arrive. It was their purchases of gold that advanced the premium rapidly from 113 on July 14 to 123 on July 18.

In the meantime the declaration of war caused the Bank of France to lose in one week 31 millions of francs, or over 6 millions dollars, in coin, in spite of large shipments from England. Business everywhere was brought to a standstill. Holland and Belgium, though neutral, were as much paralyzed as Frankfort or Hamburg and Bremen. All commerce at sea on the part of Germany necessarily stopped, her armed navy being entirely inadequate to the protection of her commercial marine. England was suddenly deprived of her principal trade. Cotton dealers and manufacturers had no outlet for their goods. Raw cotton declined from 20 cents to 15 cents per pound, involving an enormous loss on the average stock of 400 millions of pounds in store and afloat for English account, in addition to the loss on manufactured goods. Failures were numerous in all branches of trade, and commercial credit of every kind sank very low. At this season of the year, more than at any other season, the New York bankers are indebted to their English correspondents. In ordinary times they pay this indebtedness by purchasing here and sending to London the bills of mercantile houses here who ship grain, cotton, petroleum, meats, etc., to any and all European ports, and draw for the amount upon their correspondents. But in the state of the markets just described, it is evident that no one could tell what bills might be paid. English bankers, therefore, who had money due them from here, immediately on the declaration of war did telegraph (or would have telegraphed if it had not been unnecessary): Send no more bills; send only coin. Up to the 9th of July, our coin shipments scarcely exceeded the weekly average of 700,000 dollars. But within two days after the declaration of war we shipped one million and a half, and in the three weeks immediately following we shipped 17 millions more, or precisely as much as we had shipped in the entire six months preceding. These coin shipments form so far the most important evidence and indeed the principal effect of the influence of the European war upon our finances. Their importance increases with the doubt as to the precise nature of the circumstances which have rendered them necessary. We think the doubt unnecessary. We believe the nature of the circumstances fully established.

We have already stated that between the 14th and 18th of July large amounts of gold were purchased here by foreign bankers for remittance to Europe in payment of bonds sold here (deliverable on arrival) on telegraphic orders from European holders. If the 20 millions of gold shipped during the last four weeks have been shipped in payment of bonds returned here, then, with the 1,200 millions of our bonds believed to be held abroad, it is evident that we are liable to a sudden influx of bonds in such amounts as would completely sweep away our entire financial system. But it is almost positively certain that, although a large amount of gold was bought in anticipation of bonds to be returned, yet the bulk of the bonds never did arrive. Although in Frankfort the worst panic did not take place until the 23d, when our bonds are reported to have sold at 77, or about 10 per cent. below the London price of the day; although since then the Bank of England has steadily advanced its discount rate from 4 to 5 and even to 6 per cent.; although since then both the belligerents have come into the markets as large borrowers at rates of interest almost equal to those of our bonds; although even English consols have since continued to decline, and touched their very lowest figure, 88½, only on the 4th of August, over 4 per cent. below the peace quotations; yet our bonds, since the first panic of July 20, when they sold down to 80½, have almost steadily recovered in spite of all these adverse circumstances, and on the 5th of August sold again at 83½, only 7 per cent. below the highest figures previous to the disturbance. It is not too much to say that the safety and desirability of American bonds as a permanent investment are more firmly established to-day than they have ever been, and that for the settlement of balances between commercial nations they are, owing to their wide acceptability, preferable to every security excepting gold itself. It is the remarkable elasticity with which they reacted from their first depression, and the unanimity with which they are everywhere received as security, that induced European holders who had sent orders to have their bonds sold here, to refrain from actually sending the bonds, preferring to buy back here those already sold, and to sell the gold bought in their place. All accounts agree in stating that only small amounts of bonds have been actually returned, and it must now be evident, even to the most timorous, that unless the war now raging is carried to the extreme of exhausting one or both the combatants, or unless the people of the United States themselves wilfully destroy the European confidence in their securities, there is no more likelihood that United States bonds will be returned here for sale than there is of our cotton or our grain coming back to plague us. It is impossible to ascertain with any degree of certainty the amount of bonds returned to us during the last four weeks; but competent authority estimates it at less than six millions of dollars, less than one-half the amount that has frequently been sent abroad in one week!

Assuming the estimate given of bonds returned as approximatively correct, there would be 14 millions of coin shipments to be accounted for. Without entering into questionable detail, it may be stated that the average weekly specie export for the rest of the year has not been less than 700,000 dollars per week, which would account for nearly three millions during the four weeks. It is also well to remember that this is at all times the principal season for our coin exports, and that, owing to the interest payment on the national debt, a large part of which is due abroad, the shipments in July are always large.

Taking these various facts into consideration, it will not be unfair to state the effect of the war in Europe on our finances so far as follows: The war in Europe has caused the return of about five millions of our securities from abroad, which we had to pay for in coin. It has also temporarily stopped a portion of our exports, or at least rendered their proceeds temporarily unavailable for the liquidation of that overdue debt which always exists between commercial nations, and has compelled us to ship a corresponding amount, say 10 millions, of coin in their stead. The sale of the bonds here and the (unfounded) expectation of further similar sales depressed the prices of bonds here about 4 per cent., from which they have almost entirely recovered. The purchase of 15 millions of gold here, and the (probably unfounded) expectation of further purchases, has advanced the price of gold 10 per cent., against which advance there has only been a slight reaction, and only a slow and gradual reaction can be expected, until our merchandise exports again assume their wonted proportions.

There are other important financial considerations connected with the war, but these, as well as its commercial aspects, must be for the present reserved.

SOUTH-WESTERN GERMANY.

The states of South-western Germany—the Kingdoms of Bavaria and Würtemberg and the Grand-Duchies of Baden and Hesse-Darmstadt—fought in 1866 on the side of Austria against Prussia. They fought for the existence of the Germanic Confederation, the disruption of which the first cannon-shot of the Prussians avowedly proclaimed. They fought for the preservation of the leadership of the House of Austria among the German tribes, which they had learned to distrust less than that of the constantly growing and grasping House of Hohenzollern; they fought for their own independence and sovereignty against an ambitious state, whose aggressiveness Count Bismarck had then made more patent than ever, and whose evident aim it was to make itself, first, the only great power in Germany, and, subsequently, its master. Excepting Baden, they went into the fight with alacrity and passion; they came out of it ingloriously beaten. Their leader, Austria, was crushed and cast out of Germany; their northern allies—Hanover, Electoral Hesse, Nassau, Frankfort, and Saxony—were absorbed in Prussia, or—which was the case with the last named—in her creation, the North German Union; they saw the current of public opinion, at least north of the Main, rapidly turning in favor of the *victrix causa;* they paid the penalty of their mistake in heavy contributions—Bavaria and Hesse also in ceded territories; they lay helplessly prostrate.

Had France at that moment been in a condition to offer speedy aid to the vanquished, the animosity against Prussia then agitating South Germany might have prevailed over all regards of German patriotism, and led, at least, to an attempt at forming a new Rhenish Confederation, under the protection of the Napoleonic eagle. But France, like all Europe, was stunned by the rapid blows dealt by the Prussian generals on the battle-fields of Bohemia and Western Germany. The treaty of Prague granted the South-western States the right of forming a confederation among themselves; but so little homogeneous were even those four states, so widely unequal were they in numbers and power—Bavaria alone being superior to the three others combined—so slight was, therefore, the prospect of harmony among them, and so slender were the chances of success of such a union, embracing nine millions of people placed face to face with the twenty-nine millions of the North German Confederation—that no serious thought of realizing any such scheme seems to have been entertained, in governing circles, for any length of time. In this their helpless condition, Bismarck easily succeeded in persuading Würtemberg, Baden—which required little persuasion, as its Grand-Duke, the son-in-law of the King of Prussia, had partaken in the war against his will and inclination—and Bavaria to conclude with him, even before the lapse of a month after the peace of Prague, those secret alliances, defensive and offensive, by which they placed their armies for all war emergencies under the command of the King of Prussia, and the sudden divulgation of which, after seven months of silence, in March, 1867, thrilled and electrified the unionists of Germany, and filled all that was Bonapartist or warlike in France with shame and rage. A still closer treaty with Hesse followed that divulgation.

Herr Von der Pfordten himself, formerly no less conspicuous a rival of Bismarck, and no less ardent an opponent of the Prussian policy, than Von Beust, was the minister who, for Bavaria, concluded the secret treaty of August 22, 1866. His successor at the head of the Bavarian cabinet, Prince Hohenlohe, could, with a lighter heart, continue the work of reconciliation with victorious Prussia. The leading statesmen of Würtemberg and Hesse, Von Varnbüler and Von Dalwigk—not to speak of Baden—followed in his wake, though with much reserve and some tergiversation. Of the ruling princes, the Grand-Duke of Baden openly came forward as a champion for the cause of German unity; the Grand-Duke of Hesse often betrayed his opposite inclinations; the Kings of Bavaria and Würtemberg, more inclined to be guided than to guide, seemed to leave the decision of the international questions with their ministers and Chambers, but, on the whole, showed themselves rather friendly than hostile to the alliance with Prussia. The princes and ministers of all these states were ready to join the new Customs Union headed by Prussia, though their joining it, after a powerful opposition, was a new triumph for Bismarck and a new offence to France; but none of them, the rulers of Baden excepted, showed the least desire or readiness to join the North German Confederation itself. Faithfully to guard the integrity of Germany against foreign aggression on one side, and zealously to guard their own countries' sovereignty on the other, seemed to be their guiding rule of policy.

But this middle way between unionism and particularism was far from satisfying the wishes of the various populations, which, scarcely the war was over, split mainly into decided unionists and decided particularists. The immediate joining of the North German Confederation was the watchword of the one party, the repudiation of all bonds with Prussia that of the other. Both pretended to act in the interest of German unity. But while the one saw in a union of South-western Germany with their brethren north of the Main a satisfactory realization of that grand national aim, at least for a time, the other saw in it only a base surrender to a fortunate usurper, and in the exclusion of Austria the final disruption of the Fatherland. The anti-Prussian party was, considering the whole group of states, the most numerous; but it was composed of two widely different elements—of radical progressists and of ultramontane and feudal reactionists. Unnatural as this coalition may appear, it has shown itself powerful enough to hamper the action of the governments, to carry state elections, as well as the elections to the Customs Union Parliament, to perplex and embarrass the friends of the union cause generally, and "to give aid and comfort" to the foe of Germany lurking on the other side of the Rhine. The recklessness displayed on many an occasion by the ultramontane and democratic organs and orators, in their denunciations of Prussia, was of the kind with which the ravings of the Southern press in its impotence have made us familiar in this country. We cannot refrain from giving our readers a few samples.

"It is a well-known thing," exclaimed a speaker in 1868, "that big fishes devour the smaller fry; therefore, let us beware of the Prussian pond, in which we cannot fail being devoured. A compact with Prussia is a compact of the mouse with the cat. The brevity of the Prussian constitution is quite laudable; one can easily keep it in memory, for it contains only three paragraphs. The first reads: Pay; the second, be a soldier; the third, hold your tongue." Speaking of armaments in the same year, the *Donauzeitung* wrote: "We arm against France, that is, against the only power that can yet save us. We arm in order to conquer for Prussia the right to swallow us. Every man whom we equip strengthens our enemy. The less we arm, the feebler will be our only enemy, that is, Prussia." The Bavarian *Volksbote* said: "We are determined to be the serfs and vassals of neither the French nor the Prussians; but nobody can prohibit some of us from seeing in the French our only defenders from Prussian usurpation; our only helpers in need; our saviors from annexation; and our future deliverers from the unbearable yoke of brutal Prussianism." And it was this tone of rampant hostility to the schemes of German unity under the lead of the House of Hohenzollern, this constant invocation of French aid against the greatest German power, coupled with the intrigues of some of the dispossessed princes, that encouraged Napoleon and his advisers to see in Germany, which they meditated attacking, a country torn by violent hatreds and factions, and kept together only by factitious alliances, which a rapid invasion of the South, or one brilliant French victory, would easily burst for ever.

In thus calculating upon the anti-Prussian sentiment of the South-western Germans, Napoleon undoubtedly overrated its importance. He mistook outbursts of impotent rage for evidences of determined purpose. He overlooked the fact that—whatever the feelings of the ignorant peasantry of Suabia may be; whatever the influence of the Catholic clergy upon the bigoted portions of their folds in town and country; and whatever the length to which the extreme fanaticism of radical party-leaders might go—there was, among the educated classes throughout Germany, an irresistible current of public opinion concerning the integrity of the nation and country, and the sacred duty of defending it at any price against the overbearing French neighbor—a current which, at the moment of sudden peril, followed by an enthusiastic uprising, would sweep everything before it, and at once silence all opposition. In one word, he fell into the error into which the leaders of the Southern Rebellion had fallen when they began their assault upon the Union, counting upon the aid of Northern sympathizers. And his miscalculation was obviously greater than theirs. His declaration of war was followed in Germany by a more universal and more generally sincere patriotic upheaval than that which the first gun fired at Fort Sumter called forth in the North of the United States. The princes of South-western Germany readily fulfilled their obligations as allies of Prussia, whatever the inner feelings of some of them may have been; all party strife was at once hushed; one grand resolve, to fight against the invader to the bitter end, was everywhere proclaimed; and the people of the North and South-west stood forth almost like one man, from the seas to the Alps.

And if Napoleon ever had any chance of dividing Germany while fighting her, it certainly required a rapid and successful invasion of South-western Germany or a decisive victory over the Prussian army at the very outset to bring about such a result. An invasion of Suabia might possibly have been followed by popular commotions in the anti-Prussian interest; a great defeat of the Prussians might have induced one or another of King William's allies to break a half-extorted compact, to recall his army, and to proclaim his neutrality. But Fate had decreed a different course of events. The boastful invader who had planned a surprise remained almost entirely inactive on the confines of his own country, as if struck with a kind of paralysis at the moment when boasts were to give way to actions. All initiative was with the assailed, and victory perched upon the banners of the bolder. And the consequence is that the bond of union between the North and South-west of Germany has been cemented more strongly than it has been for centuries, by streams of Bavarian, Würtembergian, Badenese, and Prussian blood, poured against a common foe and for a common fatherland, on a glorious battle-field. Whatever the changing fortunes of war may yet have in store for the victors and vanquished, so much is certain that the struggle is to go on between thirty-eight millions of French and thirty-eight millions of united Germans. The Napoleonic dream of fighting a divided Germany has vanished like a dream of the night. Germany is now nearer a union, in the fullest sense of the word, than it ever has been. Only the outer form is still wanting. Prussia will not be slow in determining it.

SARATOGA.

[FROM AN OCCASIONAL CORRESPONDENT.]

SARATOGA, August 3, 1870.

ONE has vague irresponsible local previsions of which it is generally hard to discern the origin. You find yourself thinking of an unknown, unseen place as thus rather than so. It assumes in your mind a certain shape, a certain color which frequently turns out to be singularly at variance with reality. For some reason or other, I had idly dreamed of Saratoga as buried in a sort of elegant wilderness of verdurous gloom. I fancied a region of shady forest drives, with a bright, broad-piazzaed hotel gleaming here and there against a background of mysterious groves and glades. I had made a cruelly small allowance for the stern vulgarities of life—for the shops and sidewalks and loafers, the complex machinery of a city of pleasure. The fault was so wholly my own that it is quite without bitterness that I proceed to affirm that the Saratoga of experience is sadly different from this. I confess, however, that it has always seemed to me that one's visions, on the whole, gain more than they lose by realization. There is an essential indignity in indefiniteness: you cannot imagine the especial poignant interest of details and accidents. They give more to the imagination than they receive from it. I frankly admit, therefore, that I find here a decidedly more satisfactory sort of place than the all-too-primitive Elysium of my wanton fancy. It is indeed, as I say, immensely different. There is a vast number of brick—nay, of asphalte—sidewalks, a great many shops, and a magnificent array of loafers. But what indeed are you to do at Saratoga—the morning draught having been achieved—unless you loaf? "Que faire en un gîte â moins que l'on ne songe?" Loafers being assumed, of course shops and sidewalks follow. The main avenue of Saratoga is in fact bravely entitled Broadway. The untravelled reader may form a very accurate idea of it by recalling as distinctly as possible, not indeed the splendors of that famous thoroughfare, but the secondary charms of the Sixth Avenue. The place has what the French would call the "accent" of the Sixth Avenue. Its two main features are the two monster hotels which stand facing each other along a goodly portion of its course. One, I believe, is considered much better than the other—less prodigious and promiscuous and tumultuous, but in appearance there is little choice between them. Both are immense brick structures, directly on the crowded, noisy street, with vast covered piazzas running along the façade, supported by great iron posts. The piazza of the Union Hotel, I have been repeatedly informed, is the largest "in the world." There are a number of objects in Saratoga, by the way, which in their respective kinds are the finest in the world. One of these is Mr. John Morrissey's casino. I bowed my head submissively to this statement, but privately I thought of the blue Mediterranean, and the little white promontory of Monaco, and the silver-gray verdure of olives, and the view across the outer sea toward the bosky cliffs of Italy. Congress Spring, too, it is well known, is the most delicious mineral spring in the known universe; this I am perfectly willing to maintain.

The piazzas of these great hotels may very well be the greatest of all piazzas. They are not picturesque, but they doubtless serve their purpose—that of affording sitting-space in the open air to an immense number of persons. They are, of course, quite the best places to observe the Saratoga world. In the evening, when the "boarders" have all come forth and seated themselves in groups, or have begun to stroll in (not always, I regret to say, to the sad detriment of the dramatic interest, bisexual) couples, the vast heterogeneous scene affords a great deal of entertainment. Seeing it for the first time, the observer is likely to assure himself that he has neglected an important feature in the sum of American manners. The rough brick wall of the house, illumined by a line of flaring gas-lights, forms a harmonious background to the crude, impermanent, discordant tone of the assembly. In the larger of the two hotels, a series of long windows open into an immense parlor—the largest, I suppose, in the world—and the most scantily furnished, I imagine, in proportion to its size. A few dozen rocking-chairs, an equal number of small tables, tripods to the eternal ice-pitchers, serve chiefly to emphasize the vacuous grandeur of the spot. On the piazza, in the outer multitude, ladies largely prevail, both by numbers and (you are not slow to perceive) by distinction of appearance. The good old times of Saratoga, I believe, as of the world in general, are rapidly passing away. The time was when it was the chosen resort of none but "nice people." At the present day, I hear it constantly affirmed, "the company is dreadfully mixed." What society may have been at Saratoga when its elements were thus simple and severe, I can only vaguely, regretfully conjecture. I confine myself to the dense, democratic, vulgar Saratoga of the current year. You are struck, to begin with, at the hotels by the numerical superiority of the women; then, I think, by their personal superiority. It is incontestably the case that in appearance, in manner, in grace and completeness of aspect, American women vastly surpass their husbands and brothers. The case is reversed with most of the nations of Europe—with the English notably, and in some degree with the French and Germans. Attached to the main entrance of the Union Hotel, and adjoining the ascent from the street to the piazza, is a "stoop" of mighty area, which, at most hours of the day and morning, is a favored lounging-place of men. I am one of those who think that on the whole we are a decidedly good-looking people. "On the whole," perhaps, every people is good-looking. There is, however, a type of physiognomy among ourselves which seems so potently to imperil the modest validity of this dictum, that one finally utters it with a certain sense of triumph. The lean, sallow, angular Yankee of tradition is dignified mainly by a look of decision, a hint of unimpassioned volition, the air of "smartness." This in some degree redeems him, but it fails to make him handsome. But in the average American of the present time, the typical leanness and sallowness are less, and the individual keenness and smartness at once equally intense and more evenly balanced with this greater comeliness of form. Casting your eye over a group of your fellow-citizens in the portico of the Union Hotel, you will be inclined to admit that, taking the good with the bad, they are worthy sons of the great Republic. I find in them, I confess, an ample fund of grave entertainment. They suggest to my fancy the swarming vastness—the multifarious possibilities and activities—of our young civilization. They come from the uttermost ends of the continent—from San Francisco, from New Orleans, from Duluth. As they sit with their white hats tilted forward, and their chairs tilted back, and their feet tilted up, and their cigars and toothpicks forming various angles with these various lines, I imagine them surrounded with a sort of clear achromatic halo of mystery. They are obviously persons of experience—of a somewhat narrow and monotonous experience certainly; an experience of which the diamonds and laces which their wives are exhibiting hard by are, perhaps, the most substantial and beautiful result; but, at any rate, they are men who have positively actually lived. For the time, they are lounging with the negro waiters, and the boot-blacks, and the news-venders; but it was not in lounging that they gained their hard wrinkles and the level impartial regard which they direct from beneath their hat-rims. They are not the mellow fruit of a society impelled by tradition and attended by culture; they are hard nuts, which have grown and ripened as they could. When they talk among themselves, I seem to hear the mutual cracking of opposed shells.

If these men are remarkable, the ladies are wonderful. Saratoga is famous, I believe, as the place of all places in America where women most adorn themselves, or as the place, at least, where the greatest amount of dressing may be seen by the greatest number of people. Your first impression is therefore of the—what shall I call it?—of the *muchness* of the feminine drapery. Every woman you meet, young or old, is attired with a certain amount of splendor and a large amount of good taste. You behold an interesting, indeed a quite momentous spectacle: the democratization of elegance. If I am to believe what I hear—in fact, I may say what I overhear—a large portion of these sumptuous persons are victims of imperfect education and members of a somewhat narrow social circle. She walks more or less of a queen, however, each unsanctified nobody. She has, in dress, an admirable instinct of elegance and even of what the French call "chic." This instinct occasionally amounts to a sort of passion; the result then is superb. You look at the coarse brick walls, the rusty iron posts of the piazza, at the shuffling negro waiters, the great tawdry steamboat cabin of a drawing-room—you see the tilted ill-dressed loungers on the steps—and you finally regret that a figure so exquisite should have so vulgar a setting. Your resentment, however, is speedily tempered by reflection. You feel the impertinence of your old reminiscences of Old-World novels, and of the dreary social order in which privacy was the presiding genius and women arrayed themselves for the appreciation of the few—the few still, even when numerous. The crowd, the tavern loungers, the surrounding ugliness and tumult and license, constitute the social medium of the young lady whom you so cunningly admire: she is dressed for publicity. The thought fills you with a kind of awe. The Old-World social order is far away indeed, and as for Old-World novels, you begin to doubt whether she is so amiably curious as to read even the silliest of them. To be so excessively dressed is obviously to give pledges to idleness. I have been forcibly struck with the apparent absence of any warmth and richness of detail in the lives of these wonderful ladies of the piazzas. We are freely accused of being an eminently wasteful people:

I know of few things which so largely warrant the accusation as the fact that these consummate *élégantes* adorn themselves, socially speaking, to so little purpose. To dress for every one is, practically, to dress for no one. There are few prettier sights than a charmingly dressed woman, gracefully established in some shady spot, with a piece of needlework or embroidery, or a book. Nothing very serious is accomplished, probably, but an æsthetic principle is considered. The embroidery and the book are a tribute to culture, and I suppose they really figure somewhere out of the opening scenes of French comedies. But here at Saratoga, at any hour of morning or evening, you may see a hundred brave creatures steeped in a quite unutterable emptyhandedness. I have had constant observation of a lady who seems to me really to possess a genius for being nothing more than dressed. Her dresses are admirably rich and beautiful—my letter would greatly gain in value if I possessed the learning needful for describing them. I can only say that every evening for a fortnight, I believe, she has revealed herself as a fresh creation. But she especially, as I say, has struck me as a person dressed beyond her life. I resent on her behalf—or on behalf at least of her finery—the extreme severity of her circumstances. What is she, after all, but a regular boarder? She ought to sit on the terrace of a stately castle, with a great baronial park shutting out the undressed world, mildly coquetting with an ambassador or a duke. My imagination is shocked when I behold her seated in gorgeous relief against the dusty clapboards of the hotel, with her beautiful hands folded in her silken lap, her head drooping slightly beneath the weight of her *chignon*, her lips parted in a vague contemplative gaze at Mr. Helmbold's well-known advertisement on the opposite fence, her husband beside her reading the New York *Sun*.

I have indeed observed cases of a sort of splendid social isolation here, which are not without a certain amount of pathos—people who know no one—who have money and finery and possessions, only no friends. Such at least is my inference, from the lonely grandeur with which I see them invested. Women, of course, are the most helpless victims of this cruel situation, although it must be said that they befriend each other with a generosity for which we hardly give them credit. I have seen women, for instance, at various "hops," approach their lonely sisters and invite them to waltz, and I have seen the fair invited most graciously heedless of the potential irony of this particular form of charity. Gentlemen at Saratoga are at a premium far more, evidently, than at European watering-places. It is an old story that in this country we have no leisured class—the class from which the Saratogas of Europe recruit a large number of their male frequenters. A few months ago, I paid a visit to a famous English watering-place, where, among many substantial points of difference from our own, I chiefly remember the goodly number of well-dressed, well-looking, well-talking young men. While their sweethearts and sisters are waltzing together, our own young men are rolling up greenbacks in counting-houses and stores. I was recently reminded in another way, one evening, of the unlikeness of Saratoga to Cheltenham. Behind the biggest of the big hotels is a large planted yard, which has come to be talked of as a "park." This I regret, inasmuch as, as a yard, it is possibly the biggest in the world; while as a park I am afraid it is decidedly less than the smallest. At one end, however, stands a great ball-room, approached by a range of wooden steps. It was late in the evening: the room, in spite of the intense heat, was blazing with light, and the orchestra thundering a mighty waltz. A group of loungers, including myself, were hanging about to watch the ingress of the festally minded. In the basement of the edifice, sunk beneath the ground, a noisy auctioneer, in his shirt and trousers, black in the face with heat and vociferation, was selling "pools" of the races to a dense group of frowsy betting-men. At the foot of the steps was stationed a man in a linen coat and straw hat, without waistcoat or cravat, to take the tickets of the ball-goers. As the latter failed to arrive in sufficient numbers, a musician came forth to the top of the steps and blew a loud summons on a horn. After this they began to straggle along. On this occasion, certainly, the company promised to be decidedly "mixed." The women, as usual, were a great deal dressed, though without any constant adhesion to the technicalities of full-dress. The men adhered to it neither in the letter nor the spirit. The possessor of a pair of satin-shod feet, twinkling beneath an uplifted volume of gauze and lace and flowers, tripped up the steps with her gloved hand on the sleeve of a railway "duster." Now and then two ladies arrived alone: generally a group of them approached under convoy of a single man. Children were freely scattered among their elders, and frequently a small boy would deliver his ticket and enter the glittering portal, beautifully unembarrassed. Of the children of Saratoga there would be wondrous things to relate. I believe that, in spite of their valuable aid, the festival of which I speak was rated rather a "fizzle." I see it advertised that they are soon to have, for their own peculiar benefit, a "Masquerade and Promenade Concert, beginning at 9 P.M." I observe that they usually open the "hops," and that it is only after their elders have borrowed confidence from the sight of their unfaltering paces that they venture to perform. You meet them far into the evening roaming over the piazzas and corridors of the hotels—the little girls especially—lean, pale, and formidable. Occasionally childhood confesses itself, even when motherhood stands out, and you see at eleven o'clock at night some poor little bedizened precocity collapsed in slumbers in a lonely wayside chair. The part played by children in society here is only an additional instance of the wholesale equalization of the various social atoms which is the distinctive feature of collective Saratoga. A man in a "duster" at a ball is as good as a man in irreproachable sable; a young woman dancing with another young woman is as good as a young woman dancing with a young man; a child of ten is as good as a woman of thirty; a double negative in conversation is rather better than a single.

An important feature in many watering-places is the facility for leaving it a little behind you and tasting of the unmitigated country. You may wander to some shady hillside and sentimentalize upon the vanity of high civilization. But at Saratoga civilization holds you fast. The most important feature of the place, perhaps, is the impossibility of realizing any such pastoral dream. The surrounding country is a charming wilderness, but the roads are so abominably bad that walking and driving are alike unprofitable. Of course, however, if you are bent upon a walk, you will take it. There is a striking contrast between the concentrated prodigality of life in the immediate precinct of the hotels and the generous wooded wildness and roughness into which half an hour's stroll may lead you. Only a mile behind you are thousands of loungers and idlers, fashioned from head to foot by the experience of cities and keenly knowing in their secrets; while here, about you and before you, blooms untamed the hardy innocence of field and forest. The heavy roads are little more than sandy wheel-tracks; by the tangled wayside the blackberries wither unpicked. The country undulates with a beautiful unsoftened freedom. There are no white villages gleaming in the distance, no spires of churches, no salient details. It is all green, lonely, and vacant. If you wish to seize an "effect," you must stop beneath a cluster of pines and listen to the murmur of the softly-troubled air, or follow upward the gradual bending of their trunks to where the afternoon light touches and enchants them. Here and there on a slope by the roadside stands a rough unpainted farm-house, looking as if its dreary blackness were the result of its standing dark and lonely amid so many months, and such a wide expanse, of winter snow. The principal feature of the grassy unfurnished yard is the great wood-pile, telling grimly of the long reversion of the summer. For the time, however, it looks down contentedly enough over a goodly appanage of grain-fields and orchards, and I can fancy that it may be good to be a boy there. But to be a man, it must be quite what the lean, brown, serious farmers physiognomically hint it to be. You have, however, at the present season, for your additional beguilement, on the eastern horizon, the vision of the long bold chain of the Green Mountains, clad in that single coat of simple candid blue which is the favorite garment of our American hills. As a visitor, too, you have for an afternoon's excursion your choice between a couple of lakes. Saratoga Lake, the larger and more distant of the two, is the goal of the regular afternoon drive. Above the shore is a well-appointed tavern—"Moon's" it is called by the voice of fame—where you may sit upon a broad piazza and partake of fried potatoes and "drinks;" the latter, if you happen to have come from poor dislicensed Boston, a peculiarly gratifying privilege. You enjoy the felicity sighed for by that wanton Italian princess of the anecdote, when, one summer evening, to the sound of music, she wished that to eat an ice were a sin. The other lake is small, and its shores are unadorned by any edifice but a boat-house, where you may hire a skiff and pull yourself out into the minnow-tickled, wood-circled oval. Here, floating in its darkened half, while you watch on the opposite shore the tree-stems, white and sharp in the declining sunlight, and their foliage whitening and whispering in the breeze, and you feel that this little solitude is part of a greater and more portentous solitude, you may resolve certain passages of Ruskin, in which he dwells upon the needfulness of some human association, however remote, to make natural scenery fully impressive. You may recall that magnificent passage in which he relates having tried with such fatal effect, in a battle-haunted valley of the Jura, to fancy himself in a nameless solitude of our own continent. You feel around you, with irresistible force, the serene inexperience of undedicated nature—the absence of serious associations, the nearness, indeed, of the vulgar and trivial associations of the least picturesque of great watering-places—you feel this, and you wonder what it is you so deeply and calmly enjoy. You conclude, possibly, that it is a great advantage to be able at once to enjoy Ruskin and to enjoy what Ruskin dispraises. And hereupon you return to your hotel and read the New York papers on the plan of the French campaign and the Twenty-third Street murder.

ENGLISH FEELING ABOUT THE WAR.—THE VOLUNTEERS AT WIMBLEDON.

LONDON, July 22, 1870.

I NEED hardly say that one only subject is just now in the mind of every one. We are waiting in painful suspense for the news of the first shot that is in all probability to open the most terrible conflict of the century. Speculations as to the causes and possible consequences of this lamentable outbreak fill all the newspapers and occupy most private conversation. Parliament, indeed, is occupied in winding up the business at which it has been painfully hammering for the last six months; but the topics under discussion have for the moment lost their interest, and we are full of melancholy forebodings. The general question does not come within my province. I can only speak to you of the sentiment excited in England, so far as that can be said to have any importance. In a general way, of course, we have a strong dislike to a war which can only do us mischief, and blame with great unanimity the course adopted by Napoleon. At the same time, two or three undercurrents of feeling make themselves more or less manifest. There is the highly respectable sentiment that we ought to be neutral, not only in act but in spirit. Let us be exceedingly careful, it is said, not to give the least impression that we will even venture, without taking an active part—for that, of course, is out of the question—to hurt the tender susceptibility of the French nation. If we had been in their places, it is urged, we should have been just as foolish as they, and therefore, it is inferred, we have no right to blame them. The argument seems to me rather weak, for it would imply that a bystander, who is the only person who can be cool, is never to express his opinion, precisely because he is not angry. If lookers-on are not to give their view of the game, and the actual combatants can only express views which are necessarily worthless, it is clear that no very valuable opinion will come to light. There is, however, a little more in this sentiment than appears on the surface. Few people venture to defend Napoleon's conduct. The *Times*, which has indulged in its usual policy of vacillation, abused him for a time very heartily, though it is now trying to adopt a dignified impartiality; but though the French have few open defenders, they have a certain number of sympathizers. It is curious to remark how certain political instincts rally people, without knowing why, to the side with which they are most in harmony. Thus, all the Conservative party have a certain prejudice, which they cannot exactly explain, against Prussia and in favor of France. Though the obvious fact that France was the first aggressor turned public feeling against the Emperor in the first instance, the dislike to Prussia is gradually making itself felt, and we shall, as in most recent cases, be before long very much divided in our sympathies on all points except one, and that one is ardent desire to keep ourselves out of the mess. And here there is another sentiment which deserves a few words. We feel, undoubtedly, a certain degree of humiliation in our present position. We have placed ourselves too completely outside the sphere of European politics. We don't quite like it. It is unpleasant to see hard blows going and to know that we couldn't make much difference if we would. In two or three weeks Prussia or France can bring armies into the field more than equal to that much-enduring force which encircles the globe with the military airs of Great Britain, and is consequently rather difficult of concentration. There will, we are told, be 1,000,000 of men in arms on each side. It would be a great effort for us to collect a twentieth part of that number on any part of the Continent. We could, it is true, make ourselves extremely disagreeable at sea, and indeed flatter ourselves that we should be considerably more than a match for the strongest of our opponents. But what sort of an army could we produce on shore? A single French division would outnumber it, and even allowing the good old maxim—rather threadbare in these days—that one Englishman is equal to three foreigners, we should still be in a lamentable minority. Yet it is obviously possible that we may be unable to look on quietly. It is said that Government have proposed to send some 20,000 to 30,000 men to Belgium to help in maintaining their neutrality. Whether that is true, I know not, but if the Belgian neutrality were seriously threatened, I think we should show our teeth very decidedly and perhaps get so far as to use them. We should be glad if they were rather more formidable, but we can only hope at present that the necessity may not occur, and we think with some degree of discomfort on the very unintelligible guarantee for the neutrality of Luxembourg which we owe to Lord Derby's well-meant diplomacy.

Meanwhile, it might be amusing to a stranger to see certain military demonstrations which are going on at the present moment. Six miles from Hyde Park Corner lies one of the most picturesque bits of ground in the neighborhood of London. Wimbledon Common resembles a fragment of wild Scotch moor transported to the neighborhood of the metropolis, or, rather, it is amongst the last representatives of those old heaths where Dick Turpin and his like waited for the travellers of the pre-railroad epoch. It forms a level table-land, a mile or so in length, and thence slopes downward on one side towards a diminutive tributary of the Thames. These slopes are intersected by various miniature glens—favorite resorts for duellists down to modern times—covered by bracken and gorse. They afford picturesque views over Richmond Park and Combe Wood, and, in short, are as pretty an oasis of unbroken country scenery as one would wish to find so near our wilderness of dingy brick. If an intelligent foreigner asked me how it came to pass that land so near London was not yet cultivated or seized for building-lots, I should have to treat him to a lecture upon the rights of lords of the manor, and freeholders and copyholders, and the meaning of estovers, and turbary, and various other topics, which might be interesting, but which would take us back to the Middle Ages. It is enough to say that the common is subject to various rights which have hitherto prevented its enclosure, and which are at the present moment supplying materials for a long and doubtful litigation. However, the volunteers enjoy the benefit of an open piece of ground for the present, and have erected booths in various conspicuous positions, and are firing all day long across the little glens and over the broad plains from which the glens descend. There is an encampment upon the common, which provides for some six or seven thousand men, who thus have the pleasure of playing at soldiering with a very fair degree of verisimilitude. On the present occasion, they suffered the terrible hardship of a severe thunder-storm, and many of them spent a night up to their knees in water. All day long, a continuous stream of volunteers flows in and out of London. The variety of uniforms is as remarkable as the total incapacity of the citizen soldier to look like the genuine professional article. Every face, and still more every figure, reveals the unmistakable tradesman or lawyer, barely disguised by his gray or green or black coat, and exhibiting a humorous affectation of the military swagger. To say the truth, they have a very pleasant holiday, something, I should guess, like the "Cornwallis" of America, as celebrated by Mr. Hosea Biglow. All kinds of high-jinks go on with infinite zest. There are meetings round bonfires and volunteer concerts and a perpetual series of picnics, and abundance of good-humored chaff, which finds utterance in a newspaper published for the occasion. Then there are great contests between the universities and the public schools, and the Lords and Commons, and the Three Kingdoms; whilst enough is offered in the way of money-prizes to excite a very keen competition from all the corps in the country. Wonderful feats of shooting are performed, and it must be admitted that a considerable number of Englishmen have attained a degree of skill with the rifle which a few years ago would have been reckoned fabulous. Upon these points I am not a good judge, but the whole celebration suggests the enquiry how much this display promises in the event of actual service, and whether the volunteer system has succeeded, as we are apt to boast in after-dinner speeches, in putting us entirely at our ease in regard to the possibility of invasion. If so, we might wrap ourselves up in a proud consciousness of our safety, and sleep in spite of thunder. That there is some good raw material is undeniable, but undoubtedly, also, much remains to be done before this crowd of jovial sharpshooters can be organized into anything like an effective army. Just now, if what I hear is correct, Government is not a little exercised in its mind under the possible necessity of having to send a few thousand men to Belgium; and the extraordinary rapidity with which the great military powers can throw their whole strength into the field, brings out more distinctly than ever the necessity of some thoroughgoing military reforms. The question, however, is so complicated, and opens out so many discussions, that I cannot do more than hint at it at present. The plainest moral is that, for the present, we shall be glad to content ourselves with performing the part of spectators.

I mentioned to you in my last letter, if I remember rightly, that Lord

Salisbury proposed to get rid of the University Tests Bill, by the side-wind of handing it over to a committee. He has succeeded in doing so, and the practical result is simply that the bill is postponed for another year, when it will probably take some more decided shape than heretofore. I will simply notice one fact which is rather curious. Lord Salisbury entirely disavowed the intention of keeping out Protestant dissenters or Roman Catholics. It is significant that a Conservative leader should have gone so far as even by implication to consent to this, which would a few years ago have been considered a most vital change in the universities. But his reason for objecting to the bill is still more significant. He says that he is afraid that the abolition of tests will allow the universities to become centres of infidelity, and he therefore proposes to invent some new kind of legislative sieve which shall strain out all the unbelievers and admit only genuine Christians. One may say without much hesitation that the task of devising such machinery is altogether beyond human ingenuity. The difficulty is all the greater because the plan in fact amounts to locking the stable-door after the steed is stolen. Oxford and Cambridge are simply the chief centres from which all shades of rationalism are propagated throughout the country. So long as any power of speculation is allowed to them, it cannot be doubted that the universities will continue to feel sooner than other places the various currents of modern thought, and, in short, they can only be made uniformly orthodox by being made thoroughly stupid. That, however, will not happen, and the chief moral is that we have made sufficient progress to prevent even the staunchest Conservative from directly advocating the restriction of the universities to members of the Established Church.

FROM THE RHINE.

July 22, 1870.

IN the evening we went to bed in peace, and in the morning we rose in war: so sudden was the change, so premeditated the attack, so infamous, so silly the pretext. The German people would not deserve to exist as a nation, if it did not rise like one man to resent the outrage, if it did not concentrate all its powers against the impudent breaker of the peace, against the infuriated hordes of duped Frenchmen.

If you ask me for the *signatura temporis*, I answer: It is just as it was in 1813; nay, it is still better, for in our war against the old Corsican it was only Northern Germany which took up arms, while in our present war against the Corsican's nephew the whole nation is rising. There is nothing overbearing, nothing like brag, in the deportment of any class of the people; but everywhere you meet with a manly resignation, an elevated calmness, and the earnest determination not to lay down arms before the national enemy is humiliated and the honor of our fatherland avenged. Cunning as he is, Napoleon has made a great mistake this time. He expected to isolate Prussia by a purely dynastic question; badly informed, he relied on the alleged dissatisfaction of South Germany, of Hanover, Hesse, Nassau, and Frankfort. But all over Germany the people discovered at once the cloven foot, and it is difficult to say where the popular enthusiasm and willingness for sacrifice is greatest. Hanover, Cassel, and Wiesbaden, the former residences of the dispossessed princes, strive to outdo all the other cities in their devotion, and Frankfort, the reputed headquarters of everything that is inimical to Prussia, nobly rivals in patriotism her sister cities. I was present yesterday when the Frankfort reserves arrived in town. Think of the march of the Seventh Regiment through New York, on April 20, 1861, and you have an approximate idea of the enthusiasm of the people. The young merchants had hastened home from Italy, Southern France, and England, to take up arms for their country, and there were a great many among them who were no longer *compelled* to serve. Even the Duke of Nassau openly declared that in such a war he never would accept his land and crown from the hands of Louis Napoleon, or, as General Butler would say, of "the greatest criminal of the age," and to make good his word the dethroned German prince placed himself at the disposal of King William of Prussia. The Catholic nobility, who formerly sought distinction in the service of Austria, send their sons to the Prussian army. There are so many offers of volunteers that they must partly be refused. Catholic priests pray for the victory of Germany. Former party differences are forgotten and buried. Bavaria, Würtemberg, and Baden acknowledged at once that the *causa fœderis* was given, and, without being asked, mobilized their armies, to be put under the command of the Crown-Prince of Prussia, and the same General Vogel von Falkenstein who defeated the Southern troops in 1866. "We were badly led in that campaign," I was told, the other day, by a Bavarian officer at the Mayence depot. "Now we are happy to fight under experienced generals; and to prove that we are of the same stock and of the same efficiency as our Northern brethren."

How fortunate you Americans are! You have no powerful and greedy neighbors who break into your country, ravage, violate, burn, and destroy everything before them, to satisfy an ambitious whim of their ruler, to acquire more territory, or to gain preponderance over other powers. For the last two hundred years we have suffered from these barbarous inroads, which were begun by Louis XIV., and which will be terminated, I trust, under Louis Napoleon. I celebrated the last Fourth of July at Worms, on the Rhine, to show to my children the colossal statues of Luther and of his compeers, and, as the most dignified celebration of that glorious day, to explain to them the intimate connection between the German Reformation and the American Revolution. One-half of the city of Worms, famous of old through the Niebelungen, was about 180 years ago destroyed by the French, who even tried to blow up the strong tower of the cathedral, and the former proud, imperial city, with its 70,000 inhabitants, is now a small country town of 12,000. Go to Heidelberg, which owes its ruins to the French; to Speyer, where they even robbed the coffins of the emperors, and to a thousand other towns and villages; wander through the Palatinate and along the Rhine for a hundred English miles—everywhere you will find the same marks of French brutality and devastation, left by "le grand monarque." The houses of hundreds of villages along the Rhine show strong old stone walls as foundations, and frame buildings erected on them by the poor inhabitants, who had to rebuild their dwellings from among the ruins made by the French. Peruse any book of French history, and, with the sole exception of noble Michelet, you will find that these misdeeds are extolled as glorious exploits, as political necessities. And the same thing was repeated four times during the last century, and now, marching as they pretend at the head of civilization, the French want to repeat their inroads once more. The Montenegrins, the gentlemen of the Tzernagora, are mere beginners in that art of warfare which has been brought to perfection by "*la grande nation*."

Well, we will stand and repel the new attack. We know beforehand the work will be bloody and heavy, but it must be done. It will cost us untold millions of treasure, hundreds of thousands of noble lives, seas of blood, endless misery, suffering, and slaughtering, but we are bound and determined to triumph in the end. It will be a war between the Teutonic and Latin races, which Napoleon tried to bring about in 1864, when he broke into Mexico, and which was only put off by the defeat of the slave-barons in Richmond. We Germans by fighting out this war will prove to the world that the civilization of the present century is stronger than the mediæval traditions and robbing propensities of reckless gamblers; that the genius of civil liberty is more firmly established in Europe than the despotism of the French autocrat; that the labor of generations performed in the interest of peace and humanity is a better keystone of social order than the bloody work of even the most efficient agents of the Latin race, the African Bedouins, Spahis, and Turcos. You, in your glorious struggle against slavery, relied on the sympathies of the whole civilized world. You were not disappointed as far as Germany was concerned. Even our moneyed men believed in your ultimate success; our press, with a few insignificant exceptions, was in your favor, and the Prussian minister at Washington was the first of all foreign diplomatists to wish you, in the name of his sovereign, good-speed and victory. And the French? They tried to stab you from behind by invading Mexico. . . . Our cause, too, is the cause of humanity, and it does not matter whether a foreign or a domestic enemy seeks the ruin of a civilized nation. Every farmer who tills his little patch of land, every mechanic who with the sweat of his brow earns a decent livelihood, every teacher of the people—be he a schoolmaster in the remotest Western settlement or editor of the widest circulating paper—who with his brains works to educate his fellow-citizens, every politician and statesman who believes in self-government and national independence, every man who respects the ten commandments, in short, every thinking being, must and will be on our side in this tremendous struggle.

Yet, however strongly the moral weight of the whole civilized world may be in our favor, it is not strong enough to defeat the enemy. In order to do that we must have the strongest battalions. In this respect we can favorably compare with the French. The North German army has 447,838 men ready for the field (394,310 infantry and 53,528 cavalry), with 1,212 cannon; besides 164.935 reserves, with 234 cannon, and 154,232 men, with 234 cannon, to be left behind for garrison duty; to which number 169,802 Southern Germans, with 370 cannon, are to be added. Thus an actual force of 936,807 men and 2,050 cannon is reached, which is divided into three armies, namely, 1. The Southern army, under the Crown-Prince of Prussia; 2. The Northern army, under Prince Charles Frederick of Prussia; and 3. The Rhine army, at present under the command of King William of Prussia. Nothing is known here beyond these mere outlines, the movements of the troops being strictly kept secret. The French, on the other side, have 658,000 men in active service and as reserves, of whom 380,000 are ready for the field; besides, they have, since 1868, a "national mobile guard," which is to garrison the fortresses, but thus far has not shown its efficiency; while the Prussian landwehr will favorably compare with any soldiers in the army. The French have only 988 cannon of different sizes, but 144 mitrailleuses; the practical value of this newly invented wholesale murdering machine, however, is still to be tested. The French navy is, of course, much larger than the German, and our commerce will consequently suffer enormously. The French, having had time fully to prepare before declaring war, are about ten days ahead of us, and may be able to reach the left bank of the Rhine by the end of the present month. We do not mean to fight before we are in the proper condition, and rather prefer temporarily to give up some territory than to risk a battle with insufficient forces. You may look for the first pitched battle in the latter part of August.

Whatever its result may be, one great thing we owe to Louis Napoleon, and for one great benefit every intelligent German thanks him: He has perfected what thus far we could not consummate ourselves; he has made Germany one great, united empire; he has inspired thirty-eight millions of Germans with *one* will, *one* energy, and *one* determination to triumph and to conquer. The North German Confederation makes her last appearance on the political stage—one united Germany, a new first-class power, will appear in its place. Hail to the new arbiter of the peace of Europe!

FRIEDRICH KAPP.

Correspondence.

THE MONEY MARKET.

TO THE EDITOR OF THE NATION:

SIR: A recent article on the prospect of the money market (to which every thoughtful business man must give heed) speaks of the Secretary's liability from a call for payment of the three per cent. certificates, as if he could only pay them out of his general balance, proceeds of gold sold, etc. He now holds (July Statement) $38,000,000 currency, and would still have a considerable surplus for relief of market after payment of his September pension list, without sales of gold.

But do you understand that the Secretary is no longer empowered to issue in payment of the three per cents the surplus, or reserve greenbacks provided for, in view of such a tight place, in the act creating the "Threes?" These unissued legals, as I understand, do not appear, and have never appeared in the debt statement. In the new Currency, Bank, Tax acts, or in some unexpected corner of the statutes, this power may have been rescinded; and if so, your answer in print will greatly oblige the writer, and enlighten many business men who entertain the view I have given.

Possibly, your view is that the Secretary would only avail himself of this authority of new and further issue (expansion) in the last extremity, as he is hopefully regarded as facing (not advancing) toward contraction. But my question is what he *may* do; for after his responses to the currency pinch of June, 1869, and the gold panic of September last, I care to hear no more of a Secretary so inflexible that he yields to no pressure. There is no satisfaction in contemplating the loss of time and of interest paid, when the whole theory of contracting by Compounds was abandoned in the creation of the "Threes," with this power of reissue of plain legals. But in taxation and finance we must learn to possess our souls in patience.

Respectfully, F. O. TRENCH.

BOSTON, August 6, 1870.

[Neither in the "new Currency, Bank, Tax acts," nor in any "unexpected corner of the statutes," have we discovered any rescinding of the power formerly granted to the Secretary of the Treasury to issue 50 or 75 millions of new greenbacks to redeem the three per cent. certificates in case of need. As far as Congress has the power to give the authority, he certainly has the authority to issue them. But there are two reasons why he is not likely to avail himself of this authority, to which we shall refer below. The first question raised by our correspondent is as to the Secretary's ability to redeem the three per cents from his ordinary resources. We never asserted that it would be *impossible* for him to do so. But we did assert that he might find it extremely difficult. The $30,000,000 of currency which he now holds are not entirely at his disposal. He has an overdue debt, liable to immediate presentation, of over $4,000,000. He cannot, without extreme danger, allow his working balance to run below $10,000,000. This would apparently leave him $24,000,000 for purposes of redemption. But it is not known how large or how small a portion of this balance consists of legal tenders, which can alone be used for the payment of the certificates. Supposing that only $4,000,000 of his balance (considered a low estimate) consists of national bank-notes, and that otherwise his daily receipts are fully equal to his daily outgoes, that would leave him $20,000,000 of greenbacks to redeem $46,000,000 of three per cents. We are far from anticipating serious trouble from this source, but, as our correspondent well observes, "it behooves every thoughtful business man to give heed" to a danger to which, from long habit and continued immunity, we have grown indifferent, but which, under the action of the reckless new Currency Bill, has assumed an entirely new and far more threatening aspect.

We are glad our correspondent has referred to what is called the unissued greenback reserve, and we will now give our reasons for saying that the Secretary will not avail himself of it even in case of the most urgent need. In the first place, it would be inflation of the worst kind, and in direct contradiction to the spirit of the law. The three per cents are cancelled as new national bank-notes are issued against them, the one being supposed to offset the other. But if the national bank-notes are issued, and then the three per cents redeemed in new greenbacks, the currency would be increased by the total amount of new greenbacks issued—the very thing which the law sought to avoid. In the next place, unless we are very much mistaken, the Supreme Court of the United States has decided that the issue of greenback legal tenders in 1862 was unconstitutional, and, until that decision is revoked, it is fair to presume that the issue of greenback legal tenders in 1870 would be considered unconstitutional likewise. There is, it is true, a theory that these 50 millions of legal tenders are really issued, although unused, and that to *use* them now would not be to *issue* them. But, apart from the transparent dishonesty of such an argument, it is not likely that "a Secretary who yields to no pressure" would venture on such dangerous ground. Let no one, therefore, underestimate the danger, such as it is, from the three per cents in the belief that there are any unissued greenbacks to fall back upon.

Since our article on the future of the money market was written, the New York banks have (as far as the recent repeated muddles in their statement enable us to judge) lost $14,500,000 of their coin and about $1,500,000 of their greenback reserve, and have curtailed their loans only a little over $4,000,000. Money—that is, bank credit—of course continues abundant, and there is nowhere the slightest fear of stringency. Nevertheless, we repeat our warning, to the effect that the banks are entering upon a fall season subject to more than ordinary vicissitudes, in a spirit of unwarranted confidence, and in a condition of expansion which, under existing laws, is full of risk to themselves and to the whole business community.

We have received numerous letters on this subject. That of our correspondent above gives the views of most of them, and our answer to him must serve for all.—ED. NATION.]

"YALE COLLEGE AND ITS GOVERNMENT"—"COLLEGE TROUBLES."

TO THE EDITOR OF THE NATION:

SIR: So eminently fair and truth-loving a paper as the *Nation* cannot espouse so warmly in its editorial and correspondence the conservative side of an important question without allowing the other side to be heard. I therefore ask permission to reply to "M. A." and your editorial on "College Troubles" in the issue of August 4.

Without trying to emulate the attempted severity of "M. A.," or seeking "a fair chance for a laugh," I will address myself directly to the question at issue between the younger graduates and yourself and "M. A."

This I can well afford to do, feeling assured that Mr. W. W. Phelps, whose love for "Alma Mater," manifested not only by securing large gifts from relatives, but doubtless to be still further testified by munificent donations in the future, is such that he can rest easy under the severities of "M. A.," especially as he knows that he represents the opinions of an overwhelming majority of graduates of the last fifteen years. And these are the men who can help Yale.

Let us notice "M. A.'s" points in order, and incidentally your own remarks.

1. "M. A." says the present authorities of Yale College have not opposed the admission of the alumni to a share in the government. If not, what is the debate about? If the authorities are in favor of it, why is it not adopted? Who opposes it? Certainly not the alumni. Is it not clear that the authorities of Yale are opposed to it? "M. A." makes it clear that he is.

2. "M. A." regrets that the alumni are not organized to aid the College. Let me assure him that if the worthiest of them are to be snubbed for daring to speak what most think, he will not get as much aid as he would like, or as we, who love Yale and wish it success, ardently desire.

3. "M. A." places full confidence in the qualifications of the clerical members for their office, "who have guarded the funds of the college with unexampled success," and declares they will "not abdicate their rights, and hand over the institution to those who think themselves wiser." You, Mr. Editor, editorially say these clergymen "do whatever the Faculty pleases," that is, that they are mere figure-heads, the real government being the Faculty. "M. A." also says "the Faculty have a larger measure of control over Yale's management than is the case in most other colleges." Well, to say nothing of the inconsistency of these positions, it is a doubtful compliment to the "six Congregational clergymen" to say they are fit for such an office. If that is all the corporation amounts to (for no one seems to defend the retention of the ex-officio Connecticut State senators), would it not be best to dispense with it altogether, and let the Faculty, the real government, be represented as the authorities? Here is another case where the conservatives play fast and loose. Indeed, it is well understood that the six Congregational ministers are kept because they "do whatever the Faculty wish," at least what certain members of it wish.

4. But "M. A." says: "The clerical members of the corporation are the representatives of the founders." In what way? In doing whatever the Faculty pleases? In what sense? In a legal, historic, or poetic sense? In what possibly useful way can a minister, as such, better represent in a legal corporate body the founders, to say nothing of more recent and munificent donors, such as Mr. Sheffield, Mr. Chittenden, and Mr. John Jay Phelps, than a judge, a first-class lawyer, or business man? If clergymen are to control colleges in these altered days because they helped to found them, then a parity of reasoning would prove that many great universities ought to be now ruled by monks and Catholic priests.

The sneer about "*young* lawyers" comes not only with good grace from "M. A.," as directed against one of Yale's best friends, and a man whose sound judgment controls the largest interests, but is again consistent with his own advocacy of young professors at Yale!

Can any living man tell why a college like Yale, which wishes the support and sympathy of the whole country, should receive whatever advice its Faculty may wish from six ordinary Congregational ministers and the ex-officio State senators who represent a State that has remembered to forget Yale College?

5. "M. A." is afraid of the analogy of Harvard College. He says that many of the alumni of Yale are closely connected with other colleges, and therefore should not govern Yale. Pray, is not this true of Harvard's alumni also? Would not such alumni have the good sense not to attempt to govern Yale? Are they not so few in number that they could not, if they would?

6. Yale is not going to get the help she needs till these things are changed. She will not get it from "M. A.'s" plan of raising the price of tuition, and so putting a burden upon poor students or driving them to other colleges. A course at New Haven is expensive now.

You seem, Mr. Editor, yourself to think Young Yale does not know what it wants; but it does. As Mr. Phelps says, it wants the government of Yale College outside of the Faculty, the government that appoints the Faculty lodged in some other hands than Congregational ministers of the State of Connecticut. It knows much more than it wants, but it feels sure that it will secure a large share of its wishes when the government is placed on a broader foundation. It wants the government of Yale College to cease to be a close corporation, at least if the corporation is to be all of one kind of men. And Young Yale, which has the life and a good deal of the wealth of Yale's graduates, will have some of its reasonable wishes granted, notwithstanding the severities of "M. A." (whom most Yale graduates of the last fifteen years will recognize), or Yale College will suffer.

ALUMNUS.

Notes.

LITERARY.

THIS year's meeting of the American Philological Association, held in Rochester the last week in July, was not in all respects so successful as had been hoped and expected. The attendance of members was less than last year at Poughkeepsie. For this the atrociously hot weather was undoubtedly in no small measure to blame—journeyings and crowds and warm discussions in prospect, when the thermometer is among the nineties, have a wonderfully domesticating influence. Papers, too, were not numerous, yet enough, with the accompanying business and discussions, to occupy three days, from Tuesday noon till Friday noon. What was especially gratifying about the whole affair is that the papers were of much higher average merit than those offered at Poughkeepsie, several being of a character to command the attention and respect not only of American scholars, but even of those abroad, and to constitute real contributions to philological science. They will, it is expected, soon be printed in a volume of the Association's "Proceedings." Professor Hadley, of Yale, treated at length of the Greek accent, showing that its essential character was a variation of pitch, and that a tendency to a single favorite cadence—of high tone, middle tone, short low tone—at the end of a word, would explain all the intricate and seemingly irregular rules of Greek accentuation; while the same tendency, with a slight modification, accounted equally for the rules of Latin accent. Professor Whitney supported his explanation by an essay setting forth the parallel laws of Sanskrit accent, as deduced from the rules of the Hindu grammarians. Professor Goodwin, of Harvard, discussed a point or two of interest in Greek syntax (the construction of *ου μη* and *ὁπως μη* with the subjunctive), and proved to the satisfaction of the classicists present that the canons hitherto accepted concerning them were ill-founded, and that European scholars had unwarrantably tampered with the texts they edited, in conforming them to those canons. Mr. Trumbull, of Hartford, read a couple of Indian papers, of which one was especially important and entertaining, as it exposed certain errors into which even such men as Duponceau and Pickering had been led and had led others as to matters in Indian grammar and lexicography, besides showing up the numerable and inexcusable blunders of pretenders like Schoolcraft. Mr. Van Name, librarian at Yale, had been prompted by Thomas's grammar of the Creole-French of Trinidad to investigate that of Louisiana and Hayti, and sent to the meeting a valuable paper of the results he had gathered. A point in the history of English verbal forms (the ending *th* or *s* in the plural, a relic of the Anglo-Saxon *ath*) was well set forth and abundantly illustrated from writers of the sixteenth and seventeenth centuries, by Mr. T. R. Lounsbury. Professor Whitney defined the present position of the enquiries touching the origin of language, calling particular attention to the question whether the first words were pushed out by the internal impulse to expression, or drawn forth by the external inducement to communication, as the question whose answer would be most fruitful of result. Dr. B. W. Dwight blew up the whole traditional system of Latin grammar, and sketched out a new system, which should better represent the results of comparative grammar. The infinitely controverted subject of Greek and Latin pronunciation was very slightly advanced by the recommendation that the Greek diphthongs *αυ*, *ου*, and *ευ*, be uttered respectively as *ou* (in *sour*), *oo* (in *poor*), and *ew* (in *pew*), and was recommitted for further treatment next year. Professor Kendrick, of Rochester, and Haldeman and March, of Pennsylvania, were conspicuous in the various discussions which arose, and which were generally both lively and to the point. No such association, meeting in an American city, ever had to complain of a cold welcome, or of lack of hospitality; and Rochester, which had prepared itself to entertain twice as large a body as actually assembled, proved no exception to the general rule. President Anderson, of the Rochester University, did the public honors of the occasion, and acceptably, save as, in his address of welcome, he was ill-advised enough to attempt to lay down for the Association the limits of what it ought and ought not to undertake. The next meeting is appointed to be held at New Haven during the last week in July, 1871.

—It is said that 75,000 copies of Disraeli's "Lothair" have been sold, while Victor Hugo's "Man who Laughs" turned out a failure. "In America," said the *Athenæum*, a while ago, "the Messrs. Appleton have printed 50,000 copies, and it is stated on the best authority that the present demand is 1,000 copies a day." The *Athenæum* goes on to administer a rebuke to the American firm for not having followed the example of Baron Tauchnitz, who bought the right to reproduce the novel for the English Continental public, and, finding it very successful, doubled the author's honorarium. It is fair to say, however, that between England and Germany there is a copyright law, and Baron Tauchnitz ran no risk. There is no copyright law between England and America; Messrs. Appleton could not be sure that there might not be a dozen other editions, more or less, on the market within three days after they had published theirs; they could buy only the doubtful privilege of two or three days' priority; and this they did buy of the English publishers, paying for it the pretty large sum of $3,000 in gold. As it happened, they made money, for there was a good demand for the story, though heretofore the demand for Mr. Disraeli's works has been very small in America; and the reprint was not pirated. But "The Man who Laughs," for advance-sheets of which $7,000 in gold was paid, caused a loss to the firm. Under these circumstances, it might perhaps have been munificent and grateful for the Appletons to make Mr. Disraeli or the Messrs. Longmans a present; but it would hardly have been business-like—no more so than for them to go to M. Hugo and ask back part of their unlucky $7,000. Of course, it is wrong that Mr. Disraeli should have the product of his pains sold without any of the money reaching him. But, in this instance at least, it is our unjust general system, rather than the Messrs. Appleton, that should be blamed.

—The *Spectator*, speaking of the recent death of M. Prévost-Paradol, quotes the substance of a letter which a friend in England had recently received from him, and in which he wrote, among other things, that after seventeen years of labor as a penman, he had contracted a disgust for writing. This we take to be a common experience. We noted, the other day, in reading some letters of Dickens—to cite the case of another distinguished man recently dead—a remark to the effect that his correspondent, Lady Blessington, must know how the pen is hated by people who write much, and how bad correspondents they are, so far as regularity and frequency are concerned. The mere manual labor of driving the pen so many hours a day for so many days in the year is enough, one would say, to disgust a man with the sight of it, and the inventor of some substitute for our present means of putting words on paper would be a much-welcomed benefactor. The difficulty in Paradol's case would, however, seem to have been a weariness at the thought of travelling over again often a mind so often "travelled over before," as Doctor Johnson used to say; and this is a difficulty that journalists like Paradol are more likely to feel than other voluminous writers, it being rarely that they are not in danger of doing more mere task-work than other writers do who, if they write voluminously, yet write on topics of their free choice.

—We spoke last week about the violence of the Pope's behavior towards the opponents of his dogma of infallibility. A good many examples of this might be given, but one will be sufficient to illustrate the sort of stories that are told about him by the correspondents, and in the truth of which what is heard from private letter-writers who have spent the last few months in Rome make us ready to believe—though this particular tale we do not vouch for. Thirty-seven years ago, says a Paris letter in the *Publisher's Circular*, Father Theiner, a German Oratorian, distinguished for historical writings of a kind displeasing to the Jesuits, was summoned to Rome by Pope Gregory XVI. That Pontiff declined to put on the Index Expurgatorius the father's "History of Clement XIV.," which was published soon after the author's arrival in Rome, and which much incensed the Jesuits against him; and on the accession of the then Liberal Pius IX., in 1846, Father Theiner was made Prefect of the Archives of the Vatican—a very honorable post, but supposed to have been conferred upon him as much to paralyze his historical activity as for any other reason. This effect it did not, however, produce, and his writings have continued to give offence to the "insolent faction," as Dr. Newman calls the Society of Jesus, which is understood to have largely controlled the later action of the Pope. There was some astonishment, then, but not so much as there might have been, when it was discovered at the opening of the Council that the erudite father was put upon none of the commissions which were appointed to cut out the work of the Council. But when the bishops came to Rome from America, France, and Germany, the learned librarian became the centre of a large circle of prelates who needed his learning, and it may safely be assumed that the managers of the new dogma looked on him jealously, not to say watched him vigilantly. Last spring, whether sent out or going of his own accord, Father Theiner left Rome. Probably, it is said, he went of his own accord. After some months' absence he not long since returned, and discovered that his removal from office had been decided upon, and that, after more than thirty years' possession of them, he was to give up the keys of the archives to Monsignor Cardoni, an archbishop *in partibus*, who is a fanatical supporter of the Jesuit policy. Father Theiner was sent for by the Pope, who immediately on his entering the room called out to him in a high irritated voice. "On thy knees, *frate*," said the Holy Father; "I know thee now. Thou art none of us. For mercy's sake I spared thee, and have only dismissed thee from office. Thou art no longer Prefect of the Archives; to-morrow thou wilt give the keys to Cardoni. And now be off with thee." The old gentleman thus addressed shed tears. The Pope thereupon said louder and more roughly, "Off with thee, or I shall summon one of my guard." This insulting violence put some energy into Father Theiner, who said, "I will not leave the room, and you shall summon no one until you tell me the crime which you use as a pretext to dismiss me from office." "I am not obliged to render thee an account of my actions," said the Pope in reply, "but I will tell thee; firstly, thou didst furnish unknown works and documents to combat my dogma to those asses (*somari*) of the opposition; secondly, thou gavest advice and information to Rauscher, Schwarzenberg, Youssouf, and that miserable Croat (*Croatino*) Grossmayer; thirdly, thou didst communicate documents of the Archives to that rascal of an Acton (*a quel bricone Actonuccio*), who licked my boots, while at the same time he feasted the opposition bishops; and, what is more and worse, you let him enter and work at pleasure in the Archives." Father Theiner replied to this tirade that, on his honor as a priest, he had communicated unknown documents to no human being; that to Lord Acton—whom the Jesuits hate as a sort of lay leader of opposition to the dogma—he had communicated none but such documents as had been indicated by the Holy Father through Cardinal Antonelli; and, finally, he remarked that, as he was not a bishop, he was not called upon to express an opinion for or against the dogma of infallibility. The Pope was less violent after this reply, but nevertheless repeated, "Thou art not one of us, and thou canst not remain in the Archives." A shallow scoffer may hope that the Supreme Pontiff is not an infallible standard of manners also as well as of faith and morals.

—The Schema of the dogma will appear translated into English in the next number of the *Catholic World*, and a digest of it may be of some interest to our readers. "Pius, Bishop, Servant of the Servants of God," declares in the general preamble that, seeing that the powers of hell, with a hatred that increases every day, strive to overthrow the foundations of the church, he ("we") therefore has judged it necessary to set forth the doctrine which, according to the ancient and constant faith of the universal Church, all the faithful must believe "touching the institution, the perpetuity, and the nature of the Apostolic primacy in which stands the power and strength of the entire Church." And he begins by laying down the true doctrine touching the institution of the Apostolic primacy in Simon Peter. "We teach therefore and declare," says he, "that according to the testimony of the Gospel, the primacy of jurisdiction was promised and given immediately and directly to Blessed Peter the Apostle, by Christ our Lord." Here he quotes Matthew xvi. 16–19—the well-known passage declaring Peter the rock on whom the church of Christ should be built, and promising him that what he should bind or loose on earth should be bound or loosed in heaven. Further, he quotes John xxi. 15–17—the passage adjuring Peter to "feed my lambs." And if any one shall say that it was not to Peter directly, but to the Church directly, and to Peter only as the agent of the Church, that this primacy of *jurisdiction* was given; or if any one shall say that Peter alone among all the other apostles, whether taken separately one by one, or all together conjointly, was endowed with this primacy of jurisdiction; or if any one shall say that Peter had bestowed upon him not a primacy of jurisdiction but one of honor merely, and was but *primus inter pares*—why, let such person be anathema.

—In the second chapter, the Pope asserts it as well known that the power in question was given for the perpetual government of the Church, so it must be inherited by the successor of Peter, who, it is again well known, to this present time and at all times lives and resides in the persons of his successors the Bishops of Rome. Thus it is that in all ages and countries it was always necessary for every other church to have recourse to the Roman Church on account of its superior headship; and if any person shall say that the Bishop of Rome is not of divine right the successor of Blessed Peter in this primacy, let him be anathema. In the third chapter, we have a definition of the power and nature of the Apostolic primacy. It confers the power of directly teaching and governing the faithful everywhere. This power is immediate, requiring no intermediary, and the pastors and faithful, of whatever rite or dignity, are bound by the duty of hierarchical subordination and true obedience, and this not only in things pertaining to faith and morals, but in things pertaining to ecclesiastical discipline. And let no man deny that such is the true doctrine of the Catholic Church, for by so doing he loses faith and salvation. And the opinions are condemned and reprobated of those who think that this full and free communion of the supreme head, or directly with the pastors and flocks, can lawfully be hindered or that it is subject to the secular power. And let any man be anathema who shall say that the Roman Pontiff holds only the charge of inspective and not of complete and absolute jurisdiction over the entire Church, not only in all matters of faith and morals but also in all the things that pertain to the government of the Church throughout the world. So, too, let every man be anathema who shall say that the Roman Pontiff's power in this regard is not his in full plenitude, or that he cannot exercise it, without an intermediary, over each and every one of the faithful.

—The fourth chapter is the last, and asserts that Councils have always held the Bishop of Rome to be the head and infallible teacher of the faithful; and the infallible teachers, the Roman Pontiffs, have from time to time, to the end that they might fulfil their duty of teaching infallible truth, directed the faithful in the right way, not by promulgating new truths revealed by the Holy Ghost to the Pontiffs as successors of Peter, but by teaching what truths are really contained in the Scriptures or are conformable to them. The Pontiffs have on these occasions been in the habit of calling councils together; but the absolute headship and the absolute infallibility of the Pope, if this document does not falsify history, have always been held by the Church, and of course by these various councils. So this last Council merely enunciated what always was held for true. The weak point in the case of the supporters of the dogma was just this historical question, whether the Popes had not been so far from being held infallible personally, or speaking *ex cathedra*, that some of them had in fact been declared very fallible by some of these councils that they have from time to time graciously called. But no attempt, so far as appears to us, is made in the Schema itself to bolster it up. It ends as follows: "We teach and define to be a divinely-revealed dogma, that the Roman Pontiff, when speaking *ex cathedra*—that is to say, exercising the functions of pastor and teacher of all Christians, in virtue of his supreme Apostolic authority—whenever so speaking, he defines that a doctrine on faith and morals is to be held by the universal Church, he then, by the divine assistance promised him in Blessed Peter, enjoys that infallibility with which the Divine Redeemer endowed his Church in defining doctrine on faith and morals, and consequently the decisions of the Roman Pontiff are irreformable of themselves, and not in virtue of the consent of the Church." It will be curious to see what will be the first use made of this new power—which, as Dr. Newman says, is a "luxury of faith and not a necessity," and which no one in the Church called for except "an insolent faction." To the world outside the Church the case would seem to be, if we understand the matter, that the Holy Ghost now has for his mouthpiece this or that Italian gentleman, instead of having a numerical majority of some hundreds of gentlemen, mostly Italians, but sprinkled with clergymen of other countries than Italy. Meantime, most modern science, most modern government, most modern sociology, most modern books, most modern educational policy, most modern "progress" and thought, are under *anathema;* and most modern men and women, we suppose, may comfortably expect to be damned to all eternity.

—Some years ago the French publishers had a custom of printing many books without a date. This system suited them better than it suited their readers, who sometimes made the disagreeable discovery that their "new edition" was a work twenty years old. The remonstrances of such authorities as Quérard and Brunet brought about a change. Nevertheless, some printers still persist in it, or something worse, and a notable example of this persistence is furnished in Bescherelle's "Dictionnaire National," a work in high favor some thirty years ago, and which maintained its popularity long afterwards; for in 1861 it had reached its ninth edition, and, we believe, is now in its fifteenth. It was with some surprise that a happy possessor learned from his "nouvelle édition de 1863" that the French Emperor was still a prisoner at Ham! Under the heading "Ham" he read, "Où est en ce moment le Prince Louis Napoleon, depuis 1840." Continuing his researches, further examination showed that the Garnier edition of Bescherelle for 1870 is identical with that of 1843–1846.

DRAPER'S CIVIL WAR.*

WE cannot say in praise of the present volume that it is a great addition to our war history; but we acknowledge the comprehensive view that overlooked the field, and think it matter for regret, rather than fault-finding, that all the details of the great panorama could not have been better made out. From the emancipation proclamation to the end of the war is the ground that the author seeks to compass at his last look; Vicksburg and the campaigns that followed in the West, and Gettysburg and the subsequent struggles of the army of the Potomac with Lee. Of the Western campaign Dr. Draper says, with a touch of his peculiar rhetoric, but not untruly, that "there is something grand in the conception and execution of it. Its combinations are exceedingly picturesque, and its incidents alternately offer enough for disaster and glory. The brilliant movement of the army of the Tennessee on Vicksburg, the siege and capture of that fortress, the march of the army of the Cumberland to Chattanooga, the seizure of that portal into the South Atlantic States, the overthrow of Rosecrans at Chickamauga, the famine, the transfer of Hooker's troops from the Rapidan to the Tennessee (more than a thousand miles) in a week, the coming up of Sherman from the Big Black, the battle of Chattanooga, the planting of the national flag on the crest of the Alleghanies at Lookout, the expulsion of the Confederates from the fastnesses of those mountains, the wintry march of Sherman to Knoxville, and the raising of the siege of that place—these furnish the materials of a romantic and noble story." But what the author realizes with such fulness of detail he does not in his narrative convey little by little to our understanding. Badeau, with full particulars, or Swinton, with rapid summary, will better satisfy the curiosity or sympathy that may be aroused by Dr. Draper's somewhat unreal sketch.

A history which is not always animated or picturesque should have the merit of correctness if it is to win a high rank; but here, too, Dr. Draper sometimes fails. Unfortunately, we cannot tell on what authorities he relies, since he gives us no references, stating only that he has depended on official and newspaper reports, and on what he has personally learned from some of the chief participants in the war. The battle of Gettysburg is perhaps the most familiar act of the Eastern drama, and we therefore choose this campaign as a test of the author's patience and skill in gathering and arranging facts. We notice first that he has not informed himself in regard to the cavalry operations on either side before and during Lee's invasion. He passes by the battle of Beverly Ford, recognizing it only as "a cavalry reconnoissance," though it was the best contested and most sanguinary engagement fought by mounted troops during the war. He constantly recurs to the fact that Lee detached his cavalry after his invasive march toward the Potomac began, and he calls it "a fatal error," and says that Lee "thereby deprived himself of his military eyes;" but there was a credit due for this on the Union side which it is completely forgotten to bestow. "Stuart's cavalry," the author says, "having watched the passage of the Potomac by Hooker's army, kept on his right, intercepting many wagons and a number of officers." Unhappily for Lee, it is true that Stuart was in this anomalous position, rendering this ignoble service; but he came to be there in spite of himself. Far from watching the passage of the Potomac by Hooker's army, he was defending himself as he could from the Union cavalry in Loudon Valley, Pleasanton holding him in check there till the army of the Potomac had crossed into Maryland, when it kept between Stuart and Lee until the fight began at Gettysburg. There is no feature of the campaign more important than this; Lee bewails it, as Meade rejoices in it; and it is a pity to overlook it in following the movements of that time. "At Chambersburg Lee paused, impatiently expecting intelligence from the Northern cities"—of riots and uprisings. "When he moved from Chambersburg, it was with irresolution. . . . Was it for him to consort with such base allies as were proffering their aid in New York? . . . The traditions of his own house clouded his intellect and paralyzed his arm." Lee says nothing of all this. When he found himself at Chambersburg, "no report," he tells us, "had been received that the Federal army had crossed the Potomac, and the absence of the cavalry rendered it impossible to obtain accurate information. . . . The march toward Gettysburg was conducted more slowly than it would have been had the movements of the Federal army been known." We incline to believe that it was not the traditions of his own house so much as the want of Stuart's cavalry that paralyzed Lee's arm.

---

* "History of the American Civil War. By John William Draper, M.D., LL.D." In three vols. Vol. III. New York: Harper & Bros. 1870.

In the account of the fight on the second day at Gettysburg, when Sickles's corps was driven back, the author omits to tell how opportunely and gallantly General Sedgwick, with the Sixth Corps, came to the rescue after a long march, as resolute and more difficult than Blücher's to Waterloo. Dr. Draper cannot draw pictures—battle-pieces, that is—but if he could, Sedgwick coming on the field would be a capital subject, jogging calmly up to the confusion on the ridge, and ordering his troops not to form brigades, to "pitch in by regiments." On the third day, "unprotected, but unflinching, Pickett's column came over the valley, slippery with the last night's rain. . . . Almost a hundred guns, from Cemetery Hill to the Round Top, quiveringly awaited the word." Guns when discharged recoil, but can hardly be said to quiver; and certainly nothing can be firmer than a waiting gun; it would serve for a simile of repose. And as (so we are assured) there was no rain until the third day at Gettysburg, the author might as well have said of the valley that it was dusty with the long summer drought. He admits that Pickett's charge was not supported by guns or troops. "'Why don't the guns support them?' was anxiously asked on the Confederate side, and with intense curiosity on the national;" and, he adds, "not only was Lee not informed of the exhaustion of his ammunition—he did not know of Ewell's dislodgment from the foot of Culp's Hill." Yet in the face of these admissions, and in the light of the general conviction among military men that Pickett's charge was a mad enterprise needing a miracle to help it out, Dr. Draper makes bold to say of it: "In a few moments the question was to be settled whether slavery or freedom should be master on this continent." Granting that the charge had succeeded, a victory for Lee at Gettysburg would not have followed as a matter of course, and if it had, it is a long jump to the conclusion that slavery would thus have been made master on this continent. The author might as well have said that the creation would not have been completed if the six days had not sufficed; but the dictum is characteristically rhetorical, and we are not surprised to find the root of it a few lines on: Pickett was defeated, Lee had determined to retreat, and the opportunity occurs to say, "Freedom was master on the continent."

It remains only to touch on Dr. Draper's critical power in military affairs. He does but little in this direction, offering almost no criticism of strategy or tactics on either side, or analysis of the genius or success of the chief generals. But he shows a certain breadth of view here as in other phases of his subject, distinguishing the cardinal merits or defects by the total result. Some of his critical comments are very bald or speculative, as, for instance, when he says after Gettysburg: "Night and day the retreat was pressed on—a march of men mailed in mud. . . . The rain was almost blinding. What would have become of the army of Northern Virginia had Grant and Sheridan been here?" There was mud on our side too, and as Lee had mountain passes behind him, it is very likely that Grant or Sheridan would have chosen Meade's flank pursuit. After Chancellorsville we meet with this: "To the mind of an unprofessional observer it may, however, occur that traces of influences which have hitherto escaped being brought plainly into view, are here and there to be detected. The campaign of Chancellorsville will, perhaps, for many years—perhaps for ever—remain one of the mysteries of the American civil war." We are quite in the dark as to what this means; it seems to us that the value of the first part of the paragraph would be the same if the words were all transposed, as Thackeray tumbled about a meaningless sentence in one of Bulwer's plays. But in a large way, and with a large theme, the author has more freedom. In a comparison of the invasive movements of the war, he points out that the Confederate invasions were mere sorties, short-lived and full of disaster, while the army of the Potomac persisted in its forward movement through Virginia until Lee surrendered, as Grant pushed on till Vicksburg was his, and Sherman never turned back from Chattanooga to Washington. It would make the world considerate of the shortcomings of the North to remember that it was our hard task to succeed in the aggressive warfare which baffled the South; and we wish that some capable strategist would go a little further than Dr. Draper has, and analyze some of the generalship on each side. It would have been instructive to his readers if he had shown, as he might well have done, that Lee, the most renowned general of the South, owed most of his success to the errors of the Northern leaders who opposed him. It can be readily made out, we think, that he won no important victory which cannot be distinctly traced to the utter folly of his antagonist. He drove McClellan across the peninsula because McClellan sought safety for his army in a new base rather than how he might defeat, and in turn drive back, his pursuer. He fought with success against Pope, because Pope's army was divided against itself, and there was no element of victory within his lines. At Harper's Ferry it is written in characters, mountain high, that the post cannot be defended by human valor except on the surrounding heights, yet the large garrison left them to the easy occupation of Lee's troops.

Lee's Maryland campaign was a grievous calamity; but the Antietam battle may be called a victory for Lee, since McClellan did not drive him from the field. On our side, we so set that battle in array that Lee had only to strip one part of his line to resist the attacks on another part. We made a brave fight on our right, and slew many there, and many of ours were slain, but our centre and left stood fast meantime, much to the comfort of Lee. At Fredericksburg we assailed, with unheard-of ardor and devotion, the rocky heights of St. Mary's, which, to have mounted and held, might have made us famous for ever; but on the left more than thirty thousand of our men remained almost still, though in their front were no rocks or heights, and a mere reconnoissance by one division broke through the enemy's line. At Chancellorsville we lost ourselves in the woods. The larger part of our army sat down beneath the trees, and wonderingly heard that Stonewall Jackson had set off for a flank movement on our right. We did not attack Lee in his absence; and soon Jackson attacked and almost annihilated us. While we slowly recovered from this misadventure, Sedgwick, with a smaller part of our army, gloriously took St. Mary's heights on the left, but, a few hours later, advancing to make a junction with the right, he was crushed by overwhelming numbers hurled against him from Chancellorsville, where our troops, benumbed by want of leadership, lay idle hearers, almost spectators, of this tragedy. On the peninsula Lee ended his fruitless pursuit of McClellan with a great defeat at Malvern Hill. He permitted the armies of Burnside and Hooker to retire at leisure across a difficult river after the bloody disasters of Fredericksburg and Chancellorsville. And at Gettysburg he nearly ruined the army that was the mainstay of the Confederacy. After that, all his great battles were defensive; and in most of them he but showed how well he could stand at bay.

Having in our former notices spoken of Dr. Draper's philosophy, we say nothing of it here, though his book terminates with a treatise on the result of the war and the future of the Republic, and a résumé of the scientific theories to which he devoted the earlier part of his work. This volume being dedicated almost exclusively to campaigns and battles, we speak of it only in its military aspect. We have not refrained from saying that the author lacks some of the qualifications for a military historian; but we have not intended to disparage his ability nor to make light of the difficulties that he had to encounter. His book, as a whole, will edify a large public indifferent to military criticism and accuracy of military detail.

THE NORTH AMERICAN REVIEW FOR JULY.

The most widely attractive article in the new *North American* will probably be Mr. Henry Adams's "Session," which reviews the recent doings of Congress and the Administration, and impartially scalps everybody all round.

To begin with, the President's mind "rarely acts from any habits of wide generalization;" he executes with great energy ideas that come to him one by one; he is capable of receiving and assimilating new ideas, and is free from inveterate prejudices, and he is in the main sensible and practical, and he is thoroughly honest; but when used by clever rascals, or by incompetent honest men of fixed ideas, the executive energy of the President is often simply disastrous. His notions of civil government being crude, and his ideas of political economy being those of a feudal monarch of a thousand years ago, it was of the highest consequence that he should surround himself with skilled and wise advisers, and especially that his Secretary of the Treasury should be a man of real abilities, of comprehensive mind, and of wide acquirements in politico-economical science, especially in finance.

But is Mr. Boutwell such a man? What is Mr. Adams's opinion of the Secretary of the Treasury he has before now let us know. He adds a little here, however, to the picture drawn before. General Grant, at the time of his accession, as we have seen, was not very well instructed as regards civil government. That, of course, the people had not expected of him. But, on the other hand, he was perfectly ready to be taught, and peculiarly open to new ideas. His Secretary of the Treasury, the holder of the most important position among the President's advisers, had no capacity at all for teaching; even if he had, he knew little or nothing of the work to be done, and had very little patience with any knowledge not narrowly practical—was a man who "believed in common-schools, and not in political science; in ledgers and cash-books, but not in Adam Smith or Mill; as one might believe in the multiplication table, but not in Laplace or Newton." The President—who afterwards, by the way, lobbied earnestly for the San Domingo treaty—announced that he had, and would have, no policy; even Mr. Boutwell—who has since worked like a beaver at paring down the national debt—announced that he, too, had no policy, and, "even more persistently than the President, attempted to govern on the theory that government was no concern of his. Other persons in a similar position would commonly have leaned either to the theorists on one side, or to so-called practical men on the other, but Mr. Boutwell treated both with the same indifference. He had all the theorists in Europe and America to choose from, but he did not listen to their teachings. He had all the practical men in the country at his service, but he did not follow their advice. He had all the best members of the Legislature to depend upon, but he did not desire their assistance. He had a costly and elaborate machinery maintained by the country to furnish him with any information he might require, but Mr. Boutwell never required information. Nay, it seems from published papers almost certain that Mr. Boutwell, sitting twice a week in consultation with his colleagues in the cabinet, cannot have controlled their measures nor even discussed his own. The President himself at the time of his Message could hardly have been consulted by the Secretary." The American Nicholas Vansittart is Mr. Adams's name for our present Secretary.

Next, Mr. Adams addresses himself to the Senate, but more particularly to Mr. Sumner and to Mr. Conkling, who is factiousness personified. "Mr. Conkling's most brilliant triumph was over the Census Bill. Here he had a threefold victory, and it would be hard to say which of the three afforded him the keenest satisfaction. Single-handed, he attacked Mr. Sumner, the Executive, and the House, and routed them all in most disastrous confusion"—the pleasing and admirable thing about his victory being much the same as the pleasing and admirable thing about his more recent victory over Mr. Fenton; he did a thing hurtful to the true interest of the country, or of very doubtful utility, and gratified his own feelings.

In general, however, Mr. Adams's quarrel is not with individual Senators, but with the arrogance and self-seeking of the Senate as a body. In the Senate chamber is more plainly seen than in the Senate and House conjoined, that spirit which in the last decade or half-decade has impelled the legislative part of the government to attack and partly destroy the constitutional powers of the Executive and the judiciary. Particularly telling is the account of the attack which Attorney-General Hoar, backed by the Senate, to the astonishment of the greater part of the country and the grief of his best wishers, made upon the Supreme Court. Mr. Adams puts this unfortunate affair in a very clear light, and it is much to be wished that influential journals everywhere, of whatever party, should lay his account of the fight before the public. Things looked bad enough for the court during the impeachment trial; but the hasty outcries of minor politicians and weak-headed partisans are not to be compared with the deliberate and avowed intent of the Senate and the strenuous assault of a man like the late Attorney-General. An appeal to the people—it is one comfort—would have made short work of the assailants.

We have not space to speak particularly of the rest of this very interesting and forcible paper, against which, to be sure, the plausible, and indeed we should say just, complaint may be made that some small part of the interest it possesses is in virtue of the gratification which is always afforded by clever and fierce attacks on official personages high in place; and that it is too unmitigatedly and severely fault finding and critical. We do not know that, in point of fact, all that is urged is not true. We are sure, however, that there are things to be said on the other side which it would have been well to have at least shadowed forth, because they are shadowily present in the mind of the reader, and throw it into an attitude of incredulity. What, for instance, but the war and its legacy—what but things unexampled and not much to be apprehended—made possible (as did they not make necessary?) much of the dangerous tampering with the Constitution which the last ten years have witnessed? Is there not a reaction this moment going on in the direction of greater popular respect for the fundamental law? We incline towards that belief. And, to insist a little longer on our point against Mr. Adams's essay, should not one say, when he makes against the average legislator—civil-service reformer or opponent of civil-service reform—the charge of having voted power into the hands of a vast railroad corporation which soon will surpass in influence many States—should not one suggest the very great popular ignorance of the nature and power of these corporations? People are beginning to wake up to the possibilities of their future; and, as in Illinois recently, they begin to wake up to some purpose.

However, make all abatements that it may occur even to captiousness to make, and this essay is excellently worth the attention of reflecting readers. Most such, let us add, will, we think, be a little surprised at Mr. Adams's assertion, that there is a pretty distinct, tacit admission among Americans—statesmen, politicians, or what not—that the *Alabama* claims will remain open till a way is clear for the Canadians to come into the Union. Mr. Adams says little more on this head than that time will prove him right in his statement. That may be; but we are strong in the belief that this scheme is not now in the minds of the people at large.

Mr. Lowell's very pleasant essay on Chaucer is the lightest and most readable and pleasing in the list of contents, and is, of course, very much better than light and readable and pleasing, being admirable and instructive criticism of the poet. And of other poets, too, for the *trouvères* and troubadours and their works come in for detailed remark, and so Chaucer's English predecessors and contemporaries. We make room for a few lines which close the essay and give the tone of it:

"If character may be divined from works, he was a good man, genial, sincere, hearty, temperate of mind, more wise, perhaps, for this world than the next, but thoroughly humane, and friendly with God and men. I know not how to sum up what we feel about him better than by saying (what would have pleased most one who was indifferent to fame) that we love him more even than we admire. We are sure that here was a true brother-man, so kindly that, in his House of Fame, after naming the great poets, he throws in a pleasant word for the oaten-pipes

"Of the little herd-grooms
That keepen beasts among the brooms."

No better inscription can be written on the first page of his works than that which he places over the gate in his Assembly of Fowls, and which contrasts so sweetly with the stern lines of Dante from which they were imitated:—

"Through me men go into the blissful place
Of the heart's heal and deadly woundës' cure;
Through me men go unto the will of Grace,
Where green and lusty May doth ever endure;
This is the way to all good aventure;
Be glad, thou Reader, and thy sorrow offcast,
All open am I, pass in, and speed thee fast!"

Other articles in this number of the *North American* are these: Karl Blind talks—in an inconclusive way; and with a sort of unfairness, the unfairness of the fanatic and of the man destitute of historic imagination—about "Luther and the Early German Struggles for Freedom." Luther did not do Mr. Blind's special work, nor accomplish all Mr. Blind's desires, nor did he do nineteenth-century things; but regret or wrath as regards his performance is surely out of place in any of us of to-day. Surely it must be a good rule for us to keep, that as for all past history, we acquiesce in it without reserve, but will fight, and be angry, and sorrowful, and strenuous as we please about the history of to-day in which we live and which we help to shape. Mr. C. C. Perkins writes about "American Art Museums" in what seems to us a very practical way. Mr. Simeon Newcomb, who is an authority, has for a subject "The Labor Question." Mr. J. B. Hodgskin is as vigorous and incisive and clear as ever in the expression of some views which will, perhaps, give most people pause for a little while—upon the nature of currency, and the history, retrospective and prospective, of our currency. Finally, Mr. W. A. P. Martin really wins a high medal in journalism pure and simple, by being interesting and fresh—not on one, though that would have been sufficient, but—on two of the confessedly dry subjects of contemporary writing—namely, competitive examinations in China, as bearing on our civil-service reform.

The book reviews are, without exception, of a high order—useful and creditable to readers and writers of them, and not without value, most of them, to the authors under review. They comment on the following works: Lea's "Studies in Church History;" Yonge's "English-Greek Lexicon;" Hettner's "Literature of the Eighteenth Century;" Newman's "Grammar of Assent;" Bracket's "Historical French Grammar;" "Provincial Acts and Resolves of Massachusetts Bay" (Vol. I.); Bowen's "Political Economy;" and half-a-dozen books of comparative grammar, in which the principles of that science are applied by various scholars, English, French, and Irish, to Sanskrit, Zend, Greek, Latin, Gothic, Anglo-Saxon, German, and English.

BOOKS OF THE WEEK.

The Nation.

NEW YORK, THURSDAY, AUGUST 18, 1870.

The Week.

In spite of the rain which fell in torrents for some days last week on the fields of Lorraine, the Prussians have, since the battles on the Lauter and the Saar, done some good marching and some hard fighting, and their onward movement has now all the appearance of a march on Paris by the shortest roads. On two or more slightly converging lines they have pushed forward from Hagenau and Forbach, and some points in the rear, towards and beyond Metz and Nancy, driving the defeated troops of MacMahon, Failly, and Frossard before them, and reducing several small strongholds of the enemy; they have crossed the Moselle; have, by threatening its rear, compelled the Emperor's main army, under Marshal Bazaine, to give up the line of that river, and have fought the retreating army in a sanguinary battle on its banks and almost under the walls of Metz. This battle was fought on the afternoon of Sunday, the 14th (not on Monday, as falsely stated in the Berlin despatch beginning with the words: "The following additional particulars," an error of the telegrapher or decipherer which has caused a great deal of confusion), and was followed on the morning of the 15th ("the second day" of the dispatch just mentioned, for which some of our papers have "the same day," an erroneous emendation) by a Prussian reconnoissance under King William in person. Clear reports of these affairs are still wanting, and French and Prussian despatches announce widely conflicting news; but the continued retreat of the French army towards Châlons, which Count Palikao himself admitted in his statements to the Corps Législatif (on the 16th), the appearance of the Prussian advance on the banks of the Meuse, in the vicinity of Commercy, and the obstinate silence of the French authorities concerning all military actions posterior to those in front of Metz, are sufficient to prove that King William's war bulletins announcing the success of his arms are in the main correct. That the Prussians have dearly bought whatever success they have achieved in "disturbing the retreat of the French army," as Palikao expresses it, is very probable, and the Count was thus as much entitled to speak somewhat figuratively of repeated checks given them as Napoleon was to announce their repulse with great loss. The victors of Saarbrück seem to have played a conspicuous part in the new engagements, the army of the Prince-Royal holding the southern line of the Prussian advance. The boldness with which the northern wing of the Prussians dared to assail the Emperor's main army in the very sight of his great fortress, Metz, shows their force to be very heavy, though how many hundred thousands it numbers on French soil it would be hard to say.

We are far from having sufficient data for ascertaining the number of the troops, French or German, engaged in the battles of Weissenburg, Wörth, and Saarbrück, not to speak of those that now defend or threaten the much-talked-of fortress of Strasbourg. Thus much, however, is certain, that the tremendous figures with which some reporters from the front regaled us at the very opening of the campaign in regard to the Imperial army have been proved by events to have been ridiculous exaggerations. The forces that faced each other on the Saar were represented to number 300,000 and 400,000 respectively, and yet Frossard's corps, though occupying strong positions, was totally defeated by a few divisions, and no troops were at hand to support it. Douay was almost annihilated at Weissenburg, and MacMahon, in his order of the day, in reference to the battle of Wörth, states he commanded there but 35,000 men. One of the tribe of correspondents put "800,000 down as the lowest number" the Emperor meant "to have under his hand and in complete communication at the entrance of the campaign;" but after two days' fighting, in which the aggregate French losses may have amounted to fifty thousand, the French authorities tried to comfort the people by announcing that the commands of Bazaine, Canrobert, and MacMahon—embracing all the forces between Strasbourg and Thionville—still contained two hundred and thirty thousand men. Judging by all the indications that can now be gathered, we are inclined to believe that the Emperor had much less than three hundred thousand men "under his hand and in complete communication" when he "and Louis" "crossed the frontier and invaded the territory of Prussia." There was a great deal of humbug about the French parade of force. The Army of Algeria, for instance, has been quite conspicuous in announcements and reports, and it is true a few Turcos have been captured by the Prussians; but the bulk of it, that is, the whole of it, *minus* a few detachments paraded in Marseilles and elsewhere, undoubtedly continues to watch or to fight the Kabyles and Arabs of the Atlas and the desert.

The most conspicuous names of the new French Cabinet are: Palikao (Presidency of the Cabinet and War), La Tour d'Auvergne (Foreign Affairs), De Genouilly (Navy), Magne (Finances), and Jérôme David (Public Works). In political morals, it is no improvement on the out-going or rather thrown-out ministry. Its meaning is accepted to be: vigorous pursuit of the war; rigor in maintaining order; continuance of personal rule through the majority of the Chambers. The Emperor hides himself behind the Empress-Regent; the Regent screens herself behind the Cabinet; Palikao decrees through the Chambers. This game would be impossible had not the tide of indignation and revolutionary excitement which threatened to sweep away all supports of sinking Bonapartism been encountered and partly stemmed by a counter-current of patriotic exaltation which induces even the Opposition to co-operate, for the defence of the country and capital, with the very vilest tools of the Emperor they detest. And thus, while the proposition is again and again, though unsuccessfully, made by the extreme Left, to concentrate all power and authority in "a Committee of National Defence, constituted in the National Assembly, and composed of fifteen members," the most vigorous and sweeping measures of general armament are voted unanimously, and Palikao receives the thanks and applause of Gambetta. Napoleon humbly telegraphs that he "accepts the resignation of Lebœuf," and Bazaine is officially, though somewhat equivocally, announced to be the commander-in-chief of the army. The real seat of power is now apparently neither in the Imperial camp nor in the Tuileries, but in the Palace of the Corps Législatif, and should the temporary eclipse of the Empire, in consequence of new disasters, become total and final, that body will not hesitate to assume full authority or to establish a dictatorship of some kind or other.

The temper and disposition of the French people in this protracted crisis show, as we have said, the action of a double current of sentiment. There can be no doubt that, were they to vote to-day, in peace and quiet, for or against the preservation of the Imperial régime or dynasty, the nephew of the great Emperor would be as shamefully dismissed by the sovereign people as Ollivier was dismissed by his employer. But the enemy, and he the dreaded and hated Prussian, is "before the gates;" Paris, the capital and heart of France, is threatened; the honor of French arms is to be revindicated, and the Emperor is in the camp. There is time to reckon with him; the reckoning with the invader cannot be delayed. The hatred of the foreigner almost silences all other considerations, and the French uprising against him seems to be enthusiastic, universal, and earnest, while the sporadic anti-Napoleonic outbreaks are little more than riots. It signifies, perhaps, little that among the volunteers for the defence such names are given as ex-Minister Duruy, young Rothschild, and Père Hyacinthe; but it is almost ominous for the Prussians that twenty peasants of the vicinity of Wörth —and the report is proved, by a telegram to the *Tribune*, not to be a French invention—had to be shot, by order of a court-martial, for atrocities committed on wounded German soldiers. And the fact is the more significant as the Prussians are otherwise doing their utmost—not in proclamations only—to convince the French people that it is not against them they are fighting, but against the despot with whom their country is cursed. Their treatment of the French wounded and captives is admired by their enemies themselves, and strikingly contrasts with the persecutions to which the Germans in France are exposed, There are, however, indications—and some are to be found in King William's own well-worded proclamations—that Prussia's ultimate aim, should fortune continue to favor her arms, is not merely to chastise the Emperor of the French for his personal bad behavior, but also to teach the French nation, by curtailing its territory, a lesson of good neighborly conduct not easily to be forgotten. The Prussians have occupied parts of Alsace and Lorraine, provinces which formerly belonged to the German Empire, and, it seems, they mean to keep them. As things stand, they hold Weissenburg, Hagenau, and Saverne, "the key to the Vosges;" Lützelstein, a fortress in the mountains, which surrendered; Marsal, in the fortifications of which sixty cannon were captured; Nancy, the finest town of Eastern France, and probably Pfalzburg and Luneville. They besiege or surround Strasbourg, and threaten Colmar, Mulhouse, Épinal, and Bar-le-Duc. The last-named town is, as we write, probably held by Marshal MacMahon, who, retreating there with the remnants of his and Failly's corps before the forces of the Prince-Royal, seems as yet to have escaped being finally cut off from communication with the army retreating by way of Verdun. Whether he is subject to the orders of Marshal Bazaine, whom Count Palikao designates as "the only and true commander-in-chief of the army," or, in spite of that declaration, receives his orders from the Emperor himself, who as yet seems not to share the general opinion of his own proved incapacity, is still to be seen. Under Bazaine are three corps besides the wreck of the Second Army Corps, which Frossard commanded at Saarbrück, and which appears to be about two-thirds destroyed. The rout of MacMahon's army at Wörth was more complete but less sanguinary. The losses of the two armies in baggage, trains, and stores of every kind were enormous. Trochu has replaced Canrobert at Châlons, the latter taking command of the troops at Paris, in lieu of Baraguay d'Hilliers, who has been sent to Tours.

Our daily contemporaries have been in a good deal of a broil during the week touching the felonious robbery of the *Tribune*—as the *Sun* and *Times* allege that the *Tribune* alleges, but as we do not see that it does in fact allege. It appears that the *Tribune* Commissioner in Europe, resident in London, as soon as he perceived that Europe was to be wrapped in flames, despotic monarchies dashing together in blood, groaning peoples rising, possibly, to assert their rights, and all the rest of it, attained immediately to the height of the situation, and at once organized several corps of observation and poured them resistlessly on the Continent. They pervaded courts and camps; and for anything we know may themselves, some of them, have been of the noblest blood. We confess, though, that the decayed patriots of various nationalities who haunt the neighborhood of Leicester Square and know our friend Gustave Flourens, seem to us to have been in some cases enlisted. It must be a gentleman familiar with M. Mazzini who put the Commissioner up to some of his sharpness. One telegram, for instance, told us that Victor Emmanuel was to assist Napoleon with a hundred thousand men; but the special correspondent was down on it like a sledge-hammer, only quicker: Victor Emmanuel may promise what he likes, was the comment, but not an Italian soldier will move in obedience to his order in such a cause. However, let them be who they may, the corps of observers have certainly sent over a vast mass of matter. Not so much, perhaps, as to justify the high language of the Commissioner, which, indeed, was such as to make many newspaper men thank their stars that he was not on this side of the blue ocean to order them off to instant execution. "I expect," he says, "despatches from the two correspondents of the *Tribune* at the Prussian headquarters. Before their arrival anybody pretending to give details must furnish mere scraps from stragglers." Still they have sent over a vast deal of matter, such as it is, and may be said to have worked hard. Now these despatches the *Herald*, *Sun*, *Times*, and *World* are blamed by the *Tribune*, not for taking—for indeed as members of the Associated Press they have a right to them—but for professing, tacitly, a right of ownership in the enterprise which organized the corps above-mentioned. To this the accused reply in effect that the special despatches are mostly feather-headed nonsense; that all that is good in them is contained in the Associated Press despatches; and that they abound in wild guesses, "Red" opinions, and absurd rumors, so that they will by no means promise not to use them, as their property, and abuse them, as flighty nonsense, whenever they like.

As for the position of Italy above referred to, there has never been any reason to think that she would tender assistance to Napoleon. Rome is a great gift to her, no doubt; but the evacuation of Rome—the French occupation having been a standing insult and menace for all these years—was not a whit too great a price to pay for Italian neutrality. Moreover, although we need not suppose that Italy is particularly fond of her rather scornful ally in the war against Austria; and though "blood is thicker than water," and there is no doubt a natural coolness between the Latin Italian and the German; and although some of the more political Italians do, no doubt, think it the best course for their Government to stand by Italy's powerful near neighbor; nevertheless, Prussia has a long arm, and a stable government that will very likely be diplomatizing and fighting long after the Bonapartes are out of France; the chassepot which General Failly found work so like a charm at Mentana, did not endear the French to the Republican Italian, nor to any other; and finally, above all, the state of the Italian finances is such that war would be mere madness. All this seemed clear enough even before Prussian victories made Napoleonic alliances undesirable.

Republicans desirous of the success of the party will be apt to think Senator Wilson's recent circular address a mistake to be retrieved rather than a plan of campaign likely to lead to good results. More than half of it is the talk about the Republican party's past services in crushing the rebellion, which must, by dint of sheer iteration, have become almost entirely forceless, and which certainly has little or nothing to do with present issues. Moreover, there is something of a fallacy at the bottom of all talk about the people's gratitude towards the Republican party, or any other—as if parties were other than the public itself exercising certain functions; as if "the party" were an entity distinct from the public; as if the public were going to be grateful to itself. Certain it is that people, waiting with some anxiety to hear what it is that the dominant party has to offer as a policy, will be anything but pleased to read a column or two of familiar eloquence about restoring the sublime principles of the Declaration, and striking the chains from four millions of bondsmen. The address makes one effective point: it calls attention to the fact that during the last sixteen months of Mr. Johnson's administration, the receipts from customs and internal revenue were less than $372,000,000, while during the first sixteen months of Grant's administration the receipts were $469,000,000. In other words, the present administration has been a good deal honester in handling the revenue than the worst administration we have ever had. Still, the fact will no doubt be weighty with the people. The chief fault of the address is a fault of omission. Nothing whatever is said in regard to the question, Shall we maintain a heavy protective tariff or establish a tariff for revenue? or the other important question, Shall the next generation pay any part of its share of the cost of the war, and some of the burden now laid on us thus be taken off? The nearest Mr. Wilson comes to these questions is to pronounce Mr. Boutwell's schemes for funding the debt "important and beneficial measures," to which "the Democrats gave little countenance." These Democrats were perverse enough, too, the country well recollect, to laugh at the hole in the sky.

Mr. Boutwell himself sticks to his bantling, and recently at Boston, before an audience of the shoe and leather manufacturers and dealers, he has been insisting on the wisdom of his financial policy. He pointed with satisfaction to the reduction of the debt, but apparently was disposed to look rather sourly on the plan of reduced taxation—a plan, by the way, which affords Mr. Wilson a somewhat inconsistent pleasure; because, if it is well to be proud over the large reduction of the debt, it is proper to be sorry that the revenue from taxation is to be diminished. Mr. Boutwell, coming to his Funding Bill, said that he wished to see the interest account in our national expenditures diminished, and made the extremely just remark, that this might be done either by diminishing the principal on which interest is paid, or by diminishing the rate of interest paid on the principal. He, for his part, is in favor of reducing the rate of interest, and his funding measures had that end in view, he says. So they had; but as long as he was on his favorite topic of lowering the interest, he might have given us the names of his "German bankers" who stood ready a while ago to take United States bonds at four or four and a-half per cent. If he would do that, anybody will give him in return the names of German bankers who can buy as many of our bonds as they like, and get, not four and a-half per cent. interest, but a couple of cents more.

The Republican party is not compelled, however, to accept, as even a momentary mouthpiece, either Mr. Boutwell or Mr. Wilson. The time of the conventions is close at hand, and there are indications, rather faint to be sure, that the Secretary of the Treasury will find his policy condemned. The Ohio Convention was more outspoken in expressing its sympathy with Prussia than as regards anything else; but in a half-hearted sort of way—which shows clearly the politicians' opinion that the party might easily be split in two by a free-trade or rather anti-protection plank—it announces that the tariff "should be so adjusted as to be least prejudicial to the industrial and producing interests of every class or section in the whole country, securing to the home producer a fair competition against the foreign producer." This is a platform that Mr. Schenck might mount; and also it is one that Mr. Allison might stand on at the same time—ropes and stakes and bottle-holders being first provided, perhaps. It is perfectly ambiguous, and will remand the constituencies to their right of enquiry into the opinions held by each candidate individually. This, indeed, is probably how the whole matter will for the present arrange itself. There are those who expect, and some who demand, that the influential New York Convention, which is to be held in the first week of September, should speak with a certain voice on the subjects of taxation and revenue reform, but it seems to us unlikely that the party here will be less non-committal than in Ohio. Until the next Presidential contest comes into nearer view, compelling distinct utterances, the revenue reformers will, we fancy, have to make their fight in the Congressional districts.

The short and the long of it we take to be that if so be the contest for the next House of Representatives can be tided over, the Republican political managers will put off the framing of a national policy till after they have had opportunity to see what the next session will bring forth; and that the immediate contest can be carried on to a successful result, they are tolerably well convinced. They admit probable losses in the South—and it looks very much as if they would have to admit more than they do now—but they expect to hold their own tolerably well in the North, and some of them even affect to believe that this State can be made to give a Republican majority. They argue that the German Democratic vote will be given to the Republicans because of the Republican expression of sympathy with Germany and the Democratic sympathy with France; that the Germans are also displeased with the Democratic liquor law; that the new registration law will cut down the New York City majority; that the average American citizen is perfectly satisfied with the general success of Grant's administration, and will leave well enough alone. These are arguments that show a knack of hoping rather than furnish strong grounds for believing—whatever a positive and aggressive policy might do—that Mr. Hoffman is not going to be the next Governor of this State, or that the Republican vote generally in the North is not going to fall off. "Leaving well enough alone" can be done, most people are apt to think, without their taking the trouble to vote; the Germans have a steady constancy of enthusiasm that makes them tolerant enough of Democratic coquetry with the Fenians; the present liquor law may not suit the Germans, but they know very well that it is not to the rural Republican that they are to look for a better; and there is general incredulity that the registration law is going to be much in the way of Mr. Tweed and Mr. Sweeny.

A recent decision of the Supreme Court of Michigan, it will be remembered, declared municipal subscriptions to railroads, and the levying of taxes for this purpose, illegal. Under various enabling acts for seven years past there had been issued bonds to the amount of at least $1,656,300, and obligations incurred to nearly twice that amount, and the dismay which this decision caused among the bondholders, and the inevitable hardships which must have resulted from it, can easily be imagined. While the towns were solicitous for their reputation for good faith, those persons immediately interested in new railroad enterprises—especially the people in the northern part of the State—saw themselves doomed to bitter disappointment. Notwithstanding the strong public feeling against the ruling of the Court, the better sentiment prevailed of respecting it while seeking to set it aside by a constitutional amendment. On the 27th of July the Legislature was convened in special session by the Governor, and last week it adjourned, having faced the difficulties of the situation perhaps as creditably as any body of men would have done in the same circumstances. It submits for popular ratification in November an amendment in three sections, the first and second of which are borrowed substantially from the new Constitution of Illinois, and provide for the regulation by law of rates of transportation, against railroad combinations and discriminations, and against consolidation of rival lines except upon due and public notice. The third section authorizes the Legislature to legalize the municipal bonds already issued, but only in case the electors in the several counties, townships, and municipalities ratify anew the issue, and settle the mode of payment of the bonds. This shifts the responsibility from the State to its parts, but the nature of the act of voting the bonds, whether a first or a second time, remains unchanged; and whereas the towns before could plead involuntary defalcation, they must now choose between injustice to the minority and open repudiation. The former choice will not be judged too harshly by those who can appreciate this dilemma. On the whole, the people of Michigan may be said to be worthy of their Court, as they have refrained from making the railroad bonds in question lawful and constitutional hereafter, and as they have profited by the experience and advanced legislation of the neighboring State of Illinois. And if we may judge from a solitary case in Indiana, the Michigan bench has set an example which will be followed elsewhere as occasion arises.

The year has so far deprived us of two of the most distinguished of American citizens, a great soldier and a great sailor, to each of whom the country owes much. Farragut, who follows Thomas, leaves behind him no admiral in the world whose name is more widely known than his. His services before the late war were not distinguished, though he was known for a brave and accomplished officer of that school which, now that the Patent Office gets from the War and Navy Departments more and more of the business of making war, is held to be threatened with extinction. He was trained aboard wooden ships, and was a skilful navigator at a time when getting the weather-gauge of your opponent was an essential point of good naval seamanship, and the ability to sail a point closer to the wind than your enemy, gave you his ship. He had lived out the ordinary life of a sailor before the new dispensation of iron plates, rams, and monster guns took the place of broadsides out of wooden frigates. Born in 1801, he was only twelve years old when he was at sea as a midshipman fighting the English in "the last war," the famous "old *Essex*" being his first ship. The opening of the war found him a captain, and although of Southern birth and married to a Southern woman, he declined a command under the Confederate Government, and showed that hearty loyalty in which, indeed, our navy officers were but very seldom found wanting. Everybody remembers his passage of the forts at New Orleans, which was virtually the capture of that important city, and the battle in the Bay of Mobile, which was of just the character to catch the popular eye. Farragut, however, was in all respects a man formed to be a popular favorite. Extremely kind-hearted and cheery, modest, brave, and dashing, he got, in a large measure, the affection and admiration that people of our blood give so willingly to men who, whether or not of great ability, can sail a ship and fight it.

FRENCH OPPOSITION TO THE WAR.

Of the orators who, in the debates of the Corps Législatif preceding the declaration of war, had the courage to come forward in opposition to the warlike measures proposed by the Emperor and seconded by the clamors of the people, none can claim the honor of having evinced a more defiant, a more persistent courage in the struggle than old Thiers. A hundred voices from the ranks of the majority in vain exerted themselves to stifle by interruptions his denunciations of the Imperial policy and his words of momentous warning; in vain his speech was hooted as becoming a Prussian rather than a statesman of France; in vain Jérôme David told him: "Many Prussian battalions would be required to inflict on your country as much harm as you unwittingly do." He persisted in boldly speaking out his denunciations and his warning, and would not be hindered.

But defiant and imposing though his attitude was, it lacked the power of principle and higher consistency, it lacked the support of subjective truth. Peace had never been a principle with M. Thiers, in his old age not more than at the time when he threatened "to conquer Egypt on the Rhine." Still less had he ever shown himself friendly to the growth of Prussia or the development of German unity in whatever shape. In 1864, while unveiling before France the frightful condition of her finances, and denouncing, as its cause, the periodical return of great and small wars under the Second Empire, he nevertheless ended his remarks by declaring that no serious reduction of the war expenditure was possible, and that with 400,000 men under arms France was on a peace footing. And again, in March, 1867, in a powerful speech on the relations of France with Germany, he formally impeached the Imperial Government for having in its dealings with other nations substituted the principle of nationality for that of the European equilibrium as maintained by French statesmen in former ages—an equilibrium founded on the acknowledged preponderance of France and the necessary protection or guidance bestowed by her upon a group of disunited and equally powerless states. He accused the Government of having pursued the new policy in all the great European questions of the time, the Polish, the Danish, the Italian, and the German, and everywhere to the detriment of France. It had created, he said, the unity of Italy, without reflecting that Italian unity must be followed by the unity of Germany. Solferino, by crippling Austria and compelling her to fight at Custozza, had made Sadowa possible. The small states were gone, and the greatness of France was gone with them. And his *cæterum censeo* was: a strong policy, supported by a vigorous organization of the military forces of France.

In regard to Italy, to be sure, the record of M. Thiers is even worse than the record of his hostility to a united Germany of the future. He not only deplored Solferino as a blow struck at the greatness of France; he condemned the Franco-Italian treaty of September 15, 1864, which promised the evacuation of Rome; in the debate which followed its conclusion he pleaded for an alliance with Austria, an empire which had the merit of being a barrier to the greatness both of Italy and Prussia, and even for the temporal power of the Pope. In the autumn of 1867, when French troops fought Garibaldi, he showed himself one of the most passionate defenders of the Papal sway in Rome, and he it was who, not satisfied with the somewhat indefinite promises of M. Rouher to uphold it, extorted from him, by dint of violent provocations, that notorious announcement: "We declare it in the name of the French Government, Italy shall not take Rome. Never!"

Whenever M. Thiers condemned a military enterprise of the Second Empire, he did it on the score of expediency, for reasons of policy inspired by the dictates of justice and international equity have always been foreign to the statesman who devoted so many years of labor to the glorification of the unscrupulous Corsican conqueror. Besides, his denunciations were often but the outburst of a passionate political critic who had little reason to favor or to esteem the men in power, by whom he had so long been kept in involuntary inactivity and silence. He combated the late declaration of war, not because he regarded it as a wanton act of aggression, but because it appeared to him premature and therefore inexpedient, and chiefly because the Government was bent on making it. And similar motives must have mainly actuated Jules Favre in the same course of opposition—a man of a different stamp, both moral and political, but whose maxims of external policy, based though they are on the principles of justice and freedom, are apt to undergo strange mutations whenever the unity of Germany looms up on his French political horizon. In the great debate of March, 1867, Jules Favre, the most ardent antagonist of Thiers on the Italian question, was as vehement as that orator in assailing the pusillanimous conduct of the Government towards Prussia, and eagerly advocated the defence of the rights of the dispossessed petty German princes and of their "oppressed peoples"—as the only means of preventing German unity. And among the members of the Corps Législatif who answered the arguments of Thiers and Favre was, strange to say, Émile Ollivier, who had just made the first tentative step towards the influential position which was to involve him in so much shame and ruin, and who *then* advised accepting, without mental reserve and with confidence, not only the new organization of Germany as sanctioned by the Treaty of Prague, but also the near eventuality of a union of the Southern States of Germany with the Confederation of the North.

Of the younger portion of the parliamentary enemies of the Ollivier Cabinet, Gambetta was one of the most violent in condemning its tortuous and aggressive war-policy; but while speaking of the interests and in the name of humanity, and against conquests and territorial aggrandizement, he gravely proposed—if the brief report of the debates which reached us be correct—that the Germans should be required to dismantle all their fortresses facing the French frontier—for the sake of peace. Such is the horror of German power on the Rhine in the minds of French politicians of all shades, practical, liberal, or radical. And what renders the opposition to popular war measures by even a strong minority eventually quite illusory, is that by no means exclusively French view of "patriotic duty" which commands the surrender of all effective opposition as soon as war is declared. In the case before us, this sentiment of unqualified allegiance to "my country, right or wrong," has been made doubly and triply strong by the extraordinary turn of events which has so suddenly put the safety and military honor of France in question. As long, therefore, as the German foe remains on French soil, and the honor lost on the sanguinary battle-fields on the Lauter and Saar is not retrieved, all opposition to the war from principle or policy will be hushed in the deliberative halls of Paris, and all shades and fractions of parties will vie with each other in sacrifices—that is to say, in decreeing sacrifices—for the revindication of the country's integrity and glory. The measures of the Government may be censured and denounced, and reverses may bring about a revolutionary fever of excitement and the downfall of the Imperial Government; but the war, though begun by the recklessness of a despot now equally despised and hated, has become a national war in France no less than in Germany, and it will probably take a long series of reverses to compel the one side or the other to give up the struggle for integrity or supremacy.

EUROPEAN SUSPENSION OF SPECIE PAYMENTS.

The genius for organization of a Roon or a Von Moltke can concentrate gigantic armies with the precision of science in the midst of an enemy's territory. The bitterly disappointed pride of a martial people may, perhaps, bring to the French standard men enough, may perhaps arouse enthusiasm enough, to defeat, or at least to resist, the invasion. But neither science nor passion has ever yet succeeded in resisting or controlling the march of that silent power that moves in advance and in the rear of all armies—financial confidence. It is only thirty days since war was declared, and already the financial question looms up in the rear of both armies as a difficulty of the first magnitude. Extraordinary as is the enthusiasm of Germany in favor of the war, yet, strange to tell, the Prussian loan for the paltry sum of seventy millions of dollars is being subscribed for in very small amounts only, and seems at present to promise but a very indifferent result. It is true that the Government treasury is reported to have had a very liberal balance to start with, but what are fifty or sixty millions when a million of men are under arms—two-thirds of them in an enemy's country, where it is proposed to pay for whatever the people furnish? The discount rate of the Berlin Bank is raised to eight per cent., as a nominal figure, but of course no discounts are obtainable. Outside of bank, money is of course scarcer still. Houses of the highest standing are unwilling to prepay their own acceptances even by a few days at any rate of interest, and cases are reported where letters of credit from the first firms abroad have been refused payment for sums almost incredibly paltry. The bank nominally maintains specie payments, and may succeed in doing so for some time, as its entire course has for months past been guided by a foreknowledge of the present difficulties. But it is doubtful whether the desperate attempt to maintain the specie standard will not in the end be futile and disastrous.

Of the result of the French loan, issued at the same time, we have no accounts; but in all ordinary financial relations, the disorganization in France, for the time being, seems to be complete.

The Bank of France, after losing between the 14th of July and the 4th of August the extraordinary sum of 142 millions of francs—over 24 millions of dollars, or nearly one-eighth of its entire specie reserve—refused at first to redeem its notes in anything but silver; and next, finding the run continue, suspended specie payments entirely. The export of specie was immediately prohibited, by what authority or by whom does not appear; but a sum of 14 millions of francs, intended for export, and reported to belong principally to the Rothschilds, was seized at the railway station, and detained by the police.

England maintains a position of security and confidence which we cannot help thinking delusive. In the first two weeks after the declaration of war, the Bank of England lost nearly nine millions of dollars in gold, which was withdrawn mainly for shipment to the Continent. It was no doubt this heavy loss of specie that caused the rapid advance in the rate of interest from 2½ to 6 per cent. The Cable has been too busy ever since reporting the silly opinions of silly people on matters of no interest, to give us the figures of the last Bank statement, but it is fair to presume that the drain has ceased, at least for the time, since the discount rate has been reduced from 6 to 5½ per cent., and the price of silver in the open market, which had at first materially risen, has since again declined.

Out of the midst of these various indications and suppositions there looms up the essential fact of the suspension of specie payments by the Bank of France, which is in itself a historical event of the first magnitude. Were the financial history of our own war intelligently written, it would be interesting to compare events as they arise in France with our own recent experience. But, more is the pity, our financial history as yet awaits the historian, and all that we can do is to point out such of its prominent features as will help us to form an intelligent opinion on the probable consequences of like events abroad.

Of all the prominent features of our financial history, the most striking, and at this moment the most interesting, is, in our opinion, the hoarding of coin that commenced with the election campaign of 1860. On the 1st of November of that year, the Sub-Treasury in New York, and the New York banks together, held about 27 millions of gold coin. The best estimates (but which, in our opinion, are far too low) give the amount held by other banks throughout the country, and in the money-drawers and pockets of the people, as about 128 millions, making together about 155 millions of coin in the country, exclusive of the Pacific coast. In the fourteen months next following, up to January 1, 1862, we received at New York from California 42 millions, and from Europe (in excess of coin exports there) 39 millions, or, together, an addition of 81 millions to our previous stock of 155 millions. On the 1st of January, 1862, our stock of coin should have been 236 millions or thereabouts. Where was it? The banks outside of New York were drained of almost their last dollar. In circulation coin was never seen, except by chance, or when some one carried a few gold pieces as a curiosity, not to be parted with. What had become of the 81 millions brought into the country? what of the 155 millions previously here? The New York banks and the Sub-Treasury held 29 millions. Where were the other 207 millions? They were hoarded; stowed away in private safes by thousands or tens of thousands; buried in the ground or secreted under beds by hundreds; carefully wrapped away by fives and tens in stockings and rags with other sacred treasures; in one word, hoarded—hoarded in large lots and small, by rich and by poor, in places imaginable and unimaginable. It was these hoards, coming back gradually into the channels of trade under the temptation of the advancing premium, that enabled us in the eight years following to export from New York alone 407 millions in coin, when our total receipts were only 230 millions, and to increase our coin balance in the Treasury and in the New York banks from 29 millions to 100 millions and more. Never before has the world had an opportunity to form so good an estimate of the nature and amount of the hoarding carried on in time of war. It is capable of proof almost indisputable, that in the fourteen months from November 1, 1860, to January 1, 1862, the people of the United States hoarded from 200 to 250 millions of dollars in gold coin. How far are the people of France and Germany likely to follow our example?

Hoarding is pre-eminently the act of ignorance and timidity. It is based on the foolish belief, in the first place, that nothing has value except money, and, in the next place, on the fear that such paper money as has been or as may be substituted for coin, will become much reduced in value or totally valueless. So far as ignorance or timidity influences hoarding, it is not unreasonable to say that both Germans and French are likely to far exceed our own people in the disposition to hoard. In France especially, and to some extent even in Germany, the recollection, or at least the tradition, of the "assignats" is so vivid, that a forced "legal-tender" paper money, such as the notes of the Bank of France are now constituted, and as the Prussian "Kassenscheine" may become any day, are likely to suffer a severe and rapid depreciation, and to lead to hoarding of the most stringent character. The experience of the United States, so far as it is known and understood abroad, may even tend to intensify the disposition, inasmuch as it will probably be considered by the more intelligent classes as a warning example of the rapidity with which coin increases in value, and of the enormous gains likely to be realized from judicious hoarding of the precious metals. But on the other hand, the existence, *prior to suspension*, of a paper currency in universal acceptation, may tend, both in France and Germany, to diminish the evil. With us, it should not be forgotten, the bank suspension was almost everywhere a virtual bank *failure*, and that we had a long period of, so to speak, no currency before the Legal Tender Act of February, 1862, gave us the legal-tender paper money. Persons who remember the condition of affairs in December, 1860, will scarcely deny that if at that time the notes of the New York banks, for example, could by any possibility have been declared legal-tender, the financial excitement would have been materially diminished. But be that as it may, it cannot be doubted that the familiarity with, and confidence in, the existing kinds of paper money will, in both France and Germany, most decidedly tend to reduce the disposition to hoard. Taking into account these various favorable and unfavorable influences, and adding the consideration, that in both countries arbitrary repressive measures are but too likely to be resorted to, which would only aggravate existing evils, we conclude that there is every probability that France and Germany both will witness a system of coin-hoarding fully as active and stringent as that witnessed by ourselves in 1860 and 1861.

Already in France we see the hoarding in active progress. The 25 millions of dollars withdrawn from the Bank in three weeks were not wanted for export, for during all that time coin was coming into France from England—they were wanted for hoarding exclusively. It is true that, as already stated, coin was seized in France intended for export, but this coin was really only intended for another form of hoarding, adopted by large and wealthy houses, who place their coin-hoards in the hands of English bankers, as for the time being the safest place. We saw precisely the same thing here. In the months preceding Lincoln's election, and for some time after it, timid people engaged in foreign trade sent their money to England, leading to large coin exports there, at the very time when everything was already shaping for far larger coin imports from England here. So in France, banking-houses having the necessary facilities sought to place their coin-hoards in England, leading to coin exports from France to England, and inducing England to reduce its discount rate, in the belief that the drain of coin to the Continent had ceased. This same desire to place coin-hoards in England, the safest place for the moment, also accounts for the active demand in Paris for bills on London and American 5-20 bonds, these two securities constituting the safest, if not the cheapest, method of transferring coin-hoards from Paris to London. But this method of placing hoards abroad is open to only few persons, and the relief to the Bank of England from this source has quickly ended by the prohibition of all further coin exports from France. Hereafter, rich and poor alike will have to keep their hoards at home.

Supposing that we are correct in assuming that our experience in relation to hoards in war-times will be repeated in France and Germany, what will be its effect on neighboring nations and on ourselves? Again we have only our own experience to guide us.

The first step towards hoarding coin is to get the coin to hoard. When great numbers of people are trying to get coin, it is not easily got. The only way to obtain it, is to sell property of some kind or other cheap. When everybody is anxious to sell cheap, prices rapidly decline. In the winter of 1860 and throughout 1861, prices of everything produced or consumed in the United States declined so low, that scarcely anything could be brought here from abroad, but almost everything could be bought here and taken abroad and sold at a large profit. The natural consequence was that our importations rapidly declined, and our exports rapidly increased. We exported far more than we imported, and the excess was paid us in coin. Instead of shipping to Europe from forty to fifty millions of coin, as we were then and are now in the habit of doing every year, in 1861 we actually received from Europe thirty-nine millions! That was the glorious time for people of limited incomes, when living was cheap. That was the time when all the West India Islands seemed flocking to our shores, where the cream and honey of the land were almost given away. Are we to see this experience likewise repeated in Germany and France? Some indications are already reaching us. Of the manufactured goods of these countries we are already promised a very large supply, while of our principal export staple, cotton, they are likely to take from us a largely diminished amount. How their relations with England will be affected we can only judge so far from two facts: the English cotton manufacturers complain of the almost total absence of Continental orders, while at the last London sale of raw wool from the English colonies, foreign buyers were entirely missing. These few facts, and they are all that have reached us in the two weeks that have elapsed—leaving the telegraph out of sight—since the outbreak of the war, indicate with sufficient clearness that, at the outset at least, Germany and France will, like ourselves in 1861, be unusually light importers and unusually large exporters. Their products will be forced on sale for cash first in England, and next in the United States, and for a large part of the goods thus sent us we shall, in all probability, have to remit the specie. England being nearer and in closer business relations with both combatants, is likely to suffer first; but England will in turn call upon us to help her bear a share of the burden, so that though last to suffer, we shall probably in the end suffer most severely.

Of all great commercial nations, England is to-day least able to bear financial calamity. The fearful pressure of her debt upon a people impoverished by her pernicious system of finance, the startling increase of her pauperism, the constant drain of her productive capital for foreign enterprise, for which in exchange she only receives paper evidences of debt, the discontent of a large portion of her people, render her peculiarly sensitive to financial disturbance. The almost feverish haste with which the Bank of England advanced the discount rate from 2½ to 6 per cent., shows how thoroughly alive its management is to the dangers of the situation. But should the imperfect indications so far received of the hoarding going on in France be confirmed, the drain upon England will probably be so severe that all protective measures of the Bank will prove unavailing and will only lead to hoarding in England itself, and then the suspension of the Bank of England, in the midst of peace, with a large specie reserve, might be witnessed as one of the financial anomalies of the age. Startling as the very suggestion of such a thing may appear, it seems sufficiently within the limits of probability to justify its serious consideration. But even supposing that this extreme case be entirely improbable, it will not do to disregard the fact, that a continuance of the war means almost inevitably a continuance of stringent hoarding in France, and that no serious hoarding can take place in France without involving England in a serious loss of specie.

We, here, are thus exposed to a double contingency: a probable drain of specie direct from France, and a possible indirect drain in consequence of England's needs. It is worth while considering briefly how well we are prepared to meet such a drain. Just three weeks ago we pointed out (in *Nation*, July 28) the possibility of our coin reserve being suddenly whisked off to Europe, and already twenty millions have gone within four weeks. The last week's shipment, it is true, was the smallest (less than three millions); but even at that rate our loss, if continued for any time, would be serious, while, if we do not overestimate the probability and amount of the French hoarding, the drain would be far more likely to exceed that sum for some weeks than to fall below it. To meet such a drain we should be mainly dependent upon the supply now held by the New York banks—for California is at this moment extremely poor and little able to part with any of her coin, and Mr. Boutwell, our only other resource, "the Secretary who never yields to any pressure," is not likely to come to our aid. The New York banks, then, on Saturday, August 14, closed with about twenty-four millions of dollars in coin, just about enough to stand a repetition of the last four weeks' export, if during that time nothing is drawn from them for the payment of duties. But the latter supposition is quite unlikely, although heavy coin shipments would very materially reduce the payments of duties; while the banks are in receipt of coin from so many minor and unknown sources, that it is fair to assume that, in presence of an active demand, they would have enough to pay reaonable duties, and to furnish an additional twenty millions for shipment. But should the shipment reach that amount, or exceed it, our financial position would be an extremely grave one.

This suggests a natural and pertinent enquiry which is causing some uneasiness among thoughtful business men down-town, namely: In case the shipments continue, can the banks really show the amount of specie which they assert that they hold? It will be remembered that last year, just about this time, the desperate speculation which culminated in the ever-memorable Black Friday was materially aided by a statement from the national banks of this city, showing conclusively that they were habitually representing as specie a portion of their reserve which in no sense of the word was specie. Since then, the temptation to indulge in the same kind of misrepresentation has been tenfold greater than before, and there are not wanting indications that the temptation has not always been resisted. The only possible service that at this moment an intelligent Secretary of the Treasury could render the mercantile community, would be to order an enquiry into this subject. But Mr. Boutwell, who seems to float on in happy ignorance of any possible danger, is too busy enlightening the shoe and leather dealers of Boston on the mysteries of iron ship-building, to attend to such insignificant details. Last year, at the bidding of a nest of gamblers and blacklegs, the enquiry was promptly ordered; why has it been neglected ever since?

As we indicated in a recent article, the danger to our finances which everybody anticipated, a return of our bonds from Europe, seems likely to be entirely avoided, while serious disturbance threatens us from a quarter where least expected, from the hoarding of coin by Frenchmen in consequence of the suspension of the Bank of France.

AN AMERICAN DIPLOMAT OF THE OLD SCHOOL.

THE representatives of the United States in other countries are often singular specimens of the genus American, but more than the usual share of oddities—counterbalanced, indeed, by such men as Adams, Buchanan, Middleton, and Dallas—seems to have fallen to the lot of St. Petersburg. There was one gentleman who spent nearly the whole of his term in vain endeavors to be sober enough to be presented to the Emperor, or even to have an interview with the Prime Minister. As surely as an appointment was made, so surely was he drunk, and the Secretary had to write an apology on account of "severe illness." His Irish body-servant is reported to have dragged him to the mirror regularly every morning, with the exclamation, "Is thim the eyes for a Minister Plineepotenshary?" Another in more recent times is said to have put the uniformed *chasseur* inside the coach, as he drove to the Emperor's summer palace on his first reception, and to have ridden himself on the box in an old wide-awake hat "to see the country." But without going through the catalogue of *gaucheries*, quarrels with the police and palace servants, and all sorts of scandalous conduct which have made American ministers a byword, let us go back to John Randolph of Roanoke, who must have been one of the oddest of them all. In manners, to be sure, he was a gentleman, and rumor reproaches him with nothing more than having shot from the windows of the Hotel Demuth, with a huge blunderbuss, at the cats that disturbed his sleep.

It was a curious choice in President Jackson to send a fiery, vain man like Randolph to negotiate a treaty of commerce and a treaty of maritime rights with Russia. Absurdly punctilious, he detains the *Concord*, the ship-of-war which took him, at Yarmouth to procure despatch paper with exactly the same water-mark as the sample he brought from Washington, and is greatly disappointed at not obtaining it, and discusses gravely the significance of Prince Lieven's note being sealed with his private seal, which he describes minutely, and not with the official seal of the Foreign Office. Full of self-consciousness, he sees a disparagement of his dignity in the underscoring of his name on the envelope (the usual practice in Russia). The same man who is seen in his speeches in Congress appears in his despatches.

These are but two, for Mr. Randolph remained in Russia only from the 10th of August to the 19th of September, 1830. They are disconnected, like his speeches, long-winded and rambling, full of classical quotations and French expressions, profound remarks on general principles and the state of Europe, and petty personal details. In these days of telegraphs even diplomats have become laconic. Not even Mr. Seward gave, like Mr. Van Buren, a hundred closely-written pages of personal instructions, nor would any new-fledged minister be now likely to write a dozen large folio pages descriptive of his arrival in port, nor grow garrulous at Elsinore with long quotations from "Hamlet," nor compare the icebergs of the Atlantic with the Alps of Savoy. Yet these two despatches are exceedingly amusing, and one wishes there were more. As not every one is a student in the Government archives, we venture to copy out a few characteristic passages. Here is a notice of the Princess Lieven, the great friend of George IV.:

> "Prince Lieven is notoriously in the interest of England, to which his Princess, who is believed to have as much influence over him as wife ever exercised over husband (not excepting Sarah, first Duchess of Marlborough), is yet more devotedly attached. She was considered, when I was in England some years ago, as *Ambassadour de facto*, although her husband was not absent. She is now regarded as the Representative of the Russian Ministry in London: notwithstanding, to keep up appearances, they have sent out a man of straw as nominal successor to Prince Lieven." . . .
>
> "The other notes which I have received from his Highness Prince Lieven were brought by an Imperial Messenger, who (if I rightly comprehend his motive in showing it) was accredited to me by a Letter Patent, about three inches wide, on a slip of uncreased paper, in the Russian tongue and character. He only shewed his authority on his first coming."

Mr. Randolph seemed to think that suspiciousness should be the chief characteristic of a diplomat, and he indulged in it to a great extent. In a subsequent interview with Prince Lieven, after a variety of roundabout talk, mention was made of the absence of Count Nesselrode at Carlsbad for his gout, and Randolph drew a very unfounded inference, which he expresses in his flowery language:

> "It then for the first time flashed across my mind that the star of Count Nesselrode had 'sunk temperately in the West,' and that Prince Lieven had succeeded not only to his office, but to his place in the confidence of his Sovereign. They who know the difference between *viva-voce* testimony in open Court and a deposition in Chancery (a numerous class) will readily conceive the indescribable looks, tones, and gestures, although even these last were barely perceptible, which led me to this conclusion."

Then comes talk about the apprehended failure of his mission, the illness of his servants, his desire to "leave this worse than Stygian atmosphere, in time to escape the rigours of its Arctic winter," the lack of newspapers, his calls on the heads of missions, his failing to see Mr. McLane in London, his passing Mr. Middleton in the gulf, the stupidity of Congress in not passing the appropriation for outfits, and the dislike which he thinks the Emperor has to the capital, for "despotism is always timid and weak."

> "I look for a general war in Europe. The good and evil principles are in conflict—Free Government and Despotism—(General Jackson, *i. e.*, the people and the Bank of the United States)—and it remains to be seen whether the Manichæans, or the Christians in Politicks and Religion, be in the right. But for the Millstone of the debt around her neck, England would take water to-morrow."
>
> . . . "I have written thus far interrupted every quarter of a minute by innumerable flies, gigantick as the Empire they inhabit, which attack the face in all its vulnerable points, nose, mouth, and eyes, under cover of the spectacles. This is the land of Pharoah and of his Plagues. It is Ægypt in all but fertility. The extremes of Human Misery and Human Splendour here meet. Although I succeed an Anglo-Russian who considers himself very neat, an exact description of the House prepared to receive me, the publick rooms excepted, would not be very pleasing to him or to the reader."

Recollections of the recent debate in Congress on the claims of Lafayette probably suggested this somewhat ungenerous postscript:

> "I have just heard, but know not what to believe, that the Duke of Orleans is proclaimed King. Yesterday La Fayette was at the Head of affairs—a bad augury of success. He might do for the Finances in one respect—for no one is abler at raising the supplies. If he were Chairman of Ways and Means, the Appropriation Bills would never be smothered in the cradle or talked dead. He at least would never forget to take money out of the Treasury."

There is one other souvenir of Mr. Randolph's brief mission. In a copy of the first volume of Gales and Seaton's "Register of Debates in Congress," he has written on the fly-leaf:

> "St. Petersburgh, Aug. 27 (Sept. 7), 1830.
>
> "This is, to my knowledge, one of the most infamous attempts ever made to mislead Publick opinion by pretended Reports of proceedings ever made since the reign of Terrour. There was then nothing so bad. Both Gales and Seaton have put forth this publication, knowing that it purposely falsifies facts, for the purpose of affecting the ensuing election of P. They are defeated—and we pay them for their Libels!
>
> "J. R. of R."

He has made besides one or two corrections in the reports of his speeches, and once there is the remark, "This is all garbled." Possibly the cause of his anger may be found in the fact that his own speeches are sometimes laconically reported thus: "Mr. Randolph then spoke for four hours."

RIGHT AND WRONG IN FRANCE.

Paris, July 29, 1870.

What first of all strikes any one who observes the French nation at this moment from a higher or more philosophical point of view, is the deplorably inferior condition of civilization which the whole population, from the upper to the lower extremes, exhibits. There is in the club-lounger without occupation of any kind, but with sufficient fortune, the same appreciation of events as in the wretched vagabond in the worst faubourgs who lives upon what he begs, borrows, or steals. It is the one same species of ignorance, coupled with the one same kind of vanity, leading in both cases to the utter incapacity for distinguishing right from wrong—*real* right, namely, from *real* wrong. This is the most remarkable feature morally, perhaps, in the entire French race—the perverted sense of what is honest and true and of what is not so. One or two *naïve* admissions made by public men, within the last ten days, clearly prove the curious mental condition to which I allude. When M. Rouher complimented the Emperor upon his having been "preparing" for this war "for four years," and thus being ready to pounce upon his enemy on the first pretext that should come, M. Rouher had no notion that he was, as it were, delivering to his master a certificate of dishonesty somewhat akin to that earned by men who cheat at cards or indulge in other unfair practices. When the English journals (from the Anglo-Saxon point of view of "fair play") commented upon this, neither M. Rouher, nor perhaps a hundred men in France, clearly perceived the "wrong" committed, which said "wrong" is a weakness. Again, the other day, when, in answer to M. Schneider, the Emperor aphoristically laid down that "every war was just which a people sanctioned" (!), it was not till the strong impression produced by these words came back upon the French public from abroad that they perceived what an inadmissible theory had been expressed.

Education! there is THE want—the great and cruel want of the entire French community. Of *moral* education there is absolutely none—none in any class. Let us take the two broad social and political divisions of the population—the aristocratic and the democratic, the monarchical and so-called revolutionary—what shall we find? The aristocratic mother sends her boy to a religious establishment of some kind (generally conducted by Jesuits), and there what is called his moral education is simply and exclusively clerical; he is, namely, taught to think that wrong can only be measured by a formal religious standard, and that every wrong can be wiped away by confession. Genuine, strong, honest right he has no chance of becoming acquainted with there. But as it is always advisable to secure the help of some human weakness if you desire to acquire hold over human hearts and minds, so the emptiest and silliest sort of national vanity is encouraged under the name of patriotism. The wars of Louis XIV., and all the wars in which France, as a Catholic country, has achieved conquest, are held up as glorious before the eyes of "right-thinking" youth; and as all truth in history is trampled upon by clerical instructors, and all science avoided, and the giant progress of the nineteenth century is sought to be ignored, why, the upper class grows up mostly into hopeless idlers, who fall into vice from sheer ennui, and fancy they soar into heroism if they shoulder a gun and march to the frontier to invade a neighbor nation whose strength irritates and offends them. If you venture to say that France is wrong and has provoked the war, you are met by the assertion that, "as she is certain to be victorious, she cannot be wrong!"—a perfect confirmation of the Emperor's speech that, "when a country was favorable to war, war was right."

So much for the aristocratic classes. Now take the democratic ones. They are not in reality much more nearly abreast of their time than the former, although they affect more modern notions. Perhaps of the two these latter (the democrats) are the more inflated by vanity. With them all notion of "right" is merged in the idea of brute force, and that is why they are invariably applied to, in the last resort, by whatever government rules France. If you will allow the democratic class to yell out the "Marseillaise" at all hours of the day and night, to bully the better-to-do part of the public, and force not its "equality" but its "superiority" upon every one else, then the populace will enter into the war-feeling heart and soul, and rush off to the frontiers ready to invade and pillage every other country. This is one of the chief reasons why, when France suffers *military* defeat, she collapses altogether, having no notion of the moral force that is lent a people by the consciousness of being in the right.

But if you examine seriously this condition of things, you will be obliged to admit that it argues a total want of moral education; or, in other words, an inferior state of civilization—the state of civilization of two or three centuries ago, when mere might was respected and looked upon as identical with justice. Those who wished to believe that civilization had progressed in this country were laboring year after year to prove that a proper comprehension of the blessings of peace was rapidly replacing the old war-feeling, and that Frenchmen were growing to learn that moral justice was the first of all forces. It seemed to be so, and this much was clear—namely, that the *élite* of France, her thinkers and honest men, what ought to be her chiefs and leaders, had welcomed the world's new law. Hence the noble and truly patriotic conduct of the Opposition in the Legislative Chamber during the late sham discussion on the war, and the unity of the eighty-three deputies who stood together like one man to declare the utter iniquity of the Government's proceedings. But the very conduct of these eighty-three will serve to explain why the Emperor has so strenuously resisted the one only measure that would have given France a true representation in the parliament—a reformed electoral law, namely. Had Émile Ollivier not behaved with the all but unparalleled foolishness and baseness which have characterized him ever since he came to power, there is no doubt that a dissolution of the Legislative Chamber would have sent up to Paris the men who really represented the better and more modern opinions and sentiments of the country, and have rendered all the subsequent intrigues and war manœuvres impossible. In this one respect, however, all his colleagues were as much to blame as Ollivier. From the moment when M. Daru consented to remain in the Cabinet, postponing the dissolution of the Chamber to a future time, the means of securing liberal institutions, and what was termed parliamentary government, was lost. The personal rule was stronger than ever, because it could henceforth add to its own brute power the false appearance of national consent.

This is precisely what has occurred in the last fortnight. The Emperor affects to say that the Chamber is to be consulted, and Ollivier does not recoil from the comedy of appealing to the sham majority of that Chamber to "judge" the acts of the Ministry. Both the Emperor and his Ministers knew perfectly well that the Extreme Right, to defeat which the Ollivier cabinet had been called in in January, was clamoring for war as a last desperate resource against the ever-increasing desire of France for freedom, and they combined to make the Extreme Right the arbiters of the situation. As usual, when the crisis came the Emperor's vacillating character gave way, and he was rejoiced at the notion of peace; but, as he has invariably done on all other occasions since the *coup d'état* of 1851 he had created a condition of things out of which there was no escape, so that when he himself would have fain recoiled, the machinery he had combined seized him bodily and hurried him on. When, on the 11th and 12th, the weak, wretched Ollivier went literally dancing about, telegram in hand, in the lobbies of the Chamber and on the open bridge, proclaiming the renunciation of the Hohenzollern Prince and the consequent certainty of peace, he was for the moment the true exponent of his master's views, and he did, for nearly forty-eight hours, conceive that he had got out of the ugliest scrape man or minister had ever been drawn into. But on the 13th and 14th all was again changed, and the swashbucklers of the Extreme Right, aided by the Empress, and using M. de Gramont as their worst instrument, had again obtained the ascendancy, and all hope of a reasonable and peaceable solution was at an end. Then, again, since that, there has been a perpetual succession of contradictory moods in Louis Napoleon. He thought the war would be an easy promenade, during which he would find all the German races ready to support him against Prussia; he dreamt of achieving glory cheaply, and thought that, thus achieved, a little glory would do a great deal for him and his dynasty. But when it came to be seen that all Germany rose as one man to repel the invader, and that the war was to be one of race against race, then the aspect of the matter began to change, and the preparations required to be far more serious.

With the entire opinion of the world against him, not an ally in prospect, and resources unlimited in money and men to be demanded from the nation, Napoleon III. is constrained to take the field against forty millions of the most highly-cultivated people in Europe. What the result will be time alone can show; but whatever it is, the people of France will be the last to know it, since, if they were beaten to extinguishment, there would still be a Government scribe left somewhere who would declare that the glories of Austerlitz had been surpassed. The army goes forth, accompanied by its own "*bureau de publicité.*"

Correspondence.

THE SYRIAN PROTESTANT COLLEGE.

To the Editor of the Nation:

Sir: I see by your comments upon my article in the *Hours at Home* for August, on "Education in Syria," that my language may have authorized the impression that the Syrian Protestant College was founded by the American Board of Missions. The truth-telling character of your paper, and a desire to have the facts correctly stated, impel me to call your attention to three facts:

1st. The Syrian Protestant College was not founded by the American Board or by any missionary body.

2d. The missionaries, merchants, consuls, and others at Beirût who constitute the Board of Managers, aid in the management as individuals without regard to denominational differences or to nationalities; so that this college, while Protestant and evangelical, is not under sectarian control. It is an interesting fact that among the managers are missionaries representing four different boards, three of which are American and one Irish; and that among the members are found in harmonious union representatives of at least eight different denominations.

3d. That, although its charter was granted by the State of New York, and its principal trustees, Messrs. W. E. Dodge, Wm. A. Booth, S. B. Chittenden, and David Hoadley, reside in this city, this institution has received liberal aid from the people of England, where it is regarded with favor by representative men of different religious bodies, such, for example, as Lord Shaftesbury, Sir Moses Montefiore, and Arthur Kinnaird, M.P.

In brief, then, the Syrian Protestant College is an institution which, while it extends its blessings to all the Oriental sects alike, is entitled to the sympathy and support of the American and British public, without distinction of sect or creed.

Yours, etc.,
J. Augustus Johnson,
Late U. S. Consul-General for Syria.

New York, August 6, 1870.

Notes.

LITERARY.

It is announced by Mr. J. Hammond Trumbull, of Hartford, that he is engaged in compiling a list of Indian names of localities in Connecticut, which already numbers more than six hundred, but to which he solicits contributions from any source. Records of lands, deeds, and definitions of boundaries are suggested as most likely to contain the desired information, and in regard to every Indian name thus discovered or otherwise sent in should be given, if possible, the earliest form in which and date at which it appears; subsequent variations, with the authority for each; brief description of the locality designated; and the meaning of the name. While Mr. Trumbull is accomplishing this praiseworthy undertaking, for which he is so eminently fitted, other philologists in other States of New England may perhaps be prompted to follow his example. Vocabularies gathered together on this plan, even by persons having little or no acquaintance with Indian dialects, would at least have considerable value if submitted to Mr. Trumbull for comparison with his own, or to edit, as the case might be.——The medical works on the list of Messrs. J. B. Lippincott & Co. have been growing steadily in number, and the leaning of the house in this direction is now still further shown by its prospectus of the *Medical Times*, "a semi-monthly journal of medical and surgical science," to be issued October 1. We judge that it will have the general appearance of the *Nation*, with sixteen pages instead of twenty. Its departments will embrace reports of clinical lectures, original essays, articles on practical medicine, transactions of medical and scientific societies, foreign and domestic correspondence, reviews, etc., etc. The *Times* seems to be favorably regarded by a large number of physicians who have promised to be among its contributors, and it ought, with good editing, to recover for Philadelphia some portion of its former reputation as the best seat of medical instruction in America. Messrs. Lippincott & Co. have in press the following works: "On Representative Government and Personal Representation," based on Thomas Hare's well-known treatise, by Simon Stern; Sir Henry Bulwer's "Life of Lord Palmerston;" another grandson biography, "The Life of George Read," one of the signers of the Declaration of Independence, by William T. Read, who will give selections from the correspondence of his grandfather, and notices of some of his contemporaries; "A Hand-book of Medical Microscopy," by Joseph G. Richardson, M.D.; "Jesus: A Man Approved of God," by Rev. W. H. Furness, D.D.; also, numerous novels, including two translated from the German by Mrs. A. L. Wister.——Mr. L. W. Schmidt, 24 Barclay Street, is agent for obtaining subscriptions for a costly work announced by Baumgaertner in Leipzig: "Polychromatic Masterpieces of Monumental Art in Italy from the Fifth to the Sixteenth Century." It is to be published in six numbers—the first has already appeared—containing two plates each, colored and in perspective, costing in all about $75 gold. The views (all interior) will be taken from famous buildings in Ravenna, Florence, Palermo, Orvieto, Rome, Siena, Genoa, and Venice.. The draughtsman is Henry Köhler, royal commissioner for art-building and teacher of architecture in the Polytechnic School at Hanover.

—In his life of General Butler, Mr. James Parton affirms positively, and with his usual agreeable absoluteness, that the two best writers produced by the war were Mr. George Wilkes and General Butler. We forget what was said to be Mr. Wilkes's claim to this credit, though we think it was the writing of editorial articles of the most slashing kind, directed against General McClellan; but one of the reasons for giving the honor in question to General Butler was his happy invention of the term "contraband." Everybody was bothered by the negro, said Mr. Parton, in substance, if our memory is not at fault; nobody knew whether to regard the colored captive or refugee as prisoner of war, chattel, free man, animal, runaway servant, or what, and it was a very fortunate thing for us that we had among us so skilful a handler of words as General Butler to seize on the term "contraband of war," and, applying that to our elephant, suddenly and completely take him off our hands. The praise is not very well deserved, whether we look at the evasive character of the method, or at the practical effect of it in disposing of the question. But that is neither here nor there. A witness comes forward in the Chicago *Tribune*, and proves the rather curious fact that the word "contraband," as applied to the negro in his character of a troublesome person to have on one's hands, was early known to this generation, and that General Butler's invention was, as so often happens in such cases, a reinvention. He quotes from a book which, doubtless, has interested a great many of our readers, for it used to be scattered broadcast through the country, and was very popular on account of the adventurous life of its hero—Captain Canot's "Twenty Years of an African Slaver." The edition of 1854 is the one cited, and the words are a paragraph on page 108: "Scandal declares that while brokers are selling the blacks at the depot it is not unusual for their owner or his agent to be found knocking at the door of the Captain-General's Secretary. It is even said that the Captain-General himself is sometimes present in the sanctuary, and, after a familiar chat about the happy landing of 'the contraband,' the requisite rouleaux are insinuated into the official desk under the intense smoke of a fragrant cigar."

—Some of our readers may recollect the name of Dr. Rowland Williams, who was a contributor to the famous volume of "Essays and Reviews," in which he appeared as the author of the article entitled "Bunsen's Biblical Researches"—an article that brought on him a prosecution before the Court of Arches, a condemnation, and a sentence—afterwards revoked—of suspension for one year. He has recently died, and left behind him a will, which is one of the curiosities of mortuary literature, and also an odd illustration of the whimsicality, or rather the unpracticalness and simplicity, that so often accompany the scholarly mind. He was a professor in the College of St. David's, in Llanbedr, or Lampeter, in South Wales, and there he had some sort of trouble with his associates, or at least met with some discomfort, of the particulars of which we have no knowledge, and left Lampeter, resigning his professorship and retiring to Broad Chalke, near by. This residence was to him exile, and the quotation in his will of the famous words of Gregory the Great refers to the life at Broad Chalke. The will was made shortly after his resignation of his place, and may be supposed to express his first irritation. He leaves to the town of Lampeter the sum of fifty pounds sterling, of which one-third of the income is perpetually to be given to the Town Crier "for making proclamation once a year, about midsummer, on a market-day, that I, Rowland Williams, never consented to the election of George Lewellin to a scholarship in this college, but in this, as in other things, I was foully slandered by men in high places; because I loved righteousness and hated iniquity, therefore I died in exile, but while unjust men permitted me, I both kept the needy student by his right and defended the alms of the altar of God." It is a breath out of the Middle Ages to come upon such a bequest as that, and, impossible as it will seem to the American mind, this grotesque vindication may for generations yet, on market days, be heard in the quiet little Welsh hamlet, and a couple of hundred years from now may be giving proof to the Briton of the future that, despite Mr. Mill's lament, his forefathers of 1870 were not altogether devoid of individuality of character. A good deal of planing down can be borne by timber so gnarly as the British oak still produces. While Yorkshiremen reply to a civil "good-night" by saying "good-night—and damn you"; and while a typical dialogue between two men of the people, speaking of a third, runs as follows: "Oo goes theer, Bill?" "A stranger." "Stranger? 'Eave 'arf a brick at 'im"; and while wills like this of Dr. Williams's are made, we need not fall into despair over the dull uniformity of the British character.

—A writer in *Nature* raises the question why our ancestors gave the name of horse-chestnut to the tree so called, and offers us what he considers the true answer. "All over the branches," he says, "at every bud, can be seen what at a glance will be taken for an exact conformation of the foot of a horse, exhibiting the hoof, the nails of the shoeing, the fetlock joint, and so forth, in marvellous miniature. This curious freak in nature's vegetable kingdom has, no doubt, been the origin of our nomenclature of this tree." To say that there is no doubt of this derivation is putting the case rather strongly. What part of the horse is represented by the horse-purslain, for example; or the horse-radish, or the horse cucumber, or the horse-mackerel? The fact would seem to be that our ancestors called this particular chestnut the horse-chestnut because they had a way—which we ourselves have hardly lost—of prefixing the word horse to the name of anything large of its kind, or strong (in any way) as compared with other species of the same thing. The horse-chestnut is so called, we take it, not because of "the practice among the Turks of feeding their horses on the seeds of this tree," as some authorities have it, nor because of the miniature horse's foot which Mr. Connell finds at the foot of every bud; but for the same reason that a loud, coarse laugh is called a horse-laugh; the more powerful and acrid radish, a horse-radish; a large, indelicate face, a horse-face; rough play, horse-play, and the like. It is at first thought rather a curious use of the word; but we are to think of the horse as our ancestors' chief machine, so to speak, for lightening labor, and of his strength as constantly coming into comparison with that of the human laborer working by his side. That we of the present generation have not wholly lost this habit of applying the word in question is perhaps seen in the new phrase—born in the West, we believe—of "horse-sense," which is applied to the intellectual ability of men who exceed others in practical wisdom. It is as likely, however, and perhaps more likely, that the Westerner is struck by the much greater frequency among horses than among men of an exact adaptation of means to ends; of the certainty with which the horse does the things that conduce to his comfort. To be sure, other animals show the same certainty; but even in the case of such domesticated animals as the dog and cat instinct seems far more controlling than in the horse. They lack his gravity, too; and they do not share disinterestedly man's labors and responsibilities to anything like the same extent.

—The Vicar-General of this Roman Catholic diocese took occasion the other day to explain the import of the dogma of Papal infallibility. How good a report of his remarks was given to the press we do not know, but as they stand printed they tend to confirm the reader in an opinion which he very likely has, be it well or ill founded, that Roman Catholic controversialists, like other polemics, are not above being a trifle disingenuous, and whip the devil round the stump after a fashion that worldly persons would hardly like to venture on. Father Starrs, for instance, told his audience the other day that the Pope, in his character of infallible teacher of the faith, was like the Justices of the United States; a Papal decree as to faith or morals was final; no Papal decision on such matters could be appealed from; so too with the Supreme Court's decisions: they are unappealable and final. This is misleading enough. The Supreme Court sits to declare what the law is, and has back of it, as sources of law, the Constitution and the various legislative bodies of the country. It makes no law, but states what the law is. To do more than this is beyond its power. It cannot say that its decisions are final for more than the moment, and never knows that they will not be overborne at the next session of Congress or by the next action taken on an amendment by the Legislatures of three-fourths of the States. Father Starrs would probably say that the Pope speaking *ex cathedra* is not the source of dogma, but that he declares merely the law proceeding from the secret counsels of Providence. Even so, the comparison halts; there is no provision made, so far as we learn, for the reversal of the decrees which he lays down. Whatever he says is the very truth itself, and of its nature irreversible. What Chief-Justice Chase says on the bench is reversible, because nobody pretends that his judgments embody essential truth in all cases, or in many cases, or perhaps in any case; but it is convenient that somewhere should rest the power of saying the last word in disputes. Father Starrs, to be sure, may merely have been unfortunate in his comparison; but his failure in rhetoric was practically a failure in truthfulness. His own audience would probably just as soon be told out-and-out that they must "believe" whatever the Pope informs them is necessary to avert eternal damnation, because the Pope is to all intents and purposes the Holy Ghost or God, so far as God concerns himself with the future state of man. And outsiders, too, would just as soon, and a little rather, be told that, if that is the real statement of the case, than to have offered them comparisons which are effective only with the ignorant, whom they deceive.

—It is well known that some of the most telling productions of the literature of the Reformation period were small tracts or essays, printed on one or two sheets of paper (*Flugschriften*). Three thousand of these old-time pamphlets, written by Luther and his contemporaries, have been collected and reprinted by Weigel, of Leipzig. A well-digested catalogue of the entire series is also published, in which these reprints are all described, with price annexed for each, so that, if desired, they may be ordered separately. They are reproduced in all their integrity of ancient style and orthography.

—The few Oriental scholars we have among us may be interested in hearing that the publication, in numbers, of Dr. Zenker's Turkish-Arabian-Persian Dictionary, commenced in 1865, is lately completed.——Not often do we see a legal treatise in form of a map. Such a work is Richard Schrœder's "Rechtskarte von Deutschland," with explanatory notes, published at Perthes's geographical establishment in Gotha. Various codes and "bodies of law" prevail in Germany. Austria, Prussia, Baden, and Saxony all have codes which, to a greater or less extent, are adopted by their smaller neighbors, and, besides these, the German common law and the civil code (Code Napoléon) are also in vigor in some states. The object of the map is to show which of these systems is accepted in any given country of Germany.——A large octavo, just out at Leipzig, gives us studies on the institution called the Society of Jesus. They are from the pen of Eberhard Zirngiebl, and treat of the Jesuit order with especial reference to their educational system and labors in Germany. The style of the author is somewhat rough and ungainly, but his historic material is full and valuable.——Scientific enquirers concerning the relative merits of places recommended as resorts for invalids will find much valuable dissertation and information in Dr. Reimer's lately published "Klimatische Winterkurorte" (Berlin). Special discussion is devoted to the advantages of Nice, Montremy, Pau, Ajaccio, Cannes, Hyères, and Pisa.——A new "History of Bohemia," by Ludwig Schlesinger, is well spoken of in Germany. It reached a second edition in eight weeks.——A volume by Heinrich Thiersch, containing biographical sketches of Luther, Gustavus Adolphus, and Maximilian the First of Bavaria, meets with generally favorable acceptance at the hands of the critics.——Readers and students looking thoroughly into German literature should know of two works now in course of publication: "German Middle-Age Classics," which has reached its eighth volume, and "German Poets of the Seventeenth Century," of which the third volume is just published.

—The Paris journals have very lately announced, with no small flourish of trumpets, the completion of a literary undertaking "which recalls the surprising labors of the Benedictines of old." This is simply a French and Chinese dictionary by Monseigneur Perny, Vicar Apostolic of the Catholic mission at Peking, and is pronounced a success by competent judges. We are ready to applaud the linguistic talent, patient labor, and faculty for arrangement displayed by the learned author, whose work might almost be called an encyclopædia, but it is difficult to comprehend the "surprising" nature of Mgr. Perny's labors, and the reasons which induced him, as stated by the *Gaulois*, "to form moulds for the 80,000 characters contained in the Chinese language, and to run the type, and to set up the work with his own hand." Chinese dictionaries of fair pretensions to scope and accuracy already exist in several languages, the best known being those of De Guignes (French and Chinese), Gonçalves (Latin, Portuguese, and Chinese), Morrison (two editions), Williams, Lobscheid, Chalmers, and Medhurst (English and Chinese); to say nothing of manuscript dictionaries in abundance preserved in the libraries at Hong-Kong, Macao, Peking, and other places. Russia has also contributed to this class of literature, and a compilation aided by so many predecessors does not justify the extravagant laudations of the French press, despite the acknowledged fact that there is still room for a standard work of the sort in some one European language. The mechanical labor, too, accomplished by the learned vicar must surely have been undertaken for amusement, there being several very complete Chinese fonts both in China and elsewhere. Perhaps the most perfect is that of the American Presbyterian Mission at Shanghai (brevier and bourgeois bodies); the others being the "London Mission," "Daily Press," and "China Mail" journal offices at Hong-Kong (pica, long primer, and bourgeois), and an imperfect font at the Macao mission. In Europe there are good fonts at St. Petersburg, Paris, Leipzig, and Cambridge, so that one would think the severe task of Mgr. Perny uncalled for, especially as the two first-named missions supply type at a rate which must be immensely below the prime cost of material to form both matrix and character. The feat accomplished in this case is worthy of record as a curiosity in the history of printing rather than as a necessity imposed upon the author. A new English-Chinese Lexicon has, we learn from a correspondent, been published at Hong-Kong, and Dr. S. Wells Williams has a valuable Mandarin-English Dictionary in the press. Students of that dialect will welcome anything from the scholarly and experienced author of the "Middle Kingdom."

—In translations from the Chinese, we have a new and augmented edition of Sir John Francis Davis's "Poeseos Sinicæ Commentarii"—a work on Chinese poetry. A student of the language is recorded to have once forcibly, if ungrammatically, expressed his opinion that "Chinese was deuced hard to learn, and wasn't anything when you'd learnt it." Many people have passed a similar verdict on Chinese poetry—as interpreted by the most prosaic of sinologues—but a careful perusal of this work may lead them to admit that there is decidedly more in it than meets the eye of the unripe scholar. Rhyme and rhythm are essential even in Chinese to the construction of verse, and so dainty is the Celestial ear that two syllables alike in every respect but *tone* are not held to rhyme. Thus, in the lines from "Marmion,"

> "Say was Heaven's justice *here?*
> When loyal to his love and truth
> Wilton found overthrow or death
> Beneath a rival's *spear*"—

the words "here" and "spear" would not strike the Chinese reader as rhyming with each other, the one being in the questioning or "second" tone and the other in the even or "first" tone. As regards the verse itself in its translated dress, it is pleasing and sometimes poetical, while its value as a correct translation of Chinese poetical efforts is undoubted. Strangely enough, the parallelism which characterizes Hebrew verse is observed here, and the author adds an interesting essay on this matter. Sir John Davis's high character as a sinologue sufficiently guarantees both the faithfulness of the English text to the original, and the accuracy of the philological remarks.

—Mr. R. Swinhoe, the well-known naturalist, and late British consul in Formosa, has compiled a catalogue of the mammals of South China and Formosa, and a list of birds collected by Mr. C. Collingwood, another naturalist, whose recent work upon the Japan and China seas was favorably noticed in literary circles. Both of these lists are of much value, but ornithologists are yet waiting for a comprehensive work on the feathered inhabitants of China from Mr. Swinhoe's pen. As one of the best living authorities on this subject, it seems a pity that he should confine his efforts to the pages of magazines almost unknown in this country.

—The French Cambodian expedition to Western China finds appropriate record in the "Narrative" of M. Garnier, who was, we believe, second in command of the little band who succeeded in penetrating from Cambodia to Hankow about eighteen months ago. The captain of the expedition succumbed to the fatigues of the journey, dying of dysentery just as he had reached the confines of Szechuan. M. Garnier's narrative is one of the few recently published which takes us over fresh ground, and it consequently claims particular attention. Amongst the curious facts which he records are some relating to the cultivation of the poppy which furnishes the native supply of opium. Horses, according to M. Garnier, eagerly feed upon its leaves, and, if long indulged, pine away if deprived of this strange luxury. Pigs are in like manner opium-eaters, and fatten quickly on the diet (the reverse of what takes place with opium *smokers*), while rats also enjoy the intoxicating poison with a freedom from ill effects which De Quincey might have envied. The bee alone refuses to frequent the poppy districts, thus evincing a wise discretion. So at least M. Garnier says, but we have no means of verifying his authority as a naturalist. He does not state, by the way, a significant fact which has recently been made public—that Russian agents in Western China are closely following up the route taken by his party, with the view of establishing "friendly relations" with the natives of those parts.

LOUIS BLANC'S "REVOLUTION OF 1848."*

THIS latest production of the eminent French *réfugié*—a re-elaboration for his countrymen of a work in English, provoked by Lord Normanby's "A Year of Revolution in Paris"—is not a regular, detailed history, but rather a historico-critical review, of the extraordinary four months in the annals of France to which it is devoted. It thus lacks many of the charms which the wonderful descriptive powers of the author have so profusely strewn over his greater works, the "Histoire de Dix Ans" and the "Histoire de la Révolution Française." On the other hand, it has above these the merit of reviewing and, though slightly, sketching events in which the writer himself figured as one of the principal actors; and, like everything emanating from the same pen, it is distinguished by powers of analysis and diction such as are rarely met with in combination in the literature of any country or age. It is, however, chiefly interesting as a new self-manifestation of Louis Blanc himself, after twenty years of exile and comparative silence—of Louis Blanc, the socialist, the republican, and the historian.

On opening the book, we naturally ask ourselves, Does the author of the "Organisation du travail" and revolutionary lecturer at the Luxembourg still cling to the peculiar tenets the propagation of which at an inopportune moment so powerfully contributed—according to a generally adopted view—to the disastrous termination of the democratic republic he had from his youth so ardently yearned and worked for? Does the ex-member of the Provisional Government, who, at the Hôtel de Ville, in February and March, 1848, penned so many radical decrees, all breathing unlimited faith in the virtues of the people and in the rapid progress of mankind—does he still cherish, and cherish in the same degree, that blissful faith, after the carnage of June, 1848, brought about by no threats of foreign invasion, by no intrigues of a dispossessed nobility, but by demagogic agitation, party blindness, and the rage of famishing laborers; after the reduction, in 1849, of republican Rome by the arms of republican France; after the *coup d'état* of 1851, against which the sovereign people of France made hardly an effort, and after the eighteen years of Cæsarism based on universal suffrage which followed it? How does the historian of 1870, looking back after so many years of continued and modified experience, judge the character of the contemporary men whose historical portraits he depicted, thirty years earlier, in his "History of Ten Years?"

As regards his socialism, Louis Blanc still avows himself the sectarian he ever was. Socialism is still, above everything, the cause which he serves ("la cause que je sers"). He still designates poverty by "its true name, slavery." He still mocks at those who believe the organization of labor to be a chimera, and misery and hunger things "of immortal essence." He designates the following convictions, uttered in the National Assembly of 1848, as fundamental tenets of socialism, "tel que je le comprends"—mark the present tense: "The actual order of society realizes neither liberty—for liberty does not exist where thousands of men must perish of hunger if they do not sell their bodies and souls at descending auction prices; nor equality—which consists, for all men, in their *equal* right of development for their *unequal* faculties, a right of which a considerable portion of mankind is now deprived by the monopolization of the instruments of labor; nor fraternity—for unlimited competition rests on the same principle which underlies the duel to the knife, reproducing war under a different form." He still believes "that, in an association of brethren, the weak one ought never to be sacrificed to the strong; that an unequal distribution of the fruits of collective labor tends to encourage selfishness in some, to rouse envy in others, to loosen the bonds of the association, and thus to work its ruin; that men laboring side by side, with a common interest in view, are naturally accessible to the same sentiment of honor which animates soldiers fighting side by side, in the expectation of a common victory;" and that there is little strength in the objection that the soldier finds quite a different stimulus in the hope of individual advancement, in a vast perspective of personal distinction, wealth, and power. Louis Blanc sees in labor associations organized on "the system of the equality of wages"—what few others will discern—"des mobiles absolument analogues."

His republicanism, it is hardly necessary to say after the foregoing, is equally unshaken. And he is a French republican not only prospectively, but also in a retrospective sense. He defends, he glorifies the Revolution of 1848, although admitting that it surprised the country no less than the world, that "most of the departments, in February, 1848, were still monarchical; they were stunned at the news of the triumph of the Republic; they gave it their recognition, but hardly their acclaim." Its fall he ascribes to no fundamental vice inherent in either the republican institutions or the French people—though he condemns the unconditional application of universal suffrage in France—but to "an accidental combination of betrayals and faults. . . . When the majority of the last Legislative Assembly abjured its mandate, repudiated its origin, exhausted itself in maledictions against the most direct consequences of the republican faith, persecuted every sincere republican, reduced the primary-school teachers to mendicity, wantonly exasperated the laborers, disarmed the people, and, from hatred of the Republic, abolished universal suffrage—what else did it then than collect the materials of power which Louis Bonaparte employed, on the Second of December, for the crushing of that assembly itself?" The French, contrary to the prevalent opinion, he regards as a nation of eminently republican tendencies, and to proving it he devotes a long disquisition, marked by striking ingenuity, but less exhaustive and convincing than ingenious. He believes in the genius of France, and concludes his book with a glowing expression of his trust in her better nature—words calculated to inspire enthusiasm when written, but at this moment, unfortunately, more apt to elicit a smile. Here and there we also meet with a fugitive glorification of the people of Paris, which sounds like a feeble echo of once cherished but now half-effaced convictions, or with a lively apostrophe to former "generous" co-workers of the laboring class, which tells that Louis Blanc, moderate and prudent as he is in exile, has not for all time to come renounced the rôle of a revolutionist. Nor is the way in which he speaks of his own part in the affairs of 1848 calculated to throw his past rôle as such under a shade.

The defence of the Provisional Government of 1848—the principal object of the work, implying, as it did, the vindication of the author's own course, to a certain limit—was, as far as directed against Lord Normanby and similar antagonists, rather an easy task. Not without sufficient reasons does he ask: "What other government, in fact, has ever evinced, in the midst of a terrible conflict of unchained passions, a nobler confidence in the moral power of its principle, a more absolute disinterestedness, or a prouder courage? What other government has ever treated its enemies with more magnanimity, shown a greater horror of bloodshed, and abstained more scrupulously from the use of violence? What other government has ever so marvellously succeeded in maintaining itself at the summit of a society shaken to its foundation, without recourse to force; without imposing silence, were it only on calumny; without sheltering itself behind judges, policemen, and soldiers; in maintaining itself with the aid of one single power, the power of persuasion?" And the fruits of their short administration he proudly enumerates thus: They consecrated the Republic. They established the sovereignty of the people through universal suffrage. They abolished capital punishment for political crimes. They abolished negro slavery. They annulled all titles of nobility. They abolished imprisonment for debt. They proclaimed man's right to labor. They reduced the number of labor hours. They adopted, for the state, the great formula: liberty, equality, fraternity. And to certain cavilling "socialists of the new generation" he, with equal pertinence, addresses the question: "By what efforts, by what brilliant sacrifices, by what acts of manly independence, by what display of genius, have you acquired the right of being so severe? . . . Why, you are there, and France enjoys as yet no other liberties but those given her in the shape of alms!" This is all right, but were we to ask the author, Did not the Provisional Government consist of a set of poets, theorists, and dreamers of various kinds, humane and generous, to be sure, but devoid of the real ability to govern, men who sufficiently proved their unfitness for the position by attempting to rule France in revolution and to transform the world merely by the "power of persuasion?"—what answer would he give us? The book before us ignores this question.

---

* "Histoire de la Révolution de 1848." Par Louis Blanc. 2 vols. Paris. 1870.

Nor were the members of the Provisional Government, according to Louis Blanc's showing, free from foibles of various kinds, such as vanity, intriguing propensities, and fickleness. He is rather severe on Lamartine, though acknowledging himself one of the greatest admirers of his genius and integrity. He treats Garnier-Pagès as a decided opponent. Marrast he represents as an unfair and dangerous intriguer, possibly from patriotic motives. Marie was his principal enemy, and he is not sparing in accusing him of bitter and treacherous hostility to the cause of the people. He defends Ledru Rollin, but obviously more from regard for the republican cause than for the man. Arago himself, than whom none appeared greater in the "History of Ten Years," seems this time rather to tax his patience. Old Dupont (de l'Eure) plays no real part. Only Albert and Flocon, who always sided with Louis Blanc, and Crémieux, who, though wavering between the parties, was always ready to shield him, are spoken of with unmixed praise. Of men outside of the Provisional Government, Barbès, Béranger, and the author's brother, Charles Blanc, are spoken of with warm affection; Jules Favre—though a former enemy—with mildness, and none with greater severity than General Cavaignac, who is accused of having been capable, from military pride and prejudice, of committing political crimes such as we should find grave in the history of a Napoleon. The sketch of Louis Philippe, with which the work opens, is one of the author's masterpieces in this *genre*. On the whole, the unfortunate king is somewhat more mildly treated here than in the "Ten Years." We must say, as a partisan, Louis Blanc is sufficiently impartial; as a historian, he is too much of a partisan. But in what his partiality is most conspicuous is his treatment not of individuals, but of the action of the masses, that is, of the *peuple*. He was certainly guiltless of active participation in the revolutionary movement of May 15, though he has suffered exile for it, and equally guiltless of the fratricidal carnage in June; but his sympathies—the whole tenor of his narrative shows it—were, in both cases, with the revolutionary *peuple*, and he has no word of reproach for the grand collective crime committed by the insurrectionists. It suffices for him to know that the people were hungry, to excuse, nay, to admire, that equally atrocious and foolish device, "Bread or lead!" with which they madly rushed into the contest of June, as well as the obstinacy, more savage than heroic, with which they continued to fight when all hope of victory was gone.

RECENT REPUBLICATIONS.

MR. BRET HARTE'S "Luck of Roaring Camp," of which Messrs. Fields, Osgood & Co. are the publishers, is a republication in the sense of being largely, if not wholly, made up of articles that have previously appeared in the magazines. In noticing the magazines from month to month, we have had occasion to speak of these pieces, and there is little or nothing that it remains for us to say. We find them like other republished magazine articles, in that they do not show quite so well by themselves and intrinsically considered, as when the reader was involuntarily making comparison of them with the stories and sketches on the average magazine level, which, as our magazines go, is a low one, and one which a writer may transcend, and transcend with apparent triumph, and with the loud applause of the magazine public, while yet he has done nothing capable of giving permanent pleasure. That what Mr. Harte here offers us is incapable of giving permanent pleasure, or at least pleasure for a long time, it would not, we think, be true to say. "Tennessee's Partner" seemed to us very good on a second reading; we were, perhaps, rather clearer in mind than we had been before as to the badness of the last part of it; but we were equally sure, at last and at first, that all the essential portion of the story was admirable for vigorous sketching of an odd character, for unforced and unexaggerated humor, and for pathos kept excellently well in hand and devoid of sentimentalism. It is a fault of Mr. Harte's that his pathos very often runs into sentimentality, and that he apparently needs all his sense of the humorous and all his turn for analyzing and satirizing his own feelings to prevent a lapse into the falseness and mawkishness of sentimentalism. The death bed scene of Tennessee's partner is weak by reason of this fault; the "Luck of Roaring Camp," good as that is, has traces of it which interfere much with one's enjoyment, and the inferior pieces—these two being the best in the book—indicate it so often as to make one doubt if strength of fibre be not wanting in a writer who likes the lachrymose so well, and if we have not all been expecting from him rather more than we shall get. However, it is a mistake common to young writers to overvalue their ability in this direction, as producing more immediate and obvious evidences of their power over the reader; it is usual for even the greatest writers to win in their youth triumphs over the feelings of their readers before they address themselves to the more difficult task of permanently conquering and captivating the judgment and imagination. In Mr. Harte's case, we should say that the later signs would seem to show that he is improving as regards this matter. Some of his more recent poems, for instance, are free from any such blemish as more or less disfigure these pieces. They are, perhaps, getting to be a little too much like stories in another respect, and hardly justify their right to be in verse, but certainly they are not expressive of sentimentalism.

The contents of this volume seem to have been written at various periods, some appearing to be our author's beginnings at writing, and showing how natural he probably found it to personate in his clever "Condensed Novelists" various contemporary writers of fiction. Like every man of much voluntary mimetic power, he has some involuntary imitativeness also. Read, for example, "The Right Eye of the Commander," which Hawthorne might have done—and have been pleased to do, too. Other of the articles would seem to have been done still earlier, and, to tell the truth, although none of them is bad, some of them might properly have been left in undisturbed repose. The better work, however, was well worth saving. It makes it plain that we have a new writer of decided abilities as a sketcher of the character and scenes of the strange life of the Far West; a man who is at least enough of a humorist to delight in observing and to excel in catching for us the native humor, conscious or unconscious, that abounds on the Pacific Coast and on the Plains; a man of sympathies so quick as to forbid his merely drawing the outsides of his oddities, and to compel him to enter into their hearts and minds, thus causing his figures to live and glow with something of the inner truth of portraiture; a man, finally, of skill in the management of his materials, and of a pleasant style, which, however, shows ease and a taste for refined elegance in detail rather than solidity or strength; but which, on the other hand, if sometimes verging towards too much polish, is sometimes as racy as Burns's Scotch, and never is polished to the extent of Burns's provincial English. Against this list of merits are to be set the fault we have mentioned of sentimentalism; a leaning towards self-sacrificing gamblers, women of easy virtue, and, in general, towards people with some sort of decidedly melodramatic turn to their goodness and their badness; allied to this a little leaning towards sensationalism in his incidents—though that, no doubt, he has in his capacity of Californian quite as much as personally. The substantial and distinctive praise, however, that he is a humorous observer, with an eye to see inside as well as to see thoroughly well the outside, remains to him. Whether or not he was fortunate in having his lines cast in California may, perhaps, be doubted. He has at least been aided to begin by the temptation of the strongly-marked figures around him; and to have made a beginning is much. It is to be hoped that as years bring him thought and study, he may be seen working on a larger canvas, and produce enduring works as good of their kind as these sketches.

Twenty years ago the stories of Miss Aguilar were in good repute as desirable reading for young girls, and fairly deserved the estimation in which they were held. "Home Influence," especially, is a story the reperusal of which renews for us the impression of its author as a sensible, pleasant, and good-hearted person, which we long ago received from it.

Mothers and daughters might still, we imagine, read it with not less pleasure than profit. The sequel to it, however, although it shows the same kindliness of feeling, is less genuine and unaffected, and has a good deal of somewhat stilted rhetoric about it, which in these days, when everybody seems to be getting fonder of directness and simplicity of speech, is not quite pleasant. The tone and spirit of both books are quite unexceptionable, and their author appears to have had a genuine talent for domestic fiction, which was sufficiently well cultivated to account for the success of the books at their first appearance. They are not good enough, however, one would suppose, to make the experiment of reprinting them a profitable one. Twenty-odd years ago people expressed surprise that a Jewess should write tales which breathed a spirit so truly Christian; and the curiosity to see how this task, supposed to be so difficult, had been accomplished, was one not wholly unimportant reason of their popularity. There is in them a total freedom from bigotry, the utmost kindliness of feeling, and a real religious sentiment; but though they profess to represent the home life of an English Church family, and one or two clergymen occupy subordinate places in the story, there is nothing distinctively Christian about them—nothing, that is to say, which an enlightened Jew might not have written with a good conscience, and nothing, to take a case in point, which Miss Yonge, who is fond of doing the sort of thing which Miss Aguilar essayed, would accept as being in any but the most limited sense what the home education of church people should aim at. This is not, of course, to detract from the real merit of the books, but to give a reason why to certain classes they should be less acceptable than they once were; while to other people, accustomed to old-fashioned girls and little women of a quite different kind, their way of dealing with a past generation of young people will make them not altogether attractive. The series is published by the Messrs. Appleton, and already includes, besides the tale mentioned above, "The Mother's Recompense," "Woman's Friendship," The Women of Israel," "The Days of Bruce," and "The Vale of Cedars."

Mr. Disraeli's success as the writer of "Lothair" has induced the same publishers to bring out all his earlier novels, and here we have "Venetia," and "Contarini Fleming," and "Miriam Alroy," and "Coningsby," and "Vivian Grey," and all the rest of them—as stilted and rhapsodical in diction; as absurd in point of personages and plot; as full of political and social general propositions; as epigrammatic in places and as unblushingly gorgeous and sophomorical in other places; as Semitic; as parliamentary; as libellous; as fearfully and wonderfully "duchessy," as they were thirty or forty years ago, when our fathers were young dandies in strapped trowsers and voluminous cravats and rolling-collared coats, and our grandfathers took snuff and regretted the days of knee-breeches. Dull, too, we were going to call these novels, but there is pleasure to be got from them. Apart from the interest which they have as excellent specimens of a kind of novel now altogether gone out of vogue; and pleasing because of an unreality which seems quite gentlemanly in comparison with the impertinent earnestness and exactness of the modern novel, they are readable also for the light they throw, or might be made to throw, if one would study them, upon the character of their author. It would be an interesting study. We cannot say, however, that we have attempted it, though attempting it is suggested as one turns over the leaves and wonders at the curious frankness of the author. He must surely have an unaffected contempt for the people whom he has helped to rule during the last quarter of a century. Nothing could be franker, seemingly, or more expressive of steady, intense strength of will and absolute self-reliance, than the freedom of his self-revelations. As skilful writing, to say nothing of literary art, the books are not worth a moment's mention; and it seems evident enough that their author is of that opinion too, and that they are all, or nearly all, as confessedly means to an end as any pamphlet of Swift's or Cobbett's. One or two of the earliest he may have written from inability to restrain his eagerness to see his powers in actual operation on his fellow-men, but when once he became a politician in action the books became merely instruments to effect this or that purpose. The main necessity of his nature would seem to be the sensation of control of others and the gratification of seeing his compelling power acknowledged. The stories appear to us to bear out this notion of him quite as well as the career which he has presented the world for contemplation. Certainly it is the man of action rather than the man of thought that appears in them, for nothing need be much hollower and more worthless than such of the superabundant sounding generalizations and maxims as do not refer to the management of men, and of men in politics, as distinguished from the guidance and control of man.

The second edition of Mr. Henry C. Lea's "Superstition and Force" gives evidence of the author's conscientious striving to perfect his work. It has been entirely reset, the text enlarged by nearly seventy pages, a table of contents prefixed, and the index rendered very much fuller and more minute. Not only have the facts of the four essays been carefully revised, but the style, even of the general reflections, has been subjected to criticism, and the changes thus made readily approve themselves. What were notes in the former edition are here frequently found incorporated with the text, which has been correspondingly worked over for the sake of greater brevity, clearness, or accuracy. As if to preserve still more rigorously that religious colorlessness, so to speak, which won for Mr. Lea, in the case of his "Sacerdotal Celibacy," the praise of Dean Milman, he makes a noticeable alteration in the first sentence of the chapter on Ordeal. "It is only," reads the former edition, "in an age of high and refined mental culture that man, *unassisted by direct inspiration*, can entertain an adequate conception of the Supreme Being." The words we have italicized are wanting in the second edition, and it is possibly easier to defend this omission than to prove the proposition contained in them. The omission, in this instance, does not necessarily imply a change of opinion or of faith in the author, and we refer to it only as showing how thoroughly, how much more thoroughly, probably, than any of his reviewers, Mr. Lea has sat in judgment on himself. The pains he has taken put the public under an obligation which we trust it will not be backward in acknowledging in a practical way. While the motive of the work remains the same, as also the aggregate impression of each part and of the whole upon the reader, and absolute errors to be corrected have not been numerous, some of the additions, nevertheless, are of sufficient importance to make it desirable for a student to consult this the latest edition in preference to the earlier.

Into two plump duodecimos, whose large print is large enough for poor eyes, and whose small print is not unreasonably small, the Harpers have compressed the "Life and Letters," "Lectures and Addresses," and "Sermons" of the late Frederick W. Robertson—works hitherto familiar to our public in the editions of Messrs. Fields, Osgood & Co. Of the sermons we have lately had occasion to speak (see the *Nation*, No. 228), and few of our readers who are in the habit of reading printed sermons are likely to be wholly unfamiliar with these. Their influence upon clergymen and students of divinity has been, and probably continues, great; but we should expect more general good to result from an equal circulation of the "Life and Letters." Of this we remember to have written: "No biography since the publication of Stanley's 'Life of Arnold' has been issued from the press so well adapted to sink into the minds of younger men, and mould their opinions, and to raise the tone of the Christian ministry to a higher standard;" and we added, in reference to the letters: "They are to be digested as Robertson himself read, and advised others to read—only a few pages at a time; and so read, we know not where to find their equal for suggestive power." This judgment, as we turn over the pages in which Mr. Brooke has allowed his friend to portray himself as no one else could have done, we find confirmed, especially in what relates to the value of Mr. Robertson's example and teachings for the young. Not only will they serve to evoke and develop the sentiment of religion, to counteract the materialistic tendencies of the age, to call up lofty ideals and inspire manly enthusiasm, but almost to impart the culture of a liberal education. The candor which pervades the letters in a naturally higher degree than the sermons will also happily affect minds not yet filled with prejudices or committed to partisanship.

The Complete Works of a preacher than whom, perhaps, Robertson is only less a favorite among Unitarians—of the late Dr. W. E. Channing—have been published in a single compact volume, comprising 764 pages with double columns and fine type, by the British and Foreign Unitarian Association (New York: Geo. Routledge & Sons). The American edition of 1841, in six volumes, is still obtainable, at a low price, of the Unitarian Association in Boston, and will be preferred, in spite of the long usage of the plates, by those who must consult their eyesight in reading. As a means of propagandism, however, the cheaper and handier volume, embodying all the contents of the six, will undoubtedly prove more useful. Not all the pieces refer immediately to religion. Several are biographical, others critical, reviewing works on Bonaparte, Milton, and Fénelon, and the last twelve political—on the Union, on war, on slavery and the Abolitionists, the annexation of Texas, emancipation, etc., etc. These all breathe the spirit of humanity which constantly animated the writer, but they also remind us how easily a dread of violence and bloodshed, whether the result of timidity or of principle, makes of one who may be a radical in religion a conservative in politics.

Messrs. G. P. Putnam & Son merit thanks for their cheap, one-volume editions of Evelyn's "Diary" and Warton's "History of English Poetry"—fit records of two sweet-natured, learned, accomplished men. It is pleasant to see them put within the reach of the poorest, and it is to be hoped they may go into all the district libraries; for though they are not books that all district-library readers will care for, and though they sometimes seem wasted on the many, we are not to forget the one here and there whose mind—we may say, whose mind and heart—such books vivify and ennoble. These are in fact the true public of such authors.

We have been slow in noticing a book that will keep well, however—the American reprint of "A Collection of the Proverbs of all Nations," which have been compared, explained, and illustrated by Walter K. Kelly (Andover: Warren F. Draper). Of course, only a small portion of the world's proverbs are contained in these covers, the citations being mainly confined to some half-a-dozen languages. The novelty of the compilation consists in the grouping of similar or connected proverbs, whose different shades throw light either upon their common origin or upon national characteristics, and which tend to show that human nature is pretty much the same among all peoples. The thread of text, which consists of commentary, philosophy, and anecdote, is ingeniously interwoven by Mr. Kelly, who has made a fairly readable and suggestive book in a field generally as uninviting as "elegant excerpts" and the like. We doubt, nevertheless, if his method of presenting proverbs "in orderly, coherent groups, accompanied with appropriate accessories, so as to fit them for being considered with some continuity of thought," will aid the memory as much as he anticipates; but that will not be his fault.

Messrs. Scribner & Co.'s "Illustrated Library of Wonders" has been extending itself over more or less of the universe since we last took notice of it, and maintains its average excellence. The illustrations, when not sensational, are remarkably good. The following titles have not heretofore been mentioned: "The Sun," by Amédée Guillemin: "The Sublime in Nature," by Ferdinand de Lanoye; "Wonders of the Human Body," by A. Le Pileur; "Wonders of Italian Art"—containing twenty-eight woodcuts of famous paintings—by Louis Viardot; "Wonders of Glass-making in All Ages," by A. Sauzay.

"Letters on the American Rebellion," by Mr. Samuel A. Goddard, of Birmingham, have been published in a handsome octavo (Boston: Nichols & Noyes). They consist, as we have before had occasion to state, of current attempts to inform the British public concerning the progress of the war, the causes and object of it on both sides, the true significance of military and civil occurrences, and in general to combat the prejudices, ignorance, and malevolent inventions of the journals and politicians that were friendly to the South. It was a service of which it is no doubt well to preserve a record, since the result of this and similar efforts to keep England from interfering with our struggle showed that, in that country as in America, when all opinions may have free expression, reason and sound morality are certain to prevail if only time be given.

An Account of the Remarkable Occurrences in the Life and Travels of Col. James Smith, during his captivity with the Indians, in the years 1755–59. With an appendix of illustrative notes, by Wm. M. Darlington, of Pittsburgh. (Cincinnati: Robert Clarke & Co. New York: J. Sabin & Sons. 1870.)—The publication of this volume of the Ohio Valley Historical Series has been in a certain way timely. Frontier warfare between Indians and white settlers has been almost incessant from the day Col. Smith first experienced it, and if on the Plains it is different in character—considered purely as a military operation—from what it used to be in the forests of the thirteen colonies, the Indians are still a foe capable of making surprises, of planning campaigns, and of enduring stubborn conflicts, to a degree which renders them formidable and hard to cope with. Col. Smith undertook to teach his generation, both by theory and practice, how to oppose the Indians with their own tactics, remarking, with the good sense which characterizes all his writing, that the New Englanders had been trained by their Indian difficulties to resist in the most appropriate and successful way the discipline of the British troops—as Concord day certainly showed. However, he has less to instruct us in now, in this regard, than as to the natural and unperverted character of the Indians, which we cannot too often take account of even when called to deal summarily with the perverted. Few white men have been forcibly adopted into Indian tribes, and few of these have ever given their observations to the world. Col. Smith was a lad of sixteen or seventeen when thus adopted, and he testifies to the perfect good faith which the Indians observed towards him as a regular member of the tribe, making no distinction between themselves and him. Their virtues he came to rate very high, and charitably to excuse their barbarousness "on account of their want of information." The habit of profane swearing has seldom been exposed so well in any tract as in the page or two which Smith gives of a conversation with his "adopted brother" Tecaughretanego on this subject; and the folly of drunkenness is well shown by example in the case of his tribe when, after purchasing with their beaver a keg of French brandy, they "held a council about who was to get drunk, and who was to keep sober." The penalty of keeping sober was the taking care of the drunken savages; and though not unattended with danger, this office was preferred by young Smith.

In spite of its value as an account of Indian character, customs, and mode of warfare, this work is quite as much entitled to the numerous editions which it has enjoyed by its unconscious portraiture of the author. He was a native of Southern Pennsylvania in what is now the border, but was at one time the scene of lively contention as being claimed by Virginia, before Mason and Dixon ran their famous line between the two States. After his return from captivity he became a leading citizen of Franklin County, stood a trial for murder with great moral courage, dissuading an attempt to rescue him which would certainly have succeeded, was acquitted, and afterwards resided in Kentucky, of which he had been an early explorer. By descent he was a Scotch-Irish Presbyterian, who could speak "Dutch" while still a youth, and he is a very creditable representative of the stock. The regions noted in his journal as being resorts of the Indians or traversed by his tribe have been carefully identified by Mr. Darlington in an appendix, which, with a good index, and the excellent typography of Mr. Clarke's press, makes this unquestionably the best edition of Smith's "Account."

A History of the City of Brooklyn, including the Old Town and Village of Brooklyn, the Town of Bushwick, and the Village and City of Williamsburg. By Henry R. Stiles. 3 vols. 8vo. (Published by subscription. 1868, 1869, and 1870.)—Towards the middle of the seventeenth century, the land about Wallabout Bay to the north and Gowanus to the south was already in cultivation, and Cornelius Dirckson, the ferryman, owned "a house and garden" at the foot of the present Fulton Street. Southwardly from the ferry and along the present Brooklyn Heights stretched the farms of Van Cowenhoven and others, while Red Hook was the property of the redoubtable Wouter Von Twiller. This was in the year 1643, and at this period Brooklyn was not. Soon afterwards several families established themselves on both sides of the road now leading from the ferry to Flatbush, and in May, 1646, demanded permission "to found a town at their own expense." Authority being granted, the town thus founded was named *Breuckelen*, after an ancient village of the same name in Holland, some eighteen miles from Amsterdam. Our young settlement was just twenty years old when the threat of an Indian war in the Province of New Netherland required vigorous military preparation in New Amsterdam, and the director and council proposed that the town of *Breuckelen* should furnish eight, ten, or twelve men, to be "kept ready for the protection of one or the other place in danger, which may God avert." The sense of a town meeting, held in compliance with this call, was that "Breuckelen was not strong enough to furnish so many men." Just two centuries later the same town (with its name meanwhile Anglicized, first Brookland, and then Brooklyn) was strong enough to furnish, for the defense of the American Union, nineteen regiments, exclusive of thousands of men in the navy and in other branches of the service.

Between the periods of these two representative facts, it may be well imagined that there lie rich stretches of historical perspective and large treasures of old-time traditions capable of yielding a record of high and varied interest. Such a record has been made, and lies before us in three really handsome octavo volumes. No merely book-making enterprise, even with superior publishing facilities, could have made this work what it is. It has evidently been a labor of love on the part of its author and editor, who has not only harvested but gleaned in every field of available information touching Brooklyn history with an industry and ability deserving signal acknowledgment. And Mr. Stiles's work is of more than merely local interest. We follow in it the story of a small colonial population of two nationalities, Dutch and English, gradually growing and developing under three dominations, Dutch, English, and American, into the almost metropolitan community we know to-day. Beginning with a few scattered settlers on wild wooded hills, we witness and sympathize with their early trials, poverty, and privation, their loss and suffering from war and the hostile savage. Fine apparel they had not. Of polite accomplishments they knew little and cared less. But as to the quality and quantity of preaching, and such like spiritual exercises, they held decided opinions, even as now in what would seem to have been the "City of Churches" from a very early date. We hear their protest in 1657 against paying a preacher of short sermons appointed over them, "for such a poor and meagre service or prayer in lieu of a sermon—while often, when one supposes the prayer or sermon (whichever name might be preferred for it) is beginning, then it is actually at an end." "But," they add deprecatingly, "the preacher's advanced age occasions all this, for his talents do not accompany him as steadily as in the days of yore." Then comes the present from the West India Company of a bell for the church, "which might also be used in time of danger." And state progressed as well as church, for Brooklyn had then reached the dignity of having a separate constable of its own. A few years more, and a tract of adjoining land nearly a mile square is bought, wherein young Brooklyn may spread its elbows. Indians were the vendors, and received for it in payment "one hundred guilders wampum, one and a half tuns of beer, three guns, long barrels, with each a pound of powder and lead proportionable." Perhaps the land was not so very cheap, when we remember that the whole of Manhattan Island was sold for $24 (100 guilders), and that many years afterwards (1706) the total real and personal tax to be collected in Breuckelen amounted to £41 3s. 7½d. Nowadays we talk of town land in small quantities, and of money in large amounts. It was otherwise in ancient Brooklyn, for in 1732 we find offered for sale, "near the ferry, a large well-furnished house, with a large barn well covered with cedar [ordinary roofing then being thatch], a handsome garden, and *ten acres of land* in a fair young orchard." A few years later Brookland had 721 inhabitants of innocent habits and primitive customs. They fought not so fierce an animal as the tiger, for instance, but we find that in November, 1759, "a large bear passed the house of Mr. Sebring, and took the water at Red Hook, attempting to swim across the bay. Mr. S. and his miller immediately pushed off in a boat after him and killed him outright." But, alas for the rarity of human charity even in those primitive days! not only bears but men were sometimes hunted down, for on October 11, 1764, Aris Remsen offers twenty shillings reward for Henry, a runaway negro, who, from the description given, must have been a character. He had on a Scotch bonnet, short wide trousers, and half-worn shoes with steel buckles. "He is apt to get drunk, and stutters. He speaks good English, French, Spanish, and a little of other languages." Three years later, Francis Koffler offers a reward for "a runaway indentured Irish servant, John Miller, which kept the bar and made punch at his house at Brooklyn ferry." Humbug and gullibility certainly existed in Brooklyn as early as 1778, for in that year we find Dr. Brandreth and "the sands of life" "old retired physician" anticipated by Johannes Casparus Rubel, "*minister of the Gospel and chymicus*," who advertises: "It has pleased Almighty God to give me the wisdom to find out the *Golden Mother Tincture* and such a *Universal Pill* as will cure most diseases. I have studied European physicians in four different languages. I don't take much money, as I want no more than a small living, whereto God will give his blessing."

One-half of Mr. Stiles's first volume is filled with early colonial sketches; the remainder of the volume is mainly devoted to an admirable account of the battle of Long Island, the movements of the American and British armies, the British prison-ships of Wallabout, and other incidents of the Revolutionary period, and brings down the history of Brooklyn to the close of the War of 1812. The second volume gives the history of Brooklyn as a village (1816 to 1834), as a city (1834 to 1854), and as a consolidated city to 1869; of the old town of Bushwick (1660 to 1854), and of the village and city of Williamsburg (1827 to 1854) when it was consolidated with Brooklyn, besides interesting biographies of early settlers. The third volume is devoted to the institutions of the city, its churches, schools, cemeteries, parks, etc., all treated in detail. All these volumes are profusely illustrated with views, maps, plans, autographs, portraits, and other illustrations, all well selected and admirably executed. Few cities are so fortunate in a historian as Brooklyn.

Lifting the Veil. (New York: Charles Scribner & Co. 1870.)—This is another of the many recent attempts to solve the mysteries of the future life, and though it is intrinsically better than the "Gates Ajar," as being much less materialistic in its conceptions, it will also be found far less interesting to that public which mostly concerns itself with the topics treated of. Miss Phelps's lively and picturesque manner of taking off the present peccadilloes of her fellow-sinners while pointing them to the solid comforts which await them in the future, is altogether wanting in the author of "Lifting the Veil;" and though she is probably much more orthodox than her sister seer, she is likely to be much less popular. Her book consists mainly of a series of long conversations between a pair of young women, one of whom has just lost her husband, and whom her friends attempts to console by relating to her her own spiritual communion with the dead lover of her early girlhood. The earlier portion of these talks must, we fear, be called stiltedly and unnaturally sentimental; it is not thus, surely, that even the best regulated young women converse together even in grief and deep retirement. Towards the last there is less of purely personal sentiment, and the talks are more and more made up of Scriptural quotations which bear upon the expected joys of heaven. Like all the rest of these books, it is too full of what Leigh Hunt called "other-worldiness" to give one an altogether pleasant impression of its author. What shall we do in heaven? How shall we enjoy ourselves? Is it really not true that we are to carry palm-branches and play on harps?—these are questions which appear to perplex the readers and writers of this sort of literature to a degree which leads one to believe that a good deal more preparatory work is needed in their cases before they will be fitted fully to enjoy anything, either here or hereafter. Meanwhile, the speculations of young ladies who used in their days of callow ignorance to suppose that, immediately on their entrance into a state of bliss, the full burst of knowledge on all possible subjects would completely take away their breath, like "a strong puff of hartshorn," but who now do not see any use in so abrupt and violent a proceeding, and are contented to be only gradually initiated into eternal wisdom, do not, we confess, seem to be of much value either as consolation to the afflicted or as contributions to dogmatic theology.

Stern Necessity. A Novel. By F. W. Robinson, author of "Poor Humanity," "Mattie: a Stray," "No Man's Friend," etc. (New York: Harper & Brothers. 1870.)—This is an interesting and well-written story—better than such others of Mr. Robinson's writing as we remember, by reason of being rather less didactic, and showing fewer traces of the professed manufacturer of fiction. Occasionally, Mr. Robinson's descriptive passages, and a certain measured way of talking into which his characters fall, must remind his readers of Dickens in his more serious vein; but, on the whole, he is sufficiently original and unmannered, and his novels, without presenting any specially prominent excellences, are always above the average. They seem, however, so far as we know them, to be the work of a man who has deliberately adopted novel-writing as a profession, and who has for a main object the pleasing of his public; and in work which produces that impression it is difficult to take any hearty satisfaction. Still, this history of the eccentrically benevolent Maud Christopherson and her lover, Geoffrey Bridge, and her protégée, Jenny Spanswick, is better worth reading than most other novels of the season, and will add to its author's reputation as a successful minor novelist.

Friday Night. A Selection of Tales Illustrating Hebrew Life. (New York: Office of the *Jewish Messenger*. 1870—5630.)—The six or seven stories which form the contents of this volume are, with one exception, translations made from various sources and originally published in the *Jewish Messenger* of this city. Some interest attaches to them as studies of certain phases of Jewish life made from the most favorable standpoint; and one or two of them afford some curious illustrations of the fact that believers in the most diverse faiths bear religious disabilities and persecutions in the same way, and are supported under them by similar compensations and consolations. The "Schlemiel" is the best story of the collection, but none of them has any special literary value.

Critical and Social Essays.

REPRINTED FROM "THE NATION."

This selection in some measure supplies the place of Volumes I. and II. of the *Nation*, now somewhat difficult to procure. The following is the table of contents:

I. The Glut in the Fiction Market. II. Critics and Criticism.—III. Clergymen's Salaries.—IV. Popularizing Science.—V. The Good Old Times.—VI. Why we have no Saturday Reviews.—VII. Tinkering Hymns.—VIII. American Ministers Abroad.—IX. Horse-Racing.—X. Some of our Social Philosophers.—XI. Waste.—XII. Dress and its Critics.—XIII. Social Influence of the National Debt.—XIV. Hints for Fourth of July Orations.—XV. American Reputations in England.—XVI. The European and American Order of Thought.—XVII. Roads.—XVIII. Pews.—XIX. A Connecticut Village.—XX. Voyages and Travels.—XXI. Verse Making.—XXII. Something about Monuments.—XXIII. Our Love of Luxury.—XXIV. A Plea for Culture.—XXV. Curiosities of Longevity.

"These papers have well repaid a second perusal. They seem to us admirable specimens of sharp, clear, concise writing. There are twenty-five in all, and they treat a great variety of topics of literary, social, and critical interest in a most fresh and delightful style. We cordially commend the volume as most entertaining and suggestive reading."—*N. Y. Evening Gazette.*

"The contents of the work are all of interest, and each contribution is characterized by that purity of diction and high thought for which the *Nation* has secured so deserved a reputation. We are really surprised at the value of this compilation. It is the cream of all the best productions of the best newspaper writers of the country."—*Philadelphia Evening Telegraph.*

"For real wisdom—that happy knowledge of the truth which not only is distinct but capable of clear and attractive statement—we have not lately met anything superior to these essays."—*Brooklyn Union.*

"A very pleasant companion for a summer's day or a winter's evening."—*Boston Journal.*

"All are entertaining, clever, and well written; and some of them deserve the higher praise of being the condensed statement of vigorous thought upon questions of practical importance. . . . . We trust that this is but the first of a series of similar volumes."—*North American Review.*

Handsomely bound in cloth, 12mo, $1 50.

REPORTS.

MESSRS. LITTLE, BROWN & CO. propose to publish THE LORD CHANCELLOR'S DECISIONS from 1849 to Michaelmas Term, 1865, provided a sufficient number of subscribers is obtained. The series comprise 22 vols., namely: Macnaghten & Gordon, 3 vols.; De Gex, Macnaghten & Gordon, 8 vols.; De Gex & Jones, 4 vols.; De Gex, Fisher & Jones, 4 vols.; De Gex, Jones & Smith, 3 vols. The Report will be reprinted verbatim, and to each case will be appended a note referring to subsequent Decisions in England and the United States, in which the case in the text has been mentioned. The volumes will be issued monthly, the whole to be comprised in 22 volumes. Subscription price, $5 per volume, payable on delivery.

Subscriptions should be addressed to

LITTLE, BROWN & CO.,
110 WASHINGTON STREET,
Boston.

The Hartford (Conn.) Courant.

(DAILY AND WEEKLY.)

THE COURANT is the oldest Newspaper of prominence in the United States, and, with less than half-a-dozen exceptions, the oldest printed in the English language. It was founded in October, 1764, and has been published uninterruptedly, under the same title, ever since. It has a very wide circulation throughout the Connecticut Valley, and is one of the best mediums for Advertisers in New England.

The DAILY COURANT is issued every morning (Sundays excepted), at $8 per year, and has a circulation second to but one provincial Eastern daily. The WEEKLY COURANT has a circulation of nearly 10,000 copies, extending to all parts of the country. A Supplement of eight pages is given gratuitously every other week, filled with choice literary reading. Terms—$2 50 per year; or to clubs, $2. Address,

HAWLEY, GOODRICH & CO., Publishers,
HARTFORD, CONN.

MASON & HOADLY'S

NEW METHOD FOR THE

PIANOFORTE.

It is a grand book; new, original to a large extent, complete as a whole and in each of its parts, and eminently practical throughout.

It is received with the greatest interest and approbation, and has already been adopted in all their teaching by many who have heretofore been unwilling to use any instruction book. Published with both *American* and *European Fingering* in separate Editions. Price $4. Sent, post-paid, to any address on receipt of price.

Have widespread circulations throughout the Connecticut Valley, and find ready admission to thousands of families as regularly as the return of the seasons. The *Times* was established in 1817, and there is not a State in the Union, or hardly a civilized country on the earth, to which copies are not sent.

TERMS: $2 50 a year, or to Clubs, $2, for Weekly; $8 for Daily.

⁂ One of the best mediums for advertisers in New England. Address "*Daily Times*, Hartford, Conn."

LIFE AND LETTERS OF CAPTAIN JOHN BROWN. Edited by Richard D. Webb, and published by Smith, Elder & Co., London, 1861. In all respects the best life of John Brown ever written. Illustrated by a photographic portrait without a beard, showing perfectly the character of the lower part of the face. Cloth, 12mo, price $1 50.

Sent post-paid on receipt of price. Address PUBLISHER OF THE "NATION," Box 6732, New York City.

The Nation.

NEW YORK, THURSDAY, AUGUST 25, 1870.

The Week.

BELOW we have made our customary attempt to unravel the news relating to a battle-week like few in history, the despatches being either meagre or obscure, seldom from eye-witnesses, and often contradictory. The operations have consisted, in the main, of a series of attempts on the part of the French, under Bazaine, to withdraw from Metz towards Châlons, for the purpose of uniting with MacMahon for a final effort to stop the Prussian march to Paris, and of a series of fierce and eager assaults on the part of the Prussians to prevent the movement. The latest news seems to indicate that all hope of resisting the Prussian advance on Paris by the direct line had been abandoned, and that, while leaving that city to sustain a siege, the French commanders had determined to transfer their base to some point in the north, and operate as best they can on the Prussian flank. The garrison of Paris will probably prove of little value, and, indeed, all the French talk of a levy *en masse* is so much talk. Popular risings can no more stay such armies as the Prussian, than a bull can stop a locomotive. The "volunteers," we have little doubt, have already proved a source of serious embarrassment to the French commissariat, which appears, like most other things Imperial, to be rotten, and to the French generals, none of whom has as yet shown much skill in handling large bodies of troops. The souvenirs of 1792 are of little value in the presence of the needle-gun. Even the *Marseillaise* loses its old power, when the enemy's line pours forth eight shots a minute, which kill at five hundred yards.

The sanguinary series of battles and engagements which may fitly be designated as the Five Days before Metz, opened on the afternoon of Sunday, the 14th, with an attack of the Prussian Seventh Army Corps, commanded by Von Zastrow, on the rear of Marshal Bazaine's forces. This general had, a little before noon, begun taking over his army to the left bank of the Moselle, with the intention of retreating by a southwesterly route to Châlons, there to join the troops concentrated under Marshal MacMahon. The French "advance guard"—so Napoleon naïvely reported to Eugénie—"had no knowledge of the presence of any force of the enemy"—the strangest incident, if true, of all the strange incidents of the present war, considering that the region around "the bulwark of France" is no wilderness, but thickly studded with villages, and that the main Imperial army had been resting there for weeks. Half of the retreating army had crossed when the assault began, but, both sides receiving heavy reinforcements, the conflict assumed vast proportions and grew desperate. Gen. Ladmirault endeavored to flank the Prussian left, but was repulsed by the Prussian First Corps, under Gen. Manteuffel. The French finally retired towards the glacis of the detached works near the fortress, followed for some distance by the Prussians, who, however, returned to their first bivouac by daybreak. This apparently retrograde movement by Von Steinmetz's army, which claimed a victory, was in combination with the marching off on its left of Prince Frederic Charles's, who then began executing that bold curve in a northwesterly direction which was to place him between Bazaine and MacMahon, before the former, checked by Von Steinmetz, could reach the banks of the Meuse.

On Monday, King William, who had hastened to the scene of combat from his headquarters at Herny, made in person a reconnoissance, penetrating within the outer lines of the French defences around Metz, by which the fact was ascertained that the bulk of Bazaine's army had left, endeavoring to effect its retreat in the direction of Verdun. Von Steinmetz, on the right of Frederic Charles, now pushed forward, steadily, though cautiously, pursuing the enemy. Several slight engagements between the rear-guard of the French and the advance-guard of the Prussians seem to have taken place on that day in the vicinity of Gravelotte and Longueville, and the Prussians also struck the Thionville railway line north of Metz, but no conflict of any magnitude occurred. But early on Tuesday, the 16th, Bazaine's army was brought to a stand near Mars-la-Tour, between Doncourt and Vionville, by the Prussian Third Corps, commanded by Gen. Alvensleben, who was sustained successively by the Tenth, Eighth, and Ninth, Prince Frederic Charles commanding. The entire army under Bazaine, embracing the corps of De Caen, Ladmirault, Canrobert, and Frossard, and the Imperial Guard, was engaged. The combat was terrific, and lasted the whole day. In the evening Bazaine finally gave up all hope of breaking through the lines of Frederic Charles, who fought him facing east, while Von Steinmetz pressed upon his flank, and sullenly retired, retracing his steps toward Metz, and leaving two thousand prisoners, two eagles, and seven cannon in the hands of the enemy. His communication with the rest of the French forces was virtually broken. Both Frederic Charles and Von Steinmetz were now between him and MacMahon, the Emperor, and Paris.

On Wednesday there was again some desultory fighting in the neighborhood of Gravelotte, but no battle was fought, the much commented-on official despatch of Marshal Bazaine, dated "Verdun, Aug. 17, 8 o'clock P.M.," to the contrary notwithstanding. This despatch can be proved by its contents to be a somewhat modified and misprinted version of his official report of the battle of the preceding day. It pretends to speak in the name of the Marshal of what was going on at the very same hour, under his own direction, on a distant battle-field. It mentions among the wounded Gen. Bataille, whose name was previously officially given among the wounded in the battle of Mars-la-Tour. It concludes with statements about the conclusion of the battle, and the number of the enemy's men, exactly identical with the closing statements in the previous report of the preceding day's fighting. Nor is there any allusion to a battle on Wednesday to be found among the Prussian despatches. On that day both armies moved slowly in the direction of Metz, before reaching which they once more met in what seems to be till now the bloodiest conflict of this unusually bloody struggle. This battle was fought on Thursday, the 18th, near Gravelotte and Rézonville, almost in sight of the fortress. It began in the morning, and it was not before night had covered the field of carnage that the French yielded the ground to their constantly victorious enemies, and sought shelter under the guns of their forts, leaving several thousand prisoners behind. King William speaks of miracles of valor performed by his troops "against an enemy equally brave, who withdrew by inches," and again and again resumed the offensive. How severely the victors suffered is sufficiently expressed in the King's words: "I shrink from learning our losses." Whether those of the French in killed and wounded, on that day, were equally great, may be doubted. But the victory of the Prussians and the isolation of Bazaine were now complete. Mars-la-Tour was the decisive battle, Gravelotte the dearly-bought crowning success of the Prussians. The reports of fighting on Friday and Saturday were inventions.

During all this time, the Emperor, who had left Metz on Sunday morning, was ingloriously withdrawing before the enemy, first in advance of his retreating army, by way of Conflans to Verdun, and then, in solitary abandonment, to Châlons and Rheims; and, at the same time, the Crown Prince of Prussia, with his Army of the South, was vigorously and irresistibly pushing forward from Nancy, which he occupied on the 13th. Flanking the fortress of Toul, he crossed the Meuse near Commercy, and, entirely detaching himself from Prince Frederic Charles, on whose left he moved, drove MacMahon from Bar-le-Duc, and by effecting or threatening the crossing of the Marne at Vitry-le-Français, compelled that Marshal to break up the camp at Châlons, and to withdraw with his regulars, as it seems, in the direction of Rheims, while the Garde Mobile were sent back to Paris. This city, which learned the issue of the battles before Metz only after a series of almost atrocious deceptions practised on her patriotic credulity by Palikao, has, in the meanwhile, been hastily put in a more or less effective defensive condition, the soul of the now omnipotent "Committee of Defence" being General Trochu, who is looked on as a kind of dictator, while the Emperor and Empress-Regent are lost in obscurity. Troops of the line, marines, sailors, mobile guard, national guards, firemen, custom-house men, have been arrayed, *pêle-mêle*, to man the strengthened forts and ramparts. If there be any truth in the "strategic movements" of MacMahon's army after its retreat from Châlons, the capital will hardly have the support of a regular army within its fortifications, as the Marshal will probably try to put himself in communication with the garrisons of the numerous fortresses of the North, and, if still possible, with Verdun, Thionville, and Metz, and thus to create a nucleus of resistance independent of the fate of Paris, and strong enough to threaten the flank and rear of the enemy. Strasbourg, Toul, and Bitsch hold out; Pfalzburg is reported captured, but the report lacks confirmation.

We have but little news by way of Berlin, except official despatches from the king, which have, however, the sober, modest, and somewhat solemn air which has marked all his utterances since the war broke out. But there is little to be said about the Prussians except that their administrative machine works with unbroken regularity, and with a ponderous power which is astounding the civilized world. Men, munitions, and stores pour to the front in a never-failing current, and every man finds his place when he gets there, apparently without a jar, and every blow either of the three corps strikes, it strikes with all the force of the first hour. The work which in all other wars has been the work of a year, is literally crammed by the Prussians into a month. They take the whole male population bodily, and without giving even delicate men time to get sick or weary, fling the mass on the enemy, and again and again and again, till he is crushed, and the war is over. This terrible rapidity is one of the essential conditions of the system. Society is waiting paralyzed at home for the army to come back, and it has to win quickly at whatever cost. It is pretty certain, too, that murderous as this system seems, it is the most humane of all. It saves the losses by disease, which in all wars outnumber the losses under fire four to one.

The excitement caused in England by the publication of Benedetti's plan for the annexation of Belgium has been in some degree soothed by the conclusion of a treaty, which Prussia has signed, and France, at the latest advices, had promised to sign, and to which Russia and other powers will probably adhere, binding the parties to it to attack anybody who violated Belgian neutrality. But there is still a great deal of soreness in the public mind, and a growing desire to fight somebody, just by way of showing that England is not to be completely counted out of European politics yet. The Manchester peace party has finally disappeared—the surviving members being unable to breast popular indignation as Bright and Cobden did.

The President has issued a neutrality proclamation in the usual terms, but as nobody here shows, or is likely to show, any desire to interfere in the contest, it has little practical importance. Both France and Prussia seem to have as many ships and men as they can find work for, and little disposition to accept aid from without. Both here and in England, large sums are, however, being raised in aid of the wounded on both sides, whose number must be enormous and sufferings frightful. The war is carried on to some extent on these shores by the newspapers—the Democratic press largely standing by the French, while the Republicans applaud the Germans. The *World* is the most prominent supporter of Louis Napoleon, and performs feats in his defence that would put a Turco to the blush. Indeed, it would appear from its account of the war that Bazaine was steadily thrashing the King of Prussia into Paris, while the King was doing his mortal best to get away to Berlin, Bazaine all the time barring his passage. How the *World's* campaign will end, it would take greater strategists than we pretend to be to predict. The *Times* suggests mediation, but who is to mediate, or on what basis, it does not make very clear. There is really no *tangible* cause of dispute between the belligerents.

Mr. Frelinghuysen has declined the mission to England, and had, it appears, declined it by telegraph before his name was sent to the Senate; and nobody else is talked of for it, and the men who are really fit for it will, now that it is going a-begging, be very reluctant to accept it. So that it is not at all improbable that it will at last be filled by some makeshift. The President has excited a good deal of surprise among his friends and admirers by some of his appointments, but it seems as if his dismissals were going to be equally curious and unaccountable. What good purpose has been attained, or what feeling that the President ought not to be ashamed to own has been gratified, by Mr. Motley's dismissal, it would be hard to say. Not a shred of a reason that will bear examination has yet been offered for it, and it is quite safe to assert that it will help to diminish the influence of American diplomatists, not in London only, but at all foreign courts.

Mr. Speaker Blaine being renominated for Congress from the Third Maine District, has written his constituents a letter which is good as a campaign document, whether one is wanted for circulation among Republicans who have their thinking done for them, or among other Republicans. The former class will be satisfied with Mr. Blaine's praises of the past of the Republican party, and with the figures that he gives in regard to the expenditures of this administration and the last. Thus, during the seventeen months since Grant's accession, there has been a reduction of the public debt amounting to more than $156,000,000—or $6,000,000 more than Mr. Boutwell said—while during the last seventeen months of Johnson the debt was increased $30,000,000. Other Republicans will take more satisfaction in learning from a Republican in Mr. Blaine's position that "the Republican party is opposed to high taxation"—unless indeed he means to call the present rate of taxation low. However, it daily becomes clearer that by the time Congress meets again the members will all have had all necessary instruction on this head. Whether by any amount of instruction any member of the last Congress will ever learn anything about the mysterious operation of funding, is a question for a wizard to answer. Mr. Blaine, however, claims credit for the party on the ground that it made strenuous attempts to fund the debt at a lower rate of interest, and abuses the Democrats roundly for opposing Mr. Boutwell's plans. He justly demands popular approval of the course of the party in removing so many from the vexatious and enormous number of articles on the Internal Revenue list, but has nothing to say about that eighth wonder of the world—our list of articles subject to customs duties. Why would it not be a good thing for some of the more disinterested members of Congress, whose seats are secure, to lay hands somehow on a part of the fund got by the one per cent. assessment on clerks' salaries, and get Mr. Wells—for American gold, this time—to draw up a respectable, coherent scheme of taxation for revenue? The saving of the wear and tear of Mr. Schenck's temper that would be effected thereby, would alone be worth the money; and then, too, Congress need not spend all its time next winter in fleeing from the fangs and claws of one set of "interests" to be met by the hoofs and horns of another.

The Prohibitionists are very apt to be members of churches, but one thing that Christ taught pretty plainly—that "the kingdom of heaven is within you," and that righteousness is not machine-made and put on a man, but is a growth from within outwards, right action being the flower and fruit of holiness—is a lesson that Prohibitionists will not learn, and would not, though there should arise from the dead all the prohibitory laws that ever went to decay in New England. They met in convention at Boston on the 17th instant, passed the usual resolutions, and nominated as their candidate for Governor Mr. Wendell Phillips, who, for once, was persuaded to "withdraw his objections," and now, for the first time in his life, appears as a candidate for office. And it is not improbable that he may get it, and not, we suppose, undesirable. He is too old now, and is too entirely mastered by his talent for vituperative oratory and acrid criticism of everything and everybody, for the responsibilities of office to have any great effect in the way of bettering his habits of thought and speech; and indeed it is now not of so much importance that these should be bettered. But his success, whether it extends no further than to give the State to the Democrats, or whether it extends to putting it into the hands of the Temperance men and Labor Reformers, may send out of place the hack politicians who for so long a period have had Massachusetts in their hands, and may make a change in the United States senatorship and in some of the Congressional districts. Moreover, it may be as well for the Prohibitionists to get one more proof that, good as ice-water is, and powerful as the General Court of Massachusetts is, human nature in Massachusetts is not yet ready to confine itself to ice-water at the bidding of legislators; and, even with so energetic a governor as Mr. Phillips, will perjure itself in jury-boxes, drink out of surreptitious demijohns in back-rooms, and otherwise demoralize itself, rather than forego wholly the use of stimulating beverages.

The Prohibitionists alone, of course, could not elect Mr. Phillips; and, indeed, as Congressmen are to be elected, and everybody, therefore, will turn out, and nobody can succeed merely by reason of a light vote; and as Governor Claflin strengthened himself with the people by his defeat of the railroad ring, there would seem to be, in any case, but a slight chance of Mr. Phillips's election. His formidableness mainly arises from the likelihood that he will get the full support of the Crispins and the Labor Reformers, who are pleased with him for some views of his as to the impropriety of any man's having a fortune—like Mr. A. T. Stewart, for instance—while in the neighborhood of Mr. Stewart's store there are poor people; and who like still better his opinion that Chinamen should be kept out of the country. One can imagine how comfortable he, of all the tribes of men, ought to feel when mounted on a "caste and color" platform—that eloquent bosom, to which, for the last thirty years, every human being of every clime, race, and color has had a standing invitation, now placarded with an inscription warning all Chinamen off the premises. Affairs are related not to one principle, great as it may be, but to a million, and, practically, general propositions are nowhere so false and worthless as in politics. It was all very well for Mr. Phillips to talk into the void about the absolute rights of all men in this country, but the minute the Chinaman, with cheap labor, shows himself on the shoe-bench of Mr. Phillips's Irish workingman, Mr. Phillips discovers that if the Chinaman's yellowness is God-given and all right, and calls for embracements, his cheap labor is all wrong, and that the sublime truths of the Declaration need a little overhauling and limitation. The possible governor's attitude at the moment may be as defensible in itself as it is amusing to see him in it, but the lesson remains for some of us to lay to heart—say such of us as are talking "broad principles" in the office of the *Revolution* and *Woman's Journal*—that "broad principles" that will stand the test of experiment are not found in boundless profusion by thinkers of a certain sort.

We observe that the Labor Convention at Chicago has designated the *Nation* as one of its three "organs." We do not well know to what we are indebted for this honor, or in what the duties of such an "organ" consist; but we must respectfully decline entering upon them, whatever they may be. The resolutions of the Convention, in short, we can in no wise agree with, and the debates which preceded them have not inspired us with that respect for the body which we should like to feel. Moreover, we may as well say frankly that, in our opinion, anybody who seeks to persuade workingmen that there is any other way to better their condition really than becoming capitalists themselves through co-operation, is either a false prophet or a charlatan. With the desire frequently expressed at the Convention for plenty of paper money issued by the Government for the benefit of the working-classes, as we have before said, we entirely sympathize. We would give every workingman as much paper money as he pleased to ask for, at cost of paper and printing, provided nobody was obliged to take it in exchange for his goods, which the Convention will admit would be unjust.

A correspondent who is on the spot gives us a little information as to the way in which North Carolina was carried by the Conservatives, and some of it is rather curious. They invented, he says, the "political protracted meeting," and, gathering together the people in various parts of the country, spent solid days—all the candidates speaking, from Congressman down to county commissioner—in picturing to the bucolical North Carolinian the villanies of Holden and the atrocity of quartering military forces on the people. If there is one thing that the North Carolinian believes in, it is the Patrick-Henry-Mecklenburg-Declaration view of the right of the citizen to regular good old Revolutionary liberties. He neither knows nor cares anything about civil service reform, or minority representation, or the influence of great cities on our political system, or the dangers to be apprehended from great corporations, but he does know that his fathers fought for the right of self-government, and that all his school-books told him that soldiers among citizens are minions of tyranny. Upon this the Conservative orators rung the changes, not only in "protracted meetings," but in those tours made in company with the opposing candidate which are so common in the South; and, as most North Carolinians do not read newspapers, the orations decided the contest, and changed the 12,000 majority for Grant to a majority of as many thousands, or half as many again, adverse to the Republicans.

It is to be taken into account, too, that the Southerner, although a graver man than the Northerner, yet retains a certain boyishness of mind for a very much longer time, and perhaps never gets rid of it. A Northerner of thirty, as regards the effect of oratory upon him, is about as a Southerner of sixty-five. Doubtless it is by reason of this sort of immaturity of intelligence that we are to account for a good deal of the prevalent Southern sympathy with France. The critical, thoughtful, self-contained, self-restrained Prussian provokes the instinctive dislike of all sentimentalists, so that one might say, *à priori*, that women, Southerners, and Irishmen would naturally side with France. Then, too, sympathy with France and the Empire is to be observed in all that kind of Democrats—and the white South is Democratic—who believe in the bottom of their hearts that true Democracy is a false doctrine, and that the only sound way of governing men is to keep them well in the hands of a few leaders. Profounder contempt for the Roman populace was never felt by a Roman aristocrat elected by suffrage, than is felt for their fellow-citizens by a large class of our Democratic politicians, and thus is partly to be explained the attitude of the Democratic journals in the present war. The "Irish vote" has something to do with it, but the instinctive sympathy of Tammany despotism with Napoleonic has more.

Full and sickening details of the massacre of French missionaries and others at Tientsing have come to hand, and it is now possible to judge of the value to foreigners of the treaties so ostentatiously negotiated by Mr. Burlingame. Again possible, we should have said; for, as a well-informed correspondent points out in another place, this last is but one of a series of massacres at the principal treaty ports of China. At the best, it appears that we have concluded an engagement simply with the good-will of the imperial authorities, whose power to fulfil their obligations is either uncertain or absolutely wanting, for there is no proof that riots like that in June are surprises to the Government, or that there is any real security against a repetition of them at any time, whenever any official or priest or kidnapper chooses to play upon the superstitions of the people. The peculiar atrocities of the Tientsing massacre, however, should not blind us to the fact that mobs embrace what is vilest and most brutal in any population, and that it would be very hard for the Chinese to surpass the barbarities of the French Revolution of the same kind as those perpetrated at Tientsing, or those of the July riots in this city only seven years ago. In fact, the safety of Chinamen in San Francisco, in presence of the Irish, is, perhaps, more precarious than that of foreigners in Tientsing, where individuals may at least go unmolested during the interval between two outbreaks. And California justice, in the case of the Chinese, has not hitherto greatly surpassed that of the Middle Kingdom. The difference turns, as we have remarked, upon the extent to which these hostile demonstrations indicate the spirit of the people and government. That they prove the Chinese an unequal party in a treaty with civilized nations we have no doubt whatever.

FREEDOM OF BELLIGERENT COMMERCE.

Many interesting questions as to neutral rights and duties arose during our late rebellion, and have not yet ceased to agitate, and perhaps irritate, the peoples of the United States and of Great Britain. The great contest now raging in Europe has reopened the discussion as to the proper methods of conducting a maritime war, and, in particular, has again directed attention to what may be called the American proposition, that all merchant ships and their cargoes, except contraband belonging to the citizens of one belligerent, shall be exempt from seizure and from any molestation by the armed vessels of the other. In the first treaty between this country and Prussia, concluded in 1785, it was agreed that in case of war between the two contracting parties all private property on the sea should be free from capture. The United States having been requested to accede to the declaration of April 16, 1856, made at Paris, declined to do so in full unless a further clause were added incorporating this principle contained in the Prussian treaty of 1785. Immediately upon the outbreak of the present hostilities, the King of Prussia issued a proclamation announcing that no French private property afloat, except contraband, would be molested, and this even though the French Government should not reciprocate by a similar concession. Mr. Secretary Fish, in a recent communication to the Prussian Minister, has taken public occasion to congratulate that official upon the action of his master; to refer in very laudatory terms to the former convention between the two powers which they represent, speaking of it as marking an era in human progress; and to commit, as far as an executive department can commit, our Government to the support in future of this innovation upon the universally accepted modes of maritime warfare. We purpose to examine this proposed doctrine of the freedom of belligerent commerce, and to enquire whether its effect would, in truth, be "to elevate the standard of civilization."

The treaty of 1785 before referred to was in many respects a very peculiar document. It was plainly never intended as a practical guide in the international affairs of two countries which would have much direct intercourse with each other. Prussia had then little or no maritime commerce; the United States had just achieved her independence; war between them could never arise. It was possible, therefore, to make the convention a vehicle of impracticable theories. It affirmed the dogma that free ships make free goods; it declared that in case of war between the two contracting powers there should be no contraband goods, and that arms, ammunition, and other military materials usually treated as contraband should not be liable to confiscation, but should be subject simply to detention, to be surrendered up at the close of hostilities, while the ships carrying such cargoes should suffer no penalties whatever. The principle under discussion was not embodied in any direct legal language, but was announced in the following somewhat gushing manner: "And all merchant and trading vessels employed in exchanging the products of different places, and thereby rendering the necessaries, conveniences, and comforts of human life more easy to be obtained, and more general, shall be allowed to pass free and unmolested."

This treaty expired by its own limitation in 1795, and a second was framed in 1799, which not only abandoned all these rosy-hued notions of warfare, but which even gave the doctrine of "free ships, free goods" the go-by until a general assent of European nations could be secured. The very recent action of the Prussian Government is plainly a *coup de théâtre*—a bid for the applause of a neutral audience. The overwhelming preponderance of the French navy renders the destruction of Prussian commerce inevitable, while the capture of a single French merchantman is almost impossible. We can hardly suppose that the Prussian Government offers its proposition to the acceptance of other nations with any hope that it will be incorporated into the general international law. Its most able theoretical writer—a professor in the University of Berlin—Heffter, although advocating some modification in the present system of prize and prize courts, rejects the suggestion with disdain. He says: "Certainly no one will ever pretend to deny that a country engaged in war has the right and power to seize the vessels and their cargoes which belong either to the state or to the citizens of the enemy. No nation is bound to leave open those routes of the sea which can furnish to the enemy the means of prolonging the contest, nor to permit the continuance of a commerce injurious to its own. To maintain the contrary would be to defend a chimera" ("Droit International Public," sec. 139, ed. of 1866).

There are some considerations which render it not only impolitic, but absurd, for the United States to become the champion of the doctrine of free belligerent commerce. The ancient practice of war exposed private property of all kinds, on the land as well as on the ocean, to capture by an invading enemy. All theoretical writers agree that, as a matter of strict right—*strictissimi juris*—this liability still continues. But the personal evils of war, as far as non-combatants are concerned, have been greatly mitigated. International jurists now declare that a nation which should authorize the indiscriminate confiscation or destruction of hostile private goods and other movables on land, would act in opposition to the acknowledged tendencies of a higher civilization, and would place herself outside the pale of Christian peoples. But to this modern practice there are and must be exceptions. The property of non-combatants on land may yet be seized or destroyed in accordance with the demands of military necessities, in order to furnish subsistence to an invading army, or to cut off supplies from the enemy. Still it is universally conceded that immunity to goods on land precedes immunity to goods on the sea. The United States has effectually estopped itself from advocating the so-called American theory of maritime warfare. We speak not now of the devastation of the Valley of the Shenandoah, nor of Sherman's march through Georgia and South Carolina. These severe measures were, doubtless, military necessities. We speak of those confiscations of goods, and especially of cotton, which were authorized by special statutes, which were always made after resistance had entirely ended, which were dictated by no warlike exigency, which were mere measures of personal spoliation. To illustrate by a single example: after the peaceful occupation of Savannah, cotton amounting in value to millions of dollars in private hands was seized and sold for the account of the Treasury department. It is true that a statute provided that owners who could establish their loyalty might reclaim the price of their confiscated goods; but such a claimant having been unexpectedly successful in obtaining a judgment of the Supreme Court in his favor during the past winter, Congress at once proceeded to render all such decisions impossible in the future. Harsh military or even legislative proceedings during the agony of hostilities may be excused; but a sweeping measure of confiscation, made in cool blood years after the war has ended, is simply an act of revenge, and is abhorrent to every principle of natural right and justice. It will certainly hardly do for a government which still retains such a law upon its statute-book—nay, which has within the past few months made that law more stringent, to enter into a crusade against the injustice of hostile attacks upon private ships and cargoes.

It is also impolitic for the United States to maintain the doctrine of free belligerent commerce. Although our people may have lately acquired some taste for war, however desirous some politicians may be to engage in European contests, it still remains true that from our geographical position, and from the nature of our Government, we must always remain neutral. It is for our interest to advance the rights of neutrals and not of belligerents. We should be prepared to reap the substantial advantages which belong to the neutral actor. The anomalous events of the rebellion should not divert us from our traditional policy. All civilized countries are now agreed that free ships make free goods; all but ourselves and one or two others unite in condemning the use of privateers; these neutral demands were acceded to by the solemn Declaration of Paris in 1856. It would be simply suicidal to throw away these advantages, won after so long a struggle, by insisting that belligerent vessels and cargoes shall be free from capture. Once establish this dogma; once proclaim that in the event of war the maritime traffic of the hostile powers may continue uninterrupted, and the merchant shipping of countries not parties to the strife is immediately forced from its position of superiority. This is undoubtedly a selfish consideration; but it is not unjust, is not opposed to any notions of abstract right. Nations at peace have a natural right to enjoy advantages for the time lost by nations at war. We should always be in a situation to do a large part of the carrying trade of European belligerents; we abandon this position if a change in the international law shall leave this trade to go on uninterrupted in its former channels.

But there is another and far higher consideration, because based upon notions purely moral. The adoption of the doctrine that the private maritime commerce of belligerents should remain free, instead of "elevating the standard of civilization," would be a step backward, a measure opposed to the best interests of humanity. Its pernicious results may be summed up in a word. In every war the hostile attacks, instead of being as now partially directed against inanimate property—and property of a kind whose loss cannot in general entail any personal suffering upon the owners—would be entirely directed against human beings. Every military operation would have for its immediate and only object the destruction of life. Assume that the ideal of which this proposed change is a part had been completely accomplished. A war is declared between two nations. It produces no direct effect upon the peaceful avocations of life; agriculture, manufactures, and commerce go on as usual, enriching the people, enabling them to respond to the increased pecuniary demands of their government, and furnishing a constant flow of warlike supplies to the forces actually engaged in the field. There is no diminution in these orderly activities except that caused by the conversion of some thousands of producers into as many military non-producers. Under these circumstances, the war will consist in nothing but a duel between two opposing armies. The nation which can bring forward and sacrifice the greatest number of soldiers will necessarily be victorious; and each will fight until its supply of recruits has been exhausted. But all this time trade has not been directly interfered with; loaded ships still plough the ocean unmolested; warehouses are filled; merchants prosper; only men are killed. Whatever else such a result may be called, it is certainly not humane.

It is not at all to the purpose to assert that warlike operations should be directed against combatants, while non-combatants should be left free. The proposed system would simply destroy the latter class by converting them into the former before the struggle was terminated. But, in fact, in modern warfare there is no distinction between these two classes. In our late civil war, the combatants were taken indiscriminately from all ranks and grades of society, and a hostile blow was felt in every household of the land. The same is true of France, Germany, and other Continental nations. The same will be true of England in her next great war, for her volunteers will be called upon to meet the immense conscriptions of her foes. We cannot hope then to kill off only mere professional fighters, and leave the great mass of citizens unhurt. If some of this destruction of human life can be prevented by cutting off other national resources, the result will certainly be in the interest of humanity. If a war can be brought to a speedier close by diminishing the amount of material products on hand, and by hindering the creation of others, by preventing the people from contributing to the support of their government, and thus preventing that government from paying its troops, and from furnishing the arms, ammunition, and subsistence needful for the continuance of hostilities—if a war can be brought to a speedier close in this manner, rather than by shooting an additional number of human beings, a moral advantage has been gained, and progress in civilization has been hastened. The proposition we have been discussing is, in truth, the incongruous resultant of the selfishness of commercial interests and the short-sightedness of a sensational humanitarianism. The destruction of material wealth which Sherman wrought in his march through Georgia was, in reality, an act of kindness, for it made it unnecessary to slaughter many thousand American citizens who otherwise must have perished.

THE TRANSFER OF POWER IN EUROPE.

We presume the warmest friends and admirers of the Emperor Napoleon will now admit that the character of the war has, since the opening of the campaign, essentially changed. The French entered on the contest for the avowed purpose of humbling Prussia, by breaking up the German Confederation, detaching the South German States from their dependence on her, and thus showing that the relative position of France in the European commonwealth was not altered. But, according to the admission of the French Ministry, the one object of the struggle now is "to save the country," or, in other words, to drive the Prussians from French soil. He must be a very sanguine Frenchman who hopes for more than this, or looks beyond this. But if this were done, and it certainly will not be done without a tremendous struggle which will shake France to its very centre, it would still leave Prussia in full possession of the position which the French so much covet and have so long held—that of the leader in European politics—and which the French have been in the habit of describing by the well-known phrase, "When France is satisfied, Europe is tranquil." German ideas will hereafter have most weight with European politicians; the German "No" will be looked on as the greatest of all obstacles, the German "Yes" as the greatest of encouragements; and German institutions will inevitably furnish the model for second-rate powers and half-organized nationalities. The change—one of the most important the world has seen—is permanent too. Of this there can be no manner of doubt. The fall of France is not the result of her own mad waste of strength, as under Louis XIV., or of a combination of foreign powers, as under the elder Napoleon. She goes down in the very flush of her power, after twenty years of great material prosperity, with her armies at their full strength, and her armament as perfect as science and preparation can make it, and under the blows of a single enemy. That enemy, moreover, is a new nation, of which Europe has hitherto known nothing, which Napoleon I. never encountered, and probably never even dimly foresaw till the campaign of 1813. The force now marching on Paris is not the old foe which the Emperor foolishly imagined his uncle had overthrown at Jena; it is literally a fresh one, as politically strange and terrible for France as the hordes which poured across the frontier of Gaul in the fifth century—and in some ways as hardy, vigorous, and as full of hope. It comes, too, with all the strength of extraordinary training, with a rapidly increasing population, in the fulness of physical health, which is the natural result of a pure family life, and with a passionate confidence in the future which has in no degree diminished what is perhaps nearly as necessary to the display of the highest devotion—its strong reverence for the past.

It is with no desire to underrate what France has done for the world that we say that this transfer of the predominance in Europe from her to Germany will be a great gain for civilization. France for forty years after the Revolution rendered invaluable service in the work of destruction. The Napoleonic conquests, ruthless as they were, broke up feudal institutions and made feudal ideas ridiculous, and gave the world the first and most startling illustration it had ever had of the truth that "rank was but the guinea's stamp," and that it was not only in the New Testament that the stable-boy was as good as the gentleman, but on the battle-field. Every time Murat charged, he taught a lesson in human equality which was carried back to every home on the Continent. But with this, and the Code Napoléon, which has since furnished a model to nearly all the Latin states, the political value of France may be said to end. To the work of reconstruction, of building up a better order of ideas and a better polity on the mediæval ruins, she has rendered no assistance; nay, has proved a positive hindrance. It was the influence of French politicians on the Continental malcontents which made the revolutions of 1848 such melancholy and ludicrous failures; and it was their follies, too, which made possible the extraordinary attempt to revive in France herself the system of pagan despotism—that is, a despotism resting on simple brute force, and not on traditions and sentiment—of which we are, it is to be hoped, now witnessing the end. Cæsarism is a product of French soil, and would not have been possible if the French had not been ready for it. The French were ready for it. They have now twice within the present century placed the whole resources of their magnificent territory, the absolute control of their army, navy, treasury, and educational system, in the hands of a military adventurer, and let him make what use he pleased of them, imposing no conditions on him whatever, except that he should pick quarrels every now and then, and not be defeated in battle—in other words, letting him govern a great Christian state on the same tenure as the chief governs a band of brigands.

In the first instance, they had the excuse that they surrendered themselves amidst the confusion of a great social and political revolution to a man of extraordinary genius. But, in this second case, they placed their lives and fortunes at the disposal of an obscure pretender, of whose character but little was known, and that little bad, who came surrounded by a troop of adventurers in search of a livelihood, and who made his way to power through the wholesale slaughter of his fellow-citizens and the overthrow of the constitution; and for twenty years they have not only allowed him to make sport of all that was most respectable in French society, to live, and enable his personal adherents to live, in unprecedented luxury, to put a frivolous Spanish bigot at the head of the court, and to lend the great secrets of state to be used by stock-gamblers, but also they have allowed him to lead the flower of the French youth into one war after another, to be slaughtered by the thousand for objects about which the French people were never consulted. It must be admitted that the whole civilized world gains by the removal from a controlling influence on European affairs of a people which has given such a lamentable display of want of judgment, scruple, and self-control. "Emperors" at the head of 500,000 men may be very amusing playthings for Frenchmen, and, if their existence involved nothing but the degradation of France, perhaps nobody else would have a right to complain; but when they undertake to regulate the status and career of their neighbors, we are all interested in having them confounded and brought to nought. We venture to assert, too, that the Prussian triumph is not only the best thing that could have happened for Europe, but for France herself. It not simply gives the predominating influence in European affairs to the most cultivated of European communities, but it will surely—if anything can—open French eyes to the hollowness and vanity of the political ideal which they have cherished for half a century, and satisfy them at last of "the falsehood of extremes," and prove to them that glory, no less than strength, is only to be found in peaceful progress. The Prussian power on the battle-field, no less than the Prussian riches at home, is the result of sixty years of patient training, of contentment with slow gains, of respect for knowledge and for discipline, of close attention to the education of children, and of constant remembrance that a man is bound to labor for the state no less in his home than in the ranks of the army. The Prussian has Prussia in mind when he is marrying, when he is educating his children, when he is holding the plough and driving the shuttle, no less than when he is serving in the ranks, and the result of two generations of this magnificent culture is that his country is the foremost of modern states. The lesson is full of instruction for all of us as well as for France.

There can be very little doubt, we suppose, that the collapse of the French army will lead to the reorganization of her military system on the Prussian model. The Prussian system is now clearly to be the system of the future everywhere, and this, too, will be a gain for civilization. If fighting is to be the only mode of terminating international controversy, the world is interested in having it done by citizens, and not by hired men, and in having the whole social machine brought to a dead stop while it is going on. It is thus only that war will cease to be the amusement of kings, and become in popular eyes the dreadful thing it really is. It is thus only that communities can be brought to enter on it deliberately and solemnly. Every stump orator or roaring editor who howls for battle ought to feel that, if his rhetoric is successful, he will have to shoulder the musket and "pay with his person," as the French say; in the Prussian system there are no brigadierships for blatherskites. The introduction of the system into France would doubtless do more than anything else to keep down the martial ardor which has done so much to prevent the erection of a stable government, and made her so ready a prey to military adventurers, and to destroy the military caste, whose existence must always make the legislature feeble. Rézonville may therefore yet do for her what Jena did for Prussia.

"PIDGIN ENGLISH."

Of the natural tendency of language to assimilate words from sources foreign to its own origin we have numerous examples in everyday life. Hindostanee words have become a part and parcel of the English spoken in Great Britain, while numerous Spanish expressions are current in this country. Spanish itself again has in Uruguay and Paraguay admitted a large admixture of Guarani, while the conservative Chinese have with equal facility adopted many words from Manchu and Mongolian. In all these cases the intruding vocables have at first passed as "slang" until custom has stamped them with the mint-mark of respectability. No visible effect is produced upon the languages in question by the presence of these strangers. Yet dialects are to be found which, beginning under similar circumstances, have so lost their original identity in the process as to have become veritable philological "bastards." Such are the *lingua franca* of the Mediterranean, whose existence is doubted by some, and the *gitano* or gypsy language of that vast tribe, of uncertain origin, which still exists in every European country, its members, like Ishmael of old, having "their hand against every man, and every man's hand against them." The most recent of these bastard dialects, and necessarily less perfect in its individuality than those above-mentioned, is "pidgin" ["business"] English, which at the present day is spoken by some hundreds of thousands of Chinese upon the seaboard of their empire, and even threatens to extend to the coasts of Japan.

There is also, singularly enough, a native Chinese dialect in process of formation, which is to the colloquial of the district in which it exists what "pidgin" is to pure English. One effect of the Taiping rebellion, which caused an influx of natives from the districts of Central China to Shanghai, was to cause the formation of a fused dialect, consisting of words indifferently taken from those spoken at Shanghai, Canton, and Nanking. No great growth of this speech has been noticeable since the rebellion was crushed; but it bade fair at one time to contribute another to the already numerous varieties spoken in different parts of the empire. It is not impossible that events will some day bring about this result, in which case it will probably attract considerable attention on the part of sinologues, as the tonal rules hitherto in force will be subjected to new and curious violations.

We assume that we may claim the term "dialect" for any form of colloquial speech which is governed by rules of general application, and the subject of our article fairly comes within that definition. Let us endeavor to state briefly the principal rules which govern "pidgin English," and, if possible, arrive at some conclusion as to its probable future. Dating back to the earliest days of the East India Company, a sufficient time has elapsed since its origin to fix its formation within regular limits. Take, for instance, to begin with, the pronoun. This occurs only in the forms *my*, *he*, and *you*, which do duty both as personals and possessives. "We" and "they" are rendered by *thisee man, that man*, the context implying when they are used in a personal rather than a demonstrative sense. The sentence "I saw him" thus becomes "my have see he;" while "we went out" would be rendered "Allo thisee man go out." There is not here any analogy between the Chinese forms (resembling our own) and the rude substitutes adopted. All native dialects have I, he, we, you, and they, the possessives being regularly formed by the addition of *ti*, of: thus, *wo*, I; *wo-ti*, mine. The article and conjunction are entirely dispensed with in "pidgin" as they are colloquially in Chinese, the word "together" being used as a copulative only in extreme cases. Verbs are in "pidgin English" used only in the present and imperfect indicative, the termination, generally changed into *ee* (likee, walkee, etc.), remaining in all cases unchanged. Adverbs of time do duty for the other tenses, "I shall go" becoming "my by'me bye go." The subjunctive is formed by adding the word *belong* contracted into b'long; "you should go" being expressed as "you b'long go." "If I go" is "sposee my go;" and beyond this there are no means of expressing the other tenses except by clumsy combinations. "If I had gone" is "sposee my have go." *B'long*, of course, stands for "it *belongs* to your business to."

The comparison of adjectives is effected by prefixing the words "more" and "too muchee," though the ordinary comparative form is often used in conjunction with the first-named: thus, good, more better (pronounced bettah), too muchee good; largee (also pronounced *lahgee*), more largee, too muchee big. The Chinese form is simple enough: "I am better than he is" being "I, than he, good;" or, in the superlative, "that is the best," "that, than all, exceeding good." Pidgin English uses our own handy "yes" and "no" in place of the awkward "it is," "it is not," of Chinese. These examples show that, as regards grammatical structure, "pidgin" is in the main an imperfect adaptation of our own rules. But the general construction of sentences is essentially Chinese. "Go to the post-office and bring me a letter" would be rendered just as it would be translated in a native dialect: "You savee that post-officee; looksee have got one chit b'long my; sposee have got you makee bling." The absence of a relative form necessitates the cutting up of all long phrases into short sentences both in Chinese and pidgin English.

Such being, in short, some of the most important grammatical peculiarities of this dialect, let us turn to its pronunciation. There are certain sounds which the Chinaman has from custom an inherent difficulty in pronouncing. Thus, he cannot sound the final *ge* of "large" except as a separate syllable, so he adds an *e* and makes it lar*gee*. A similar disability exists to pronounce under certain circumstances, dependent on the initial sound following them, words ending in f, t, k, th, m, n, s, and v, which in like manner have *ee* added to them; t and k frequently take *see*, "want" becoming "wantsee." There is no apparent reason for this latter peculiarity, unless it may be referred to habit, arising from the constant recurrence of the *ts* sound in all Chinese dialects. Custom gives the final *ee* to many words ending in *b* and *l*, but they present no difficulty to the native speaker as pure finals. The letter *r* is absolutely unpronounceable either as initial or medial to the Southern Chinaman, and is avoided as a final when possible—in striking contradistinction to the mandarin-speaking portion of the empire. In Peking, almost every word is capable of taking a final *r* sound by adding to or eliding its primitive terminal; thus, *jen* becomes *jerh; nā, nārh*, etc. When pronounced in the south the *r* closely resembles the Hindoo letter *r*, which is between an *r* and a *d*.

It will be readily understood that, thus "transmogrified," English as spoken by natives at the China ports becomes a jargon, rescued only from contempt by the fixed rules under which it is constructed, and the illustration it affords of Chinese idioms. Many words in common use are of Portuguese or Malay origin, while a certain number of pure Chinese phrases add to its polyglot character. Some words, again, are neither English, Chinese, nor anything else but "pidgin," and their derivation cannot be ascertained. Such are *maskee*, which signifies "never mind;" *chin-chin*, for "how do you do," or "good-by," "to compliment," etc. This latter phrase is not, as commonly supposed, Chinese. There is a phrase, *Tsing Tsing*, meaning "if you please;" but it is never used in the sense of the modern *Chin-chin*, and the natives believe the latter to be pure English. One of the most curious "pidgin" words is an excrescence pronounced *ga-lah*. It has no signification, and is simply added to a word or sentence to round it off. A Chinaman will thus say, "my wantsee go topside ga-lah" for "I shall be going upstairs" or "up town." The origin of this queer word is found in Chinese colloquial. Each dialect has certain "empty sounds," as the syllables are appropriately named, which are affixed to the ends of sentences to satisfy certain laws of rhythm, and the commonest of these is *ko-lo* or *ko-la*, which has easily changed into *ga-lah*.

Although pidgin English seems, when first heard by an unaccustomed stranger, to be as difficult as a veritable foreign language, its inverted construction and curious mispronunciation are very easily acquired, and it therefore continues in extensive use. A colloquy committed to writing looks curious. Suppose, for instance, a foreigner to have called about some business on a native merchant:

Chinaman. Ai yah! chin-chin; how you do?
Foreigner. Chin chin; any piecee news have got?
Ch. No got news; thisee day b'long too muchee hot.
For. Yes; too muchee hot; you pidgin numba one?
Ch. Pidgin no b'long good jus' now; you got any pidgin for my?
For. My got littee smallo piecee; my wantsee buytee one lole (roll) sillik (silk).
Ch. Ah! my got plenty. What fashion coloh you wantsee? Allo fashion have got. That Guvnoah mississee (Governor's wife) any time come thisee shop makee buytee (always deals at this shop); etc., etc.

It does not appear that pidgin English will die out. Numbers of Chinese, indeed, thanks to emigration to the United States, and the increased facilities available in the British Government schools at Hongkong, now learn to talk English with fluency and correctness; and the number of foreigners who acquire one or other of the Chinese dialects is increasing, the latest estimate, counting all nationalities, being somewhat under four hundred. But there is always a large fluctuating population of foreign soldiers, sailors, and visitors, to whom the acquisition of Chinese would involve a toil quite disproportioned to its use. To these a means of communication with the natives, based on a European vocabulary, is too serviceable to be dispensed with, and for them pidgin English will hold its ground. So far from dying out, it seems rather probable that in the course of years it will take rank as a dialect beside the *lingua franca* of the Mediterranean Sea.

LAKE GEORGE.

[FROM AN OCCASIONAL CORRESPONDENT.]

LAKE GEORGE, August 10, 1870.

I FIND so great a pleasure in travelling, and maintain so friendly and expectant an attitude toward possible "sensations," that they haven't the heart to leave me altogether unvisited, though I confess that they are frequently such as may seem to lack flavor to fastidious people or to those sated with many wanderings. I found it a sensation, for instance, to come from Saratoga (for the first time) in a "drawing-room car." I found it a luxury of an almost romantic intensity to sit in one of those revolving *fauteuils* and gaze through that generous, oblong plate of glass at the midsummer wilderness which bordered my route, while through a nether screen of delicate wire the summer breeze rushed in, winnowed of the grossness of cinders, and an artfully frescoed ceiling invited my gaze to rest at moments from the excessive *abandon* of nature. I observed that my companions on top of the coach which I subsequently mounted, were unanimous in voting Glenn's Falls a remarkably pretty town: I therefore observed it with the view at once of enjoying its prettiness and of appraising my neighbor's judgment. Pretty it is for a town of elements so meagre. Like Saratoga, the village is blissfully bedimmed and overshadowed with a noble abundance of wayside verdure—by serried lines of elms and maples, and their goodly domestic umbrage in gardens and yards. It has not, however, that rounded and harmonious charm which would perhaps have made it appear a little less incongruous to me than it did to behold a public work of art at our egress from the village. Like so many other little American towns, it has its own little æsthetic fact—shining with newness—in the shape of a soldier's monument: an obelisk, if I recollect, of a pleasant cream-colored stone, surmounted on its apex by a species of napkin, which an eagle is in the act of rending in his claws, and decorated toward the bases with four niches, enclosing four of the usual warriors contemplating the graves of their comrades. It is not very wisely conceived, perhaps, nor very cunningly executed; but there it stands, neighbored by a grosser ugliness, which, in its fair monumental breadth and permanence, it may connect with some lurking germs of future beauty. The drive to Lake George is full of a grand rough prettiness—leading you straight into the midst of the thickening hills and along the bases of half-grown mountains. When you emerge upon the lake, you find yourself fairly launched into the romance of mountain scenery.

I find here, at this little village of Caldwell, an immense hotel of a good deal of external architectural pretension—French-roofed, with a sort of high-piled and gabled complexity which, as country hotels go, makes it look vaguely picturesque. It stands directly on the lake, and boasts a really magnificent piazza—a terrace of contemplation—worthy of the beautiful view it commands. This, I believe, is not the choice quarter of the lake. Yet such as it is, it is thoroughly lovely. Great simple masses of wooded hills rise with a plain green nearness, to right and left; further, as the lake recedes, they increase in size and in magic of colors, and in the uttermost background they figure nobly in outline and hue, with the magnitude and mystery of a mountain chain. A friend at Saratoga informed me that Lake George is considered strongly to resemble the Lake of Como. A year ago, almost at the present moment, I spent a week on the shores of that divinest of lakes, and I think that, even unreminded by my friends, I should occasionally be prompted to an attempt at comparison and contrast. It is in a certain way unwise and even unkind to play this sort of game with the things of America and of Italy, but it seems to me that comparisons are odious only when they are sterile, and intruders only when they are forced. Lake George is quite enough like the Lake of Como to impel you, if the image of the latter is fresh in your mind, to pursue the likeness to its inevitable phase of unlikeness. The mountains which melt into those blue Italian waters are clad with olives and vines, with groves of mulberry and chestnut and ilex, with a verdure productive of a wholly different range of effects from that of the sombre forests of the North. And yet, such is the infinite mercy of the sun, its inscrutable cunning and power, that, to-day, as the morning light spent itself through the long hours over the sullen darkness of these American hills, it tempered and tinted and softened them, and wrought upon them such a sweet confusion of exquisite tones, such a dimness of distant blue, such a brilliant tissue of noonday vapors, such a fine-drawn purity of outline, that they seemed to borrow their beauty from a Southern air and to shine with that mild, iridescent, opaline glow which you enjoy from the little headland above Bellagio. It is the complete absence of detail which betrays the identity of American scenery. On those Italian slopes the fancy travels with the eye from one bright sign of human presence to another, from a gleaming mountain hamlet to the lonely twinkle of a mountain shrine. In our own landscape, if the background in its greatest beauty is in a sense common, undetermined, and general, the foreground is even more so, inasmuch as in the foreground there is usually an attempt at detail. Here, on the left shore of the lake, is a saw-mill with a high black chimney, a dozen little white wooden houses, and a little promontory of planks on posts, in the nature of a steamboat-pier. This brave little attempt at civilization looks as transient and accidental as the furniture of a dream. Above it mounts the long-drawn roundness of the wooded hills. Their woods of course supply the saw-mill, and the saw-mill supplies the excellent plank-road. I followed this road yesterday through the village to a point where, having entered the relapsing woods, it throws out two tributary arms. The plank-road pursues its way to other little settlements, expectant of the coach. One of the other roads keeps along the lake—"a little piece away," as a young girl of the country told me. The third observes a middling course, along the lower slope of the hills, above the lake road. I wandered along the last, to excellent purpose as regards the pursuit of the picturesque: through the coolness of thinly divided woods, past little bald grey farm-houses, lonely and sunny in their midsummer plenitude, past an occasional cottage of gentility—a built and dedicated point of view. I shall long remember a certain little farm-house before which I stayed my steps to stare and enjoy. If the pure picturesque means simply the presentation of a picture, self-informed and complete, I have seen nothing in Italy or England which better deserves the praise. Here, for once, the picture swarmed with detail—less, however, with the scattered accessories of the usual warm-toned farmstead of tradition than with the rich invasive presence of spontaneous nature and the tangled overgrowth of rank vegetation. No Tuscan *podere* could have been more densely and gracefully luxuriant. The little unpainted dwelling stood on a grassy slope—leaden-grey in the shade, silver-grey in the sun. Against the darkness of the open doorway, from where I stood, I saw a white butterfly soar and sink—I almost heard in the noonday stillness the soundless whirr of his wings. The milk-pans glittered in the sun; beside the house-wall a magnificent clump of pink hollyhocks lifted its blooming stalks, touching almost the roof, and adding the hint of another color to the abounding green and yellow and blue. The deeper grass, toward the fence and roadside, was a great expansive blaze of golden-rod. It seemed to glitter upward toward the milder yellow of the crowded apples in the crowded trees of the orchard. This orchard—its trees all high and noble in spite of their bended breadth—lost itself in a tangled confusion of verdurous background, so that it was hard to say whether it was an orchard run wild with excessive productiveness, or a piece of the mountain wilderness come down to be tame and prolific. At any rate, I have seldom seen a more potent emanation of reflected composite light and color, of leafed and bladed and fruited green.

I made my way down a sloping lane to the road which adheres to the lake and thence by a path across a wooded field to the verge of the water. Here I wandered along the narrow strip of beach to a little sandy cove, and lay down with my head in the shade of a thicket of bushes. The pebbles lay unstirred at my feet; the water was sheeted with the noonday light; the opposite mountains were clothed with wonderful tones of atmospheric blue. I tried to study them, to distinguish them, to remember them; but I felt only that they were wonderful, and that they don't belong to the province of words. The mountains at all hours have a way of trying to put off the observer with a certain *faux air* of simplicity: a single great curve for an outline, a dozen alternate planes of deeper or fainter blue for its contents. The persistent observer very soon learns, however, what to make of this brave simplicity—or rather, he very soon learns how hard it is to make anything positive of it, to resolve it into its thousand magical parts. It is an old story that the mountains are for ever changing, that they live and move in a series of shifting and melting and amazing "effects;" but I never so deeply felt its meaning as while I lay on that couch of unrolled pebbles and gazed at them across that shining level which assures the freedom of the interval of air. The clouds were stationed in a windless volume just above the line of their summits. Above the empty lake was an empty field of sky. The result, of course, on the slopes of the hills was a series of exquisite operations in light—doubly fine and delicate from the stillness of the air. The general tone was immensely soft and luminous—so that, as I say, I might very well have been on the Lake of Como or on Lago Maggiore. A green island lay blooming in the middle of the lake—which was not the Isola Bella, but apparently a plain small thicket of firs. The oars of a little boat twinkled in the sun and wrinkled the waveless deep. I chased the great slow shadows on the mountains into little shadows, and the little shadows into shadows which still were great. I followed the even blue into violet and pink and amber. I disintegrated with a steady gaze the long pure sky-lines into linked miles of innumerable lonely spires. And then at last I rose to my feet feeling that I had learned chiefly to misreport these mountain wonders.

In the late afternoon, I went upon the lake lazily, with a red-necked, brawn-eyed young rustic as an oarsman. It was, of course, delicious. The closing day had drained the water of its early glare and dyed it with cool blue shadows. The hotel, from the lake, looked decidedly vulgar. The mountains, in the gross richness of their deepening blue, made at last an approach to a large massive simplicity. It is not till the sun departs, I think, that you see them in their essential masses. The aerial charm is gone, but they gain in formal grandeur. In the evening, at the hotel, there was the usual array of placid, sauntering tourists—the usual spectacle of high-heeled young ladies in those charming puffed and panniered overdresses of white muslin which are now so picturesquely worn. I confess, however, that to myself the most interesting feature of the evening was the band of musicians on the piazza. The New York papers had just come in, and I had been reading of the great deeds of Prussia and the confusion of France. I was filled with a sense of Prussian greatness. Strolling toward the place where the band was stationed, I beheld behind every trumpet a sturdy German face and heard in every note an uplifted German voice. My sense of German greatness was hugely magnified. Here, while their strong fellow-citizens were winning battles and making history in Alsace and Lorraine, they were making music in a distant land for a crowd of unmelodious strangers. What a splendid range of prowess and powers! What an omen for the Prussian future! The air seemed a brazen pæan of triumph and joy. Their simple Teutonic presence seemed a portent.

FRENCH PATRIOTISM—TROCHU—THIERS.

PARIS, August 12, 1870.

THERE is a very curious thing to study here at this moment, and which more than ever seems to me to confirm the view I took in my last letter, namely, that education—true, honest, civilized, *moral* education—is the one thing needed in France. It is this: If, in the midst of the grief and indignation which burst forth on all sides, a man of another origin, an Anglo-Saxon, suggests that every disaster is retrievable when a nation's will is set upon retrieving it, and instances Bull Run, they so little understand the way in which the North Americans took that first incident of the war, that they affirm, when it is explained to them, that it was unpatriotic! No amount of argument can bring them to comprehend that to avow a defeat, not only to avow but to blazon it forth, is to show yourself superior to it, and capable of wiping it out. No! That they will not agree to. Their notion of patriotism is to hide whatsoever is unpleasant, and to admit nothing that is disparaging, and to cling to the belief that what is *well* hidden may manage never to be known.

All this (which is identical in every class), denotes simply, as I have already remarked, a defective education; an education from which the untruthful element is never expunged. Depend upon it, that whatever happens, France must, if she is to hold her proper rank among nations—the rank which her really great qualities and gifts entitle her to—she *must*, for the next ten or fifteen years, reform her system of education, root and branch. She must learn certain elementary principles of which, even if she be brought to admit them in the abstract, she invariably refuses to recognize the application. Every province of education will have to be attacked in turn, and, above all, female education must be absolutely turned topsy-turvy, for women are the men-makers, the mothers of men. This is what the deepest thinkers even of France apparently fail to perceive. A woman, to be the fitting mould or frame of a true man, needs above all to be a thorough woman; tender, namely, and true, upright, pure, and devoted to what is right. These qualities suffice. If she transmit these qualities to her son the battle of life will do the rest, and he will know how to wage it. But if instead of these primordial truths she aim at making her son merely "cunning of fence," according to the world's meaning, she utterly mistakes her mission, and makes a dishonest and weak man—dishonesty being weakness.

It can never be enough repeated: here is the supreme French fault: they do not believe in the superiority of the true over the false, of the good over the bad. I will take a military instance of this, which is, at this pre sent moment, an extremely striking one: I mean General Trochu. A few years since, during the campaign of 1859 against Austria, General Trochu was a popular character; he had been Marshal Bugeaud's favorite aide-de-camp; he was known to have been set aside in the Crimean war, and the fact of his being disliked by the dynasty contributed to serve him in Liberal public opinion. When things grew critical in Italy, Trochu was made a general of division, which he never would have been otherwise, and many persons, even in the immediate *entourage* of the court, admitted that he was undoubtedly superior. When the first successes of Liberalism began, three or four years ago, the name of Trochu was constantly in men's mouths, and more than once it was said that he ought to be War Minister. But after the Austro-Prussian war, Trochu wrote his famous and admirable book upon the French army, its qualities and its defects—and Trochu's universal popularity decreased. The book sold by hundreds of thousands—twenty editions within the year. Every military man in the whole world declared that a more valuable work never existed; but although every soldier and every citizen in France bought and read General Trochu's book—nay, more, avowed that it was the most *useful* work imaginable—it was almost unanimously decided that it was "unpatriotic" of General Trochu to have written it. Why "unpatriotic?" Because it showed the weaknesses of the French army, and actually gave it to be understood that were that army not reformed in more ways than one, there might be other armies that would vanquish it. Now, this was a contingency not to be hinted at. The notion that the French army was not omnipotent was one which no "patriotic" Frenchman would tolerate, and General Trochu had so irretrievably lost favor with his countrymen that, when he was, at the opening of the present war, found to be in reality "nowhere," the disappointment was by no means what it would have been if he had never published his book, and of indignation there was none. General Trochu had ventured to show that French troops might perhaps not be invincible; he had lost his popularity.

Things are somewhat altered now, and perhaps General Trochu may yet save to a certain degree the situation. If he does, when peace is made, he will probably be allowed to modify for the army what it is so absolutely necessary to modify amongst the entire mass of the population, education, namely. But the price will have been a heavy one to pay for the necessary reforms of the French troops. It is now probable that, with thorough reorganization of all sides, with a new ministry, a new commander-in-chief, new administration everywhere, in short, the honor of the country may yet be rescued, and that the intervention of united Europe may prevent the absolute predominance of Germany. Predominance is good for no nation, as the defeat of France (who aspired thereto) has proved. Equilibrium between nations is what peaceable, cultivated, progressive civilization in Europe requires; and I already hear many people suggesting that England, if joined by the United States, might force the entire Continent to join the Peace League, and, having obtained honorable terms for France, re-establish the necessary equilibrium, and achieve the one aim without which all the rest is illusion, namely, disarmament.

A great many important facts are proved by this war. First, that war is no longer possible if the progress made by civilization is to subsist. One of the two must perish and die out. Does any one believe it can be civilization? But then it must be war. Your own system in America must necessarily be adopted by the whole world, and conscription must go to the wall in its present Continental form, to be replaced by the availability of the whole population if required for purposes of defence.

Another thing that the present war will have destroyed is the possibility of personal government. Had real discussion preceded this sudden outbreak—discussion, namely, in a chamber composed of free men, representatives of the nation freely chosen by the nation, and not "mere official candidates"—no war would ever have taken place. Calm, reasonable argument would have stood in the place of passion, and a "way out" would have been easily and satisfactorily found. M. Thiers goes further, and, in the letter he wrote some days ago to the *Times*, he affirms that, even with the Chamber constituted as it now is, if time had been allowed, the majority would never have voted blindly, but would have required to know why France was to be involved in an aggressive war. M. Thiers says that, had "twenty-four hours" been given to him, he should have been able to prevent this disastrous campaign.

Perhaps it may one day be found that, horrible as it may be, and frightful as is the price, a permanent gain has been achieved by this atrocious war which nothing else could perhaps have rendered possible. At all events, the higher class of politicians now, the thinkers and statesmen of other days, have before them the task of saving the country. It is in such moments as these in which the real value of a man's nature comes out, and he is tested solely by his trustworthiness. I shall probably surprise many of your readers if I say that there is the reason why, in a crisis of this kind, the entire public turns with confidence to Thiers, and would shrink with terror from any mention of Guizot. Guizot lost the July monarchy by three defects—narrowness of mind, indifference to truth, and tolerance of dishonesty. Scrupulously honest himself, he had no belief in the necessity for honesty or truth in those around him. Royer-Collard, who was always severe, passed upon him the historical sentence, "C'est un austère intrigant," and for that reason the honest and thinking men of France would recoil from the name of Guizot on an emergency. Now, M. Thiers, whatever his faults, has never shown taste or talent for intrigue. "He has proved himself versatile," say his foes. It may be so, but he is the sincerest of men, and while he holds an opinion he will fight honestly and manfully for it. He is a proverbially enthusiastic patriot, and no one will doubt the safety of French honor in his hands. Events may make of Thiers the Talleyrand of the situation.

Correspondence.

THE CHINESE MASSACRE.

To the Editor of the Nation:

Sir: How are the reports of the barbarous massacre of the missionaries in Tientsing, in the month of June last, to be reconciled with the announcement of the special ambassador of the Chinese Emperor just two years previous, as follows: "China *invites* your missionaries, and tells them to plant the shining cross on every hill and in every valley, for she is very hospitable to fair argument"?*

C. C.

To the Editor of the Nation:

Sir: The recent massacre of nineteen foreigners at Tientsing affords an opportunity to those who have opposed the prevailing views regarding Chinese policy, of pointing out how entirely the tragedy in question justifies the statements they have made. It has hitherto been almost impossible to get a hearing, so prepossessed were people with the idea that the Burlingame Convention had inaugurated a new era of intercourse between China and the West. How far that belief has proved baseless, a series of events since its negotiation sufficiently demonstrates. Why the reasonable hope raised by the Chinese Mission should have proved so delusive is not, however, to many so clear, and I propose, with your permission, to make a few remarks in explanation.

The local authorities of China, from viceroy to petty magistrate, are, with scarcely an exception, corrupt. They oppress and defraud the people, while they swindle the Government by false returns, and taxes of which they have pocketed a large percentage. They seldom report the truth respecting any disturbances which occur, being heavily bribed to conceal it by those in fault. Their "justice" is frequently sold to the highest bidder, and their authority in cases of emergency is therefore "nil." As this corruption extends to the military mandarins, the central Government frequently finds itself powerless to enforce its orders in the provinces, and a very common excuse for leaving some flagrant crime unpunished is that the offender is "too powerful" to be meddled with.

It is not therefore difficult to understand that, presuming the Peking Government to be in earnest in its alleged wish for extended foreign intercourse, and its desire to adhere to existing engagements, and presuming Mr. Burlingame's appointment to have been made in good faith (all of which I deny), it may have agreed to stipulations which it is quite unable to carry out, if the official classes of the provinces choose to be "obstructive." They are obstructive because any attempt to check disturbances would both cause them the loss of hush-money and bribes paid to ensure their inactivity, and would render them unpopular. Accepting the good faith of the Peking officials, the non-reliability of their engagements is, from causes beyond their own control, sufficiently obvious. But when we find that instead of desiring foreign intercourse, an overwhelming majority of the Emperor's advisers are opposed to it; that many grandees of the Empire have, since the "mission" left China, memorialized the throne adversely to foreign interests; that so far from Mr. Burlingame's appointment as a salaried representative being spontaneous, it was forced on them by Mr. Hart, the foreign Inspector-General of customs; and that, finally, treaty agreements are evaded whenever practicable—what are we to think of the value of Chinese promises?

---

* See Mr. Burlingame's address in New York, June 23, 1868.

While a dislike to foreigners has always prevailed on the part of the provincial mandarins, from the fact that every foreign settlement forms a "house of refuge" to oppressed natives, the French are particularly hated for two reasons. Their officials are somewhat overbearing in manner to these self-important gentry; and the Romish missions, which are all under French protection, annually gather a number of native converts who regard the priests as their protectors against extortion. The genuine hatred entertained on these accounts against them is dexterously pandered to by a class of natives, alarmingly numerous, who subsist by kidnapping children and selling them to brothels or as slaves. These scoundrels accuse foreigners, especially priests and others who take charge of deserted children, of their own crimes, and the credulous Chinese are easily led to believe anything, no matter how absurd or horrible the charge, of people whose occupation is a mystery. The passions of an uneducated mob are soon roused, and a Chinese mob is pretty much the same as a similar assemblage anywhere else—the blackguard class predominating. Petty hangers-on of the mandarins, foreseeing a harvest in "squeezes," bribes, etc., whatever turns up, add their own insidious persuasions to violence; and so one of the periodical "rows" is got up, to the great advantage of the mandarins and kidnappers. The mandarins are almost invariably apprised of what is going to happen, and keep out of the way. The accounts given of the Tientsing riot relate that placards were posted all about the town a fortnight before, stating that the French would be attacked on the 21st of June (the day of the massacre), and other foreigners on the 24th; so that in this case there is happily no need to rely upon presumptive proof of their connivance. Yet nothing was done by the Superintendent, Chunghow, or his subordinates. Having occupied an official position at Tientsing a few years since, I had the opportunity of becoming well acquainted with that official, and believe that his inaction was the result of cowardice rather than hatred of foreigners, to whom he was uniformly courteous and considerate. He once expressed to me his fear of the fate that would befall him in case of a rising, which he declared he could not prevent should the people become excited, though he would gladly do so to save his own head. His words were, or should be, prophetic!

The hitherto deceived people of the United States and Europe have in support of their views the pacific assurances of Mr. Burlingame. We, whose opposition to his policy is most unjustly charged to personal or national envy, point to outrages, *committed since he left China as its "envoy,"* at Canton, Swatow, Tamsin, Foochow, Nanking, Hankow, Chefoo, and Tientsing—eight ports out of the thirteen open—in support of our side of the question. We are further backed by the unanimous testimony of the British, French, Russian, Prussian, and (late) American ministers as recorded in formal despatches; by that of missionaries of all denominations, of journalists, merchants, and consuls of all nationalities, of the foreign Chinese customs employees, and of the naval and military men under every flag in the China seas! And yet all this testimony, sealed with the blood of tortured, strangled, burned, and outraged men and women, must not be weighed in the balance with the assertion of an agent (who received $40,000 a year for his services) that China was "progressive" and "welcomed the shining cross." Can you wonder that residents in China feel—just a little—put out?

I am, sir, etc.,

N. B. DENNYS,
Late Editor *China Mail*, M.R.A.S., etc.

NEW YORK, August 22, 1870.

CONTRABANDS.

TO THE EDITOR OF THE NATION:

SIR: The application of the term *contraband* to human beings (not necessarily of a particular color) is much older than either General Butler or Captain Canot. During the disputes about impressment which preceded and accompanied our war of 1812, some of the English Whigs, including Lord (then Mr.) Brougham, undertook to furnish a solution of the difficulty. One of their suggestions is thus quoted by Cobbett; the italics are his:

> "The most effectual [mode] undoubtedly would be to ordain by a treaty that the subjects of each power, if found on board the merchant-vessels of the other, *should be considered in the nature of contraband of war*, inasmuch as their natural sovereign was thereby deprived of their service in war."

This expedient, however, though "the most effectual," was rejected as impracticable for other reasons. Cobbett himself said of it: "As to the proposition of making English seamen 'contraband of war,' it is so impudent, so shameful, even so horrid, that I will do no more than just name it, that it may not escape the reader's indignation." CARL BENSON.

LENOX, MASS., August 19.

Notes.

LITERARY.

MESSRS. IVISON, BLAKEMAN, TAYLOR & CO. will shortly publish "Literature of the English Language; comprising representative selections from the best authors; also, lists of contemporaneous writers and their principal works," by E. Hunt, A.M., Principal of the Girls' High and Normal School, Boston. The selections go back to Chaucer, but instead of following the usual chronological arrangement, "the author begins by introducing the pupil to our distinguished modern authors first." This reversal has obvious disadvantages for learning the devolopment of a literature, but that it may not be justified by the experience of the school-room is more than we would allege. The plan, say the publishers, is eminently original and practical, and it may be both one and the other. They have also in press "A School History of the United States," by Prof. Swinton, of the University of California, better known as Mr. William Swinton, war correspondent of the *Times*, and writer of the best historical works dealing with the late war that have thus far appeared. The "School History" will be properly supplied, it is promised, with maps, plans, and portraits. The same house has nearly ready "Greek Praxis, or Greek for Beginners," by Professor J. A. Spencer, of the College of the City of New York. ——A biographical sketch of William Winston Seaton, by his daughter, which Messrs. Fields, Osgood & Co. announce, will revive the memory of a firm whose name was household while Mason & Dixon's was, and when the *National Intelligencer* of Gales and Seaton led the press of the country as the organ of party leaders or of administrations. That day is far gone by, and the paper itself, though dying not long after its founder, and that recently, seems already knee-deep in the dust of the past; but any light honestly shed upon the men and the journals and the politics of the period during which Mr. Seaton was prominent and powerful, will convey useful lessons to the student of American history.——*Hours at Home*, which was established in 1866 by Messrs. Charles Scribner & Co. as a semi-religious magazine for family reading, has ever since had very fair success in all ways. Even pecuniarily it was, we believe, successful from the very first number, and that so rarely happens to an American magazine, or indeed to any other, that it is a fact worth noting as so far creditable to the management of the publishers and the editor. The name of the magazine is now to be changed, and it will be known as *Scribner's Monthly*, is to be profusely illustrated, and is to be in charge of Dr. Holland, whose publishers Messrs. Scribner & Co. have been for many years. The news of his appointment will no doubt be good news to a large circle of readers.——Messrs. Felt & Dillingham have been succeeded by Francis B. Felt & Co., who continue at the old stand, 455 Broome Street, the wholesale book and stationery business.

— Mr. Edward C. Towne is a clergyman of the Unitarian persuasion, who, some years ago, after studying theology in the Divinity School at Yale, suddenly surprised his Congregationalist friends by declaring that he could not be a Congregationalist, inasmuch as he had become a Unitarian, and, in fact, a rationalist. Mr. Towne has it in contemplation to teach his doctrines in print by means of a magazine which he hopes to bring out by the beginning of October. The name of the new periodical will be the *Examiner*, and the second title will be as follows: "A Monthly Review of Religious and Humane Questions and of Literature." The principal features of it will be, first, "a novel, the modern vehicle of the widest popular instruction; second, scholarly and thoughtful essays on themes of human and religious interest; third, translated articles from French and German sources; fourth, shorter papers and paragraphs of fact, thought, and criticism; fifth, a full and careful account of new books and of other books which the new ones suggest, or which are suggested by questions engaging public attention."

—The first aspect of Prof. Schaeffer's Latin Chart (Philadelphia: Charles, Brother & Co.) irresistibly suggests humbug—it promises so much, and in such a tone, at once boastful and aggrieved. It seems that "Latin professors" have been shy of the extravagant promises, and the author is furious at their neglect; his "General Directions" and "Appeal to the Press," with their pettishness and underscorings of every emphatic word (and a good many not emphatic), read like the production of an exasperated female correspondent. No wonder the chart has been quietly set aside when introduced with such a flourish of trumpets or fish-horns. There is something very curious in the *naïveté* which proclaims loudly that the chart "has been treated *with the most signal indifference* by ALL the Latin professors to whom it has been sent;" that "*absolutely* not in *one single, solitary instance* has ever any answer or response been elicited of ANY kind," etc. One would say that more complete testimony as to its exact value need hardly be sought by its author. And yet this unfavorable judgment, if natural, would not be entirely just. The chart has many very good features, and may be used, we should think, with very good results in connection with text-books. Its characteristic feature, of setting apart the stem, connecting vowel, and affix, is familiar enough, and used in detail by nearly all good teachers, both in Latin and Greek. The special merit of this chart is that it combines all these details quite ingeniously, and enables the teacher to present to his pupils a connected view of the whole at one time, as an end to the paradigm. We do not believe—although trial alone can determine this—that it should *supersede* the grammar paradigm; nor do we believe that to the beginner there is any advantage in having the whole of all four conjugations before his eyes at once. Still less do we believe that new students can learn the whole of this in an average of two hours; and that at the same time students who have already some knowledge of the verb would require two days, is only a piece of the professor's boastfulness.

—The European war has revealed many things as to the editing of New York newspapers, and has, we fear, given the provincial press great cause of satisfaction with their inferiority to the press of the metropolis. The *World* began well when, in the first days of the war, it rapped the *Tribune's* knuckles for calling Weissenburg a French town, whereas, the *World* said, the Crown Prince's exploit in taking it was only equalled by the exploit of the Dutch when that martial people captured Holland—Weissenburg being, as all mankind outside of the *Tribune* office knew, a German town. And the *World's* daily explanations of how it happens that the German armies are so constantly thrashed and ruined by the French under the glorious Bazaine are things by which the editors of Chicago and Cincinnati must be moved. But the *Times* astonished us greatly on Saturday by these editorial remarks: "Our correspondent at Paris gives an account of the means by which, as he asserts, two powerful English journals have been moved to take up the cause of the Orleans family. It is to be hoped that higher motives than those which are assigned have guided our contemporaries in their course. Mr. Disraeli once insinuated that the inspirations of the London *Times* were drawn from gilded saloons, but so direct a charge as that which our correspondent alleges has been brought against it, has seldom been adduced before. For the honor of our profession, we may hope that there is nothing but rumor in it." This looked serious, and we turned at once to the columns of the Cable despatches to discover the disgraceful truth. There we found this: "I have just heard from a good source the original cause of the hostility of the London *Times* to the Emperor, and the sudden wheel-around of the *Daily Telegraph* in the same direction. Lady Waldegrave, of Strawberry Hill, a great friend of the Orleans family, is showing great social attentions to the London journalists, with a view to making partisans. Mr. Delane, of the London *Times*, dines there three times a week, and has been the more easily won over by her Ladyship from the fact that he lost £20,000 in the time of the Hohenzollern affair, by stock speculations for a rise on the faith of an announcement of the settlement of the war question by M. Ollivier's organ, *Le Constitutionnel*. Among the recent conquests of the siren of Strawberry Hill are Mr. and Mrs. Levy, of the *Daily Telegraph*. They received the honor of an invitation to her Ladyship's dinners, and the allegiance of that journal was secured." All this double-leaded, and given one of the most prominent places in the paper!

—Now suppose Mr. William Evarts overhears a sneak-thief saying that he saw Mr. Charles O'Connor picking a pocket in a Third Avenue car, and thereupon states the fact in open court, but wipes his eyes and hopes "for the honor of the profession that there is nothing but rumor in it." What high honor, to be sure, would be due a profession whose best members should behave in that manner. For our own part, we shall soon begin to wonder that "gentlemen of the press" are still admitted into decent hotels or respectable private houses. The honor of the profession of journalism will be better maintained than it is now and stand higher when editors remember that to spread disgraceful, unproved reports about the character of other editors cannot be atoned for by printing in another prominent place in the paper a hope that "for the honor of the profession" the journalist who calls two other journalists flunkeys and swindlers may himself be a libellous rascal. Singular, too, that it should have taken three dinners a week to corrupt the editor of the *Times*. Would not one a week have brought him down?

—If it were not for wars, it has been said, Englishmen would never learn the geography of foreign countries. But certainly no one's memory, unaided by travel, is equal to the task of following in detail a modern campaign without frequent reference to a map or a gazetteer. The French frontier, for instance, is not making its début in military history, by any means, and yet the number of persons not French who knew of the existence and location of Wörth, or Gravelotte, or Rézonville till the other day, when battles had been fought there, was probably indefinitely small. And if any evidence were wanted of the general ignorance in this country of European topography, the newspaper maps and the newspaper comments on the events of the war would furnish it. There has been a singular lack of enterprise in preparing correct, even if rude, maps and sketches of the seat of hostilities, and we have known of errors as gross as cutting up the Rhine into a boundary, placing Metz to the south of Paris, and putting the name of a river for the name of a province, and *vice versa*. Naturally, or not unnaturally, in the beginning the map-makers gave us the largest possible view of Germany, with merely a slice of France thrown in gratis, in order to show from what points of departure the march on Berlin was accomplished. It turned out that this proportion needed to be exactly reversed; and, in our own case, we were fortunate enough, after trying in vain to procure Baedeker's Guide-books for Northern and Southern Germany, to secure the sheet of Eastern France from Kiepert's Hand-atlas (Berlin: Dietrich Reimer; New York: L. W. Schmidt), which we have found the fullest and clearest map of any in the market. It embraces the country lying between Carlsruhe and Angers, and the English Channel and Lyons, with fragments of Belgium, Luxembourg, Rhenish Prussia, Rhenish Bavaria, Baden, and Switzerland. Its accuracy is as remarkable as its execution is beautiful. We believe, however, that it is difficult to obtain just now. In its stead a map just issued by Messrs. B. Westermann & Co., of this city, may be profitably consulted; for, though inferior to Kiepert's, it is much in advance of any other American-made map that we have seen. The extent of it is indicated by Rotterdam and Erfurt on the north and east, Paris on the west, and Châlons-sur-Saône on the south. It would be improved, we think, if the coloring were confined to the boundaries. Lloyd's "Topographical and Railway Map of the Seat of War" evidently contemplates a general imbroglio, for it embraces every state in Europe. The scale on which France is drawn is, of course, small as compared with the map just mentioned, but well enough exhibits the objective points and principal advances of the Prussians.

—The Secretary of the Interior and the Commissioner of the Bureau of Education appear to have hit upon a plan which will relieve the poverty of the Bureau, and give it far greater efficiency than special Congressional appropriations have provided for. A "Circular of Information" for August has just been published, not as from the Bureau, but as from the Department, at the request of the Commissioner, who reminds Secretary Cox that he has the needful authority for doing so. The circular was compiled mainly with reference to enquiries of a general character addressed to the Bureau. It contains tables gathered from the census of 1860, showing the illiteracy of our population; the proportion of the *analfabeti* to the legal voters and actual election majorities; the relation between intelligence in the several States, the number of patents issued, and the postal receipts *per caput;* similar comparisons by groups of States, etc. There are also given translations of useful articles by Dr. Ficker, on school statistics, and Dr. Virchow, on school-room diseases; and the latter half of the circular is occupied by a comparative table of the systems of State boards, and a pretty full list of State, county, district, and city school officers in the United States, with addresses. There is nothing wasted in this document, miscellaneous as it is, and Mr. Eaton has prefixed a résumé of the deductions that might be made from his census tables, which will direct attention to these in the right way. He remarks, for instance, that "no State reimburses the General Government for its postal services whose adult population contains more than *eight per cent.* of illiterate persons." On pages 30, 31, are seasonable statistics in regard to the illiteracy of the French and Prussian conscripts respectively. While the former show an average of thirty per cent. unable to read or write, and a minimum of three, the latter average less than four per cent., with a maximum of sixteen (Posen) and a minimum of one-sixth (0·17, Saxony).

—On the 4th of this month was held at Louisville the first German-American teachers' convention. One of the main questions before it was how to shape instruction in German so as to ensure subsequent permanent use of the language. Mr. Carl Knortz, of Oshkosh, Wisconsin, delivered an address on this subject, from the report of which in the Louisville *Volksblatt* (August 5 and 6) it appears that not only do the great mass of German immigrants begin straightway to depreciate and let slip their mother-tongue; not only do they prefer that their children should be taught English, and that only, because it is at once serviceable and cheaply learned, while German is unpractical and dear; but even those who have been trained in the *Turnvereine*, and the pupils of the public schools in the large cities, speak English for the most part in their daily transactions or in their intercourse with one another. Mr. Knortz finds the cause of the parents' indifference to the preservation and transmission of their native language in the faulty mode of instruction in the public schools of Germany, which neglect the national literature to a deplorable extent; and these methods, loyally copied in the United States, produce analogous results. Mr. Knortz, therefore, insists upon an improved pedagogy—praising and describing with some detail Jacotot's system of primary instruction and Fröbel's Kindergarten—a more natural and attractive discipline in grammar, and, above all, such an acquaintance with German literature as shall give a firm hold to the language in the affection and usage of every child thus educated. Mr. Knortz would not omit instruction in English, but would have the German remain the mother-tongue.

—Other educational news from Kentucky is not without interest. The Louisville *Courier-Journal* of August 16 recounts the history of the present Kentucky University at Lexington, which, to use the tolerably high pitch of the editor, "already stands among the universities of the world like a young giant full of iron nerve and modern life among the corpulent and drowsy elders of the family." The efforts of Mr. John B. Bowman, a farmer of Mercer County, and a graduate of Bacon College, have set this young giant on his legs. Fifteen years ago he conceived the idea of founding a university free to young men of slender means, and began to raise an endowment of half a million of dollars. His financial scheme was ingenious. Every subscriber who gave his note for a thousand dollars received a certificate of stock "with coupons attached bearing value equal to one year's tuition, and made transferable." They were redeemable in tuition only. The money thus raised, chiefly among farmers, was sufficient to start a college at Harrodsburg in 1859, with nearly two hundred students. The breaking out of the war stopped the increase of the endowment, but the college, though surrounded by hostile armies, suffered no interruption from either, nor any loss, being decidedly more fortunate in this respect than William and Mary College in Virginia. But it was equally unfortunate in being burnt up at last, with its library and apparatus. Proposals of consolidation and removal then came from Transylvania University at Lexington, but in the midst of them the Legislature considered doubtingly whether the State could afford to accept the Government grant for an Agricultural College. Mr. Bowman here stepped in, gave the necessary guaranties, and obtained a bill consolidating the Transylvania University and the Agricultural University with the Kentucky University, removed to Lexington. In 1866, Ashland, famous as the property and homestead of Henry Clay, was purchased as a permanent site for the University, and there may now be found in operation, under favorable circumstances, the College of Science, Literature, and Arts; the Agricultural and Mechanical College; the College of the Bible; the Normal College; the Commercial College; the College of Law; and the College of Medicine. Last year over eight hundred students were in attendance. "Three young men, properly prepared and to be selected by a majority of the justices of the peace from each Representative district of Kentucky, are entitled to tuition free of charge." The tuition fee, when exacted, amounts to forty dollars.

—Close upon the publication of Massimo D'Azeglio's letters to his wife, appears another collection which seems to exhaust, if not the possible sources of light on his inner character, at least the necessary ones. It consists of his letters to his very dear and intimate friend Giuseppe Torelli, who died only three months after D'Azeglio, and while engaged in preparing a continuation of the latter's "Miei Ricordi." Cesare Paoli edits the present volume, incorporating with it the biographical fragments left by Torelli. The letters number ninety-five in all, embracing the period from August 1, 1851, to October 18, 1865, and are almost exclusively political. It is needless to say they are written with the utmost frankness, without thought of their ever being made public. In them he gave vent to his irritation, distrust, disgust at men and affairs, yet always in a facetious vein, which seemed almost unaccountable even to himself. "It is curious," he writes on one occasion, "that although my bile is stirred by so many things, when I write it seems as if I were extravagantly jovial."

THE TEMPORAL POWER OF THE PAPACY.[*]

MR. LEGGE has been fortunate in his selection of a subject. More, perhaps, than any other historical problem, the growth of the papal theocracy is a theme worthy of patient research and philosophical investigation. To trace, amid the forgotten and scanty records of the past, its slow development for a thousand years, is a task fitted to test the patience of the most laborious scholar; while to seize and estimate the innumerable hidden causes which led to that development, requires insight and impartiality such as few students possess. Yet the most tireless labors of the drudge and the highest qualities of the historian are well employed on a question which, when rightly treated, explains the process through which our modern civilization has evolved itself from the blind struggle between the Roman Cæsar and the Northern Barbarian. The history of the papacy is that of the Church, and the history of the Church is, to a great extent, that of civilization. No wonder, then, that Mr. Legge has had as his forerunners many of the ablest men who have devoted themselves to elucidating the records of the human race.

We wish we could say that his work is worthy of its subject, for a compact, trustworthy, and readable résumé of the marvellous history of the papacy would be a most serviceable contribution to English popular literature. Unluckily, Mr. Legge is lamentably ignorant of the requirements of his task, and has utterly mistaken his vocation. His book has but one solitary recommendation. It is so absolutely unreadable that no one will be seduced into wasting on its chaotic pages time which might be far more profitably employed on the "Arabian Nights" or "Alice's Adventures in Wonderland." Reviewers are understood to be omnivorous, and to have a capacity for devouring undauntedly the most portentous masses of dulness. In this we hope we are no exception to our brethren; we had thought ourselves thoroughly broken in; and yet we have found it impossible to penetrate through more than the first eight chapters of Mr. Legge's lucubrations. These bring the narrative down to the French Revolution, and afford quite sufficient opportunities for pronouncing on the capacity of the author and the value of his labors.

It requires, indeed, no very extended survey of the work to discover that Mr. Legge is conspicuously deficient in every qualification requisite to an historian. Of these the first is a conscientious study of the records of the period described. Mr. Legge in his preface rather ostentatiously records his gratitude to the officials of the British Museum for assistance rendered by them in the prosecution of his researches, and we can imagine the confusion of those learned men when they see arrayed before the public the class of authorities which they seduced the luckless author to rely upon. In the chapters which we have read, embracing nearly the whole history of the Church, we can find reference to but two original authorities—Eusebius, and Justinger's "Berner-Chronik"—and even in these the manner of the reference is such as to suggest that they are quoted at second-hand. The other writers from whom Mr. Legge draws his materials are "Compend. of Univ. Hist. Jarrold & Sons," "Good Words, 1868," "Riddle's History of the Papacy," "The Mysteries of the Vatican," "Gill's Papal Drama," "Dyce's Modern Europe," "British Quarterly Review, Vol. XIV.," "Butt's History of Italy," and other equally recondite sources, including some safer guides, such as Hallam, Milman, Stanley, "Janus," and Ranke.

Hastily throwing together crude ideas gathered in this manner, it would be too much to expect of Mr. Legge the accuracy which is the next most essential characteristic of the historian. We can fancy Hallam or Milman or Ranke turning over his pages and feeling themselves made responsible for the grotesque blunders into which their disciple has betrayed himself. He informs us (p. 5) that the churches of the first four centuries were ignorant of the primacy of the See of St. Peter, though that primacy was admitted as early as the time of Irenæus, at the beginning of the third century, and the exact nature and quality of it were the subject of numerous subsequent disputes. He speaks of the baptism of Constantine by Sylvester I. (p. 12) as an admitted fact, as though Sylvester had not been dead for eighteen months before Constantine would allow himself to be taken to the font. He asserts (p. 17), without adducing a particle of evidence, that, in the fourth century, the acquisition of property by the perpetration of forged wills and title-deeds was a frequent practice of the Church. He quotes (p. 23) Gregory II. as asserting that the Western nations regarded him as a God upon earth, when a reference to Gregory's epistle would have shown him that the Pope was speaking of St. Peter and not of himself. On the same page he alludes to the coronation of Pepin-le-Bref as performed by Zachary, in place of by Stephen II., and denounces the papal sanction of Pepin's kingship as a "barefaced defiance of political morality," when it was in reality but the recognition of what had for generations been an accomplished fact. He attributes (p. 31) the exposure of the false decretals to Erasmus in place of to Antonio Agostino, Archbishop of Tarragona, a half-century later; and on the same page he exhibits astounding ignorance by mingling the events of the ninth and tenth centuries, and attributing them all to the ninth—both the dismemberment of the Carlovingian Empire after the death of Louis I. and the debasement of the papacy under Theodora and Marozia. The same delightful indifference to facts is shown (p. 34) in the assertion that "the destruction of the Carlovingian house, A.D. 987, left the territories of the Church a prey to the Italian princes," when the fall of the French Carlovingians in that year had about as much influence on the internal affairs of Italy as the quarrels of the Danes and Saxons in England, and when Rome, at that particular time, happened to be under the iron rule of the Saxon emperors, who for nearly a century had supplanted the German Carlovingians. Possibly even Mr. Legge may have heard of Crescentius and his tragical fate in endeavoring to restore the anarchy of the "Italian princes." On the same page, we are told that a pontiff of the time of Hildebrand "received a *posthumous* sentence of deposition, his corpse being disinterred for the purpose"—alluding, doubtless, to the unfortunate Formosus, who was so treated by his successor Stephen VII. a hundred and fifty years before Hildebrand was heard of. On p. 36 we find an allusion to "John XII. and the popes of the ninth century," though John XII. and his fellows were the most significant outgrowths of the darkness and corruption of the tenth century—and on the next page (p. 37) our author speaks of the sons of Tancred de Hauteville and their comrades who founded the Norman kingdom of Sicily as "Goths who had originally come from France at the invitation of the Italian nobles!" With equal felicity, the Emperor Henry IV. is stated (p. 43) to have "died of a broken heart, the prisoner of his own son," when in fact he was taken sick and died (probably of poison) while marching at the head of an army, with every prospect of suppressing his son's unnatural rebellion. A similar fertility of blundering distinguishes the remaining pages through which we have looked, but a longer enumeration would be equally wearisome and superfluous.

---

[*] "The Growth of the Temporal Power of the Papacy. A Historical Review, with observations upon the 'Council of the Vatican.' By Alfred Owen Legge." London and New York: Macmillan & Co. 1870. 1 vol. 12mo.

The material thus superficially collected and persistently misunderstood is pitched together in the most chaotic manner. The book opens with a rambling philological dissertation on the origin of the titles Pope and Pontiff, in which we are informed that "the Bishop of Rome received, through the Emperor, the title of 'Pontifex,' because entrusted, among other duties, with the construction and repair of bridges. Thus Milton, picturing Satan as building a bridge over chaos to get to this planet, calls it 'a work pontifical' "—whence Mr. Legge sagely and logically concludes, "Thus the very name which expresses the highest ecclesiastical character of the Roman Pontiff, exhibits the secular origin of his primacy." Then proceeding to discuss the traditional founding of the Roman Episcopate by St. Peter, he treats us to an account of the spurious relics exhibited at Rome: the swaddling-clothes of the Saviour, the milk of the Virgin, the thorns of the crucifixion, etc. This is followed by some vague and incoherent remarks on ecclesiastical antiquities, and the same disregard of logical sequence and perspective is displayed throughout the work. The really cardinal points on which the history of the Papacy turns are barely alluded to, or are passed over in silence, while pages are filled with the results of the author's desultory and inaccurate reading, or his trite observations, sometimes touching in their puerile simplicity. Thus the conversion of Constantine is commented on: "We have the authority of one of the most prominent of contemporary clergymen of the English establishment for stating that the reign of Constantine was the beginning of the decline of Christianity in spiritual things, quite as much as it was the commencement of its rise in temporal grandeur." So in speaking of the overthrow of the Constantinopolitan power in Rome by Gregory II. and his successors, the author interrupts his narrative with such gabble as—

> "The Western Church was now freed from its subserviency to the Empire of the East, but now also began that connection between Rome and France which has proved fruitful of so much misery, and which remains, after eleven centuries, the insoluble problem of European politics; whilst the prolongation of the French occupation is, in the present state of Italy, an insult to that renovated country. More than this, it is a danger to Europe, and a source of weakness to France, whose ruler thus proclaims his recantation of the noble principles in defence of which, in early youth, he took up arms and witnessed the heroic death of his brother, fighting against a Pope for the liberties of Italy."

So in describing the anarchy of Italy at the close of the fourteenth century, he turns aside to indulge in a disquisition on the probable population of Rome under the Cæsars, the details of which are apparently borrowed from Mr. Story's "Roba di Roma." The exceeding luminousness of these little side-shows may be estimated from his remarks on the Angevine occupation of Naples, which, he assures us, "was an inestimable advantage to the Papacy," although in the same paragraph he adds that it "was attended with disastrous consequences to the Papacy itself" (p. 63).

The reader need hardly be told that all this blundering, disjointed talk is not rendered attractive by elegance of style. The author's ignorance of the rules of composition is fairly illustrated by the above extracts, and one more characteristic example must suffice: "It would be difficult to overrate the importance of the service thus rendered to the Papacy in the height of its contest with the imperial power, by a pontiff whose self-confidence was a source of equal power as the greater genius of a Hildebrand" (p. 46). In fact, we may say that the only readable portions of the volume are to be found in the numerous extracts from his predecessors with which Mr. Legge garnishes his pages.

THE NEW TIMOTHY.*

EVERYBODY knows more or less well the new type of minister which now, in even our most dignified denominations, pretty often displaces the old type. We have all seen the sort of "live man" who among the dissenting sects corresponds with "the muscular Christian" whom Mr. Charles Kingsley invented for the Anglicans. And with some of us, neither of the pair is a favorite. The Muscular Christian, what with his resemblance to his father, and his resemblance to his bastard brother Guy, begotten by Mr. Lawrence, is a creature a good deal more disgusting than the Live Man; but the latter is not a creature to please one either. He believes that "religion is not the gloomy and formal thing" that it is made out to be in seminaries. In seminaries, pale, knock-kneed young men, with long hair, hollow chests, and bad digestions, eat Graham crackers, and read Jonathan Edwards, and practise the writing of elaborate sermons, and never take a walk, and are afraid of a horse, and wear black coats, and blush painfully when young women look at them. No, religion is a cheerful thing. So he wears a moustache. He says nothing forbids the devoutest follower of Christ to keep his liver in good order, and that, if a fast trotter conduces to that effect, why he shall get one. He holds that the weaker brethren are very weak if they think his glass of wine is worse for him than their strong coffee is for them. Why should not a sinner set forth to his fellow-sinners the infinite merits of the Saviour without tying up his neck in white muslin? So he valiantly turns down his shirt-collar; and his conservative deacons are lucky if he does not wear a necktie of some light shade, and smoke cigars in the outskirts of the village. When he meets the infidel tailor he does not pass by him with an air of mingled pain and rebuke which causes that ill-tempered little scoundrel to blaspheme more hideously than ever, and to bawl out to his sad-eyed wife, a believer yoked with an unbeliever, that there goes another of her infernal hypocrite parsons. On the contrary, he stops genially at the shop-window; goes further in pointing out errors in our version of the Scriptures than Tom Paine himself, the tailor's favorite author; gets his measure taken for a coat; makes the little blasphemer think to himself, Well, anyhow, this a'n't one of your hollow-chested croakers like old Smith, or young Skimp, or that Merkes; points out, then, that though this and that and a thousand more errors may be alleged by the scoffer, and freely admitted by the believer, the eternal truths of the Bible are still as near the tailor's soul, and of as tremendous importance to it, as ever; gives the tailor's son a lesson in boxing; leaves the tailor in the shop, and, going into the back parlor, prays with the tailor's wife—not a dry set prayer like Skimp's, but a heartfelt talk with his Father, which the tailor hears through the door; as he comes out, gets a light for his cigar from the infidel's pipe, recommends him to procure such and such a brand of tobacco, and goes away leaving Skepticus badly staggered, and on the high road to Sunday clean shirts and surreptitious attendance at "evening meeting." The Live Man in the ministry never preaches; he talks. Christ is not to him an abstraction, he says, but his flesh-and-blood brother, who loves to be addressed familiarly, so, when preaching and praying, he is not averse to a little slang—provided it is not of the kind called Sermonese. What harm is there in a joke from the pulpit? In short, the new Timothy is usually a young gentleman with more blood than brains; with more ability to talk fluently than capacity for thinking; about as spiritual-minded as a stock-broker, and not so well mannered; as learned as a magazine writer; as witty as a sophomore; as noisy as a stump speaker; as displeasing a person to anybody who likes spiritual and moral teachers to be men of clear heads and clean hearts as any person that can well be conceived of.

---

* "The New Timothy. By William M. Baker." New York; Harper & Bros. 1870.

His existence and present popularity are no doubt a part of a reaction against a bad state of things; but it is not the best part of the reaction. It was not well that young men or old men should undertake the complicated work of the Christian ministry, as that office is understood in these days of declining dogma, with no better preparation for the social, intellectual, moral, and religious work before them than used to be given the preacher in the days of Bellamy and Hopkins. The learning of those men, such as it was in kind and degree, made them, in that time, the intellectual masters of the men among whom they lived. The reverence for the minister's office made the possession of tact and of trained skill in social life comparatively unnecessary. The expounding of the Calvinistic scheme of salvation was in one way a harder but in most ways an inconceivably easier task, than it now is for our clergymen to satisfy the enquiries of an age which brings to the strict examination of the whole superstructure and substructure of faith and morals as much learning, as much patience, and honesty, and eagerness, perhaps as much love for man and reliance upon God and the truth, as our clergymen can show in their enforcement of Christian doctrines. Such an age assuredly would not be content with the teachings of men so able and so good as Calvin and Edwards themselves; and its dissatisfaction with such religious instructors as still offer the world the interpretations of Scripture which even such men as those made—the dissatisfaction with the "articles of faith" still preached to the enquirer in most of our Protestant churches, is not going to be decreased because other men, offering the same doctrines, learn sparring and riding instead of studying hard; wear moustaches instead of shaving their upper lips; are as "genial" as politicians instead of being oppressed by the thought of a world doomed to everlasting misery or to be saved for everlasting bliss; smoke cigars and go to the theatre with ostentatious liberality; jest and talk "common sense" in the pulpit, instead of warning of judgment to come. Men and women who do any thinking at all resent this shifting of issues, and are apt to think the Live Man a charlatan of bad taste and little ability, who, for all his noise, is neither reforming the world in the church's way, nor really doing anything to bring the church and the world into real harmony. The "dyspeptics," whether or not they could keep it so, did once put their world and their church in accord, and the unison, if it is to be brought about again, will not be brought about by the goodness of the Live Man's stomach, nor by his geniality, but by the goodness of various men's heads.

Mr. Baker's "New Timothy," which has rather suggested these remarks than deserved them, presents us with the least offensive specimen of the new kind of clergyman. He does not affect "liberality," though he is penetrated rather by the milder than by the harsher doctrines of the Gospel; his muscularity is in his individual case needed for the re-establishment of his health; and his "geniality" is merely the casting off of his seminary shyness and the diffidence of youth, and the putting on the degree of frankness little rarer among clergymen than among other men. The author's preaching of the general doctrine of New Timothyism, however, is perhaps not quite so good as his special realization of it in his hero's character; and he would seem to share the weak opinion of which we have spoken, viz., that the issue between the church and the people to whom the church's claims are to be presented is one, the successful solution of which is mainly dependent on the habits of the men who present the claims. These are not unimportant; but it seems to be a fundamental error to think of them as being of the essence of the matter.

It is not, however, of great consequence what Mr. Baker thinks of these and various other weighty matters; nor, to make here an end of fault-finding, is it necessary to say anything about his inability to make a remarkably well-constructed story or to create a character. He can do neither, and the novel-reader pure and simple may easily find more readable books. But not so with the social observer, curious about the various phases of American character and life. No one who knows what the Southern "protracted meeting" is, and what is the "religion" that is "got" there, or a Southern court-house town, or a Southern planter of the unpretentious type, or a Southern cane-brake, or a Southern negro, will fail to find Mr. Baker's book extremely pleasant reading of a sort that has a great deal of freshness. Mr. Baker has, moreover, a fund of humor which stands him in good stead. Take, for instance, this description of a lovely pair of mourners at a funeral. They are the utterly, inconceivably worthless hangers-on of a drunken, gambling family of the roughest of rough men, "the Meggar Boys," sons of an old reprobate named Meggar, whose wife, an ignorant woman, has "got religion"—and, let us add, has every occasion to make use of it every minute she is under her husband's roof, but whose devotions have to be carried on in the garden-patch behind a screen of bean-poles and vines. The leader of the Meggar boys, however, "Doc.," is pleased with the new clergyman, is converted, and being king of that part of the country, commands Zed and Toad that they each put on one of his clean shirts and attend General Likens's funeral; otherwise, he "allows" that there will be trouble. Those two young gentlemen consequently go:

> With the other dogs Zed and Toad come, and very much as if with their tails between their legs, after the Meggar boys to the gate, but stop there, produce knives simultaneously from their pockets, split each a good splinter off the palings, and begin whittling. They are out of their element, and curse guardedly and under their breaths, hats down over their eyes.
>
> "S'pose he *is* dead. I never said he wasn't!" Zed complains in continuation to Toady. "He isn't *my* daddy, is he? I want to know!" and his splinter is assuming under his knife the shape of a coffin.
>
> "An' such a day for a hunt!" acquiesces his companion. "Oh no! mighty pious, to be sure! legs in trowsers like candle-moulds, a feller's collar a-sawin' away under his ears. It's gettin' to be a leetle more'n *I* can stand myself!" and his remarks thereupon are not exactly of the nature of a mass for the repose of him who lies shrouded within.
>
> "You hear Doc. try the old man?" remarks Toad again, after a silence, whittling nearer his companion and farther from the gate, as the company still continues to arrive.
>
> "To get *him* to come?" answers Zed, with an oath.
>
> "Not straight out, you know; he hinted round," said Toady, with half-a-dozen curses. And that was a peculiarity of the Meggar family, that hinting round. Very rarely, indeed, did any one under that roof ask a direct question of, or make any direct remark, unless it was a curse, to any other there. This would involve their looking at each other straight in the eyes while they spoke—a thing habitually avoided by them even in the heat of quarrel. Old Mrs. Meggar only asked direct questions, made remarks aimed at some one person under her roof, looking in the eyes of the person she addressed as she spoke; but she was a disagreeable exception to the general rule—a sort of incarnate conscience in the centre of the family on that account.
>
> "Yes, Doc. he hinted round an' round the old man like a bumble-bee, comin' closer an' closer ev'ry time," said Toad, who had himself not seen his companion's eyes in his life except furtively.
>
> "And what *did* that old cuss say?" enquires Zed.
>
> "He was a-smokin' by the fire; 'Ketch me going to funerals,' says he. Old 'oman was a-knittin' in the corner," continues Toad. "'Soul?' the old man says, says he, 'Ha'n't got any. Spit it away in tobacco juice; puffed it away in tobacco smoke; drowned it out in whiskey; cussed it to pieces long ago.' An' he ups an' slams on his breast with his hand. 'Hollow!' says he, 'hempty!' Old 'oman she was cryin' softly; when he says that, she ups an' out."
>
> "Breaks for the butter-beans," remarks Zed, and very correctly.
>
> "Ha'n't been no fun sence that bar-fight," continues Toad, at last. "General Likens *he* comes over—*glad* he's gone; Brown Bob *he* sits an' talks; that young parson act'ly hes his praarrs in the house! Goin' to preachin,' too, ev'ry Sunday; old 'oman on old gray, or in the wagon; we a-followin' behind."
>
> "An' Doc., he tryin' to ease off from swearin'." Zed continues the catalogue of grievances: "A fellar that could swear the bark off a black-jack too—*he* tryin' to give up swearin'!" The thought is painful to both in the extreme.
>
> "Did my best, too, to stop it," complains Toad; "his givin' it up. Crossed and bothered him more'n I ever dar to do before. You see I thought Doc. he'd blaze out at me like he used to; get in the way again so."
>
> "Not a curse at las'. Only got knocked down for your pains," observes Zed, moodily.
>
> "But, I say, look here," says Toad, after some silent whittling, under the temporary influence, probably, of the funeral and of the many solemn faces grouped around and arriving every moment, and as if by a desperate effort, "S'pose a fellar turns out he *hes* got a soul somewhere among his in'ards—and s'pose there *is* a God—" But his conjectures are broken by the indignant oaths of his disgusted friend, who trembles inwardly with even greater apprehension himself.

Perhaps there is in this passage, as well as in some others, some exaggeration; but life puts on strange aspects of extravagance in the South-west—in Texas, where we take it the scenes of this book are laid; and judged by the testimony of the story before us, and that of "Inside: A Chronicle of Secession"—which was less a story than a wonderfully truthful, minute, and striking picture of the rebellion, as it affected the fortunes of Confederate villagers—judged by the testimony of these two books, Mr. Baker must be pronounced a writer with a great talent for seizing and transferring the surface of life in those curious Southern towns, just like nothing else on earth, and on the Southern plantation. The personage and the incident should be a little bizarre, we suppose, if he is to do his best with it; for his ladies and gentlemen are tame and colorless; but the homely old planter, the snuff-dipping old maid, the hunter in his log-cabin, the Sunday service at the cross-roads church—these things he does excellently.

Miss Van Kortland. A Novel. By the author of "My Daughter Elinor." (New York: Harper & Brothers. 1870.)—With many of the same faults which marred its predecessor, "My Daughter Elinor"—faults of exaggeration and overdrawing, and a heavy-handed attempt at fun-making, which is absurdly farcical rather than genuinely funny—this novel is still, on the whole, a creditable production, readable and entertaining, and in some ways lifelike and natural. It is, perhaps, because it is so agreeable a surprise to find an American novel of society whose author is not overburdened with a consciousness of having the problems of the universe to settle anew on a really solid basis, that the easy flow of sentiment and nonsense and small talk, without any ulterior intention of preaching, which we find in this story, seems so pleasant; it is to that surprise, at all events, and not to any special excellence as a novelist displayed by its author, that we credit our own approval of it. It is an agreeable story, with little or no plot, and depending for its interest mainly upon the smoothness of the narrative and the naturalness of many of the conversations and characters. There are two or three main incidents of importance—as the falling in of the mine and the story of the strike; but the latter, although it is cleverly handled, and might as well have happened in Pennsylvania as elsewhere, does bear a resemblance both in itself and in the way it is managed to somewhat similar incidents in Charlotte Brontë's "Shirley," sufficiently marked, when taken in connection with the suggestion one gets of Dickens's methods in the way his funny characters are treated, to make us believe that the author is not free from the influence of his favorite reading, nor certain enough of the value of his own observation of character and manners to inaugurate that "originality" whose absence from our literature we are all deploring. He has made some very fair sketches, however, of people who are unmistakably American—or Middle State people, it would perhaps be fairer to say, since we have also in our literature some undoubted portraits of Western and Eastern and Southern men and women who are also distinctively American—and who are certainly not old acquaintances. He has caught very well, that is to say, the tricks of manner and expression which one hears every day; and as his characters are not especially thoughtful, nor heroic, nor at all given to improving each other's minds, the kind of small talk which passes current in society and is found in the hearing sufficiently amusing and entertaining, does duty in the book as well; and, aided by the author's facile handling of his not weighty material, amuses and entertains his readers likewise. His freedom from the moralizing and speculative tendency which our New England novelists indulge in, he probably owes in great measure to his Ritualistic proclivities. Most of our other storytellers are more or less closely identified with one or other of the more pronouncedly Protestant sects, and it is apt to be borne in upon the minds of their less technically "earnest" readers that they moralize and speculate all the more ardently because they have been obliged to hunt up, or are still engaged in hunting for, some substantial basis for their speculations. They get to their work with commendable industry and determination; but one cannot avoid feeling that their methods are better adapted to essay-writing than to fiction. Apparently it is not impossible to make bricks without straw; but then the extra labor it involves rather unfits the laborer for producing an artistic edifice from his accumulated materials.

Not having any preaching to do, and having his theory of life pretty well settled, the author of "Miss Van Kortland" has been able to give all his energies to making an amusing story, and has not ill-succeeded. He falls, however, into another difficulty which, if we may say it, we have noticed before in fictions produced by people who agree with his in religious belief; he is sometimes a little coarse. Not to any such extent nor in so insidious a way as that adopted in novels like Huntington's "Lady Alice" or the "Red as a Rose" series, whose author, being equally innocent of morals and of moralizing, takes frequent occasion to give the Ritualistic movement an amusing pat of commendation. In this novel the coarseness takes instead the form of a revolt against American pruderies of thought and speech, which is all very well in its way, but is in this case obtruded too persistently and unnecessarily not to suggest the doubt whether restrictions which are felt so keenly are not, in the special instance, salutary. It occasions in the reader, at all events, renewed thankfulness for that æsthetico religious tendency which partially counterbalances it.

Our author has, of course, remembering his former novel, three or four broadly absurd characters, which have the merit of seeming to be the result of an awkward and heavy attempt of their author's to make use of what he has seen, and what was well enough worth while trying to make use of. It is his sense of the ludicrous and absurd, however, on which he relies for his fun-making, and that is not a source which will bear too persistent working. He relies too much on nicknames and exaggerations and repetitions, and devotes altogether too much space to these farcical episodes which in no way help the progress of the story, and altogether interfere by their broadness with the pleasant impression of its writer which the book gives as a whole. It is undeniable, however, that, bad as they are, they form one of the peculiarities of the author which is agreeable to many of his readers, and which a regard for the salable qualities of his books will probably not induce him to modify.

Gwendoline's Harvest. A Novel. By the author of "Carlyon's Year," "A Beggar on Horseback," "Found Dead," etc. (New York: Harper & Brothers. 1870.)—Some of our readers may be aware of the fondness which this author shows for subjects and incidents as the basis of his stories, which, if they are not to be called impossible, are, to say the least, excessively improbable. The present one will not be found less sensational than those which went before it. Beautiful murderesses came in with Bulwer's Lucretia, we suppose, and Miss Braddon and a dozen or two other fiction-mongers have since done what they could to foster the taste for them; but the special variety of the class exhibited in Gwendoline we do not remember meeting before. There is a pleasing and unique absurdity in the conception of her motives for crime and her modes of achieving her wicked actions, which is not always attainable by the best intentioned of the novelists who do this sort of thing. She is young and superlatively handsome, and has a profound passion for a youth who returns it. But she is poor, and of noble blood, and her lover is a younger son, and though he is willing to run the risks of poverty with her, and she has no opposition to fear from her only relative, yet her worldly wisdom will not let her agree to a life of privations. She concocts a scheme which, with a charming candor, she unfolds to her lover. She will marry some rich man, become his widow, and then endow her present suitor with a fortune. He, not so prudent as herself, at first recoils from this novel plan, but Gwendoline's ardent love and cool wisdom at last reconcile him, and he retires, to while away his weary hours in flirtations until such time as the prospective wife and widow shall recall him. Now, Gwendoline has an interesting young friend, the wife of a rich old Scotchman, who, unknown to herself, but not to Gwendoline, is in the last stages of a decline, which may be precipitated by any sudden shock. At her house Gwendoline makes a visit, in which she contrives in an inadvertent way to let her friend know the real state of her health—a stratagem which has the desired effect of creating within the next twelve hours a rich widower, ready to our heroine's hand. Of course, she deludes him into marrying her within the year, after playing the part of watchful saint over his orphans in the way of which beautiful murderesses alone are capable, and so successfully plants the crop which is to produce her wished-for harvest. Unfortunately, the old man has more vitality than Gwendoline gave him credit for, and lingers a year or two, during which his wife's jealousy is fearfully excited by her old lover's persistent flirtations and growing coolness. She contrives a plan for adroitly poisoning her husband with minute doses of prussic acid, having, without his knowledge, induced her physician to prescribe them for him under the pretence that he has palpitations of the heart, but is morbidly averse to speaking on the subject. He is found dead at last, with an empty vial of poison beside him; but his wife has managed so skilfully that all suspicion is averted from her, save in the breast of an old servant of the former wife. From this time Gwendoline's plans appear to succeed. She marries her lover, and though she has not, as she had hoped, succeeded to all her late husband's fortune, she has a sufficient jointure, and, in addition, a large allowance for the education of the daughters of the first marriage. She leads an unhappy life, however, tormented by her husband's open infidelities and by her memory of the crime she committed to win him, and which she has never dared to reveal to him. At the end of twenty years, when her only son is grown up, and madly in love with the daughter of her first husband, she begins to gather in her harvest. Between her and her husband, both of them prodigies of dissimulation, they have managed to rear a son whose craving for ideal justice and insurmountable horror of double-dealing must have been extremely refreshing to his parents. While he is persuading his mother's step-daughter to marry him, he suddenly discovers not only her first crime, but that she is now plotting to poison his sweetheart, after first inducing her to make a will in his favor. Here ensues a grand *tableau*, from which Gwendoline retires in disgrace, and ends her days in quarrelsome poverty with her husband, while her noble young son and his bride hie them to some pleasant isle of the sea, where nobody will remind them of the family scandals. Altogether, the book is a most pleasing and profitable one, and we offer our hearty congratulations to the author.

Letters of the Right Hon. Sir George Cornewall Lewis, Bart., to Various Friends. (London: Longmans. 1870. Pp. 449.)—Sir George Lewis was a type of English statesman almost extinct at home, and altogether unknown on our side the water. A diligent student all his lifetime, devoting rather unwillingly his best years to the work of governing, to the hard task of parliamentary life, and to the exhausting duties of offices of increasing importance and responsibility, he found his recreation and his relaxation in studious discussions of such subjects as the early Roman history, of ancient astronomy, of Egyptology, and in comparatively lively articles for the *Edinburgh Review* on English administrations for the first half of the nineteenth century. Two stories not found in this imperfect collection of his letters, nor in the fragmentary sketch of his life supplied with them, illustrate the latter quite as well as anything that he has said of himself. One was, that he said "life would be so pleasant if it were n't for its pleasures;" and the other, that Mr. Panizzi, of the British Museum, said that for all the books of that vast library there were but two real readers—Sir George Lewis and himself. In spite, however, of all this, the letters show that he was full of kindly interest in contemporary people and affairs, and his judgments, although positive, dogmatic, and, of course, very often erroneous, were not harsh or unkind. They, however, have a good deal of interest for his contemporaries, though, perhaps, no great value even to them, and little enough for those who are to come after us.

That in the volume which will, perhaps, most strike the American reader—if, indeed, more distinguished names than Sir George Lewis's have not already sufficiently pressed it on his attention—is the fact that, after a thorough and highly honorable career at the university, a careful training at the bar, a sedulous training in the administration of subordinate offices—all avowedly as preparation for the duties of statesmanship, Sir George Lewis, though not a statesman of great capacity, was yet recognized by the British public as a trained public servant, and one to be used because he was trained, and who turned out useful. And the system that makes Cornewall Lewises makes also competent and faithful tidewaiters, and, as such, is cherished and extended to the minutest ramifications of the civil service. Here we have nothing like it.

NAPOLEON III.

HANS ANDERSEN.

HURD & HOUGHTON,

13 Astor Place, New York,

HAVE JUST READY:

I.

Paris in December, 1851;

OR,

THE COUP D'ÉTAT OF NAPOLEON III.

BY EUGENE TÉNOT,

Editor of the *Siècle* (Paris), and author of "La Province en Décembre, 1851."

Translated from the Thirteenth French Edition, with many original notes, by

S. W. ADAMS AND A. H. BRANDON.

In 1 vol., crown 8vo, price $2 50.

"This translation is exceedingly faithful, we find, on comparison with the original. A full Index has been added, and a Translator's Appendix, containing about one hundred pages of concise and carefully prepared notes. . . . . Besides giving the key to many things, they contain brief sketches of many men who are now prominent. . . . . For cunning and unscrupulousness it has no equal in history, and the unravelling of it is as interesting as one of the plots of Wilkie Collins's novels."—*Hartford Courant.*

II.

Only a Fiddler.

A DANISH ROMANCE.

BY HANS CHRISTIAN ANDERSEN.

In 1 vol., crown 8vo, price $1 75.

ANDERSEN'S WORKS LATELY PUBLISHED:

The Improvisatore,	$1 75
The Two Baronesses,	1 75
Wonder Stories. Illustrated,	2 25
In Spain and Portugal,	1 75
O. T.; or, Life in Denmark,	1 75

Tom Brown at Oxford.

By the Author of "Tom Brown's School Days." New Edition. With Illustrations by Sydney P. Hall.
$1 75.

Alfred the Great.

BY THOMAS HUGHES, M.P.

With Illustrations. $2.

The Scouring of the White Horse;

Or, The Long Vacation Ramble of a London Clerk. By the Author of "Tom Brown's School Days." Illustrated by Richard Doyle. $1 25.

MACMILLAN & CO.,

63 BLEECKER STREET, NEW YORK.

The New Classical Course.

Goodwin's Greek Grammar. (To be issued in September.) By Prof. W. W. Goodwin, of Harvard College. Greek Lessons and Reader in preparation.

Allen's Latin Composition. (Just issued.) $1 25.

Allen's Latin Grammar. 15th thousand. By W. F. and J. H. Allen. 12mo, 148 pages. $1 25.
Recommended by Harvard College as indicating the amount required for admission.

Allen's Latin Lessons. $1 25.

Allen's Latin Reader. 12mo, 518 pages, $2 50.
Second edition, revised, with additional notes and vocabulary. References to Allen's, Harkness's, Madvig's, Bullions's, and Andrews and Stoddard's Grammars. Accepted at Harvard and Yale as an equivalent for Cæsar.

Allen's Latin Lexicon (general). $1 25.

Allen's Latin Selections. $1 50.
The same as the Latin Reader, without the Vocabulary.

Allen's Latin Primer. $1 25.

Madvig's Latin Grammar. Revised by Thomas A. Thacher, Yale College. $3.

Hudson's School Shakespeare (8 Plays). By H. N. Hudson. $2.

Craik's English of Shakespeare. $1 75.

The Latin Verb. Illustrated by the Sanskrit. By C. H. Parkhurst. 50 cts.

Ginn Brothers & Co.,

PUBLISHERS,

13 BEACON STREET, BOSTON.

Fruit and Ornamental Trees

FOR AUTUMN OF 1870.

We invite the attention of Planters and Dealers to our large and complete stock of

Standard and Dwarf Fruit Trees.
Grape Vines and Small Fruit.
Ornamental Trees, Shrubs, & Plants.
New and Rare Fruit and Ornamental Trees.

Descriptive and Illustrated priced Catalogues sent prepaid on receipt of stamps, as follows:
No. 1. Fruits, 10c. No. 2. Ornamental Trees, 10c. No. 3. Green-house, 5c. No. 4. Wholesale, FREE.
Address,

ELLWANGER & BARRY,
ROCHESTER, N. Y.

ESTABLISHED 1840.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 1, 1870.

The Week.

THE great war topic of the week is MacMahon's movement from Châlons and Rheims to the vicinity of Mézières and Sedan, in the Department of the Ardennes. Retiring before the Crown Prince, he has thus placed himself upon the right flank of Frederic Charles, with the intention of either assailing the latter and, if possible, restoring communication with Metz, or simply retarding, by a menacing attitude in a strong position, the march of the enemy on Paris. Some desultory fighting seems to have taken place in consequence of this move, and a great conflict is said to be imminent; but the reports are, as yet, too vague to be commented upon. The Prussian forces can now be said to occupy, more or less completely—with the exception, of course, of the fortresses—the following Departments of France: Lower Rhine, Moselle, Meurthe, Meuse, and Marne, and parts of the Departments of Upper Marne, Aube, and Ardennes. The two northern armies, Von Steinmetz's and Prince Frederic Charles's, which from the beginning have co-operated, have till now done most of the fighting—at Saarbrück and Forbach (Aug. 6), before Metz (Aug. 14), at Mars-la-Tour (Aug. 16), at Gravelotte (Aug. 18), in various minor engagements near Stenay, and in an unsuccessful attack on Verdun—and they now partly envelop and partly mask the fortresses which form the French quinquilateral—Metz, Verdun, Thionville, Longwy, Montmédy. Their advanced line seems at this moment to form a triangle, the base of which extends from a point near Varennes,on the Aire, to a point near Stenay, on the Meuse, and the apex of which is near Grand Pré, on the former river, pointing toward Vouziers. This force is commanded by Prince Frederic Charles, but it embraces also troops formerly commanded by Von Steinmetz, who, with the bulk of the First Army, besieges or watches Bazaine. The Third Army, under the Crown Prince, which fought only at its outset—at Weissenburg (Aug. 4), and Wörth (Aug. 6), has traversed much longer lines, starting from the Lauter, and advancing to beyond Rheims, Epernay, and Sézanne—its wings, west of the Meuse, spreading from the Aisne to the Aube. Its bulk moves along the Paris and Strasbourg Railroad, the western sections of which follow the course of the Marne, and the late movements of the Crown Prince, who, while tending towards Paris, has not lost sight of MacMahon, make it doubtful whether he intends ultimately to advance against the French capital between the Marne and the Seine or between the Marne and the Oise. One of the grand depots of this army, which is followed by large bodies of reserve, including Landwehr troops, is Nancy. The attempts of the reserves to reduce Toul and Pfalzburg have as yet proved failures. The progress of the more important sieges of Strasbourg and Metz—if the investment of the latter may be called a siege—is reported very satisfactory by the Prussians.

The Prussian reserves are now rapidly formed into new armies, and, according to the best information accessible to us, the following is the latest distribution of the German forces: Of the five armies now actively engaged in France, the First Army, commanded by Von Steinmetz, consists of the First Corps (Gen. Manteuffel), the Seventh (Gen. Zastrow), and the Eighth (Gen. Goeben); the Second Army, commanded by Prince Frederic Charles, of the Second Corps (Gen. Fransecki), the Third (Gen. Alvensleben II.), the Ninth (Gen. Manstein), and the Tenth (Gen. Voigts-Rhetz); the Third Army, commanded by the Crown Prince of Prussia, of the Fifth Corps (Gen. Kirchbach), the Sixth (Gen. Tümpling), the Eleventh (Gen. Bose), and two Bavarian army corps (Gens. Tann and Hartmann); the Fourth Army, commanded by the Crown Prince of Saxony, of the Fourth Corps (Gen. Alvensleben I.), the Twelfth (formerly the Saxon Crown Prince's own), and the Saxon and Prussian Guards; and the Fifth Army, commanded by General Werder, mainly of the Würtemberg and Baden divisions. This latter army carries on the operations against Strasbourg, while the Sixth Army, commanded by the Duke of Mecklenburg-Schwerin, forms a reserve on the Rhine, and the Seventh, whose commander is not named, another reserve in the interior of Prussia. The largest of these armies is Prince Frederic Charles's. The total number of the five operating in France, including all kinds of arms, may not fall far short of half-a-million. An enthusiastic correspondent, of the class that formerly believed in at least 800,000 French soldiers between Strasbourg and Thionville, raises the number of the First and Second Armies alone to 350,000. Another correspondent of the same school restores the thus terribly deranged equilibrium between the contending parties by speaking of 200,000 men of MacMahon's passing before his eyes, and of 350,000 of a new French "army of reserve now forming near Châlons." This latter army the Rheims special did not see passing before his eyes, but only dreamed of, while the men defiling before him, if they ever did, he seems to have counted twice before he reached his figure. Bazaine may have about 60,000 at Metz; the defenders of Paris, if not all effective, are very numerous; Strasbourg is defended by about 10,000 men; a new army is said to be forming south of the Loire.

By the "strategic movement" of Marshal MacMahon, the arrival of the Prussian forces before Paris may have been delayed for a number of days, and the men in power in that capital seem to turn the time gained to the best advantage—strengthening the defences and making them as impregnable as possible, arming the mobile and national guards, enrolling volunteers, accumulating vast stores of provisions for both men and animals, and clearing the city of all turbulent or otherwise dangerous elements. Large numbers of people have been sent out under various pretences; some as non-naturalized natives of the countries with whom France is at war; some as persons without regular means of subsistence, some as suspicious on account of republican ideas; others are flying in haste and confusion, with their families and goods, in order to escape the horrors of a siege. Count Palikao, the Minister of War, does his best to frighten people away, both by terrifying announcements concerning the advance and approach of the enemy, and by vigorous measures against the *suspects*, numbers of whom, Germans and natives, are now said to fill the prisons of the city. Preparations are also made for the transfer of various branches of the Government, including the Senate and Corps Législatif, to some sufficiently remote town on or beyond the Loire. Whether all these measures are exclusively required by the menacing condition of affairs—*extra muros et infra*—or whether they are also, or chiefly, meant to subserve some particular interests, may still admit of doubt; but various indications go far to show that the latter is most likely to be the case.

It is evident that there is now very little harmony between the head of the Cabinet and War Ministry and General Trochu, the Governor of Paris; that the latter is gradually losing the influence which his sudden appointment to his office, in the first moments of terror after unexpected disasters, allowed him to exercise; and that, in the Committee of Defence, the comparatively large Bonapartist elements have now an almost undisputed ascendancy. Thiers, to whom Paris owes its fortifications, had almost to be compelled to accept a place in the committee, and he finally did it, imploring the support of the Corps Législatif; but this body, having somewhat recovered from the fright with which the sudden break-down of Imperial power and the reappearance of the spectre of revolution had almost overwhelmed it, has just shown, by its vote on Kératry's motion to enlarge the Committee of Defence—two hundred and six nays against forty-one yeas—how little it is inclined to support Orleanists like Thiers or General Trochu against the more or less open upholders of the Napoleonic dynasty. General Trochu has shown himself powerless even against Pietri, a very intimate, but at the same time very contemptible, tool of the Emperor; and now Palikao, emboldened by the military enrolment of the most dangerous portions of the Paris republicans, by the removal and incarceration of others as suspected of conspiring with Bismarck, and by the reiterated determination of the Opposition leaders to suspend party hostilities as long as the Prussians are on French soil, treats the Orleanist general, whom in the days of greatest confusion he pushed forward as a kind of screen against popular indignation, with undisguised haughtiness. The Empress-Regent herself, whose bigotry but half covers her political intrigues, is reported to have demanded Trochu's dismissal, but we doubt whether the situation is ripe for anything so bold.

We hope and believe there are very few people who allow their satisfaction over the Prussian triumphs to make them forget the gallant men who, for the last month, have been heroically defending French soil, and as successfully as the Imperialist incapables who command them would permit. There is something for which we are all more concerned than the success of any army or any political system, and that is the honor of human nature; and certainly nobody can say that it has suffered in the hands of the French soldiers. They have shown that they know how to die; and to die bravely is a nobler feat, and will always be so considered, than to win victories. Nobody, too, we trust, who follows the Prussian march with joy, forgets that every mile of it brings ruin to hundreds of happy and peaceful homes; destroys for thousands the results of lifelong toil and self-denial; casts helpless on the world thousands on thousands of the very young and the very old. Nobody who has not seen war in a thickly-peopled country can have any idea of the misery and desolation which the operations we are now following on the map are causing in Eastern France. There was nothing like it in our own war, because this was waged for the most part in sparsely settled regions and in vast uninhabited woods and swamps. Devastation is a necessary concomitant of war. Even if marauding is repressed, contributions often have to be levied, crops destroyed, and houses burnt.

The time to think of all this, however, is before the war begins. The duty of thinking of it devolves in an especial manner on editors. Editors who shout for battle, and work the public mind up to fever-heat, and keep back all the features of armed struggles except the "stirring" ones, talk only of the "pomp and pride and circumstance," and say nothing of the wasted fields and ruined cottages, of the woods filled with homeless wanderers, the roads thronged with panic-stricken fugitives, of the wild destruction in single days of the proceeds of years of saving, ought for very shame to be modest in talking of them after blood has begun to flow. They are part of the game. Our Southern editors sinned in this way; the Paris editors are doing so. The lamentations of the latter over the Prussian exactions are rendered all the more revolting by the fact that when, in the early part of July, they were lashing the French people into the necessary degree of fury, they were looking forward to seeing the French army inflict on German peasants the misery which the Prussian army is now working among the French. There are still horrible memories all over Germany of French military occupation. Many Prussian families preserve as heirlooms the insolent answers of Napoleonic officers to the remonstrances called forth by their exactions. Chancellor von Müller, of Gotha, tells of his pleading with Daru, the French Intendant, after Jena, on behalf of the peasants of the little duchy, who had already been stripped of nearly everything they had, and of whom another contribution was demanded. Müller said their produce was all gone; this would take their very ploughs and their last morsel of food. "Monsieur," said Daru—and he was not a hard-hearted man, as Napoleon's Intendants went—"que vous viviez ou non est parfaitement indifférent. Il nous faut des contributions." Count Bassewitz was informed, in reply to similar remonstrances addressed to the French general commanding in Mecklenburg in 1806, that "the Emperor's wishes had to be carried out; that if the Emperor ordered it, he [the Count] would be strung up to that tree in a minute."

The disposition of the Celtic race to suspect treachery is curiously illustrated in the ferocious fury of the French against Prussian spies, and the wonderful facility with which they are discovered all over the country. At the present moment, any evil-disposed person has only to point a man out in the streets of Paris as an "espion prussien" to put his life in danger. The correspondent of the New York *Tribune* was pursued the other day, according to the *Evening Post*, by a howling mob, who saw him taking notes, and was only saved from death by the intervention of a humane butcher, who took charge of him and pledged himself to chop his head off on his private block, and with his own cleaver. The crowd, confiding in the butcher's honor, then withdrew. The risks the newspaper correspondents have run at the front have been very serious, "the people" about Metz being plainly of opinion that nothing but the sacrifice of a few persons with light beards and a foreign accent would stay the Prussian advance. In Fenian circles in this country, and indeed everywhere, the same phenomena are to be seen. At a meeting of Irish "Nationalists," one has only to designate anybody in the assemblage as a "British spy" or "informer" to have him well pummelled, if not killed. During the last Fenian invasion of Canada, a respectable-looking man, reading the bulletin on one of the newspaper offices, was denounced as a "British spy" by a wag in the crowd, and was immediately knocked down. In the first French Revolution, the rage about "spies" and "traitors" was equally marked. Characteristically enough, two of the most noted bravoes of the Empire, or "Mamelukes," as they are called in Paris, the Cassagnacs, father and son, have gone into the business of spy-hunting as the most congenial they could find. The most striking contribution of their paper, the *Pays*, to the literature of the crisis, has been a demand for the expulsion of all Germans from France; and the worthy Paul, who has been shamed into joining the Garde Mobile, has ferreted out on his way, and denounced to the police, a poor Red, whom he once wounded in a duel, and who has been ever since in exile for press offences, M. Lissagaray. One cannot help rejoicing that somebody's sword is going to clear out this den of swashbucklers.

There are gentlemen in Washington, and about the newspaper offices in this city, who must be mightily entertained by some of the French despatches, and thoroughly competent to explain them. The resemblance of many of them to those with which the North was regaled in darker hours of the late war, is very amusing. For instance, when there is no news at the Ministry of War, and the reason given by Palikao is that the generals are too busily engaged in making combinations for the destruction of the enemy to send any despatches, how vividly it recalls that old formula of the Washington correspondents with which we were all so sadly familiar: "There is great cheerfulness at the War Department to-day; the reason it would be improper to give; but this I may say, that a movement is on foot which will fill all loyal hearts with rejoicing, and plunge the rebels in grief and dismay." Who does not recall, too, when he hears that MacMahon is "drawing the Crown Prince on," and that that unhappy commander is marching steadily to his doom, the old Southern news, as Sherman moved down into Georgia, "that Johnston had him just where he wanted him," and that he "would find a lion in his path," and that the people would rise up, tear up roads, blow up bridges, pull down fences, remove their pigs, sheep, and poultry, and play such fantastic tricks with "his long line of communication," that he would curse the day he was born?

The Associated Press is a very singular body. Its members do an enormous amount of preaching to the world at large on the conduct of life. Nevertheless, their own mode of transacting their business can hardly be intended to be an example. They are now having a curious fight over the European war news. The rules of the Association forbid the receipt by any member of any exclusive telegraphic despatches except, we believe, from Washington and Albany, and from such places as have just had an execution which some member of the Association may wish to make especially harrowing. Consequently, when any one paper employs a correspondent to telegraph from any other part of the world, it is obliged to offer the despatches to all the others to be used either wholly or in part, and paid for accordingly. The *Tribune*, accordingly, has employed correspondents with the belligerent armies whose despatches are sent over by Cable, and are, under the rules, offered to the other New York papers, and by them paid for in proportion to the amount they print. They are just as much entitled to them as if they had themselves despatched the correspondents who wrote them. Nevertheless, the *Tribune* every morning prints a paragraph in a conspicuous place, drawing attention to their use of them in terms which certainly are calculated to leave, and in ninety-nine cases out of a hundred do leave, on the mind of its readers the impression that all papers which have the previous day published its special correspondent's despatches have stolen or otherwise improperly obtained them. On the other hand, there is no doubt that whatever credit is to be got from them, either as regards time or quality, the *Tribune* is entitled to. They are really from its special correspondents, and they cost it an amount of money of which the sum paid to the Cable Company is of course only a very small proportion. One in particular has been very valuable—the account by an eye-witness of the battle of Gravelotte. In spite of this, however, the *Sun* announces that they are from *its* "special correspondent," and the two editors accuse each other of falsehood, and refer to each other in a way which seems to indicate that the spectacle of the other's conduct in this matter was destroying in each all confidence in human nature, and inclining him to retire to a "community," or betake himself to remote berry culture.

Italy, it is stated, has answered the mission of the Prince Napoleon with a flat refusal to lend assistance to the falling Empire. The chances of this were never great, and rapidly disappeared after the first Prussian success at Weissenburg. On withdrawing its troops from Rome, the French Government informed the Italian that it would expect an observance of the September convention. The reply of the Minister of Foreign Affairs, Visconti-Venosta, was sufficiently dry, and announced merely that the French reminder had been, in mercantile parlance, "received and contents noted." Nevertheless, it cannot be denied that there is, on the part of the more respectable and intelligent classes, an undisguised sympathy for France, if it is not to be called, rather, an apprehension not so much lest Prussia may prove too dangerous and aggrandizing a neighbor—though this pretence is put forward by some—as lest the overthrow of the Napoleonic régime may be the signal for all the dreaded elements of the peninsula to rise; the Garibaldians and Republicans namely, against whom even now Italian troops have to be despatched to the Roman border. The humiliating confession, in short, has to be made that the peace of Italy, as against internal dissensions, is fatally dependent not on France, but on the dynasty, and almost on the person of the Emperor. As a result of this embarrassing situation, the Conservative view of the merits of the present struggle is in seeming contradiction to the genuine Liberalism of many who entertain it.

All over the country the politicians, small and great—but particularly the small ones, the captains of tens and the captains of fifties, the editors of local papers, the postmasters, the subalterns of the Grand Army of the Republic—are working like beavers. But, so far, the campaign is purely personal, and has but little interest except for candidates and their hangers-on. The great body of the people care little or nothing about it, having this year, besides the excuse of being sick of the name of Congressman, the excuse of absorption in the Franco-German war. The interest, such as it is, is a personal interest, because neither party has a policy; or, at least, the Republicans have next to none, and all that the Democrats have is to find fault with that of the Republicans. Maine, perhaps, forms an exception to the statement that the people in general care nothing for the contest at this stage of it; there we have the spectacle, rare at any time, and particularly rare in the apathy succeeding a long session of Congress and a summer of fearful heat, of popular meetings with a view of electing a popular favorite to the United States Senate, instead of sending there one of two strong politicians. Of this movement all that need be said is, that even if Governor Chamberlain is not so strong a man, he would do the State more credit than Mr. Washburne or Mr. Morrill. Elsewhere throughout the country, candidates with "no show" are gracefully declining; preparations are made for "running the machine" of that curious means of expressing public opinion, the primary meeting; delegations are being secured for this or that gentleman; in the country papers there are columns of that succulent correspondence which candidates exude, and, altogether, great hum of preparation among the armorers; but as for the armies, they gather together at Columbus, say, to listen to Senator Thurman to the number of fifty-seven men.

In this State we are in the midst of a battle which will come to a crisis next month in the Republican Convention, between the Fenton and Conkling factions. Whatever the causes and objects of the internecine war, there is every probability that its result will be to throw away whatever slight chance there was of the Republicans carrying the State. There remains little doubt in our mind that the course of the Democratic press in regard to the German war—the direct courting of the German vote by the Republican press has been rather fulsome, much of it, and unnecessary all of it—the course of the Democratic press, we say, in giving all its support, at the expense of much falsehood and silly assertion, to the French, has seriously alienated a very large number of Germans, whom hitherto Republican liquor legislation, rather than love for Democratic doctrines, had kept in the Democratic party. A skilful choice of candidates, and a liberal "plank" as regards lager-bier in the next platform, would have cost the Democrats some thousands of votes, and some thousands they may lose as it is. Our observations have led us to think it very likely. But the necessity which Mr. Fenton naturally feels of securing Mr. Conkling's scalp appears to promise an intestine broil that will deprive the party of half of such efficiency as was left it. To add to the chances of Republican defeat, there is talk of putting up Mr. Greeley for Governor, and he has avowed his willingness to run if wanted, and also, to do him justice, his belief that he might not gain enough votes among Democrats to counterbalance those he would lose among Republicans. There seems little doubt that he would run behind his ticket as usual.

We should not be at all surprised, however, to see Mr. Greeley get the English Mission. That he would take it cheerfully we have no manner of doubt, and that the President must by this time be disgusted with it, and willing to give it to any prominent Republican who wants it, we think is nearly as probable. Mr. Greeley is not, we confess, equal to the task of settling the *Alabama* question, and—perhaps it may be said of so great an economist without offence—is but slenderly furnished as regards diplomatic history, international law, and the general capacity for dealing successfully with politicians and men of the world; but then everybody knows well that the *Alabama* question will have to be settled in Washington, and there are no others of importance pending between the two countries. On the other hand, his appointment would give the aristocracy an idea of a powerful section of American society of which they as yet know nothing, and would make the fortune of several philanthropic associations by his appearance at their meetings. And then the effect of his near approach on the Prince of Wales and the Continental despots can hardly be overestimated. Those guilty and debauched tyrants tremble already when they open the *Tribune* and peruse its editorials. How would they feel if they knew that its founder and director was at their doors and had his physical eye, so to speak, upon them?

A striking illustration of the growing licentiousness of the press has just been afforded by the Chicago *Tribune*, which, while admitting the possibility of arguing with a man who should maintain that the moon was green cheese, says that there would be no use in talking to a man about the moon who denied its existence, and it compares Mr. Boutwell to the latter. The cause of this unseemly pleasantry is Mr. Boutwell's getting ready his four and four-and-a-half and five per cent. bonds, and his going about trying to persuade the world that people who hold five-twenties, and draw five-and-a-half and six per cent. on them, will sell them out, and take the new bonds in their place. The *Tribune* ought to know that there are things in Mr. Boutwell's head not dreamed of in its shallow philosophy, and that a man who estimates the crops by looking out of the window of the train as he goes to Washington, instead of trusting to Mr. Wells's statistics, may well have means of getting investors to prefer four to five per cent. interest of which flippant newspaper men know nothing. However, if Mr. Boutwell's new bonds do not go off, it will be owing to the death of his "German bankers" at the battle of Wörth. There is every reason to believe that they were in the thick of it, and perished under a heap of slain enemies.

THE POLITICAL PROSPECT.

WHAT with the address of the Republican Committee, and Speaker Blaine's letter, and Governor Orr's letter, and two or three State platforms, we ought to be in a position to form some idea of the nature of the wares with which the Republican managers are going to present themselves to the electors during the coming fall. We regret to say, however, that we believe it would be very difficult, even for a "man inside politics," to give orally a connected statement of the reasons why the party candidates ought to have the popular support. In fact, everybody who can claim any right to speak for the party seems to be determined to rely as far as possible on the general goodness of its character in asking for a continuance of the public confidence. Besides this, the main dependence seems to be placed on the badness and general untrustworthiness of the Democrats—a plea by which, we suspect, ten persons are reached for the one who is reached by the story of the Republican services. It is, as we pointed out a fortnight ago, high time that the curious little fiction that a party can be kept in power through "gratitude" were given up. The party is composed of the voters themselves, and nobody is going to vote this year, as he voted last year, out of gratitude to himself for the vote he cast in 1862 or 1866. So that, if the Republican party had done twice as much as it has for the country, people would still resolutely and remorselessly enquire at every election what it was going to do next before making up their mind to support it. The great mass of its adherents are only prevented now from deserting by the fact that there is nothing half so good to take its place, and the managers are certainly wise in placing this fact in the forefront of their battle. It is not possible to put the Democrats in power, apparently, without running the risk of reopening the question of reconstruction, and shaking the public credit, and deranging the currency. Possibly people are mistaken in believing this, but, if so, the Democratic orators and writers have themselves to thank for it.

It is tolerably clear, however, that nobody in the Republican party looks back to its performances in Congress, during the last two years, with any pride or satisfaction. Indeed, the address of the National Committee confesses that the less said about them, the better. Two years more of such helplessness and incapacity in the presence of the questions of the day would probably, even if nothing better turned up in the interval, make even the Democrats, with all their sins upon their heads, acceptable to the majority of the voters. There appears fair reason to hope, however, that something better will turn up in the interval. The Republican organs at last begin to acknowledge that Democratic iniquities do not furnish sufficient materials for the Republican platform, that the tariff and the management of the public debt must become political issues of the highest interest, and must be dealt with boldly by any party undertaking to administer the Government. The insolent refusal of Congress last winter even to consider the condition of the Civil Service—that great canker of American politics—ought not to be repeated. The marked increase in its efficiency, as shown by the increase in the revenue returns, is no excuse for the absurdities in which Mr. Bingham and others indulged, or for the failure of both Houses even seriously to debate the matter. The standard of efficiency is not to be ascertained by comparing the revenue now with what it was in the days of Andrew Johnson—that is, in the most corrupt period in our financial history—but by comparing it with what the most careful calculations show that it might be. In other words, the Republican party has no right to come before the public and say, "See how much less Grant's administration steals and loses than Johnson's did." What it ought to be able to say, or say, is, "See how little is lost or stolen. See how far we are from being content with not being as bad as others have been, and how earnestly we are striving to be as good as anybody can be." The plan of selecting the career of some notorious rascal as a boundary line, and then measuring one's own goodness by the extent to which one keeps within it, is something which no character can stand very long, and it is one which will answer just as ill for parties as for individuals.

There is as yet no sign of agreement in the party ranks in any financial policy, either as regards the tariff, or the currency, or the management of the public debt. The tariff question seems at present to be an open one, and is apparently going to be fought over in single combats, in such districts as are most interested in it; and the result of these conflicts, though it may not impose a policy on the party at large, will certainly afford members of Congress some indication of the direction of the current of popular opinion, an advantage which the last Congress did not enjoy. In the "funding" process, over which Congress passed so many happy hours last winter, the public, partly owing, no doubt, to the war and the hot weather, appears to have lost all interest. Anybody, however, who will take the trouble to look back over the debates on this subject will, we feel sure, find them funnier reading now than they were when they took place. Mr. Boutwell is armed with full power to "fund," at a lower rate of of interest, and we believe the new bonds are being rapidly prepared in Washington, but the names of the mysterious "German bankers" who were so eager to take them and of whom we have heard so often, have not yet been revealed. We venture to say they have been slain on the bloody field of Wörth, and that the bonds will, for the present, have to lie in the Treasury vaults, the hostility of the bankers of other countries to our institutions leading them to prefer five and a-half per cent. interest on their money to four and four and a-half. If, however, Mr. Boutwell can find anybody to "fund" upon under the new law, we presume the public will heartily rejoice, but there must be no favoritism in the distribution of the bonds. "First come, first served," should be the rule, and we would, as Mr. Schenck has suggested, let no man have a five per cent. bond unless he took a four per cent. one at the same time.

There is one other suggestion which we may be permitted to make, and we make it for the fifth or sixth time, and that is, that some one member or some one committee in each House be permitted to frame and conduct the financial legislation which the party may see fit to undertake. We feel quite sure that any sensible man who will calmly review the history of the last session will, if not greatly amused, feel heartily ashamed of the extraordinary way in which both House and Senate attempted to deal with financial questions. The New York "Woman's Council" could hardly have done worse, and, indeed, we remember one debate of that learned body, on specie payments, which was fully up to the mark of many of the discussions in the House. It is not the duty of every Senator or Representative to bring in a bill, every session, to regulate the currency, or the tariff, or the public debt. He does not owe it to himself or his constituents or to posterity to do so. It is nobody's business to bring in such bills except those members who have made a long and careful study of this class of questions, or who have been specially deputed by the House or Senate to take charge of them. All others are rendering most efficient service by holding their tongues and refraining from amendments. The result of everybody trying to have a finger in the pie is confusion of the worst kind, the loss of the session in dreary and often foolish talk, the injury of the public credit, and the loss of popular confidence in the party. Every member ought, next session, to register a solemn vow to let finance alone unless he has studied it prior to the year 1862, or has been invited by Congress to take it up; and all members treating financial questions ought not to take up the history of money any further back than the foundation of the Bank of England.

THE LABOR CAMPAIGN.

WE have just heard the last of the annual talk upon the labor question in which the workingmen's delegates indulge in their convention, and we are about to witness in Massachusetts a political campaign in which the "labor party" will formally put in an appearance at least, through Mr. Wendell Phillips as their candidate for the governorship. We are consequently justified in believing ourselves to be in a position to say what the present condition and tendency of the "labor movement" are. We are sorry to say we are not able to report, as far as our observation has gone, the disappearance of a single chimera from the creed of its supporters, or any sign of an increased disposition to recognize either the facts of life or the tendencies of human nature. The evils from which laborers are suffering, like the evils from which women are suffering, are thoroughly tangible, but those who attempt to deal with them appear to have the greatest scorn for a remedy which has not to be sought through the airiest speculation. The workingmen of the

United States are undoubtedly suffering from the badness of the currency, which, having no certain value, has put prices to a certain extent within the control of large operators, and makes possible combinations from which, whoever gains, the poor are sure to suffer. The obvious remedy for this is the return to specie payments. There are two or three ways of doing this, each of which has its advocates; but we believe we are correct in saying that from the politicians of "the labor reform" party none of them has received the smallest support or attention. Nay, so far as they have approached the subject at all, it has been as ardent advocates of further inflation—indeed, as well as we can understand their scheme, of an unlimited issue of greenbacks, it being, in their opinion, apparently in the power of the Government to release people who have no money, and would like to have some, from all recourse to money-lenders. In other words, they appear to consider "credit"—that is, the use of as much money, without security, as he thinks he can profitably employ—one of a man's "natural rights."

The workingmen are suffering also, and suffering greatly, from the tariff. The uncertainty of the tariff—it is changed from top to bottom nearly every year—combined with the great weight of its duties, also helps to strengthen the speculators and capitalists, and to concentrate in a few hands all the most profitable trades. It is only the great operators having control of large funds who can successfully contend with the ups and downs which the tariff has introduced into business. It is only they who can spare the time and the money necessary for the work of lobbying at Washington which the high duties make nearly as necessary a part of any great manufacturer's business as the yearly balancing of his books and the repair of his machinery; and it is only they who, if their efforts are unsuccessful, and sudden adverse changes are made in the tariff, can meet the crisis without ruin. Under such a system, there is no place for small producers. It is as much as they can do to meet the natural uncertainties of trade; the artificial uncertainties they cannot provide for. The consequence is that the labor-market, like all other markets, passes every year more and more under the control of a few great capitalists, who, whenever they please, can make the competition of capital for labor, on which economists rely so much for keeping up wages, a mere farce. Nevertheless, we have yet to see a word of decided or intelligent protest against the tariff and its iniquities from the labor reform party.

Nor is this all. It is not the tariff and the currency only which are helping to give the control of the industry of the country to a few hands. The turbulence and unreasonableness of the workingmen are doing nearly as much. Take the coal trade as an example. The miners engaged in it are a large and hard-working body, whose lot is at best a painful one, and needs all the sweetening it can get. It is not wonderful that they are eager to extract from capital the last cent of wages it can afford to pay. But they have gone far beyond this, and have adopted and try to carry out the worst practices of the English trades-unionists. They take from the employer all control over the processes of his business, prescribe to him not only the amount of wages he shall pay, but the methods he shall employ to keep all workingmen down to the level of the lowest, by prohibiting the display of unusual industry or capacity, and enforce these rules by murder and every variety of outrage. The result is that the coal companies are combining in self-protection. It is only the greatest combinations of capital which can stand the shock of incessant strikes and intimidations, and the more capital combines, the more labor is at its mercy. But we do not remember to have seen, at any labor convention, a word of warning as to the obvious tendency of these disorders.

In short, in this reform, as in most others, there is a strong disposition shown to avoid the natural—which is usually the troublesome—mode of mending matters; exactly the same disposition on which the immense quack-medicine business of the country is built up. To improve one's health by careful diet, by exercise and temperance, involves constant self-denial and no little pains; it is far easier and far pleasanter to take some "stuff" than to live by rule; and the consequence is that a roaring trade is driven in "pain-killers," and "reliefs," and "balsams," in spite of the preachings of the doctors and the teeming from the press of books on health. When we tell a workingman that capital is the result of saving, and that to have capital he must save; and that to have the benefits of large quantities of capital he and his fellows must club their savings and work together, we ask him to be very patient and industrious, to deny himself many pleasures, and to put off for a long time the realization of his hopes. It is not unnatural, therefore, that he should turn eagerly to the quack doctor, who tells him that all he needs, to have capital of his own, is an act of Congress providing for the issue of more paper money, or forcing the banks to lend at a low rate of interest, or fixing the minimum rate of wages or maximum duration of the working-day. This can, of course, be brought about by throwing a ballot into the box, so he sends the quack to Congress, or makes him governor of a State; and that he finds plenty of quacks ready to his hand it is hardly necessary to say.

It is to be hoped, however, that the conventions, in spite of their pompous talk and voluminous resolutions, do not represent, or anything like represent, the real sentiments or expectations of the great body of the workingmen. We believe the agitators have certainly found very few dupes among the native Americans, whose hard-headed appreciation of the facts of life and of the conditions of success consequently give them nearly all the prizes of their callings. But it is to be regretted that these take so little part in the discussion of the labor question. They are hardly ever heard from, and the result is that the laboring class as such can hardly be said to contribute anything to the settlement of the labor controversy. The discussion seems to be carried on on the platform by professional "champions" of the workingman, or else by professional politicians, to whom the workingman's wrongs are simply what a fresh breeze is to a sailor—a means of reaching a snug harbor, and he cares little whence it comes or whither it goes, provided it wafts him and his chest on their way.

NATURAL BOUNDARIES.

When the power of Napoleon I. was rapidly crumbling away after the crushing defeat at Leipzig, the allies, halting at Frankfort before entering upon the last campaign, offered him, for peace, the undisturbed possession of France, with her limits extended east to the banks of the Rhine. The France thus offered him would have been almost coextensive with ancient Gaul, which was bounded by the Rhine, the Alps, and the Pyrenees, and would have embraced, besides the French Empire as it now is, the whole of Belgium, portions of the Netherlands, Luxemburg, and Rhenish Prussia, Hesse, and Bavaria. Napoleon, in his unreasonable pride, spurned these terms of peace, and when, a few months later, he presented them as his own to the Peace Conference at Châtillon, they were rejected by the allies. Napoleon fell, and the kingdom of the Bourbons was ultimately reconstructed as it had been before the wars of the Revolution. But since that time France has not ceased dreaming and talking of her natural boundaries—the Pyrenees, the Alps, and the Rhine. And this has not been the idle dream and idle talk of popular vanity and demagogism merely; statesmen, historians, publicists, and poets have vied with each other in making France believe that she had a natural right to all the lands west of the Rhine, and the dire consequence of that fondly cherished delusion is the present war.

We call it a delusion, for the Rhine is not a natural boundary of France in a rational sense of the word. Nor are rivers, in general, the natural boundaries of countries. Rivers, it is true, form excellent geographical lines of demarcation between provinces or other divisions of one and the same empire, kingdom, or confederation, such as are the lines of the Ohio and the Mississippi, which bound some of our non-original States. But they are no more real lines of separation than are the meridians of longitude or parallels of latitude which have been selected to bound other States of our Union. For rivers, and especially navigable rivers, far from being separating barriers, are natural channels of intercourse and intermingling, of coalescence and union, the world over. Comparative geography, a science of rather recent development, has fully established this axiom. If used as real barriers, as the Rhine and Danube were by the Romans against the barbarians, and the Ticino and Po by the Austrians against Italy, they form unnatural barriers—that is to say, *unnatural boundaries*—kept up and guarded by the sword of the conqueror, occasionally long enough to become, or at least to appear, natural. Watersheds, not rivers, form natural boundaries. Mountain ranges separate nationalities. The same nationality almost everywhere flourishes on both banks of every navigable river. Every basin, or at least every section of a basin, has its character. The inhabitants of the slopes that hem it in will fuse with the dwellers in the bottom. People living on the opposite slopes of a mountain range will tend in opposite directions.

The whole of history and geography, studied together, proves it. The Nile has never nourished two different nationalities on its opposite banks; it has never been the boundary of an empire. Babylonia flourished on both sides of the Euphrates; Assyria on both sides of the Tigris. The Hebrews occupied both banks of the Jordan. Neither the Oxus nor the Jaxartes, neither the Indus nor the Ganges, neither the Yan-tse-kiang nor the Ho ang-ho, has ever formed a boundary between different nationalities, or separated different civilizations. It was not the river Eurotas, the Alpheus, the Cephissus, or the Peneus, but mountain ranges like the Taygetus, the Pindus, and the Œta, that formed, by bounding, the wonderful system of Grecian autonomies. The various sections and branches of the Apennines mainly separated the ancient national divisions of Italy. Rome developed its power on both banks of the Tiber; the Po, in forming Cispadane and Transpadane Gaul, bounded provinces but separated no nationalities; the little rivulet Rubicon only marked the end of a frontier line formed by the Apennines, just as the little Tweed in the Middle Ages served to complete the natural boundary line of the Cheviot range between England and Scotland.

Mountain ranges, not rivers, formed, in the Middle Ages, the grand divisions of the Iberian Peninsula. The Ebro flows not on the confines but through the midlands of Aragon; the Guadalquivir does not bound but traverses Andalusia; Castilians live on both sides of the upper Douro and Tagus, Portuguese on both sides of the lower. The countries of Eastern and Central Europe show striking parallel examples. Russians inhabit both banks of the Volga and the Don, Poles both banks of the Vistula; Germans both banks of the Oder, the Elbe, the Weser, and the Rhine. The Danube flows through the very centres of Würtemberg, Bavaria, Austria, and Hungary. The last-named polyglot country owes its national unity mainly to the encircling wall of the Carpathians; all its rivers flow towards or through its central bottom lands, and thus keep up a union even of the most heterogeneous elements. Bohemia is a mountain quadrilateral.

The mountain and river systems of the rest of Europe confirm the rule, with hardly a single exception. Neither do those of America invalidate it. That the Father of Rivers is a mighty bond of union instead of a barrier of separation, is acknowledged on all hands. The same is the case with the Missouri. A glance at the map will show that the St. Lawrence is only a figurative boundary line between the United States and the British Provinces, and that it flows through the latter. The Rio Grande is a frontier line dictated by recent conquest, and Indian tribes continue to roam on both its banks. Rivers selected as State lines are too feeble even as barriers between communities. The lower western bank of the Hudson is lined with suburbs of New York City. Camden is a suburb of Philadelphia; Covington, of Cincinnati. In South America, the Amazon and the Orinoco offer parallel instances to the Mississippi and the St. Lawrence. Some branches of the La Plata alone can be said to form exceptions, but recent events indicate that even these are not to last.

To return to the natural boundary between France and Germany. It is clear that the Rhine is far from forming it, either geographically or historically. The natural geographical boundary line, irrespective of the now existing nationalities is the watershed between the Meuse and the Aisne and Marne, and its easterly continuation between the head-waters of the Saône and Doubs, on one side, and those of the Moselle and Ill, on the other. All of France that lies east and north-east of this watershed—the main parts of Lorraine and the whole of Alsace—belongs to the water system of the Rhine, a river both banks of which, from its source to its mouth, are inhabited exclusively by Teutonic people—Swiss, Germans proper, and Dutch. Historically, the lands watered by those western affluents of the Rhine formed, after the downfall of the Roman rule in Gaul, parts of the Frankish realm of Clovis, and subsequently of its eastern and purely German division, Austrasia, while the valleys of the Seine and of its numerous affluents formed the much more Gallic western division, Neustria. The Carlovingian Empire embraced both divisions, but after its final disruption during the period of partitions inaugurated by the Treaty of Verdun, Austrasia was merged in Germany, while out of Neustria gradually grew up the modern Kingdom of France. And both Alsace and Lorraine—the latter in its main parts—continued to belong to Germany down to the time when French centralization, developed by Louis XI. and perfected by Richelieu, proved itself decidedly superior to the more and more loosening machinery of the Empire—the final annexation of the two provinces to France taking place under Louis XIV. and Louis XV. respectively. The inner territories of Lorraine have since become almost entirely Gallicized; Alsace is French in sentiment, though not in language, and the section of the Rhine which bounds it on the east has assumed the semblance of a natural boundary, but the semblance only. The possession of the western bank of this river section has stimulated the desire of making the Rhine the eastern boundary of France. The constant threatening to achieve this conquest as an act based on a natural postulate has awakened, even in the more moderate portions of the German people, the thought of re-establishing, on an opportune occasion, the natural boundaries between Germany and France as they were before the Peace of Westphalia. It is beyond the sphere of this article to discuss the questions whether the present is the opportune moment to do it, and whether it would at any time be just or expedient to do it against the will of the populations concerned.

THE PRUSSIAN SOLDIER.

BERLIN, August 11, 1870.

WHEN I wrote to you last we were anxiously waiting the opening of hostilities. Although I did not doubt the final result of the war—for a great people wantonly provoked like ours would have forfeited the right to existence if it had not defeated the enemy—my mind was rather oppressed with uncertainty and anxiety. The interests at stake are too weighty, they involve too much of the destiny of the world, not to impose on every patriotic citizen a heavy care, a personal responsibility.

Now the time of doubt is past. Against general expectation, it is we who have opened hostilities, and although the overture only is played, yet the first week of August has brought the decision, as far as France is concerned. Germany has already proved her superior in every respect; ultimate defeat will be the end of Napoleon. You will find the details of the events which brought about this result in every newspaper, in every telegraphic despatch, in Louis Napoleon's own words, who is now at the end of his means. He who for a dozen years was considered a great man, for the reason that the others were so small, who always speculated on the worst passions of men, and, operating with them, created a reign of corruption, fraud, and lying which could not find its equal even in the first Napoleon's—now stands before the world a self-confessed criminal, begging for assistance and a penny of mercy; for, says he, in the melodramatic address of his official paper, "if you, England, Austria, Russia, and the small fry, do not come to the rescue, greedy, ambitious *Prussia*—(he ought to know by this time that united *Germany* is against him)—will devour all Europe in her insatiability."

We are not so dull as not to know the true state of facts. The cannon-ball of Weissenburg and Wörth has announced to the world that the times of French leadership in the councils of Europe are gone, that the barbarous practices of stirring up nefarious war are done away with, that Germany will now take the place which France has held for two hundred years, but will wield her influence in the interest of peace and humanity. How is it that this sudden change has taken place? To arrive at the true appreciation of things, I propose not to stop on the surface, but to examine the undercurrent of events.

In reading the French papers, you will find that the defeat is attributed by them to the greater numbers of the Germans. I admit that thus far we have been stronger on every field and at any given point than the French. But does this fact speak in their favor? Their population and ours is about equal. They have between thirty-seven and thirty-eight millions of inhabitants, while, on the other side, the North German Confederation has thirty, Bavaria five, Würtemberg, Baden, and Southern Hesse three and a-half—a total of thirty-eight and a-half millions. The French were three weeks ahead of us when they declared war, but they did not move beyond the frontier for the first blow. Nevertheless, they considered themselves so strong, and were so sure of the victory, that they neglected the most ordinary precautions. Why, then, were they beaten? We Germans are better organized for a war, we have a better and more thorough way of doing things in that line, than the French. They are courageous, gallant, and full of spirit, but they do not care for the details of the service; they labor under the mistaken idea that everything can be done and carried out by impetuosity and bravery.

The strength of our organization does not lie in the one per cent. of the population which forms the regular army, but in the number of those who have served their time, and in case of war are called in as reserve and landwehr. Every year 100,000 fully drilled men are mustered out of the standing army, who, in case of war, are liable to active duty in the field for nine more years. Thus, while the standing army numbers only 300,000, our reserve and landwehr are 600,000 strong. They are the flower of the nation—none younger than twenty and none older than thirty-two. The French have only enlisted men. Their last effort to imitate the German system was frustrated by the egotism of the ruling classes, who did not feel disposed to devote part of their time, and, in case of need, their lives, to the service of their country.

When the German troops moved towards the frontier, everything was ready for battle; the smallest strap of the knapsack, the last button on the coat of the steward, were in their places. Formerly, the normal time for mobilizing the army was a fortnight. This time less than a week was required; in some instances, the work was done in four days. Again, formerly the forwarding of an army corps by railroad took either five, or at the utmost eight, days, for it was supposed that a railroad could not forward more than twenty or twenty-four trains of troops a day. Each army corps requiring one hundred and thirty to one hundred and fifty trains, the whole number of trains for ten to eleven corps thus amounted to from thirteen hundred to eighteen hundred. We have five trunk lines running from east to west at our disposal, and, instead of ten to eleven days for forwarding the army to and beyond the Rhine, only six days were required; instead of thirty, we had forty and fifty trains a day, the Government despatching a train about every forty-five minutes. On coming from Cologne to Berlin, I counted sixty-three military trains, each of which contained about one thousand men. A battery of artillery (six pieces) occupied five to seven cars. The service was done with wonderful promptitude and exactness. Not one train was behind time, and only two accidents happened. The soldiers, who were expressly drilled for this kind of railroad service, entered and left the cars with as little noise and delay as the passengers of an express train. I was present when the Second Regiment of the Guards—three thousand men—left Berlin; they marched along the platform, and each car having the number it could hold marked on the outside (as, for instance, forty men or six horses, etc.), they were seated in about three minutes.

After the first week's service, the employees were so accustomed to their work that they despatched trains laden with soldiers as rapidly as passenger trains. The whole Second Army Corps (Pomeranians) were sent from Berlin to Neukirchen, near Saarbrücken, in fifty hours (feeding, drinking, and marching included), and arrived there punctually to the minute.

This spirit of punctuality and strict obedience to the orders of his superior has been inculcated into every Prussian and North German from his earliest youth. The whole training of the nation is pre-eminently military, and, whatever bad effects it may have in other relations and at other times, in emergencies like the present one it is wonderfully adapted for carrying out even the most difficult military task. These qualities cannot be drilled into a man in a month or a year; they must be interwoven with his feeling and thinking; they must work by tradition as well as by present practice. In Prussia, these traditions and practices are now two hundred years old.

But higher than this personal efficiency I value the moral tone of the German army. Our soldiers go to the war to defend their hearths and homes, to repel an attack, to settle our relations to France so fully and thoroughly that she will never again venture to provoke us. It is a bad job, you can hear every landwehr-man say, but it must be done; we know that we ruin our business, but now the time for defeating the French once and for ever has come. There is an earnest resignation and firm resolution in these men which deserves the highest admiration from every impartial observer. All classes of society are represented in this popular army. Even in a New England regiment you could not find so many educated men. While you had the scholar, professional man, and artist by the dozen, we have them by the hundred in every regiment; they constitute in our armies the same percentage which they do in common life. For instance, the other day, I read a small pamphlet written by a Prussian sergeant on the part he had taken in the Bohemian war of 1866. The night before the battle of Königgrätz he had a dispute, he says, with a comrade. It was about the "péripétie" of Sophocles's Antigone, and his friend was just going to answer him when the drum suddenly called the soldiers to arms. This same material we have now—of course not all so well educated, but on the average as good as the best of our nation. Each one of these educated men is as good as two others.

In spite of all that has been written about the intellectual superiority of the French army, I venture to assert that, with very few exceptions, it consists of the lowest elements of French society, and that it is thus cut off from all connection with the civil life of the nation. The French themselves indirectly admit this indisputable fact by excluding all subaltern officers from good society. When they are admitted, they are not allowed to appear in their uniform. An army like the Prussian would not tolerate barbarians as comrades in their ranks. In my opinion, it is as much against the law of nations to fight with Turcos and Spahis against a civilized country as it would be to buy up the zoölogical gardens of Europe and let their inhabitants loose against Germany. Our soldiers and our people treat the prisoners most humanely. The Turcos are not much better than wild beasts. The other day, two Turcos, prisoners, near Erfurt, suddenly attacked a sergeant who had them in charge, violently tore away his sabre, and murdered him most brutally. The criminals were of course most summarily executed, but is there any other army in the civilized world whose soldiers would commit similar outrages?

Diplomatically, France is more isolated than ever a belligerent power within the last hundred years. The stupidity of her statesmen has done the greater part of the work, but the *coup de grace* was given to her by Bismarck's timely publication of Benedetti's proposed treaty, which has put all Europe on its guard against French annexation propensities. Whatever may have been said by the French against Bismarck in this respect, they have not been able to refute his statements; they could not produce a single proof of their assertions. Thus this campaign was already diplomatically lost before it was opened in the field. To judge from present appearances, no other power of Europe will interfere. The arrival of the First (Prussian), Fifth (Posen), Sixth (Silesian) Corps in France shows that the Prussian Government does not apprehend anything from Russia and Austria. As strongly as the first power is in favor of Germany—the Polish and the Oriental questions induce Russia to do everything to continue on good terms with Prussia—Austria will not venture to interfere. Beust would like to do so, just as would Archduke Albrecht, who longs for revenge for Sadowa, but the feeling of the Germans of Austria is too strong in favor of their countrymen, and, besides, the repeated defeats of the French army have shown that Louis Napoleon's is not the strong side, and that it is not advisable to lean on him. Francis Joseph may now return Napoleon's compliment of 1866—"that he does not wish to associate himself with a corpse." All that Austria will do for the present will be to maintain an armed neutrality. Italy and England are of no account in this war, which, if the two belligerents be left alone, will, to present appearances, last no longer than the Bohemian campaign. It would, however, be a great misfortune for us if Napoleon were driven away by his people before peace is made. This man must sign his own doom and the humiliation of his nation, which is *particeps criminis*. We can impose heavier conditions on him than on an Orleans, a Bourbon, or a Republic.

FRIEDRICH KAPP.

FROM LAKE GEORGE TO BURLINGTON.

BURLINGTON, VT., August 12, 1870.

I HAVE spent to-day amid lakes and mountains. I left the further end of Lake George in a little steamer in the early morning. The three hours' sail which you thus obtain is full of delightful beauty. The whole lake is framed in the noblest, purest mountain-masses. On the sides of the mountains, as we started, the clouds lay heavy and low, shutting us in, almost, to our little world of water; and during our transit they occasionally broke into rapid momentary rain; but on the whole I think they gave us quite as many effects as they concealed. At moments, when they thinned and lifted, the pale watery light yellowed the heavy darkness of the ranged forests into a languid counterfeit of autumn. The circling mountains faded and deepened in this passage like arriving and departing ghosts. The great hills group themselves about the upper portions of Lake George with a multitudinous majesty and variety which I shall not attempt to describe. They recede in dimly vaporous bays, where you barely feel their grim walls darkening through the cold gray sheets of cloud; they protrude in great headlands and break the mist with their cliffed and crested foreheads. The especial beauty of Lake George is believed to consist in its innumerable little islands. Many of these are extremely small—a growing-place for a dozen trees; several are large enough to contain a couple of houses. On one of them we saw some brave pleasure-seekers encamped, who came down to the water's edge in the rain and cheered us with a beautiful, cheerful bravado. The scenery about the lake, as a whole, is such a vast simple undisturbed wilderness, that you are almost startled to behold these various little makeshifts of civilization; you half wonder at our capital little steamer and at the young ladies from the hotel on the deck, with copies of "Lothair" in their hands. Landing at the head of the lake, we mounted on stages and drove some four miles to Ticonderoga and the edge of Lake Champlain—passing on our way through a little village which seemed to me, save for its setting of hills, more drearily, dirtily, glaringly void of any poor, pitiful little incident of village prettiness than a village with as fine a name—it was called Ticonderoga—had a right to be. The last mile of the four brings you into a bit of country prettier to my eye, almost, than any other in all this beautiful region. Through a poor wooden gateway, erected as if with a sort of sense of its guarded treasure, you enter a great tract of grassy slopes and scattered trees, which seem to tell you that nature herself has determined for once to aim at pure privacy, and to bestow upon a great rough expanse of American woodland the distinction of aspect of a nobleman's park. The short grass rolls downward in easy slopes, shaded by dense yet desultory groups of walnut and oak. You glance down the short vistas, as if to discover a browsing deer, or, perhaps, in the purer essence of romance and of baronial landscape, the sauntering daughter of an earl. But the pleasant avenue brings you only to the simple ruins of the grass grown fort and to a sudden view of Champlain at your feet.

Of the fort I shall not speak: I dined, perforce, in the half-hour during which I might fastingly have explored it. I saw it only from the top of the coach as we passed. It seemed to me in quite the perfection of decay—of stony decrepitude and verdurous overgrowth—and to exhale with sufficient force a meagre historic melancholy. I prefer to speak of the lake, though of this, indeed, there is but little to say, and I have little space to say it. My sail hitherward of four hours showed me the most and the best of it. There is something, to my sense, in the physiognomy of Lake Champlain delightfully free, noble, and open. It is narrow for a lake and broad for a river, yet it strikes you more as a river. The water is less blue and pure than that of Lake George—a concession of quality to quantity. But its great beauty is the really great style of the landscape: this grand unflowing river, as it seems, with the generous, prolonged simplicity of its shores—green and level, without being low, on the east (till you come abreast of the Green Mountains), on the west bordered by an immense panorama of magnificent hills, receding more dimly from line to line till they meet the steady azure of the great wall of the Adirondacks. At Burlington your seeming river broadens as if to the meeting of the sea, and the forward horizon becomes a long water-line. Hereabouts the Green Mountains rise up in the east to gaze across the broad interval at their marshalled peers in New York. The vast reach of the lake and this double mountain view go far to make Burlington a supremely beautiful town. I know of it only so much as I learned in an hour's stroll, after my arrival. The lower portion by the lake-side is savagely raw and shabby, but as it ascends the long hill, which it partly covers, it gradually becomes the most truly charming, I fancy, of New England country towns. I followed a long street which leaves the hotel, crosses a rough, shallow ravine, which seems to divide it from the ugly poorness of the commercial quarter, and ascends a stately, shaded, residential avenue to no less a pinnacle of dignity than the University of Vermont. The university is a plain red building, with a cupola of beaten tin, shining like the dome of a Greek church, modestly embowered in scholastic shade—shade as modest as the number of its last batch of graduates, which I wouldn't for the world repeat. It faces a small enclosed and planted common; the whole spot is full of civic greenness and stillness and sweetness. It pleased me deeply, considering what it was; it reminded me the least bit in the world of a sort of primitive development of an English cathedral close. On the summit of the hill, where it leaves the town, you embrace the whole circling presence of the distant mountains; you see Mount Mansfield looking over lake and land at Mount Marcy. Equally with the view, though—I had been having views all day—I enjoyed, as I passed again along the avenue, the pleasant, solid American homes, with their blooming breadth of garden, sacred with peace and summer and twilight. I say "solid" with intent; the most of them seemed to have been tested and ripened by time. One of them there was—but of it I shall say nothing. I reserve it for its proper immortality in the first chapter of the great American novel. It perhaps added a touch to my light impression of the old and the graceful that, as I wandered back to my hotel in the dusk, I heard repeatedly, as the home-faring laborers passed me in couples, the sound of a tongue of other than Yankee inflections. It was Canadian French.

Correspondence.

THE ENGLISH WOMEN AND THE CONTAGIOUS DISEASES ACTS.

To the Editor of the Nation:

Sir: I thank you for giving place to my letter in reference to the uncourteous remarks of your English Correspondent on the efforts of many of the most estimable of his countrywomen for the repeal of the Contagious Diseases Acts. I shall not now make any attempt to reply to your comments on what I then said, for I would very much prefer that, in the interest of justice and humanity, you should give room for the comments of a far abler pen than mine.

A few days since, I had a letter on this subject from one of the most eminent of living Englishwomen. Although it was marked private, and on account of delicate health she withholds her name and declines public controversy, I have obtained permission to forward the following extracts to you, feeling confident they will meet at your hands with respectful attention. I am, sir, etc.,

R. D. Webb.

Dublin, August 13, 1870.

"I see with heartfelt pleasure that you have written, and how you have written, to the New York *Nation* about the movement here against the Contagious Diseases Acts. For above half a year it has been a weight on my mind that that paper, so well conducted, so upright, so courageous, so well informed, and so sensible, has been so calamitously misled as it has been about the movement in this country against the Contagious Diseases Acts.

. . . .

"The strongest impression remaining on the minds of English readers of the *Nation* in its treatment of this subject, is that it seems to regard the movement for the repeal of the Contagious Diseases Acts as a woman's agitation, on behalf of a certain group of ideas and feelings which a small number of women have taken up to work after their own fashion. The editor tells us that he has read most of the publications issued on behalf of repeal of the acts. Yet he seems to have paid no attention to the story of what has been done within a year—that is, since two months or so before the women began their work, or dreamed of ever beginning it. What are the facts? It is just a year since the latest of the acts was pushed through Parliament by audacity, stealth, and trick in curious combination. As some of the remnant of our representatives voted for the bill under the idea of its being one of the bills on the formidable diseases then likely to recur among cattle—so did a considerable number of clergymen, ladies, and people with a heavy charity purse, sign petitions and give money for the purpose of obtaining an extension of the new Contagious Diseases Acts over the whole female population (under the name of the civil population) of the kingdom. The trick prospered for some weeks after the inevitable discovery was made of the real character of the bill; for the good and kind and credulous and ignorant people who signed petitions and gave money believed what they were told, that this was a hospital charity by which the bodies of women would be cured of disease and their souls of vice. Some of our present helpers have thus publicly or privately explained their signatures and gifts of a year or more ago.

"By this time, a small but inestimable body of benevolent people had become convinced of the iniquitous character and fatal operation of these acts. The founders and managers of rescue societies and homes for the penitent became aware of the natural and strong alliance that had grown up and was extending between the brothel-keepers and the officials and police who were working the acts; whereas the managers of rescue societies, homes, and voluntary hospitals found their efforts embarrassed wherever the acts were operative. The poor people who are especially outraged by this legislation were growing furious wherever helpless women were endangered by them, and their wrath was fearful when, as often happened, fathers and brothers were asked to sign on behalf of an extension of the acts. During last autumn, the facts of the case reached one woman after another qualified to understand the significance of the crisis and thoughtful enough to see that our very existence as a nation—the rescue from perdition of body and soul—had come to depend on our rejection or reception of the methods of dealing with a special vice and disease, under which one people or another, and too nearly all, are perishing.

"What was to be done? There was not a day to lose; the agitation for extension was urged as vehemently as could be ventured under the necessary condition of concealment from society generally, and especially intelligent women of high character. It was too late, however; the truth had become known beyond the two or three who had striven in vain to expose the character of the earlier act. There are women in England who have grown up in sympathy with the popular admiration of the blessed Lady Godiva, as we were reminded at the time, and they not only had the spirit of Godiva in them, but had intellect and patriotic culture enough to perceive that this question of our day is immeasurably more solemn and fateful than any problem that could come before Lady Godiva. They well knew how their efforts would be treated, and what risk they ran of the cruellest kind of defamation from Christian men who are wont to be satirical on Christian 'ladies' who perceive no duty owing from them to their fallen sisters. Yet sixty 'ladies' of high character and reputable position undertook without hesitation, if not without horror and dread, to try whether they could not prevent the extension of these acts in the next session. At once the storm of insult, rage, and absolute outrage of justice burst upon them. Where they were spoken of in print it was as a handful of immodest and notoriety-seeking women interfering with a work of beneficence, and the facts of their being supported by their husbands, brothers, and friends in the law, in the church, etc., were suppressed. By what I see in the *Nation* and other American publications, I gather that it is there supposed to be a woman's movement altogether, and taking its place in the series of benevolent enterprises which never comes to an end.

"Again, then, what are the facts? The Parliament session of 1870 is closed, and there is no extension of the acts nor any prospect of such extension. I know something of the devices and plots of the promoters of the acts under their new experience of a high-principled, vigilant, and intelligent opposition, and I am disposed to doubt whether they have themselves any belief that such extension will ever be obtained. On the other hand, I hear of no doubt in any quarter of the repeal of these acts, nor of a repeal in time to avoid the popular insurrection which would be rendered inevitable by persistence in the outrage of subjecting the people of England to such a law as this.

"Some of the fruits of the action of this handful of 'ladies' are these, if the credit really belongs to them: Some months ago there were 270 organized associations in the towns of the United Kingdom, and by these a vast amount of business has been done.

"The petitions to Parliament during this single session for the repeal of the acts have been, as its members know and its records show, between 600 and 700, and the signatures of men and women exceed half a million. Besides petitions and memorials from local residents here or there, there are very many from clergymen, with the sympathy of several of the bishops; from barristers, solicitors, and lawyers' clerks; from physicians and surgeons; from retired Indian officers who have seen how the acts work; from the flocks of all manner of clergy; and from countless multitudes of workingmen and women—the greatest sufferers by the law and its perversions.

"The proposal of Government, when under increasing pressure, of a commission to enquire into the working of the acts, is refused because the time is past. The demand is that we shall be rid of the mischief for ever. We can see for ourselves whether the administration of the law is good or bad while it lasts, and great progress is daily making in this task; but this is another question from that of the repeal of the law. Upon that repeal the country is determined, and if it is not effected before the next general election, it will be then.

"One class of facts, the most important of all, can hardly be better presented than as it is comprehended in the significant piece of our experience with which I must end my letter. Of course, the main interest lies in the enquiry how the sin, the suffering, and their victims, fare under the new system. This is the brightest part of the whole experience. Never was there before such a prospect of the retrieval of health, morals, and domestic life, under the simple process of our each doing our duty, and especially by pure women at last venturing to take an interest in their fallen sisters. A year ago, while our conspirators were passing this law which brings us under the French system, as far as our officials dared go, the people of Paris knew and felt themselves to be perishing under that system, and dreary were the disclosures of their despair. Our movement revived hope in them. If we were seeking to escape the curse of the prevalence of such a system, they might try to get rid of theirs, however fearful their state may be. The enterprise was in course of organization, our example was appealed to in France and our sympathy sought over here, when the new war broke out. I trust it will not be long before our neighbors are working again as we are, and as we mean to work till our end is gained.

"Now, would any American reader of the *Nation* read our story in the past year truly in regard to the Contagious Diseases Acts from the notices of Englishwomen which its pages offer? The question for the *Nation* to ask of itself is this: All these things have been effected in spite of a 'conspiracy of silence' among the newspapers in combination with contempt and insult towards the ladies themselves. The *Nation*, among other organs, has assumed the ladies to be the agitators. Were they so? If not, where do their critics stand? All I have to say about this is, that I suppose we shall all agree that if those ladies have not done it, it would never have been done without them."

[We do not believe we have been misled about the agitation. We have, as far as we can remember, only drawn attention to it as helping to throw some light on a subject of a good deal of interest to American readers—the kind of politicians and legislators women are likely to make. Against the work the English ladies are doing we have nothing to say, and, we believe, have said nothing. But we have seen, or think we have seen, in their methods additional reasons for believing, as we do believe, that the world will be none the better for female suffrage, and may be somewhat the worse. We read, for instance, the "Englishwoman's" letters to the *Daily News*, which have since been collected in a pamphlet, in which she produced a good many solid reasons against the acts; but her remedy for the awful evils, for which she deemed the acts no remedy at all, may be described by saying that she thought vice ought not to exist; there being no vice, there would be no disease: therefore, let everybody be virtuous, and the problem is solved. Now, we honestly confess that we do not ourselves want to live in a state in which legislation is likely to be based on this kind of reasoning. We may add that we think, judging from all we hear and read, that there is no subject on which women are less fit to legislate or influence legislation than the sexual relation. We have seen no statement of their opinions upon it—either oral or written—in which the most important fact—the one which makes any regulation of the matter necessary—was not passed over in silence or treated as of small consequence.—Ed. Nation.]

YOUNG YALE'S REAL COMPLAINT.

To the Editor of The Nation:

Sir: I have been waiting for several weeks in the hope that some better qualified person than myself would come forward and state the real grievance of "Young Yale," or rather the real desire of "Young Yale." As matters stand now, there seems to me to be little probability of a cessation of complaints, for neither side frankly considers the vital question at issue. They are like a patient who keeps on grumbling, and while he persists in contorting himself and making it perfectly clear that he is suffering a good deal, yet declines to let his symptoms be known and will not name his complaint. You say "Young Yale" does not know what it wants; your correspondent "M. A." says the same thing; but, if you will allow me to run the risk of hurting the feelings of gentlemen whose feelings I should be very sorry to hurt, I think I can come a little nearer to setting forth the desire of "Young Yale" than any one else has yet.

In his "American Colleges and the American Public," Professor Noah Porter asks the question whether the guardianship of Yale, among other similar institutions, has not been too largely in the hands of clergymen. He answers it in the negative. Now I for one—and most Young Yalensians with me, or else I am greatly mistaken—do not believe that ministers, as they are commonly found in actual life, whatever may be the ideal theory of the ministerial office, are the best men to be entrusted with the control of a great university. It may be a necessity of the educational situation in this country, where denominationalism is as yet strong and culture at a low ebb, that ministers should control most of our colleges, for most of them are supported by denominational money and are devoted to making ministers. But, as we feel, a university to do true university work should be in the hands of the very best men in the community; and such we think clergymen are not. We think ministers are, as a class, men of second-rate ability, and that there are few of them who are not inefficient in thought, narrow-minded, and in the true sense of the word uncultivated. We believe, if trial could be made of an equal number of Yale laymen as managers of the university, that in ten years the truly liberalizing effect of a graduate's education on his mind would be five times that which his education under the present clerical system gives him. Ministers are, as a rule, inferior men—that, sir, broadly stated, is the position of "Young Yale," and it is just as well that the real root of trouble should be pointed out. There may be no cure for it; but at least the complaint is now specified, and I trust the doctors may be able to do something with it. I am, sir, respectfully,

ALUMNUS.

Notes.

LITERARY.

WHEN Messrs. Roberts Brothers announced their new translation of the works of George Sand, Messrs. T. B. Peterson & Brothers, who were not afraid to disseminate paper-covered copies of her books in the days when her name was a by-word in this country, immediately began issuing a rival edition; and to meet Messrs. Roberts Brothers' "De Mauprat" and "Antonio," they have put forth "Consuelo," "The Countess of Rudolstadt," "Teverino," and "Indiana," and these are to be followed by several others.——We are glad to be able to announce that Mr. Francis Parkman has in hand a new edition of his "Conspiracy of Pontiac." It will contain many additions from manuscript material which has turned up since the first edition appeared—chiefly from a mass of correspondence added within a few years to the British Museum, and known as the "Bouquet and Haldimand Papers." The letters of officers in the Pontiac war are several hundred in number, and exceedingly curious and interesting as vivid and lifelike reflections of the experience of those most actively engaged. There are many from Sir Jeffrey Amherst, the commander-in-chief, and many more from officers of every grade, from colonels to ensigns, part of the correspondence being official, and part friendly and familiar. Brother officers are not always spared, and the perplexities of those highest in command, and the shameful practices to which Amherst resorted in order to overcome an enemy of which he was continually proclaiming his contempt, appear in a light which is rather surprising. Considerable portions of the book have been rewritten, and many extracts from the letters incorporated.——Messrs. Lee & Shepard, of Boston, have associated with them Mr. Charles T. Dillingham, formerly of the firm of Felt & Dillingham, and, under the firm-name of Lee, Shepard & Dillingham, will open at No. 49 Greene Street, in this city, a wholesale bookselling store, where they will offer for sale a full assortment of standard, miscellaneous, and school books, and also of stationery.

—Following every man of first-rate abilities, whose employment of them threatens, or seems to threaten, the established order in any field of thought—religious, political, social, philosophical, what not—there are always to be seen crowds of eighth-rate and tenth-rate people who make of themselves zealots and iconoclasts where their leader did no more than examine the images; who, if he doubts the authenticity of Genesis, become proselytizing infidels; who noisily preach Darwinism before Darwin himself has framed a theory; who are free-lovers because Mr. Mill thinks that reform of the laws governing the married state is highly advisable; and who, in general, rush in with much noise and perfect self-satisfaction where the men they swear by walk softly. They are always half-educated people, superstitiously ready to disbelieve in the old, and to imagine that every man with some new thing has infallibly found out the secret of the universe; and usually they have all the haste and heat and intolerance and self-complacency of half-educated people. To these are frequently joined the half-crazy men of one idea, who may or may not be men of acquirements and of good sense as regards some things, but whose minds are, as regards some one or two subjects, all awry. Some such investigators and philosophers would seem to have set on foot a new magazine called the *Modern Thinker*, the first number of which has just appeared, and contains, among other articles, one by Mr. J. H. Noyes, of the Oneida Community; one about Mr. Stephen Pearl Andrews's Science of Sciences and Philosophy of Philosophies, or "Universology;" one, in the form of a novel, about the "Love Life of Auguste Comte;" one by Mr. Frederic Harrison, the acute and clever English Positivist, on "The Positivist Problem;" one, a careful article, by Mr. John Fiske, on "The Jesus of History and the Jesus of Dogma;" and one on two or three topics not usually discussed in public, and not well discussed here. It will be seen that there is some good work in the magazine; but the general tone of it is not such as to promise it a useful or a long existence. It is worth getting, however, as a literary or, rather, typographical curiosity, for it is printed not in black and white but in various colors. Mr. J. H. Noyes's page, for example, is flesh color, and the ink red; Mr. Fiske's, a sort of gray, and the ink blue, and beside these are half-a-dozen or a dozen other colors, so that the book looks like a collection of magazine covers mixed with advertising sheets. "I do not hesitate to say," says the editor, who appears to be anonymous, "that white and black for reading matter are simply infamous and damnable. . . . The popular books of the future must be printed in all the colors of the rainbow." This he says pleading for distinctness of letterpress and the comfort of the eye. But he mixes up with this pertinent plea one or two others. Thus, he declares black "indicative of feculence, smut, decay, and death;" and asserts that colors, harmoniously arranged, delight us. Whether, in printing his magazine after this odd fashion, he has been governed by a desire to attract attention to the work or really holds the opinion he puts forth, we do not know. His outbreak against the damnableness of black and white certainly appears to have no great heartiness of cursing in it, and has a hollow sound, and the opinion is certainly absurd enough to make one suspect the sincerity of any intelligent man who advances it. As a matter of fact, the letterpress of the *Modern Thinker* is fatiguing and baffling to a degree that no black and white page of anything like the same size of type ever attained. Reading undoubtedly does in time get the eyes of most readers more or less out of order. It is partly the penalty of labor, and partly, of course, attributable to defective printing. But however that may be, the fact remains that we do not open books to delight the eye with harmonies of color, nor to observe the occult relations of colors to moral sentiments. Such things are, and we can and do perceive them; but we open books not to perceive such things, but to read sentences. A clear-cut black character on an unglazed paper—the black as black and the white as white as each can be—make the page of which, so far as colors are concerned, it is easiest to get the meaning. This, at all events, is our experience, and it would seem to be the common opinion of mankind, which no longer approves even the light tints of buff with which the publishers once sought to relieve our overworked eyes.

—Nothing gets hearing now except news from the gigantic war, and we have none of us given more than a moment's attention to the death of Mr. John Pendleton Kennedy, an event which, indeed, in any recent year would have had not very much more than passing remark. When we consider the space that they once filled in the public eye, the confidence with which their admirers used to pronounce them sure of lasting fame, it is seen to be really profitable for us of this generation to note the noiseless and unmarked departure one after another of the distinguished Americans of forty and fifty years ago, the poets, and orators, and statesmen, and novelists of the second generation of Americans—the men to whom Dr. Griswold gave tickets for immortality, endorsed with the name of "one of the most eloquent orators and distinguished scholars of the age, writing in the *North American Review*." Mr. Kennedy was such a man. "Mr. Kennedy deserves a place in the front rank of American literature," said President King, of Columbia. "Mr. Kennedy is, altogether, one of our most genial, lively, and agreeable writers," says Dr. Griswold; "his style is airy, easy, and graceful, but various and always in keeping with his subject; his delineations of nature are picturesque and truthful, and his sketches of character are marked by freedom and delicacy"—and much more of the same sort—very vapidness itself; but it is, let us recollect, our American criticism of thirty years ago; and still worth a blow or two in our day. "We do not know," said the most eloquent orator and distinguished scholar before-mentioned, writing in the *North American Review*, "that we can better evince our friendly feeling for him than by expressing the wish that the success which this production has met with may induce him to withdraw his attention from other objects, and devote himself entirely to the elegant pursuits of polite letters." Mr. Kennedy lent an ear to Mr. Everett and Dr. Griswold so far as to write other books than "Swallow Barn," but was wise enough not to forsake law and politics for literature, and had success in all three. Born in Baltimore in 1795, he was graduated at the college in that city in 1812, and, going into the army, made the Bladensburg campaign. Leaving the service in 1814, he was in 1816 admitted to the bar, and in 1820 took the second step in the ordinary life of an educated young American lawyer of those days by going into the Legislature. In 1838, he made his first appearance in the House of Representatives, where he staid six years, exercising much influence in the Whig party, which he served with tongue and pen, and of whose protectionist policy he was a vigorous supporter in speeches, pamphlets, reports, resolutions, addresses, and debates. He was of high rank in the party when Webster and Clay were its leaders, and had for many years a national reputation, such as the newspapers confer on politicians, though a mere politician he never was, still less a low one. Personally, his character was without blemish; and politically, he was never a truckler to the South as were too many of his fellow-partisans, and did not conceal his opinion of the dangerousness of extreme Southern doctrines. Indeed, he had known a generation of Virginians who held another belief than Mr. Mason's or Mr. Roger Pryor's in regard to the good policy of slavery—the *ante*-cotton-gin generation, which bred no "hands" for Alabama. The highest office that he ever held was that of Secretary of the Navy, a post in which, as Allibone remarks, "he had been preceded by two distinguished literary brethren—James K. Paulding and George Bancroft." His first attempt in literature was the publication of a periodical made up mostly of tales, sketches, and verses, and entitled the "Red Book," which appeared in 1818 and lasted through 1818 and 1819. He was thirty-seven when "Swallow Barn" appeared—a picture of Virginian life—and forty when he published "Horse-Shoe Robinson," a story which followed in the track that Cooper struck out when he wrote "The Spy," and brought the American Revolution into romance. "Horse-Shoe Robinson" was Mr. Kennedy's most successful book, and, as we recollect it, deserved some of its popularity, though we suppose nobody reads it now, and that its predecessor has more of permanent value. Mr. Kennedy's other works are of no consequence, except that his "Life of William Wirt" is a biography with a certain amount of history of a certain sort in it, and doubtless will now and again be consulted by the historical student. Some history, too, there is, in his third novel, "Rob of the Bowl," which will give the general reader a little insight into the troubles in Maryland between the Catholics and the turbulent Puritans, in the days of Cecilius, Lord Baltimore, the lord proprietary. Mr. Kennedy was, we believe, never married. He died at Newport, Rhode Island, in his seventy-fifth year, leaving behind him the memory of an honorable man, a good lawyer, an industrious writer, and a patriotic and public-spirited citizen, who had everybody's confidence and respect.

—The *Pall Mall Gazette* has always been fortunate in its correspondence of all kinds, whether it was done by Mr. James Greenwood as an Amateur Casual, or by the late Mr. Higgins, or by a French Orleanist, or by a painter of the social and political figures of the Second Empire, or by Mr. Matthew Arnold, as the advocate of *Geist*, or by tourists in Europe and America, or by writers resident in India, or by Mr. "Azamat-Batuk," an unconverted and contemptuous Turk, spying out the weaknesses of the Briton—whether done by its special correspondents abroad or its volunteer correspondents at home, or by correspondents in its own office concocting letters planned by the editor. Its correspondence, indeed, has been perhaps the *Gazette's* most marked feature, and the feature most uniformly good, not yielding in excellence to the admirable editorial department, nor in interest to the "Occasional Notes"—departments always of variable goodness, and perhaps not on the whole so good of late as formerly. "Azamat-Batuk's" letters have been especially excellent. Their author is a sharp observer, witty and sardonical, who sees underneath a great many British conventional customs indelicacy, brutality, stupidity, and, above all, hypocrisy. All these he can bring into plain view by the *naïveté* with which he asks information, and states fully and plainly certain matters as to which he, being an enquiring foreigner, with a great admiration for the English, would like explanations. A sort of *enfant terrible* he is, only with a malice aforethought that makes him *terrible* in the superlative degree. The effect is that of sardonic satire in almost its best development. Almost its best, we say. Swift's satire, for instance, sardonic as it was, yet very often perhaps oftener than otherwise, had in view special or general reforms, and thus, cruel and degrading as it could be, it on the whole gives one the sense of moral earnestness, and so redeems its master's name from the charge of mere Mephistophelianism, which, if it does seem to lie against some of his works, does not lie against the man himself. He may, as they say, have bitterly hated and despised men, especially at the last of his intercourse with them; but it never was his way to despise them utterly, and with perfect good-humor to amuse himself with them. Of this, a sort of satire which can hardly be the best development of the satirical, Mr. "Azamat-Batuk" is an efficient master. He makes manifest, with the utmost good-nature and with much humor and wit, his entire contempt for the modesty and the talk of modesty of the women who go to see Schneider; for the dignity of British statesmanship; for the piety of British religious people: for the religious scruples of the people who have had English education in their hands; for the truly British hatred of shams which must have actuated Overend, Gurney & Co.; for the comparative honesty and happiness of the British tramp and a wooden-shoed slave in France—in short, for every humbug in England. This gentleman is said to be a M. Thiebland, and at present he is writing letters from the seat of war for the *Gazette*. They are enlivened with his peculiar vein of satire, and are extremely readable both in virtue of that and of their ability. There is talk, we see, of putting his late contributions to the *Gazette* into a book, and it would be a good one, whether or not acceptable to a very large public, for it would be finished satire of modern England. Awhile ago, Messrs. Roberts Brothers announced a collection of sketches of modern French political society, presumably by the same hand—but not written in character, as these Turkish letters are—and giving an excellent gallery of the personages of the régime of the Second Empire; but apparently they have given up the project.

—The discussion in the *Nation* last March between Mr. Edward Cunningham and Professor Pumpelly, in regard to the behavior of foreigners in China towards the Chinese, has naturally attracted the attention of the parties accused. The Shanghai *News-Letter* of June 10 has a communication from a gentleman who signs himself "Suaviter in Modo," and who recommends the adage impartially to both of the disputants. The assertion that it is the daily *practice* of foreign vessels to sink any native boat that comes in their way is, he agrees with Mr. Cunningham, one that "can scarcely be believed to come from an average intelligent being, as applying to a civilized and at least somewhat enlightened community." Nevertheless, it is quite true, he says, that certain ship-captains are not over-scrupulous in retaliating on Chinese boats for their obstinate and reckless slowness in getting out of the way, and are not so careful in avoiding collision with the "dreadfully provoking" native craft as they would be with foreign craft under the same circumstances, or as they ought to be. Touching the question of intercourse on land, he finds the Professor's remarks too sweeping, but not essentially unjust:

> "That foreigners on shore treat the Chinese differently from the way they would persons of the same class at home is undeniable. It is just here Mr. Cunningham misses his point. It is precisely *because* these young men (for it is principally young men), who are the brothers and sons of London and New York merchants, *do not* behave here as they do at home, that there is reason for much condemnation. Is not the pushing and shoving out of the way respectably-dressed men, the mode of speaking even to merchants who come in our offices, the calling our servants 'fools' and 'stupids' for not understanding unusual orders in a foreign tongue, followed in too many instances by blows, in strong contrast to the behavior of the same men towards their dependents or inferiors at home?
>
> "It is preposterous to say that generalizing on the treatment of the Chinese is like generalizing upon an unavoidable incident at home, or that any one flourishing his cane here would be brought to his bearings as soon as if in Boston. I could cite cases, with names, within the past few months, that would completely disprove any such assertion—as, indeed, a walk of five minutes, taken for the purpose, would equally do."

The *Cycle* of June 18 approaches the controversy in a very different spirit, not concealing its anger at Professor Pumpelly's "wilful perversions of truth." It meets his allegations, however, chiefly by *à priori* reasoning, and in its indignation at his over-statements neglects to prove them utterly baseless.

—The historian Mommsen, moved by the report that an alliance existed between France and Italy against Prussia, has addressed a letter to the Italian people and Government, not as a politician, but as having at least a literary claim to be heard. It is, of course, an appeal for friendship and sympathy; but if it were skilfully made in other respects, as we do not think it is, it is weak precisely in its historical arguments. "Have you forgotten," he asks, "our shouts of admiration for those who fought at Novara? our burst of enthusiasm when the Lombards shook off the Austrian chains? our firm and fortunate brotherhood in arms that brought the Prussians to the Main and the Italians to Venice?" And the editor of the *Perseveranza*, who believes in the European equilibrium and the balance of power, and who fears French or even Napoleonic defeat because Garibaldi and Mazzini may take advantage of it, replies: "We also remember that in 1848 the German Parliament declared the Mincio the frontier of Germany on the side of Italy; that in 1859 Prussia made the French army pause on the Adige, and delayed for seven years the liberation of Venice, possession of which it guarantied to Austria in 1864, in order to seduce her into the war with Denmark; and finally, that in 1866, after having shown a hostile and contemptuous animus towards us for many years, it made, for its own interest, and stipulating that it should have supreme control, the league against Austria, and ended by calumniously making doubly bitter for us a defeat which had been a great part of its victory." This exchange of memories is a good illustration of the futility of raking up the past history of either combatant in order to find which is right in the present conflict, and what powers should be its natural allies. Properly speaking, as we remarked last week, the enemy that now has France by the throat has no history, but springs new-born upon the stage—united Germany.

—Three years ago, when the Emperor Napoleon wanted excuses for enlarging his army, he alleged that "a nation's power depends on the number of men it can bring under arms." Dr. Léon Le Fort thereupon, in a singularly able article in the *Revue des Deux Mondes*, undertook to show that with the existing military system of France the number of men to be brought under arms was steadily diminishing. While Prussia doubled her population once in 54 years, France required 198 for the same increase. The death-rate in France, he admitted, was small, and the "mean age" (31) higher than in any European country; but this only pointed to a falling off in the number of births, since it is well known that the mortality of the first year of infancy is vastly greater than that of the next twenty years. In fact, France showed but 268 births for every 10,000 inhabitants, where Prussia showed 374, and Saxony 410. The chief cause of this, in the opinion of Dr. Le Fort, was the custom of late marriages, which the military law fostered to a great extent. Thirty and twenty-six are the marrying ages in France for men and women respectively; in England, twenty-five and twenty-four. At twenty-seven, in France, out of a thousand men there will be 582 bachelors and 418 husbands. Every year 80,000 young men are taken off for the seven best years of their life, and, when returned to their homes, seldom marry under three years more of celibacy. Fully one-third of them, though the pick of the population, come back tainted with contagious diseases. In 1867, it was remarked with satisfaction that more recruits per centum were passed than formerly. This, replied Dr. Le Fort, is because of the greater need of soldiers, forcing us to be less particular. During the Crimean war 70 per cent. were passed instead of the usual 60—"the hospitals and graveyards of the East knew with what result." The Emperor's dictum was sound, but it only called attention to the weakness of France. There was another maxim he might have remembered before throwing down the glove to Prussia: of two armies numerically equal, the more intelligent is the stronger. We showed last week the difference in respect of capacity to read and write between the now opposing armies. It is worth noting that of the four French Departments whose wholly illiterate conscripts in 1857–61 amounted to only five per cent.—namely, Doubs, Bas-Rhin, Meuse, and Haute-Marne—two form part of the ancient Germanic provinces of Alsace and Lorraine, and the other two are directly contiguous. In all Brittany, all Central France, and in several Departments of the South, sixty-six per cent. of the conscripts could neither read nor write.

—An imperial octavo volume of 1,888 pages, printed in small type and two columns to the page, which professes to tell us concerning all living notabilities, could not fail, if edited with even ordinary ability, to contain a large amount of useful information not elsewhere attainable. Nor could it well fail of falling very far short of perfection. The "Dictionnaire Universel des Contemporains," just published by Hachette, is a work of this character. Its great and clearly patent utility is, unfortunately, injured by too frequent references for important information to previous editions, which as a general rule are totally unattainable by the foreign reader even when not exhausted at the publisher's. The objection is a serious one, as such references occur on almost every page. Then we find too much space given to doubtful and noisy celebrities, to the exclusion of respectability of position and talent. Thus, much is told us concerning Madame Audouard, Adah Isaacs Menken, Madame Thérésa, and Schneider of "Grande Duchesse" celebrity, while we hear nothing whatever of such women as the Comtesse de Ségur, Mrs. Craven, Madame Lenormant. In sympathy with this tendency we find very defective mention of notabilities of the religious and theological world. All things considered, its mention of American celebrities is as fair and as full as could reasonably be expected, and certainly a great improvement on any compilation of the kind we have seen from Europe. All proper allowance made for inevitable defects, besides those specified, the work is one of decided value.

NOYES'S HISTORY OF AMERICAN SOCIALISMS.*

Readers of the *Tribune* for a year past must have observed the notices of a colony in Colorado, composed of the *élite* of the *Tribune's* country readers, and named "Greeley" in honor of the editor, who was, but for his broken health, to have delivered there a Fourth-of-July address, on the last occurrence of that anniversary. And letters from the leading spirit, Mr. Nathan C. Meeker, will also be remembered, giving an account of the progress of the infant settlement. These names, thus associated, recall the period, nearly a generation gone, when Fourierism was at its height, and when Mr. Meeker, sustained, if not originally converted, by the doctrines of Mr. Greeley, was striving to prove them in the Trumbull Phalanx, of which he also acted as the chronicler. Time has changed the form of the socialistic experiment, but evidently has not destroyed the socialistic tendency in this instance; and considering how tough our innovators and reformers are, and how recently the more successful communities have been abandoned, the number should yet be large, even of the principal movers in these enterprises, that have survived them, perhaps still cherishing the beliefs which they failed to realize. How numerous this class is, or at least the class of which they were but the representatives, is a question of more than ordinary interest to the student of American society—the class which the *Tribune* more or less directly addresses, and which, after the failure of Owenism at Yellow Springs, founded there (by accident or by instinct?) Antioch College, and after the failure of Fourierism at Perth Amboy, founded there Eagleswood School, and after the failure of "Nothingarianism" at Northampton, has founded there a Free Church without priest or creed; the class liberally disposed on every side, hospitable to every ism; the class, in short, well comprehended, except in its highest culture, in the person of the late Henry C. Wright, who for so many years had been a public advocate of temperance, of abolition, of rational religion, of hydropathy, of spiritualism, of sexual continence, of woman's rights, of non-resistance, of the abrogation of capital punishment, and who had "seen through all forms," whether the ballot, or the Sabbath, or the police. It still exists, this class which has dieted on Graham biscuit and vegetables, and dosed itself with Thompsonian medicines in earlier days, and which thinks it strange that a homœopathist should be a Calvinist, or a Unitarian a Democrat. Has it tried socialisms once for all; or has its past experience only fitted it to receive the truer forms which may attract it hereafter—which may even now be developing visibly?

Some such questions as these, whether or not he has consciously put them to himself, Mr. Noyes has furnished ample material for discussing; and it is probable that something more than a desire to satisfy his own or public curiosity has led him to take the pains which have resulted in this handsome volume, whose historical value is not likely to be overrated. He has built upon foundations begun by a Scotchman who came to this country about 1850, to ascertain the material facts concerning the associations and communities which flourished or decayed during the first half of the century. Macdonald's collection was incomplete in itself, and he never lived to publish it; but it enabled Mr. Noyes, who had been a witness and student of the socialistic fever, to construct as nearly perfect a record as it is of any importance to have; and it will be generally admitted that he has done so candidly and impartially, and with no little acumen. Nor can any fault be found with his humor, which indeed it would have required a miracle to suppress altogether. He has allowed others to portray those "queer geniuses" who afflict every association or associated movement having disinterested aims and an indefinite fellowship, with no severer test than sympathy with certain moral principles. What stories could not be told of these unkempt parasites who brought such discredit on the worthiest of causes—the men who did not believe in money, and would therefore ask you to pay their passage for them; who did not believe in changing plates at table, nor their linen ever; who did not believe in organization at public meetings; and who did believe, and would tell you sadly, you were "on a lower plane" if you did not assent to their preposterous vagaries—the kind of men who made it necessary to explain: "I *am* a spiritualist, but I'm not a damned fool." Portraits of such have been borrowed by Mr. Noyes, but he has refrained from adding anything to them.

Here is Macdonald's description of one of the lights of the Marlboro' Association, and doubtless a specimen above the average:

> "Dr. Brooke was a tall, thin man, with gray hair, and beard quite unshaven. His face reminded me of the ancient philosophers. His only clothing was a shirt and pantaloons; nothing else on either body, head, or feet. He invited us into his comfortable parlor, which was neatly furnished, and had a good supply of books and papers. Our breakfast consisted of cold baked apples, cold corn bread, and I think potatoes.
>
> "We questioned him much concerning his strange notions, and in the course of conversation I remarked that such men as Robert Owen, Charles Fourier, Josiah Warren, and others, had each a certain number of fundamental principles, upon which to base their theories, and I wished to understand definitely what fundamental principles he had, and how many

---

* "History of American Socialisms. By John Humphrey Noyes." Philadelphia: J. B. Lippincott & Co. 1870.

> of them. He replied that he had only one principle, and that was to do what he considered right. He said he attended the sick whenever he was called upon, for which he made no charge. When he wanted anything which he knew one of his neighbors could supply, he sent to that neighbor for it. He showed me a brick out-building at the back of his cottage which he said had been put up for him by masons in the vicinity. He made it known that he wanted such work done, and no less than five men came to do it for him."

"Prairie Home" had, perhaps, more of these odd characters than any other community. Here, says Macdonald—

> "I sat beside a Dr. Hard, who noticed that I took a little salt with my potatoes, and remarked that if I abstained from it, I would have my taste much more perfect. There was but little salt on the table, and I saw no person touch it. There was no animal food of any kind except milk, which one or two of them used. . . . . . .
>
> "I put many questions to them, all of which were answered satisfactorily. Here is a specimen of our dialogue:
>
> "Do you make laws? No. Does the majority govern the minority? No. Have you any delegated power? No. Any kind of government? No. Do you express opinions and principles as a body? No. Have you any form of society or test for admission of members? No. Do you assist runaway slaves? Yes. Must you be Grahamites? No. Do you object to religionists? No. What are the terms of admission? The land is free to all; let those who want, come and use it. Any particular trades? No. Can persons take their earnings away with them when they leave? Yes."

The West had the greatest number of socialistic experiments, for two reasons, as we conceive: first, because a fatal error of the communities, as Mr. Noyes points out, was their greed for land in excess of all capacity to cultivate it, and land was much cheaper than at the East; and next, because the habits of the people prepared them to change readily their mode and place of living—in other words, because of the colonizing spirit which characterizes the West. Mr. Meeker's lot is now cast in "Greeley" it may be as much in consequence of this Western unrest as because he remembers he was once a Fourierite. Nevertheless, it is worth remarking to what an extent Central and Western New York has been fruitful in socialistic *doctrinaires* and enterprises, though it has little to show now except the Shakers and the Oneida Community. New England's part was more original than that of any other section, Mr. Noyes conceding that Brook Farm, Hopedale, and Northampton were purely Yankee attempts to solve the social problem—the first, of course, until it lapsed into Fourierism. These, it may be safely said, gathered about them either as members, friendly visitors, or advocates by word and pen the most intelligent and cultivated of all American socialists—brains which still, to some extent, lead to-day's thinking or affect to-day's action, but whom it is almost impossible to imagine repeating now the lofty shibboleths of the *Dial* and *Harbinger*. What they accomplished, Mr. Noyes describes as follows: "Unitarianism produced Transcendentalism; Transcendentalism produced Brook Farm; Brook Farm married and propagated Fourierism; Fourierism had Swedenborgianism for its religion; and Swedenborgianism led the way to Modern Spiritualism." Nor is this all (nor the worst?). "The Oneida Community really issued from a conjunction between the Revivalism of Orthodoxy and the Socialism of Unitarianism."

Here we come upon the author's general view of the providential succession of socialisms in this country. All the religious communities that were established and prospered prior to 1825 he considers the "specie basis" of the movement in the succeeding quarter of the century. Such were the Shakers, the Rappites, etc., who illustrated both the possibility of social harmony and the worldly advantages of co-operative labor. In 1817 began the Nettleton revivals, and in the reaction which followed them, in 1824, Robert Owen appeared and purchased New Harmony of the Rappites. His scheme produced eleven communities, all short-lived. In 1831–1833 occurred the Finney revivals, and in their wake, in 1842–3, followed Brisbane and Fourierism with thirty-four communities. The Bible and infidelity alternated—revivals being purely American, and our socialisms imported and non-religious. Owenism and Fourierism agreed in aiming at an enlargement of the home circle, but differed as communism and joint-stock operations differ. The political associations of the former were with the Democratic, of the latter with the Whig party; and, concludes Mr. Noyes, it is reasonable to say "that Socialism, in its duplex form, has touched and modified both of the party-sections and all departments of the national life." In the main, one may agree to all this without basing upon the past achievements of socialism any very lively hope of its being resuscitated. Mr. Noyes's affirmation is quite strong enough: "We do not believe that the American people have lost sight of the great hope which Owen and Fourier set before them, or will be contented with anything less than unity of interests carried into all the affairs of life." That portion of the people which knows anything of Owen and Fourier except as empty names is indefinitely small, and that the vast majority cherish any "hope," great or small, in regard to communism, is, we believe, an utterly chimerical notion. The growth of co-operation may or may not prove favorable to socialism, though unquestionably socialism, where successful, is of the greatest value to co-operation, as demonstrating the correctness of the principle; and it is, in fact, in quite another direction that Mr. Noyes looks for the propagation of his patent theory of "Bible communism."

The peculiar doctrines of the Oneida Community being here set forth not for purposes of proselytism, but as part of the subject of the book—that is to say, historically—we are not called upon to criticise them. As they are utterly repugnant to the sense of Christians of every shade not communists, they have a certain use—like those of Mormonism and Shakerism—in showing that there is nothing in human conduct which the Bible may not be held to authorize and even direct; or, we might even say, which cannot be fathered upon Paul. On the other hand, they have the merit of facing a problem which Protestant Christendom habitually and almost instinctively shirks. The motto which a Frenchman affixed the other day to an essay on "marriage considered from a moral and religious point of view," viz., "In Europe, almost all the disorders of society arise about the domestic hearth and not far from the nuptial bed," would, if we had the frankness of the French in such matters, be admitted true, to a great extent, of this country as well. Yet formal religion, the religion of the churches, takes no cognizance of this evil except by general denunciation of adultery, prostitution, and abortion, for no one of which practices would it dare to put its professors to a searching test. Mr. Noyes's followers make, it may be said, the sexual passion the basis of their religion as of their communism. To our mind, their conclusions are revolting, as their premises—especially in the use they make of the terms "love" and "property"—are sophistical; but as we believe their motives to be sincere, we can do homage to their courage. How rapidly they are likely to spread, and how successfully to compete with the tendencies of the age, may be judged from Mr. Noyes's opinion that "the best outlook for Socialism is in the local churches," which he trusts some revival might easily convert into communities, with all "the advantage of previous religion, previous acquaintance, and previous rudimental organization." And it must be added that he does not appear to be very sanguine.

THE MAGAZINES FOR SEPTEMBER.

PUTNAM'S appears to be as interesting as any of the month's magazines, all of which, to tell the truth, have felt the noxious influence of the weather. "Pedro el Moro," a Moorish sword-maker cast away in a Mexican town, is presented to us by an American officer who made his acquaintance in the days so long ago, when Scott and Taylor and Caleb Cushing and Frank Pierce were fighting Ampudia and Arista and Santa Anna. Of the swords of Pedro the writer tells stories worthy of Damascus, and the sketch is worth reading. "New York Society in the Olden Time" is by a writer whose memory goes back to the period when there were still living among the new men, and giving the tone to New York society, the men of ante-Revolutionary times—the De Lanceys, Stuyvesants, Kips, Van Beekmans, Van Dams, and other "great burghers"—the Knickerbockers who looked down on the cavaliers of Virginia, and despised with perhaps a rather uneasy contempt the Yankees of the East. "The honest Bostonian," says our writer, speaking of Adams's visit to New York, "was 'very much struck with the opulence of the city, and the elegance of their mode of living.' . . . He records that 'the streets of the town are vastly more regular and elegant than those of Boston, and the houses are more grand as well as neat.'" "Yet," says Bishop Kip, "it is evident from his journal that he saw little of the best families." These, indeed, were all royalists, except the dissenting Livingstons, and Adams, being on his way to the first Congress, got the cold shoulder from the Van Courtlandts and Van Rensselaers. Entertaining as Bishop Kip's essay is, we fear the scorners will hold it in derision, it expresses such unaffected regret for the days when the gentry could be distinguished from the commonalty by the dress they wore; when without a thought of shame or servility the poor man took off his hat to the landed proprietor; when Albany turned out to see the Patroon make entry into the city in his coach-and-four with outriders; when the funeral of a deceased Van Rensselaer was celebrated by thousands of tenants at the manor, and at the same time with equal expenditure of gloves and mourning-rings and wine at the town-house in Broad Street in this city—where now insolent commerce, and stock-broking, and the houses of new men rear their heads. Still the article is pleasant. However weak it may be to sigh for the past, and however much it may be a proof of something wrong in a man when he cannot live in his own age and be independent and happy there; nevertheless, the milder form of the weakness—when one regrets a past that is not only the past age but is one's own personal past also—is easily permissible; and our author has himself seen the last of the wearers of "the velvet coats with gold lace, large sleeves, and ruffles at the hands," over the extinction of whom he sighs. "Honest Bostonian" we have seen that he calls the second President; but in the opinion of the first families, most of the Eastern people had something to learn in the way of honesty. The bishop quotes from a will of one of the magnates of early New York: "It is my desire that my son may have the best education that is to be had in England or America; but my express will and directions are that he never be sent for that purpose to the Connecticut colonies, lest he should imbibe in his youth that low craft and cunning so incidental to the people of that country, which is so interwoven in their constitutions that all their acts cannot disguise it from the world, though many of them have under the sanctified garb of religion endeavored to impose themselves on the world as honest men." There seems to be no denying that this delusion in regard to the business-like character of the Connecticut man has prevailed widely in all ages since he first turned his attention to traffic.

Mrs. E. P. Evans writes "Two Days at Haworth," the home of the Brontës, which is not different from other such sketches of travel, but is worth noticing because it points out how Mrs. Gaskell injured her biography of Charlotte Brontë by gathering up information so-called from all quarters indiscriminately, and then taking too little pains in sifting it. Thus, Mrs. Evans learned from friends who knew intimately all the Brontës that Mrs. Gaskell's story about old Mr. Brontë's passionate moods, in which nothing gave him relief but firing off pistols, is false and absurd. "Apartment Houses Practically Considered" is by Mr. P. B. Wight, and asserts that apartment houses need not be the failures they have been pronounced to be if the families occupying apartments would order their meals in from a restaurant instead of insisting on having a kitchen as one of their rooms. The kitchen is unnecessary, Mr. Wight says. A new sort of restaurant is necessary, then, for there is hardly one in New York where the food offered the customer is not exorbitantly dear or unfit to eat. "The North-Western Boundary Dispute"—about which the public knows next to nothing—is lucidly presented by General Alvord; "Danish Peasants" is a good subject inadequately handled; and the other articles are not such as to call for mention.

Probably the first thing to which the *Atlantic's* readers will turn is Miss Kate Field's "Charles Albert Fechter," which is ill written and one-sided, and, moreover, would look too much like an ordinary puff if Mr. Fechter were not himself so well known to the *Atlantic's* public, and if Miss Field's good-natured enthusiasm for her favorites were not also well known. It is full of readable gossip, however. "The English Note-Books of Hawthorne" is by Hawthorne's friend, Mr. Hillard, and while it adds nothing to our knowledge, and is no help towards the appreciation of the man, it is smoothly written. Mr. Howells's "Day's Pleasure" is ended, and "The Virginian in New England Thirty-five Years Ago" keeps on, the Virginian having now reached Massachusetts, and the diary, as given us in this instalment, being so arranged as to show us in contrast New England means of travel and Virginian. The diarist has a page or two, also, about Calhoun, whom he saw as he passed through Washington.

What would happen if the *Atlantic* should ever come out without poetry, nobody knows, we suppose; but so far as appears nobody would think the magazine the worse if it wanted most of the verses that appear in it. Mr. Longfellow's last two translations, however, it is well to have.

The *Galaxy's* story of "Overland" maintains itself at a fair level of interest, but, as might have been feared, fails to assimilate wholly the cañons, and buttes, and pueblas, and lariats, and Apaches, and other properties of the story-teller on the Plains, so that we hardly remember that we are reading a love-story, and hover between the true novel-reading state of mind and that rather fatigued state of mind with which, since the days of Irving's "Astoria," we have followed so many travellers across the mountains. "Lady Judith: A Tale of Two Continents," by Mr. Justin McCarthy, is begun in this number of the *Galaxy*, and on the whole looks well and readable. Dr. Keatinge's article on "The Inquisition" is one of his "Ten Years in Rome" series, and calls for the immediate attention of the *Catholic World*. "Three Women," by Mr. Grant White, takes up Mr. Justin McCarthy's recent praises of American women, and, after describing three ladies of Mr. White's acquaintance who are very fairly representative of three prominent American types—and who, if they exist in the flesh, may very likely address some remarks to Mr. White—he asserts that no one of them takes any interest in politics; that it is absurd in Mr. McCarthy to say that he has met many or any American women who talk politics fluently; and, moreover, that our Irish friend remembered the blarney-stone when he asserted that American women talk with an accuracy that would bear literal reporting and a fluency that never pauses for a word, and that they can manage a parenthesis, and never have the slightest difficulty in expressing an idea. We will not dispute Mr. White as regards the capacity of the American woman to talk politics, but Mr. McCarthy's compliments as to the correctness and fluency of the talk of American women seem to us less open to animadversion than Mr. White appears to think them. There is a good review of a dozen or so of current French books, the notice of "Flaubert" being particularly good; Mark Twain gives a page or two of his absurdities; and there are several other articles—the best, perhaps, being some verses entitled "The Three Singers."

A sensible and instructive article on Nicolaus Copernicus, and some leaves from the diary of a staff-officer of Rochambeau's when that general was in this country, are the most interesting papers in the *Catholic World*, which, however, contains further an assault, provoked by his unreligiousness, upon the "so-called scientist" Galton, who wrote "Hereditary Genius," and does not in that work set forth any religious theory as to the immortality of the soul, but, on the contrary, would rather, as the *World* says, appear to deny the probability of the soul's supernatural origin.

A notice of Dante Rossetti's "Poems" is the most noticeable thing in *Lippincott's;* while *Harper's* is evenly good throughout in its familiar fashion—one article being better for one reason and one reader, and another for another. The editor, in his "Easy Chair," recommends Fourth-of-July orators in the various States to select as the subject of their oratory in future some distinguished native of the State in which they speak and his relations to the contest, and thus secure a never-failing fund of profitable instruction and excitement for their hearers. If this scheme be supplemented by another, in pursuance of which the orators should on every alternate Fourth of July address themselves to the duty of holding up some abuse, or national disgrace, or general folly to public reprehension, the undesirable repute of the "Independence" orator would speedily pass away, and the fund of available subjects last all the longer.

Hours at Home continues to publish hitherto unprinted letters of Charlotte Brontë's, but none of them is very well worth reading, and they seem to be too timidly edited. Now and again, however, a characteristically outspoken and honest letter is given us. "The New Education," by Dr. Bushnell, is strongly in favor of scientific education.

In *Old and New* Mr. Sidney Andrews, whose authority is considerable, estimates the number of the Opposition members in the next House at ninety-nine, while the Republicans he sets down at one hundred and forty-five. In no case, he thinks, can the Republican majority be less than forty, and he thinks it will probably be fifty. These predictions agree with our own of the third week in July, and we have as yet seen no reason to modify them materially. We are, however, prepared to accept a majority of less than forty, though we do not now anticipate that there will be much further reduction of the Republican strength. Mr. Andrews points out that the West, though it did not last winter secure the new apportionment of members, will yet be of much greater weight in the Forty-second than in any previous Congress, and that the West as a whole is an enemy of the present tariff. We may, therefore, look to see the next session shape the platform of 1872, and need hardly look for any declaration of principles by the party as a national party until this time next year.

Old and New opens with an enthusiastic review of Mr. Bryant's translation of the "Iliad;" it continues with "Paraguay," by Mr. Porter C. Bliss, no friend of Lopez; more of a singularly futile story—in cheap imitation of Mr. E. E. Hale's worst manner—entitled "John Whopper, the Newsboy"; the third and fourth chapters of a little story by Mrs. Stowe; some rather pretty verses, natural in tone, by Mr. S. R. Crocker; the beginning of a lively story for boys by Mr. Ralph Keeler; and various other matter—Mr. Andrews's Washington letter being as usual the most useful.

Any one who wishes to hear of "Rough Times in Idaho;" and of "Mexican Bandits," and of "Ixotle," the beautiful Mexican girl, whom her heathen priests were going to offer up in sacrifice; and of "Less Recent Minnesota"—that is to say, the Minnesota of so long ago as 1857; and of "Our Scout to Black Cañon," and of other such things, should read the *Overland Monthly*, which is much as usual this month, and may be read with pleasure. It contains, moreover, some "Plain Language from Truthful James," who may be always of the same degree of veracity, but who is at some times a little more powerful with his mind than at others.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 8, 1870.

The Week.

On the 25th, according to the correspondent of the New York *Tribune*, the news reached the headquarters of the Crown Prince—who at that date was moving towards Paris, expecting to give battle to MacMahon at Châlons—that this commander had broken up his camp at the latter point and gone towards Rheims, *en route* to effect a junction with Bazaine at Metz, crushing Steinmetz on the way. The Crown Prince at once changed his course and set out in pursuit, and, taking the inner line, got the start of him. Reaching Grand Pré on Monday last, he got across the Marshal's line of advance, and forced him to retire towards Beaumont, and on Tuesday engaged him on both sides of the Meuse. The attack was made by the Fourth and Twelfth Prussian Corps, and First Bavarian, and the French were badly beaten with the loss of twelve guns and several thousand prisoners, and were driven back on Mouzon.

We have only very confused accounts of what occurred on Wednesday, but there appears to have been fighting, more or less severe, along the entire Prussian line, from Attigny east to Douzy, the French retiring slowly on Sedan. On that evening, the Crown Prince was at Chémery, thirteen miles from Sedan and west of Mouzon, and Moltke, who had by this time got the French effectually in his coils, made his final preparation to swallow them. Two hundred and forty thousand Germans were on the ground—two Prussian corps lying across the road to Mézières. The Saxons were pushed round to the north-east, and the Bavarians to the south and south-east, by forced marches during the night, and at noon on Thursday, after some hard fighting, the circle was completed, and the French were fairly caged. The rest of the battle was a desperate struggle for the possession of a hill commanding the town and fortress, which the Germans carried before four o'clock, and the French fell back into the town. MacMahon was severely wounded, and the Empire was lost. At five o'clock, the French army, and the Emperor with it, surrendered, the latter giving himself up in person the next day, Friday. We believe so many men have never before in modern warfare laid down their arms in one body.

In Paris, the Ministry kept back the news of the great disaster till Saturday, when they issued a proclamation, saying that MacMahon had capitulated with 40,000 men (the real number is about 90,000), and mention only incidentally, and near the close, the capture of the Emperor. On the same afternoon, Palikao announced it to the Chamber, and asked for an adjournment for consideration; but Jules Favre and the Left called for a resolution deposing the Emperor, and committing the government to a Committee of Defence, with Trochu as Governor of Paris. An adjourned debate took place after midnight, and the deposition was again pressed; and the popular excitement increasing, an enormous crowd having gathered round the Palais, the Imperialist members lost heart; some withdrew, others voted with the Left, and the Empire was formally overthrown about two in the morning, and the Republic once more established. Palikao is said to have fled, and the prominent Imperialists have followed his example. The Empress left the Tuileries attended by a single servant, leaving the Imperial apartments in great confusion; but there is said to be a grand gathering of fugitive maids-of-honor at Brussels. One of her efforts in the latter days of the dynasty to win popularity was curious and characteristic. She put up in the garden of the Tuileries two sweet little hospital tents, with twenty-four beds in each, and pretty pavilions adjoining for the surgeon and stores, the whole making a nice court hospital, where the ladies could do a little nursing any time they pleased; but the public only laughed.

The Provisional Government in Paris is composed of men who have all given proofs both of ability and republicanism. Jules Favre has given as many as any man can who has passed his life in opposition, of the possession of the highest qualities of a statesman, and Gambetta and Arago, through their youth, bring the Government into closer *rapport* with the feeling out of doors than would be possible in the case of the veterans who compose the majority. The exiles are rushing home from every quarter, the political convicts have been liberated, and everybody in Paris seems drunk with enthusiasm. The Imperialists are consoled by having feathered their nests very effectually during their twenty years' tenure of power—the Emperor, in particular, is said to have made immense investments abroad. He and the Empress will probably pass the remainder of their days holding a mock court somewhere, and teaching "Louis" to look on himself as the victim of a fraud.

None ought to mourn so much over the Emperor's downfall as that world-renowned body—"the Americans in Paris." These republicans, with some exceptions, adhered to the Empire with almost canine fidelity and admiration. The devotion of Frenchmen to it had something human in it, as it was based on a feeling, whether wise or foolish, of self-interest; but the Americans had nothing to hope or fear from it, and lavished on it that pure, unreasoning affection entertained by some of the domestic animals for man. The only reward they ever received was invitations to court, where they were treated, except when they were able to furnish entertainment, with a kind of contemptuous indulgence. They were in the habit, too, of insulting what was best in the French nation, by loud assertions that Louis Napoleon was just the man to rule the French—"he understood 'em"—that is to say, that when the president of a republic uses the army to overturn the government he has sworn to uphold, dissolves the legislature at the point of the bayonet, slaughters the people in the streets of the capital, and establishes an absolute monarchy, the success of his villany proves that he served his victims right.

The "special despatch" controversy between the *Tribune* and the other New York papers grows in bitterness, and is already apparently not very far from the "free-love" stage—the *Tribune* exulting in its correspondence from the Prussian headquarters, and the other papers showing that it has no special correspondent; or that, if it has, he is an ass, and that his despatches are worthless, and are stolen. The fact is, however, that all this is only helping to fill the *Tribune's* sails, and swelling the blasts of its horn. Its correspondence during the past week has been very interesting and very valuable, and great enterprise has been shown in obtaining and forwarding it. To be sure, it is not model correspondence, and it does not tell us half what we want to know about the operations; but there is none better in existence, and there is no use in its rivals growling over it. Its London "Commissioner" began the campaign badly, having, as is not uncommon with him, become awfully excited when the rumors of war were first heard, and, as his letters plainly indicated, prepared to sell his life dearly. He seems to have felt, too, that he was bound to help to overthrow the French Empire, and he accordingly gave a deep "red" tinge to nearly everything he sent over. After the hostilities began, however, he appears to have wisely determined to let Moltke dispose of Louis Napoleon, and the despatches have ever since, we are bound to say, been very creditable to everybody concerned in procuring them. And so, let us add, have the *Tribune's* comments on the war, and everything relating to it. It has covered itself with glory, and need not hang its head even before the excesses of Rahl's Hessians, or Turchin's brutalities in Tennessee, which, according to the *World*, make King William, Bismarck, and the Crown Prince—to say nothing of the Würtembergers and the Bavarians—unworthy of the respect and sympathy of decent men.

As to the terms of peace, the most important information comes from the correspondent of the *Tribune* at the Prussian headquarters, who reports a conversation with Bismarck, in which the latter said he would insist on taking and holding Strasbourg and Metz, as material guarantees for the future good behavior of France, but for very sound reasons repudiates all desire to annex Alsace or Lorraine, and makes no mention of payment for the cost of the war, which certainly ought to be exacted, if only in the interest of public morality, to the last cent. Nobody can call this a very extortionate programme. There is, as the Count remarks, no arrangement possible which will give Germany any compensation for her losses, or any guarantees against future aggression, which will not leave a great deal of anti-German feeling in French bosoms. Nothing would leave less than the proposed arrangement. Jules Favre is reported from London to have proposed another to the King, in which the guarantee of future peace and quiet will consist in the disbandment of the French standing army. It is to be hoped that the new government will see the necessity of this, if not for the satisfaction of Germany, for the security of republican institutions. The Prussian system, with some modifications, would guard property against the socialists without exciting the guilty ambition of successful generals.

Of all the exciting news by which this week has been ushered in, perhaps nothing surpasses the announcement that Italy will remove her seat of government this month to Rome, and that her troops are marching towards the Papal frontier, not, as before, for observation, but for occupation. France's necessity has become Italy's opportunity, if it should not rather be said that it has become her necessity also. For if the King did not take possession of the natural capital of the peninsula, the red-shirts were sure to do so, or to give trouble that prudent statesmanship would avoid. Nobody can doubt that, the moment the Emperor declared war on Prussia, the Italian Cabinet knew that the solution of the Roman question had come. But it maintained a becoming reserve both towards France and towards interpellations at home, until the first shock of battle had shown that Napoleon was lost. Meantime, as the French troops withdrew from Rome, forces were sent to intercept the Garibaldians, and now the Government is ready to move in itself. The effect of this transfer of the capital on the imagination of the Italians will doubtless be somewhat diminished by the lively regrets of the people of Florence—regrets as vain as those manifested at Turin, on occasion of the previous transfer, but hardly likely to divide and embitter politics to an equal extent. Florence was, everybody understood, only a halting-place, a half-way house, on the road to Rome, and speculators in real estate have had fair warning. It will be long before we shall realize even the superficial results of the Prussian victory, and certainly one of the most amazing will be the unity of Italy, perfected even beyond that of Germany, and the loss to the infallible Pope not only of his temporal power, but of the last Catholic nation which had any interest in sustaining him. He will probably receive the Italian corps of occupation with a few curses, which will furnish a model for ages to all bishops and priests who may happen to be out of temper with "the arm of flesh."

The general expectation in Europe seems to be that peace will be made at once; but it seems hardly possible that the new Government can avoid trying the fortune of arms once more. The French people are evidently persuaded that the Republic can do better than the Empire, and we fear, mad as it seems, will try it. The Prussians are in full march on Paris, and we shall probably hear of the siege within the next six days. People are beginning now to feel more interested in the question how the Prussians will bear their good fortune than how the French will bear their reverses. Whether the war proves a blessing or a curse to Europe will depend on German moderation; and we have no doubt, in spite of the dismal anticipations of many people, that although the Germans are determined to have Germany, and though the remaining small powers of Germany may before long disappear, the process of expansion will stop there.

We believe most people have been thoroughly puzzled by the attitude of the Democratic press towards the Germans. What can have induced them not only to defend the French Empire, but to ridicule and revile the Germans, and even attempt to saddle the Prussians of to-day with the blame of the misdeeds of the poor Hessians in this country in the last century, and also with the murder of a woman by one of Blenker's soldiers in the South during the late war? If there was a French vote to be caught by this sort of stuff, or if the Irish were not so thoroughly wedded to the Democratic party that it is next to impossible to get them out of it, one could comprehend it; but, as matters stand, the affair remains a deep mystery. The result is that the German Democrats are very much disgusted, and in this State talk loudly of a secession from the party, while the Irish are no more attached to it than ever, and are too busy making arrangements for a fresh combination of European powers against England to take much interest in home politics. In Fenian circles, it is said, great encouragement is derived from observation of the working of the Prussian military system, as its application to Ireland would put 100,000 men in the field, to say nothing of the reserves and landwehr—a force which would, of course, overwhelm the British army in one week. There is one lesson, however, which the chief "Nationalists" would do well to learn from "the Dutch," and that is not to talk about fighting any more till they are really going to fight, and fill up the interval with some regular and productive industry, under which term we do not include the liquor business or politics.

The aspect of Missouri politics is interesting; and, on the whole, it is seen at a second glance to be, perhaps, more favorable, and certainly more honorable, to the party, than appears at first. As nearly as we can make out, the fight is not altogether between protectionists and revenue reformers, as the *Tribune* of this city would have us believe. The facts of the case seem to be these: Governor McClurg holds the faith of Parson Brownlow, and believes, or at least offers it as a creed for his party's acceptance, that the men disfranchised in 1865 must be kept disfranchised for an indefinite time to come. They are still disorderly and dangerous, he says. Holding this doctrine, he and his supporters proceeded, it is alleged, to pack the convention, which has just closed its session, with men who did not represent the true opinion of the party, and were all violent advocates of continued disfranchisement. Of these men, some were elected, not at regular meetings called to elect delegates, but at meetings that had been called merely for the election of county committees; some were proxies representing counties in which no meetings had been held; and, altogether, they represented Governor McClurg and the men who now hold the State offices in a firm grip, and who have no disposition to let go of them, a great deal better than they represented the Missouri Republicans. After several days of confusion, the convention broke in two, and half the delegates, under the lead of Senator Schurz, seceded, and nominated a ticket of their own, headed by the name of Gratz Brown, formerly a Senator at Washington, and an able man. The men they left behind proceeded to pass resolutions, of which one is strongly protectionist; one declares General Grant's statesmanship to be "already advancing his name as the greatest name of history," and nominates him for the next Presidency; while a third, in appearance, left the disfranchisement issue to individual voters for settlement, but, in reality, recommended Governor McClurg's party to extend proscription indefinitely. Altogether, the intelligence of the convention would seem to have left it with the seceders; that much of the honesty went, too, is roundly charged, and on the face of things seems likely. Nevertheless, it is to be remembered that the removal of the disenabling clauses of the Constitution was in any event certain. But Senator Schurz insisted on the redemption by the party of its repeated pledges. Doubtless there is much that is personal in the contest.

The Gratz Brown party—which has the support of Senator Schurz, Ex-Governor Fletcher, and Lieutenant-Governor Stannard, and which Senator Schurz thinks able to carry the State by twenty thousand majority—distinctly avows its purpose to let every man in the State vote.

Its leaders assert that if the rebels, as they are still called, were once restored to their rights as American citizens, if they were represented as well as taxed, and could cast the vote which during four years of peace they have been debarred from casting, they would speedily "stamp out the bushwhackers" who make the disturbances which are falsely charged on the Confederate soldiers. These latter are law-abiding men, say the Brown men, and many of the delegates to the convention said the same thing as being true of their own districts. One delegate, indeed, hinted that it very well suited the McClurg men to set a negro school-house on fire and then come into convention and demand the exclusion of rebels from the polls because they burnt down loyal buildings. And a portion of the Republican press, as well as half the delegates, believes in the good citizenship of a majority of those who rest under disabilities. Thousands of them, says the *Herald*, of St. Joseph, are disfranchised on the strength of a mass of affidavits which they have never seen, and of whose contents they are ignorant, and which are in many cases nothing but perjuries. Thousands more, the same authority says, are disfranchised because a son, a boy, was captivated by the tinsel and glitter of Price's army, and, taking his gun, went off in spite of the entreaties of his parents, leaving behind him a father who cannot now make oath that he never had any sympathy at all with the rebellion. This Brown wing of the party passed resolutions setting forth the injustice of political disabilities; declaring in favor of a tariff to produce such a revenue as will enable us to deal equitably with the national creditor, and calling for reduced taxation; requiring a reform in the civil service; and taking the Democratic press to task for its pro-French attitude. No one can at present do more than make a guess as to the probability of this wing of the party's carrying Missouri in the fall. Our own guess is that there is little hope of the success of the McClurg party, and that if the State is not given to the Brown party by the Democrats, these latter will have it unless the quarrel is made up.

There are signs of trouble on the tariff question in Illinois also, the Republican Convention there having passed a resolution declaring that Congress has no right to impose taxes "except for the maintenance of the Government, the payment of its debts, and the promotion of the general welfare;" and that it is "wrongful and oppressive" to "enact revenue laws for the special advantage of one branch of business at the expense of another." We believe the *Tribune* is of opinion that this outburst of free-trade sentiment, as well as the division of the Republican ranks in Missouri, is due to the "conspiracy" hatched in Washington last winter and revealed to the world through the New York *Evening Post* and Chicago *Tribune*. But then there must be something more than conspiracy at the bottom of it, or else the conspirators have pretty inflammable materials to work upon.

Elsewhere than in Missouri and among our New York Germans, there is not visible much political stir. In North Carolina, the disturbance caused by Governor Holden's action in the case of Alamance and Caswell Counties is not yet wholly allayed, for though the judges have held that they can do nothing with the Governor for having practically suspended the writ of habeas corpus by refusing to allow a return to be made when it was served upon his military agents, they have, nevertheless, while leaving Holden to be dealt with by impeachment, issued warrants for the arrest of Kirk and others of the Governor's subordinates. The have at the same time, after a patient hearing, bound over for trial several citizens whom an examination showed to be very probably the murderers of a Republican State Senator. Not the least doubt exists in our mind, as we have before said on more than one occasion, that there have been numbers of outrages, semi-political at least in character, occurring in the counties into which Governor Holden sent his volunteers. But we have never been able to believe half that was said by the Governor's organs, nor able to see how his extreme measures were necessary. We should like it if he, or some of our readers who are of opinion that we have had too little faith in him, would explain the charge which the *Tribune* makes against him. The *Tribune* received from him a while ago a letter purporting to have come from Judge Tourgee, of North Carolina, asserting that four or five thousand houses had been broken into in Caswell and Alamance, and we do not know how many murders committed and how many hundreds of men and women whipped by the Ku-Klux. It was a letter showing how well justified the Governor had been in levying war on a part of his State. Judge Tourgee at once wrote another letter correcting these figures, reducing them vastly, and the *Tribune* calls on the Governor and Senator Abbott for an explanation. Governor Holden makes none; but Senator Abbott writes saying that just as the letter came to him it was sent to the Governor, who sent it to New York. It becomes, therefore, the duty of Governor Holden to show that he did not for his own purposes falsify the letter for his own political purposes.

The Tenth District of the Sixth Ward, in this city, we commend to the attention of anybody from abroad who wishes to study the American national character in its present phase of development. The Sixth Ward is filled with Irishmen, to be sure; but, as everybody knows who has ever seen an American at an American hotel or in an American railroad car, one side of his character that affords food for contemplation and reflection is his power of enduring extortion and impudence; and that, if it cannot be contemplated in the district above-mentioned, may at least be reflected upon there with much ease. The men who live in it, together with the ladies and the children—all the inhabitants, all told, from the suckling babe up to the old gentleman who has seen in his own person a century or so of the "six hundred years of wrong"—number, as the census proves, 870 souls. In May of this year, when we last had an election, these 870 inhabitants of the Sixth Ward stood up to their duty and cast no less than 934 votes—a remarkable exhibition of enthusiasm, considering the fact that the election was only for judges, and was not one to call out much popular zeal. Every man, woman, and child in the district must have cast, on an average, about one vote and one-thirteenth. This sort of thing the American endures, just as he endures Mr. Jim Fisk, or Mr. Justice Barnard, or Mr. William Tweed, or Mr. P. B. Sweeny. And it is as certain as the shining of the sun that our most active Democratic politicians, Mr. Hoffman being as surely one of them as the late Alderman Florence Scannell, just gone to his rest out of a murdering rum-shop brawl, organize similar rascality every year in every ward in the city.

It will go on, without doubt, for some time yet, and will give pain to every writer in *Blackwood* for years to come. The fact is that there is little or no use in talking morality in politics to the more respectable men of either party, and urging them to go to work and prevent such a state of things, because, although Americans are not less virtuous and moral than other nations, they have not yet felt the pinch of rascality as other people feel it when their public men are knaves. As long as most of us, if we fail in life here, can go to Kansas or San Francisco or Texas and begin life over; as long as most of us can look back, at the end of the year, and find ourselves with more dollars in our pockets than we had at the beginning of it; or can look forward and see an opportunity of making more by the end of the coming year than we now have, we are hardly going to stop work and look after the rascals who make millions for themselves, in a way that we admit to be shameful, by fleecing us individually to the tune of a few dollars or a few hundreds. When we live a little closer, and Mr. Fisk's thievings from each of us make—as Overend & Gurney's thievings did, in England, in the case of Englishmen—the difference of coming down a grade in social life or giving up one of our servants or sending our daughters out to teach music, we shall be as sharp with our rascals as anybody need desire. Meantime, the Republican politicians, by means of a law the efficacy of which is yet to be tried, are endeavoring to stop these election frauds, in virtue of which Mr. Hoffman is Governor, and hopes to be some day President. It is noteworthy that every Democratic paper in the country, so far as heard from, remains entirely unshocked by the 934 votes of the 870 men, women, and children, and that they all revile the law as it stands, and resisted its enactment.

THE CATASTROPHE IN FRANCE.

We presume nobody who was not at the scene of operations was prepared for the magnitude of the disaster which has overtaken the French arms, though the end has for a fortnight been clear enough. It has been perfectly plain ever since the battle of Gravelotte, when Bazaine failed in his attempt to withdraw from Metz, that the triumph of the Prussians was certain and not very remote. The break which was made in the French line by the battle of Wörth was never repaired, and it was evident from the first that it could not be repaired. The line was cut in two—one part driven into Metz, and locked there; the remains of the other fell back on Châlons, under MacMahon, disorganized and demoralized, unable to keep the field against any one of the Prussian armies. At Châlons, the terrible truth crept out, in spite of the ingenious subterfuges of the French Ministry, that the disaster was really irretrievable; that the Emperor carried the whole disposable regular force to the Rhine; that the only reinforcements MacMahon could receive were composed of the Garde Mobile, which was now for the first time embodied, and for which there were neither officers nor chassepots. The accumulation of it at Châlons, armed either with old "converted" muskets or with muzzle-loaders, and led by officers who had no more knowledge or experience than the men, apparently only resulted in frightful disorder, and MacMahon, doubtless with one of the heaviest hearts a brave man has ever carried in his breast, broke up the camp, and, sending some of the new levies back to Paris, moved off northward before the Crown Prince, in what he doubtless felt would prove a vain attempt to effect a junction with Bazaine. He, of course, in spite of the lying telegrams from Paris, never succeeded in getting anywhere near Bazaine, and was slowly driven back on the Belgian frontier, and was there surrounded, badly wounded, and his army destroyed.

Indeed, from the first shot fired by the Germans in their offensive movement down to the surrender at Sedan, the Prussians seem to have invariably attacked in double or treble the force of the enemy, thus fulfilling the first rule of the great game in which they are engaged, and there appears to be now no doubt that they have had under arms from the outset between 800,000 and 900,000 men, while the French have, from all that we can see or hear, never mustered more than 400,000, or, in other words, about the old standing army which France possessed when Sadowa was fought. This disparity of numbers would probably have decided the result, even if the Prussians had not been in possession of a strategist whom we will not, on the strength of two campaigns, rate higher than the elder Napoleon, but of whom it may be said that he has in those two campaigns far surpassed Napoleon's most brilliant exploits. Opposed to him he had at the beginning, when the fatal blow was struck, only a pair of court soldiers, the Emperor and Marshal Le Bœuf, who, judging from the first affair at Saarbrück, were apparently making war, in part at least, for the entertainment of the company at the Empress's soirées.

Now, how did it happen that, in spite of the uneasiness excited in France by the campaign of 1866, and the great show of preparation made afterwards for a conflict with Prussia, the Emperor should thus, after waiting four years, and choosing his own opportunity for entering on the struggle, be found so completely unready as to have to witness the destruction of his army and the overthrow of the Empire within five short weeks? The answer is, first, that the law increasing the army, which was passed, after much discussion, in January, 1868, has never been carried out. The regular force, including men actually embodied and the reserves, would not have reached its full strength under the Act till 1874; and the Garde Nationale (Mobile and Sédentaire) was never called out, the political condition of the country being such that the Government was apparently afraid to arm it; so that it was actually not summoned to the field till after the defeat of Wörth, and, worse than this, neither officers, rifles, nor uniforms were provided for it. All this is made the more extraordinary by the fact, which was acknowledged in the Senate by the Minister of War during the debates on the new law, that the Government was unable to put more than 100,000 men in line at Solferino, and had no reserves. Secondly, the French Cabinet appears to have been totally deceived as to the condition of public feeling, both in the states lately annexed by Prussia and in the states south of the Main, partly, no doubt, owing to too great reliance on the stories of the aristocratic malcontents with whom the French legations would most readily come in contact, and partly owing to the deep-seated and we might almost add cultivated, incapacity of Frenchmen to understand the position of people who are illogical in their politics. No country in the world has furnished more brilliant examples of successful investigation of foreign modes of feeling and thinking and acting than France has; but this kind of work is done by a few writers and travellers, of unusual powers and training. The bulk of French society, and especially that section of it which has of late years controlled the Government, almost disdains to comprehend foreigners or to acquire their language; and there is probably no race whose ways they find so inscrutable as the Teutonic. Since the Revolution, too, their natural scorn of what is outlandish has been intensified, and their love of logic increased, by the exceeding order and regularity of their own institutions. The French Cabinet appear to have settled it to their own satisfaction, therefore, that all the German states which bore Prussia a grudge would seize this opportunity of freeing themselves from her yoke, and that they were indeed bound by a proper regard for consistency to take arms against her. The Emperor's proclamation, in fact, showed that he expected the Bavarians, Würtembergers, Badenese, and Saxons, who have helped to bring him to his doom, to march with him on Berlin, and he probably relied on reinforcements from this quarter to bring his forces up to the required magnitude.

It is not necessary to lay much stress on the other causes of his defeat, because it is difficult to know how much weight to attach to them. The French commissariat has apparently broken down, but a good commissariat has no place in French military traditions. It has always broken down where the theatre of war was a friendly country, or where nothing was to be procured on the spot. It broke down badly in the Crimea, and again in Italy. Nearly all the great French wars have been carried on on foreign soil, and, as everybody knows who is familiar with their history, in nearly all of them the soldier has relied largely on marauding, and the intendance on forced contributions, for supplies. These resources are no doubt precarious, but the danger of relying on them only appears clearly in defeat; and of this French armies have heretofore had but little experience. We say little, too, of the charge which Edmond About brings against the Imperial régime, of having, by its vigorous centralization, robbed the population of its patriotic fire and energy, and rendered impossible the repetition of the heroic efforts which stemmed the tide of invasion at Valmy and Jemappes in the great days of the Revolution. There is doubtless some truth in it; but in weighing it we may have to remember that the levies of 1792 had only to face ill-armed, ill-led, well-flogged armies, and we may be very sure they would go down before the march of the present Prussian force like grass before a mowing-machine. Doubtless, too, the Emperor's favorites, the men who have reached high rank in the army, have owed their rise to other things than military skill or great services; but it is impossible to deny that many were men who had in their day done good service. Everybody would have pronounced either MacMahon or Bazaine, as Tacitus says of Galba, *capax imperii, nisi imperasset.*

Nothing like the disaster of last week has befallen any nation in modern times. Indeed, we doubt if all history can show a parallel for it. It surpasses that of Leipzig or Waterloo, as we pointed out the other day, inasmuch as it has overtaken France while in the very flush of her strength, and fresh from long and almost uninterrupted repose. For the first time in her career, too, she has to bow the knee before a single enemy. The depth of the humiliation and anguish into which French hearts are plunged to-day, probably nobody but Frenchmen can picture, because no other nation has lived so largely on national glory. It has played in French life the part which in the lives of all other peoples is divided among half-a-dozen different interests. It has furnished to at least three generations of Frenchmen that solace which other races find in religion, in liberty, in riches, in industry, in art, and in literature combined. Nothing touched them which did not nearly concern the greatness of France; nothing cheered them by which they were not made in some way a sharer, however humble, in her renown. And let us be just, and say that they offered their idol no mean or paltry worship. Millions of lives have been laid down at its altar with a cheerfulness which no other people has ever in any cause been able to equal; and we who, if we strive for some purer ideals, strive also, and strive hard, for many grosser ones, must walk softly now among the French dead, and look reverently on the desolation and foreboding which reign to-day in a million French homes. We believe the best interests of humanity to be served by the Prussian triumphs, but we owe it to humanity also to witness with sorrowful sympathy the despairing agony of a great nation—a nation whose achievements in war and peace must always form one of the noblest chapters in the history of our race.

THE FUTURE.

THE downfall of the Empire in the lifetime of the Emperor, amidst circumstances of extraordinary humiliation, will gratify one of the dearest wishes of some of the best of the French Liberals, which prevented many of them from accepting office, or making their peace with Cæsar, even if they felt assured that he was going to surround his throne with free institutions—namely, the desire that it should not stand recorded in French history, for an incentive and encouragement to other usurpers and traitors, that the man who perpetrated the crime of the Second of December enjoyed all his life long the fruits of his iniquity, and died in the peaceful possession of his booty. Unhappily, retribution has not come upon him from the hands of those whom he betrayed and outraged, nor without involving all France in his ruin. But it *has* come, and has come in a way which displays the hollowness of Cæsarism even more strikingly than if he had been driven out by the French people. Nothing could better illustrate its worthlessness as a permanent government than the fact that a Cæsar, while he has to make war frequently, can never afford to lose a battle; or, if he does lose one, dare not come back to the capital, and becomes an object of execration to all his subjects. Nobody but a military genius of the first order can hold a crown on such terms as these. More than sixty years ago, the father of the present King of Prussia was involved in just such a disaster as has overtaken Louis Napoleon. He lost a great battle through the badness of his generals, and the rottenness of his whole military system, and came back to Berlin a miserable fugitive, with the conqueror close on his heels; but the people cheered him as loudly, and lavished on him as many other affectionate demonstrations of welcome, as if he had been victorious. No monarchy which does not rest on attachment lively enough to survive misfortune can be called a strong or permanent government, and Louis Napoleon's overthrow, if it does not exhibit all the features of poetic justice, contains a lesson which will probably prevent the repetition of the brutal experiment of which his uncle was the originator, and which he himself renewed. In short, imperialism has turned out a total failure; the bourgeois régime of Louis Philippe lasted just as long, and cost only half as much, and left France with her resources, her armies, and her honor intact.

The proclamation of the Republic after the collapse of the Empire was naturally to be expected; and if the French had more of the tenacity and strong political sense which distinguish the Hungarians, for instance, who have many times seen their free government overthrown by military force, but have invariably revived it again, as if nothing had happened, we should witness now in Paris the formal revival of the Republic of 1851—that is, the restoration of the constitution which Louis Napoleon suppressed, and the setting in motion again, as if nothing had happened, of the machinery of government which he threw into the lumber-room. This would save the endless discussions and dangers of another constituent assembly, and would go far to impress the popular mind with the idea that a republic was the normal government of France, and the Empire only a temporary reign of violence. The presence of the enemy on French soil, however, makes anything like regular action on the part of the provisional government impossible, and would make any attempt to bring old institutions again into operation very hard. The difficulty of the situation is that no party dares to propose peace, or likes to face the responsibility of making any peace which will involve the humiliation of France or the cession of French territory, or the payment of the expenses of the war; and yet one of these, or both, the Prussians will certainly demand. The plea which is put forward in Paris that, as the King declared he only made war against the Emperor, he ought, now that the Emperor is gone, to desist from hostilities, will hardly find much favor in the Prussian camp, and ought not. It would be a serious injury to the French people themselves to allow them to discard all responsibility for the acts of a man whom they have twice by enormous majorities placed in possession of dictatorial power, and whose mad rush into this disgraceful war they enthusiastically applauded. Nothing will help them more effectually to a sense of their situation, and to a better political life, than being made to feel, by the terms of the peace, the danger and loss, as well as the disgrace, of parting with the control of their own affairs.

But the making of peace is a serious matter, and no government probably will attempt it without fighting. The proclamation of the Republic has evidently revived the memories of 1792 with a force which under the Empire they could never have had; and we fear it is almost certain that, in spite of MacMahon's surrender, an attempt will be made, by aid of a levy *en masse*, to protract the resistance; and we doubt if the war will be closed without another great battle, to be fought by the troops which are now being collected south of the Loire, and without a siege of Paris. Of course no intelligent person can entertain any doubt about the result. The slaughter of the new recruits, armed with muzzle-loaders, and badly officered as they must be, will be mere sport to the Prussian troops, already flushed with an unparalleled series of successes, and full of contempt even for the French regulars; and the defence of Paris, without the hope of aid from without, will have no value, except as a means of satisfying the self-love of the Parisians, and reconciling them to a peace.

The formal proclamation of a republic, too, diminishes seriously the chances of a return to constitutional monarchy under the Orleans family. An accomplished fact is a difficult thing to undo, and there is no doubt that all monarchy will now for some time labor under a portion of the odium incurred by the one which has just perished at Sedan. But then there is no reason to be as much afraid of advocating an Orleanist restoration as some of our daily contemporaries in this city have shown themselves. A week or two ago, they were bandying charges of Orleanism with as much venom as if it meant "free love," and some of their denunciations of that dynasty showed either extraordinary ignorance or extraordinary forgetfulness. The fact is that the eighteen years of Louis Philippe's reign constitute the only period in French history during which Frenchmen had an opportunity of learning the art of political discussion, and during which the pen and tongue were really free, without danger to property. Moreover, the Orleans government was the only government France has ever had which, while recognizing the principle of popular sovereignty, sought to turn the French mind away from military glory and foster amongst the people peaceful tastes and habits—that is, the very things which some of those who abuse the Orleans family are loud in declaring France must now acquire in order to be either happy or prosperous. No constitutional government could have done more for the material resources of the country. From 1830 to 1842, its efforts to make railroads were blocked by the hostility and incredulity of the French public, which did not believe in railroads. In 1842, the work was at last undertaken with ardor, and between that and 1848 nearly every great line France possesses was begun, and either completed or carried far towards completion. It reformed the patent laws in the interest of poor inventors; it introduced the Conseils de Prud'hommes for the first time into Paris, to the great relief of the workingmen; it passed the great act regulating the employment of children in factories, and was debating its extension to women, when the Revolution came and interrupted it, as it did a great mass of other legislation having for its object the amelioration of the condition of the working-classes and the freedom and encouragement of industry. More than all, and greater than all, one of its first acts was to give France a good system of popular education, which, under the First Empire, had been by special decree restricted to reading and writing, schoolmasters being strictly forbidden to carry children any further. The number of schools was increased under Louis Philippe; the grades multiplied; the courses enlarged, and the appropriations nearly doubled.

In short, a greater misfortune than his expulsion never befell France, though it has taken twenty years of successful wickedness and tyranny, and a bloody and disastrous war, to open the eyes of many people to the fact. His sons are still living—two of them, brave, skilful, and distinguished soldiers—Frenchmen, through and through, in the highest and best sense of the term; men of stainless honor, and of great and varied accomplishments, whom years of exile and adversity have refined and elevated, and who in everything they have attempted, whether with sword or pen, have shown themselves worthy scions of the great house to which they trace their lineage. It would, we feel sure, be well for France if in this hour of her adversity she were to turn to them for deliverance; but we feel almost equally sure she will do nothing of the kind at present; and yet stranger things have occurred than the re-rising amid the blood and desolation of the present war of the star which lighted up the field of Rocroi. Time is of almost as much importance to the Prussians as victory, and the man who could so use the fresh levies as even to protract the struggle, and keep the Prussian armies in the field, might secure better terms than now seem possible, and would deserve, and not improbably obtain, of France the highest reward she has to bestow. With the Imperialist generals gone to destruction, and Trochu, an old Orleanist, Minister of War and practically dictator, it is not out of the range of possibility that the Duc d'Aumale and the Prince de Joinville might find themselves yet charged with the rescue of France—and the attempt, even if it failed, might be glorious for the country and fruitful for them.

PRUSSIAN WAR LOANS.

Of the many surprises which Prussia has, during the present war, prepared for the rest of the world, the most remarkable is certainly not the celerity with which she placed her gigantic armies on the enemy's soil, nor the vigor with which she has, so far, beaten back the French army, nor yet the unanimity with which all Germany follows her lead. More remarkable than these, more remarkable by far, is the surprise occasioned, to friend and foe alike, by the utter failure of her first war loan for a comparatively paltry sum. One hundred and twenty-five millions of thalers was the entire amount asked for; the interest rate, five per cent.; the subscription price, 88—netting the holder less than six per cent. on his investment, but not much less than he could obtain from American bonds just before the war. The king, the entire royal family, the leading capitalists and bankers, subscribed liberally, and unusual efforts were made in the cities, towns, and villages to secure minor subscriptions. But in spite of the favorable terms of the loan, in spite of royal and princely example, in spite of all efforts, and in spite of the wonderful enthusiasm engendered of unparalleled military successes, less than one-half the amount has been subscribed for. It is true that the loan has, nevertheless, been announced closed, and that the secretary of the treasury, with doubtful ostentation, has given public notice of his inability to send separate answers to each of the numberless applications from persons desiring to subscribe. It is also true that the loan is quoted at the Bourse at a premium of three to four per cent. over the issuing price. But it is no secret that the loan was nevertheless a failure. As soon as it was found that the genuine subscriptions gave out, the entire balance of the loan was taken, ostensibly as an investment, by the "Seehandlung," a moderately wealthy corporation, originally of the same character as the Dutch "Matschapey" or the English East India Company, but long since dwindled down into a mere "Crédit Mobilier," or rather "Crédit Foncier," of minor magnitude but greater character and responsibility. The relations of the "Seehandlung" with the Prussian treasury have long been of the most intimate character, and its subscription to sixty or seventy millions of the loan—its own capital being only twelve millions—is looked upon as a mere blind to hide the treasury defeat, and as a fair means of bringing the new security within the range of speculation by forcing up the price at the stock exchange. The true nature of the negotiation has not transpired, but it is noticeable that the correspondent of the New York *Tribune* telegraphed on the 18th of August that forty millions of the loan were sold at 63, an almost incredibly low figure. It is scarcely possible that such an extraordinary discount should have been made to the Seehandlung, especially since its subscription offers no guarantee of its ability to furnish the money when required. But however this may prove to be, the mere fact that the most powerful nation of Europe, only four weeks after the outbreak of a wonderfully successful war, should have difficulty in raising one hundred millions of dollars at six per cent., is too significant to be allowed to pass unnoticed.

The apparent failure of the Prussian financial system is all the more remarkable in view of the fact that the very people who now seem unwilling or unable to invest 100 millions of dollars in the securities of their own state have, during the last five years, purchased from 700 to 1,000 millions of dollars of the securities of the United States, and even purchased large amounts of them when we were in the midst of a gigantic civil war of uncertain duration. It is not to be for one moment supposed that the people of Germany have to-day less confidence in the solvency of the admirably governed Prussian monarchy, with a light debt and in the midst of military successes, than they had in the solvency of the heavily-burdened United States during the darkest days of disorder, doubt, and despondency in 1864. The question of confidence can, we think, be safely eliminated from the enquiry. We may, without fear, assert that the confidence of the people in the security is unbounded. Why, then, do they not purchase them?

People can invest in securities of any kind only money obtained from three sources. First, idle funds in bank unemployed; these, especially after the great decline in values resulting from the outbreak of war, are light, and prudent people part with them unwillingly. Next, such surplus earnings as the people make from day to day; it is self-evident that these accumulate too slowly to meet the imperious wants of greedy war. Lastly and mainly, the money to invest in securities of any kind must ever be obtained from the sale of securities of some other kind. After the first small amounts of idle funds have been invested, all further money to be employed in government loans can only be obtained by the sale of some other property, some other security. The investment then becomes, confidence being always presupposed, a simple business transaction. The safety being equal, the less productive security will be sold, and the more productive will be bought in its place. From this point of view, it will appear perfectly plain why German investors were unwilling to sell United States bonds (of which by far the largest amount of investment securities in Germany now consists) as long as the new Prussian loan, offered in their place, did not produce more than they do. As long as the Prussian five per cent. loan was held at 82, it was actually less productive than American bonds at their then market price. But even if it had been more productive instead of less, there are still good reasons why holders of American bonds would not part with them, even for domestic bonds of equal safety. The reason is this:

The Prussian debt is comparatively light, and its bonds are almost exclusively owned at home. Prussia has never yet been obliged to resort to foreign markets to place its loans, and foreigners have not sought them of their own accord, mainly in consequence of the arbitrary character of the Prussian administration, which has not tended to inspire special friendliness in foreign capitalists. For these reasons, Prussian securities are not known in the financial markets of the world outside of her own borders. To any one not familiar with the practical workings of the great money markets, the fact of the securities not being generally known may seem of slight consequence in the case of a great state like Prussia. But it is indeed of the utmost importance. It took two years to introduce American bonds in the German markets, three and four before English and French dealers would buy them, and certain kinds of them (of our Government securities, be it understood) are even now so little known that they could only be sold at a considerable sacrifice. This want of knowledge has nothing to do with want of confidence; it is simply a detail of business, as it were—a habit of the market, which is only overcome by time and effort. This absence of familiarity with Prussian securities in the great financial markets debars her own citizens from buying them to a far greater extent than would at first sight seem possible. We have more than once recently explained in these columns how powerful, how imperative is the demand for gold in time of war. Even those who are too intelligent to hoard gold give every possible preference to securities which can, in case of need, be promptly converted into gold. If the case of need arises, it is evident that the gold cannot be obtained at home, and that, therefore, the only securities that offer any certainty of prompt conversion are those which find a ready sale abroad. From what we have stated, it is very clear that this is not the case with Prussian bonds, and hence the indisposition of even the most patriotic Germans to buy Prussian bonds, for fear they might not be able to convert them promptly into coin in case of need. Before the Germans will consent to sell American bonds in order to subscribe the proceeds to new Prussian loans, they must, in addition to a higher income for their investment, be offered sufficient compensation for the risk of not being able to realize coin for their bonds when wanted. That the six per cent. realized on the present selling price of the new five per cent. bonds is insufficient compensation, is evident enough. How much more will be necessary, remains to be seen. One thing, however, becomes more and more plain every day, and that is that American bonds are to-day more readily salable for gold in more markets than any other security whatsoever, and that for the settlement of international balances among the principal European nations they are almost as useful as the gold coin itself, so that it may be accepted as a settled fact, that neither Prussia nor any other European nation, England perhaps excepted, can borrow money except on terms very decidedly more advantageous to the investor than those offered by American bonds.

CULTURE AND WAR.

THE feeling of amazement with which the world is looking on at the Prussian campaigns comes not so much from the tremendous display of physical force they afford—though there is in this something almost appalling—as from the consciousness which everybody begins to have, that to put such an engine of destruction as the German army into operation, there must be behind it a new kind of motive power. It is easy enough for any government to put its whole male population under arms, or even to lead them on an emergency to the field. But that an army composed in the main of men suddenly taken from civil pursuits should fight and march, as the Prussian army is doing, with more than the efficiency of any veteran troops the world has yet seen, and that the administrative machinery by which they are fed, armed, transported, doctored, shrived, and buried should go like clockwork on the enemy's soil, and that the people should submit not only without a murmur, but with enthusiasm, to sacrifices such as have never before been exacted of any nation except in the very throes of despair, shows that something far more serious has taken place in Prussia than the transformation of the country into a camp. In other words, we are not witnessing simply a levy *en masse*, nor yet the mere maintenance of an immense force by a military monarchy, but the application to military affairs of the whole intelligence of a nation of extraordinary mental and moral culture. The peculiarity of the Prussian system does not lie in the size of its armies or the perfection of its armament, but in the character of the men who compose it. All modern armies, except Cromwell's "New Model Army," and that of the United States during the rebellion, have been composed almost entirely of ignorant peasants drilled into passive obedience to a small body of professional soldiers. The Prussian army is the first, however, to be a perfect reproduction of the society which sends it to the field. To form it, all Prussian men lay down their tools or pens or books, and shoulder muskets. Consequently, its excellences and defects are those of the community at large, and the community at large being cultivated in an extraordinary degree, we get for the first time in history a real example of the devotion of *mind* and training, on a great scale, to the work of destruction.

Of course, the quality of the private soldier has in all wars a good deal to do with making or marring the fortunes of commanders; but it is safe to say that no strategists have ever owed so much to the quality of their men as the Prussian strategists. Their perfect handling of the enormous masses which are now manœuvring in France has been made in large degree possible by the intelligence of the privates. This has been strikingly shown on two or three occasions by the facility with which whole regiments or brigades have been sacrificed in carrying a single position. With ordinary troops, only a certain amount can be deliberately and openly exacted of any one corps. The highest heights of devotion are often beyond their reach. But if it serves the purposes of a Prussian commander to have all the cost of one assault fall on one regiment, he apparently finds not the slightest difficulty in getting it to march to certain destruction, and not blindly, as peasants march, but as men of education, who understand the whole thing, but having made it for this occasion their business to die, do it like any other duty of life—not hilariously or enthusiastically or recklessly, but calmly and energetically, as they study or manufacture or plough. They get themselves killed not one particle more than is necessary, but also not one particle less.

A nation organized in this way is a new phenomenon, and is worth attentive study. It gives one a glimpse of possibilities in the future of modern civilization of which few people have hitherto dreamed, and it must be confessed that the prospect is not altogether pleasing. We have been flattering ourselves—in Anglo-Saxondom at least—for many years back that all social progress was to be hereafter in the direction of greater individualism, and amongst us, certainly, this view has derived abundant support from observed facts. But it is now apparent that there is a tendency at work, which appears to grow stronger and stronger every day, towards combination in all the work of life. It is specially observable in the efforts of the working-classes to better their condition; it is still more observable in the efforts of capital to fortify itself against them and against the public at large; and there is, perhaps, nothing in which more rapid advances have been made of late years than in the power of organization. The working of the great railroads and hotels and manufactories, of the trades-unions, of the co-operative associations, and of the monster armies now maintained by three or four powers, are all striking illustrations of it. The growth of power is, of course, the result of the growth of intelligence, and it is in the ratio of the growth of intelligence.

Prussia has got the start of all other countries by combining the whole nation in one vast organization for purposes of offence and defence. Hitherto nations have simply subscribed towards the maintenance of armies, and concerned themselves little about their internal economy and administration; but the Prussians have converted themselves into an army, and have been enabled to do so solely by subjecting themselves to a long process of elaborate training, which has absolutely changed the national character. When reduced to the lowest point of humiliation after the battle of Jena, they went to work and absolutely built up the nation afresh, and in a fashion which reformers of all other countries cannot ponder too seriously. We may not altogether like the result. To large numbers of people, the Prussian type of character is not a pleasing one, nor Prussian society an object of unmixed admiration, and there is something horrible in a whole people's passing their best years learning how to kill. But we cannot get over the fact that the Prussian man is at this moment the foremost man of our day—the one who is likely to furnish, consciously or unconsciously, the model to other civilized countries, until such time as some other nation has so successfully imitated him as to produce his like.

Let us take a look at him—we of the temperance movement and of the anti-tobacco movement and of the "natural rights movement," and we who believe, as Mr. Wendell Phillips pretends that he believes, that "the best education a man can get is what he gets in picking up a living," and that universities are humbugs, and that from the *Tom-tom* and Lyceum lecture the citizen can always get as much information on all subjects, human and divine, as is good for him or the state—as he marches past in his ill-fitting uniform and his leather helmet. First of all, we observe that he smokes a great deal. According to some of us, the "tobacco demon" ought by this time to have left him a thin, puny, hollow-eyed fellow, with trembling knees and palpitating heart and listless gait, with shaking hands, and an intense craving for ardent spirits. You perceive, however, that a burlier, broader-shouldered, ruddier, brighter-eyed, and heartier-looking man you never set eyes on; and as he swings along in column, with his rifle, knapsack, seventy rounds of ammunition, blanket, and saucepan, you must confess you cannot help acknowledging that you feel sorry for any equal body of men in the world with which that column may get into "a difficulty." He drinks, too, and drinks a great deal, both of strong beer and strong wine, and has always done so, and all his family friends do it, and have only heard of teetotalism through the newspapers, and, if you asked him to confine himself to water, would look on you as an amiable idiot. Nevertheless, you never see him drunk, nor does his beer produce on him that utterly bemuddling or brain, paralyzing effect which is so powerfully described by our friend Mr. James, Parton as produced on him by lager-bier, in that enquiry into the position of "The Coming Man" towards wine, some copies of which, we see, he is trying to distribute among the field-officers. On the contrary, he is, on the whole, a very sober man, and very powerful thinker, and very extraordinary scholar. There is no field of human knowledge which he has not been amongst the first to explore; no heights of speculation which he has not scaled; no problem of the world over which he is not fruitfully toiling. Moreover, his thoroughness is wonderful—the envy and despair of the students of all other countries—and his hatred of sham scholarship and slipshod generalization is so intense, that we trust the "Genial Critic" will get out of the range of his saucepan before he passes in front of him.

But, what with the tobacco and the beer, and the scholarship and his university education, you might naturally infer that he must be a kid-glove soldier, and a little too nice and dreamy and speculative for the actual work of life. Bless you, you never were more mistaken. He is leaving behind him some of the finest manufactories and best-tilled fields in the world. Moreover, he is an admirable painter and, as all the world knows, an almost unequalled musician; or if you want proof of his genius for business, look at the speed and regularity with which he and his comrades have transported themselves to the Rhine, and see the perfection of all the arrangements of his regiment. And now, if you think his "bad habits," his daily violations of your notions of propriety, have diminished his power of meeting death calmly—that noblest of products of culture—you have only to follow him up as far as Sedan and see whether he ever flinches; whether you have ever read or heard of a soldier out of whom more marching and fighting and dying, and not flighty, boisterous dying either, could be got,

Now, we can very well understand why people should be unwilling to see the Prussian military system spread into other countries, or even be preserved where it is. It is a pitiful thing to have the men of a whole civilized nation spending so much time out of the flower of their years learning to kill other men; and the lesson to be drawn from the recent Prussian successes is assuredly not that every country ought to have an army like the Prussian army—though we confess that, if great armies must be kept up, there is no better model than the Prussian. The lesson is that, whether you want him for war or peace, there is no way in which you can get so much out of a man as by training him, and training him not in pieces but the whole of him; and that the trained men, other things being equal, are pretty sure in the long run to be the masters of the world. It is a lesson which we cannot help thinking some of our reformers might take seriously to heart. There is hardly one of them who does not flatter himself that if he can only get his thumb on one little knob in the composition of his countrymen, he can make them all models of virtue. The temperance men, for instance, are quite sure that all that is needed to put an end to crime is to forbid the sale of liquors—a little contrivance which would amuse our Prussian private mightily. It was like, he would say, simply building more jails, if crime were very rife, and taking no thought of popular education or popular poverty; or like multiplying the articles of war if you found your troops laggard on the march or timid under fire. If you told him, moreover, that many reformers were of opinion, and showed it in practice, that no virtue was of consequence except the particular one they had in charge, and that a nation might be great and happy, though every man in it was a liar, provided he abstained from intoxicating drinks; and that a respecter of "human equality" might be a very excellent person, though an arrant and notorious cheat; and that an enemy of slavery might roll nightly in the gutter without falling from grace, he would take off his knapsack and, having selected a dry piece of turf, would roll over and over with laughter. If you still further mentioned to him that some of the most ardent "moralists" of your acquaintance denied all responsibility for the use of their tongues, and when on the platform or at the writing-table said whatever came into their heads that seemed likely "to help along the cause," and encouraged young people growing up under their influence to do the same thing, and took to their bosoms and exhibited to their children as model men, as "noble champions" and "whole-souled heroes," very well-known rascals of long standing, for the simple reason that they occasionally helped some "movement" with a blathering speech, or a small subscription from an ill gotten fortune, his indignation and amusement would have a fierce struggle for the mastery, and he would sometimes laugh, and then again clutch his needle-gun. "Do you mean to tell me," he would say, "that there are people in the United States—a country which has afforded the most wonderful example, in that part of it called New England, of the effects which may be produced by running the whole character in a mould, and thus creating a type of man—who, while pretending to desire the advancement of the human race, deliberately preach that the practice of one or two of the minor virtues is all that need be expected of one? who put truthfulness and courage in the second rank, and elevate talk above thought, and pretend that a man's general character is of little moment, provided 'he is sound on the main question,' as you call it; that, indeed, as far as the proper performance of his political and social duties is concerned, it does not much matter if he is ignorant as well as vicious; and that, if he only knows how to read, and attends fires, and earns his own living from the age of six, he is sure to be fit for any duty the community may see fit to impose upon him?" We should certainly find this question a very awkward one.

THE "WAYS AND MEANS" FOR OUR COLLEGES.

THE matter of university reform has been widely discussed in its various phases during the last few years. Those who are intimately acquainted with the affairs and workings of our colleges, and upon whom devolves the task of putting the suggestions in practical operation, know that the whole discussion hinges upon two questions: How much can we accomplish with the material which the schools supply? and, How much can we accomplish with the pecuniary means at our disposal? On the first of these questions it is not here proposed to say anything. We turn our attention to the second one. The colleges are now doing as much as they can do with the pecuniary means which they possess, and the question of doing more and better is a question of money.

The fact is well known to those who are acquainted with the affairs of Yale College, for example, that it is pecuniarily in the most straitened circumstances; in other words, that its pecuniary resources are strained to the utmost by the work which it is trying to accomplish. The demands upon its funds are continually increasing. The appliances of education are being continually improved and multiplied. The machinery of education has been improved as much within fifty years as the machinery of locomotion. The improved machinery, however, is expensive. A great deal of the fault which is found with the college resolves itself into this, that it is trying to turn out modern, highly-finished work with antiquated and clumsy machinery. People are dissatisfied with it just as they would be with a railroad run upon strap rail, with springless and cushionless cars, and rickety locomotives. The state of things can be improved only by the investment of capital, and the question is, how to raise the capital? It is a simple mercantile problem, neither more nor less, and as such it ought to be discussed.

It is worth while to see distinctly, by two or three examples, that we are right in asserting that the grounds for dissatisfaction are due to pecuniary weakness. The college is now using recitation-rooms which are as inconvenient and as ill-adapted for the uses to which they are put as if they had been built for stables. While our best modern school-houses are furnished with convenient rooms, fitted up expressly and ingeniously to serve the purposes of recitation, and provided with all the most finished appliances for the work of instruction, the rooms, furniture, maps, blackboards, etc., which are in use in college are those of thirty or forty years ago. The authorities of the college know this as well as the critics, graduate and undergraduate, who urge it upon their attention. They would be glad enough to make the proper alterations and improvements, but where is the money to come from? "The college," in the ordinary use of terms, is the faculty, or, at most, the corporation, but no one expects the individuals who compose these bodies to pay the bills, and if any one did, we shall see before we get through that there is the best reason in the world why this expectation should be disappointed.

The library stands among the most important of the instrumentalities of education. A good library belongs to the definition of a college or university. An institution which cannot buy the new books which are being continually produced in every department of science, is doomed to become a fossil. Weakness in this particular does not strike the popular mind, in its judgment of a college, so distinctly as weakness in many others, but there is no defect more fatal, or more important in the view of those who hold a high theory of what a college ought to be and do. The purchase of books, however, involves money resources, and we are thrown back again upon the same vulgar necessity.

The "tutorial system," as it is called, although it is very far from being a system, is one of the most vulnerable points of the institution. It is one of the things upon which adverse criticism fastens most frequently, and with the most pungency. It certainly is an antiquated and rickety machine for the work of education. The time when a college instructor fulfilled his duty if he looked on the book and saw that the young men repeated from memory what was written in it, has gone by. We now have a few men, at least, who hold another theory of the work of their office. The instructors who are now demanded are men of thought, research, and genius, who can *make* books, or even dispense with them, and teach directly, personally, from an independent and original knowledge of the subject. Only such men can inspire enthusiasm and awaken interest. They are as rare as the men of excellent qualifications for any other branch of work, but we need to find them and see that they are secured for their proper calling. A book is a dead thing. We have to make it answer because we cannot all come into personal relations with the scholar who wrote it and acquire the knowledge he has to impart with the added force and the added charm of his spoken words. A book which is crammed and recited to a man who hears it as a routine duty only is worse than dead, it is *killing*. Now, it is impossible, in the nature of things, that a young man who has only been out of college for a year or two, and has perhaps spent those years in some foreign pursuit, should come to the task of teaching, at a month's notice perhaps, with either the knowledge of human nature, or the power to enforce discipline, or the scientific culture, or the plain matter-of-fact information in regard to the subject, which the position requires. Still less is it to be expected that any large number of the persons so chosen shall turn out to have talents for this kind of work. This much is bad enough, but it is not the whole story. The schools address the best of the young graduates and try to secure them as teachers. They offer salaries to men only one or two years out of college which are sometimes twice as large as the tutors receive. When, at the end of three years, the college elects tutors, it finds that the most desirable men are either engaged in other pursuits, or are employed as teachers at such salaries that to take a tutorship would involve a heavy pecuniary sacrifice. Once the college could make its own terms. It could take only graduates of three years' standing, and could insist that they should stay for at least two years. Now it has to take men of two or even one year's standing, and they will not bind themselves to stay more than a year. What does this mean? Simply this: that the college offers remuneration which is below the market price for the article it wants. All things considered—the amount of labor, the "position," the opportunities for other work, the amount of compensation, etc.—the place is not attractive to the men who are desired. There may have been formerly a class of men who had the requisite talents and attainments, and who were willing to devote them gratuitously, or almost gratuitously, to the work of preparing the young men of the country to win fame and wealth in the learned professions. If such a class ever existed, it is now extinct. The laws of supply and demand, of the relation between price and quality, rule here as everywhere else. If you will not pay the market price of the article you want, you must take the inferior article which your money will buy. Professors or potatoes, the law is universal. If, therefore, this country does not want the higher education, let us ascertain that fact, and then it will make little difference whether the colleges are bad or good, and we can stop talking about them. If college and university education of a high character is wanted, let us make up our minds that we have got to *pay* for it the money which it is worth.

There is no such thing yet at Yale as an academical *career*. There is no course marked out for a man who feels called to this work, and desires to pursue it. To a young man who has the talents and industry which make him a candidate for a position of this kind, the *chance* of a tutorship at $900, and the still remoter chance of a professorship at $2,600 at the vanishing point in the vista of life, are not attractive. The impulsion of natural tastes is strong, but the chances are very slight, the individual has no means of working towards the end he desires to attain, he must "wait to be asked," and, when he foresees the unsentimental and pitiless regularity with which butchers' and bakers' bills will be presented, and also the size of them, he can hardly be considered mercenary if he turns away from his "calling." Most men, under these circumstances, vacillate between the pulpit and the professor's chair. The pulpit is a career, and one which offers, to men who have the choice between the two, superior pecuniary inducements. Many men, therefore, go into the pulpit, engage in parish work, cultivate the homiletical faculties, and form the habits of clergymen, and then are elected professors, and have to form new habits, cultivate other faculties, and train themselves to other pursuits than those into which their lives have already hardened. But we cannot have scholarships, fellowships, tutorships, and professorships, graduated into a career, gathering up all the proper talent and fitting it for this work, without money.

It is clear, then, that the question of college reform in some of the points in regard to which it is most pressingly urged, is a question of ways and means. It is *money*, or the want of it, which is the root of all the evil. It is also clear that the ordinary laws of trade and mercantile modes of thought have invaded a domain hitherto controlled, in great part at least, by sentimental considerations. Nobody expects that this sort of work will ever be attractive on account of its pecuniary return, or that any one will ever acquire wealth by it, but it is hard in these days and in this country to get men to choose poverty if they can escape it, and the position of a college professor nowadays is one of positive poverty. It is impossible for a man to live in any community without incurring money-debts, and if his labor, his contribution to the work of society, does not secure him such a money-return that he can discharge those debts, he cannot long maintain his self-respect or the respect of his fellow-men. This is a mercantile, not to say a mercenary, view of the subject, but the man who ignores it, although he may be very sentimental and self-sacrificing, must expect to face the question whether he is *honest* before he dies.

If, then, the great practical question as to the reform, and increased efficiency, of our colleges is one of ways and means, the question arises: What can we do about it? There are three plans worth noticing.

The first is the plan of *state appropriations*. This is substantially the plan of the German universities. It avoids the dangers which are inherent in wealthy endowments, and provides year by year for the current expenses. It assumes, however, that the state takes an enlightened pride and interest in its institutions of learning, that it appreciates their needs and provides for them liberally, and that it will continue to do so with regularity. The dangers of it, under our political system, are that the state will *not* take interest in the higher education, but will suffer it to languish, its interest being limited to popular education; that it will not provide regular and consistent control for the university on account of the continual changes in the *personnel* of the government; that the jealousies of different sectarian institutions will wreck the plan; and that the influence of political parties will control the appointments of the professors and the working of the institution. These dangers are so serious and so probable that this plan finds few supporters. The second plan is that of *endowments*. This is the plan now in operation, and it is unquestionably necessary at least to provide buildings and apparatus—the fixed capital of the institution. But endowments are essentially a mediæval notion. The time has gone by when men believed that they would save their souls by diverting their property from their heirs to the foundation of a college. That faith was once universal in Western Europe. The English colleges owe their wealth to it. Since it lost its hold upon the minds of men, the fashion of endowing public charitable institutions has declined. It was already dead when the oldest American colleges were founded. The men who founded them did so from pure interest in the cause of education, but though they acted from another *motive*, they preserved the same *form* as the benefactors of the English colleges. We are still at work on the same system. We go on begging the wealth of the country to act with equal liberality, and from the same motive, as the first founders of the colleges. In fact, however, it has not responded so as to keep pace with the growth of the country, the increased demands upon the institutions, and the increased expensiveness of the process of education. It is high time for us to look about us for another resource. We can find this resource only by observing the conditions of the case as enumerated above, and by adopting the forms which are familiar to existing society. We find that the wants of the college can be expressed in the crassest and most vulgar terms of the dialect of trade, and that they can be satisfied only by adopting business processes.

The third plan, therefore, is the *business* plan. This admits of two subdivisions. In the first place, when we get tired of waiting for the rich man's thousands, we can begin to take the poor man's dollars. We have examples enough before us of success in business which has been won by seeing that there was more money to be made out of the pennies of the million than out of the dollars of the upper ten thousand. No graduate of the college has ever paid in full what it cost the college to educate him. A part of the expense was borne by the funds given by former benefactors of the institution. A great many can never pay the debt. Very few can, in their turn, become munificent benefactors. There is a very large number, however, between these two, who can, and would cheerfully, give according to their ability, in order that the college might hold the same relative position to future generations which it held to their own. The sense of gratitude, the sense of responsibility, the enlightened interest in the cause of education, which are felt by these men, constitute a resource which has never yet been tried, but which would yield richly. They stand by as idle spectators while the college is applying to a few wealthy individuals. Their share in its labor now consists in simply rejoicing in its good luck when it succeeds. A *popular* effort, which should seize upon the indebtedness of these men to the institution and their interest in it, and make it yield money, would be a step in the right direction. We are familiar with popular efforts of this kind for other causes. It is time that we applied it here. If every graduate who could afford it should give the college ten dollars, and others should give more in proportion, we should enter on a plan whose financial soundness is unquestionable. We should be paying a debt which we all owe. We should be applying principles which are thoroughly in sympathy with the ideas of this popular and democratic age, and we should reach results which we never can attain by waiting for the tardy generosity of a few men of extraordinary wealth.

In the second place, the business plan requires that the men who enjoy the benefits of the institution should pay for them in money all that they cost in money. At present, we are going on the principle that education is a thing which ought to be given away, or, at least, partially given. We proceed on the theory that it is desirable that every man should have a college education, and so we *give* it to as many as possible as a free gift. Whether this plan encourages many to acquire the higher education upon whom it is not worth while to expend the labor and money, is a question we may here pass over. Many men who could not pay for an education, if it were sold at its full money cost, make the best use of it as things now are. If the price of tuition were to be raised so far as fully to remunerate the college for its outlay on each student, especially on the supposition that the college should secure the best talent for this work and pay for it, and should provide the most approved appliances, it would, no doubt, become a serious burden. Many are now compelled to secure remissions. This number would be increased. But why make the pride or the impecuniosity of some fix the rate of payment for all? Why should not those who can pay pay fully? The normal principle of the institution should be to ask those who enjoy its benefits to pay for them. When men come who want the benefits and cannot pay for them, express provision should be made for them by the beneficence of individuals. Why interfere with the business methods of the institution, for sentimental reasons, to accomplish sentimental ends? Business should be the rule, and sentiment the exception; not sentiment the rule, and the consequent financial and business weakness a constant source of complaint. In the financial statement of the college, the income from room-rents, tuition, etc., should stand over against the running expenses, and present a balance on the right side. If, then, any persons step in and make the payments for those who are unable to pay themselves, so much the better. It is the best form which their benevolence can take, and it is earnestly to be hoped that there may be so much generosity of this kind that no proper and deserving person need ever lose the benefit of the institution. The discussion of theories of university education must, of course, go on, and the theories must be tested by practice. With those matters of pure theory we have not here been concerned. There is, however, a great deal of loose and aimless criticism of the present state of things which has no practical value. Our aim has been to see where the root of the difficulty is, and how to deal with it. Our prejudices may keep us for a long time from following the plan here sketched out, but it is the only sound solution of the question of ways and means.

PARIS.

Paris, August 26, 1870.

In such confusion as the present, in what has become not alone the rout of an army, but of a dynasty and a nation, it is difficult to state what are the particular events that produce the strongest effect. Still, at this moment, I do not feel much doubt in saying that since the first ridiculous and abominable speech (for it was both) of M. de Gramont on the 6th of July, about the impending "Empire of Charles V.," nothing has so astonished the public (but in a very different sense) as the nomination last week of General Trochu as Governor of Paris—in reality, namely, dictator.

When I told you in my last of the reasons which had deprived the army of General Trochu's services in all the Imperial campaigns, I took care also to tell you that for having courageously published criticisms on the army, and boldly set forth what France must learn if she would be saved, General Trochu had so displeased the vainglorious French public that they did not at first resent openly his having been set aside. But the moment defeat asserted itself steadily, and the popular rage took Louis Napoleon for its object, then the necessity for being served by capable and honest men grew evident, and the first name that was uttered by all tongues was that of Trochu. Nor was it only as a military chief General Trochu was clamored for, but also as a political leader.

When the Deputies went in a body to the Empress to demand the dismissal of the Ollivier and Gramont cabinet, the first thing they said was: "General Trochu must be made Prime Minister;" to this the Empress answered that that was impossible, for that General Trochu stipulated for his entrance into power upon "conditions that were inadmissible." A few hours later, La Tour du Moulin, a member of the Moderate Left, asked in the Chamber that General Trochu should immediately be charged with the formation of a new ministry. It was rumored that he would not, and his first appointment was to the command of the corps undergoing transformation at Châlons. This, however, could not last long, in the face of the fearful needs of the hour; and so it came to pass that, on the 17th of August, the Emperor leaving Metz for Verdun, and Verdun for Châlons, in his flight before the invader, had to comply with the general feeling, and sign the decree which sends Trochu to watch over the safety of the population of Paris.

From this date the "Empire" may be said to be no more.

"What," people ask, "were those 'conditions' stipulated by General Trochu, and which were so 'inadmissible' that the Empress could not anticipate their ever being granted?"

"Why, simply answer those who know General Trochu, "that he [Trochu] would not consent either to hold a position *from* Louis Napoleon, or to allow him to divide authority with him."

In fact, Trochu's nomination implies *abdication*, and the fact that *he* rules over Paris is synonymous with that of the Napoleon dynasty having ceased to do so.

How the material fact of the deposition of Napoleon III. will be actually brought about, and what will immediately succeed him—these are points on which the public is not at one with itself. "Sufficient for the day" is so evidently the thought of every man in France just now, that what may occur on the morrow is scarcely reflected upon. In this sentiment is to be found the only possible excuse for the system of misrepresentation that still endures.

To do Palikao justice, I believe that he knows how much better it would be to be able to give *true* information, than to be always "cooking" that which he has to offer; but is it possible to tell the French public the "plain" truth?

Firstly, for the last ten days—ever since the defeats of Wörth and Fröschweiler—the army itself divided into two, if not three, different corps, has scarcely known its real status, and Marshal Bazaine has probably sent but spare and curt telegrams to the Paris Government; but next, if Count Palikao is possessed of other news (which is almost certain), what would inevitably happen if he promulgated it without proper precaution?

Suppose that, on Monday last, the Government in Paris had simply set forth the real state of things, and had informed the idle, hungry public that matters looked very gloomy; that the Emperor had fled as best he might; that the troops at Metz, already put on half-rations, had not yet been able to follow. That then, on the Wednesday, it had recorded the unfortunate battle of Mars-la-Tour, completed, on the 18th, by King William's victory at Rézonville, shutting up Bazaine and his army at Metz! Suppose they had bluntly given forth these very plain truths as they got them (if they *did* get them), what would have been the result? Very probably, that such a fit of blind, bitter rage (the rage of impotence) would have possessed the people that massacre and pillage would have reigned supreme over the Paris streets, and blood have run more freely even than on the Alsatian battle-fields.

This being the condition of things, it is really open to doubt whether the Ministerial mode of proceeding be not all but obligatory. Their method seems to be this: From personal sources they hear pretty nearly the truth; they do not absolutely ignore it or falsify it; they disguise it, or rather they give a part of it; as, for instance, at Mars-la-Tour or Gravelotte, they stated what happened up till *four* o'clock, and rested on what was a partial success. They only refrained from chronicling the Prussian victory which was decided five hours later. Forty-eight hours after this, the intelligent part of the Paris public has learnt, through the *Times* and other English papers, what has in reality occurred; and then the Liberal press of Paris—*Temps, Siècle, Opinion Nationale*, etc., etc.—allow themselves to copy extracts from the foreign correspondents, which show the situation pretty much in its true light. At the end of a week, Paris is fully in possession of the whole sad tale, and knows that, while it had been exulting on the Boulevards, the army in the East had, in fact, suffered again another defeat, which was twelve hours after telegraphed to every capital in Europe, but first of all to London. When this dreary consciousness of misfortune is achieved, it is borne with relative patience; for it has come gradually, and not suddenly and all at once. The effect is certainly a mitigated one; and with such a populace as the Parisian before them, I cannot say that the Government is to blame for not bluntly emitting what is termed the "plain truth."

Besides, though it is partial and slow, there is in all this a manifest improvement as compared with what took place under the First Empire. If any one will take the pains to read the late M. Villemain's "Life and Correspondence of Count Louis de Narbonne," he will see what the wholesale mendacity of the First Napoleon was. He will find, after the defeat of Leipzig (and also during the Russian campaign), every luckless engagement transformed into a success, and there, where the fortune of war had most signally abandoned the Emperor, the most brilliant victory chronicled. With Napoleon I. it was a very plain and easy system, consisting in merely filling the bulletins with the exact reverse of the truth; it was a system of positive mendacity, whereas the present is a negative one, and consists at the most in disguising the truth, or only publishing small fragments of it.

But when will the day come when France will bear to look "the truth, the whole truth, and nothing but the truth" in the face? When will the lower classes be sufficiently instructed to discern the outlines of history's lessons? This is now the gravest of all questions, for on it hangs the future prosperity of this country, and the possibility of a lasting peace for the rest of the world.

Just reflect on the necessary mental condition of a race in which no lesson can be drawn from history, because the facts of history are untold. A French peasant or a lounger on the Parisian boulevards does not know what happened between 1813 and 1815. He does not know that the First Empire fell because France had for fifteen years tried to bully and oppress every nation in Europe. The individuals of the existing generations scarcely know even that the First Empire actually did fall. The consequence of all this obviously is, that they rush blindly into unjust and aggressive wars, without having the remotest idea of what they lead to, and what is their probable result.

I do not suppose that a similar instance of absolute blind ignorance in the masses of a nation exists anywhere else out of France, unless it may be in Spain. Strange to say, in both countries there is one cause (among many others) equally active; the clergy, namely. The mass of the lower French priesthood is now almost on the same level of narrow-mindedness and bigotry as is that of Spain, and the Jesuits of all lands resemble each other, resolved, wherever you find them, to crush out the light, and stifle all aspirations towards modern civilization and progress.

It has been one of the principles of the Second Empire to subject the nation, as much as possible, to the Jesuits.

Notes.

LITERARY.

Messrs. Charles Scribner & Co.'s list of fall announcements embraces for September the following works: A new volume of "Lange's Commentary," comprising Galatians, Ephesians, Philippians, and Colossians; Volumes XI. and XII. of the popular edition of Froude's "History of England," thus completing it; fifteen volumes in continuation of the "Illustrated Library of Wonders;" Volume IV. of Mommsen's "History of Rome," with a copious index, prepared expressly for this edition, which will then be completed; "Bible Notes for Daily Readers," by E. M. Hunt, M.D.; a new edition of Pouchet's "The Universe," with important additions and illustrations; "The Theology of Christ," by Rev. Dr. J. P. Thompson; and "Early Years of the Christian Church," by that eminent scholar and writer, Dr. E. de Pressensé. In October will appear in book-form the series of articles on "Books and Reading" lately contributed to *Hours at Home* by Prof. Noah Porter; and "Life of Dr. Green," by Le Roy J. Halsey, D.D. In November will be ready for the holidays "Songs of Home," a companion to the "Songs of Life," published last year, and like that a portion of the collection known as "Folk Songs," with illustrations by Fenn, Hennessy, Griswold, and other artists, interpreted by Mr. W. J. Linton. Finally, a new edition of Mr. Charles Loring Brace's "Races of the Old World."——Messrs. Sheldon & Co. announce an entirely new series of books for boys by Capt. Mayne Reid, one volume telling of "The Castaways; or, Adventures in the Wilds of Borneo," and another of "The Tall Patagonians." In October, they will publish "With Fate Against Him," by Miss Amanda Douglas, author of "In Trust," and Mr. Richard Grant White's *Galaxy* articles on "Words and their Uses," collected in one large 12mo volume on tinted paper. In November: "The Shadow of Moloch Mountain," by Mrs. Jane G. Austin.——Mr. Carleton announces new and uniform editions of all of Mr. John Esten Cooke's novels and a new novel by Marion Harland.——General Upton has prepared and Messrs. D. Appleton & Co. will publish "Tactics for Non-military Bodies, adapted to the Instruction of Political Associations"—police forces, fire organizations, masonic lodges, and other similar bodies. The same house will publish "The Origin of Civilization," by Sir John Lubbock; "Does Protection Protect?" by Mr. W. M. Grosvenor, the editor of the St. Louis *Democrat*; "Suburban Homes, and the Best Mode of Laying-out Grounds," by Mr. F. J. Scott; "Lay Sermons," by Professor Huxley; and a novel by Mrs. Oliphant, entitled "The Three Brothers."——The Catholic Publication Society announces a new volume of Sermons, by the Paulist Fathers, of this city.——A new story of school life, by Mr. William Everett, is announced by Messrs. Lee & Shepard, who have in preparation, besides, a great cloud of juveniles; a "History of Paraguay," by Mr. Washburn, late American Minister at the court of Lopez; "The Divine Man," by the author of "Credo;" "Biographical Annals," by Rev. Calvin Durfee, of Williams College; "The Coming Man, Why and How: Why the Chinese Emigrate," by Col. R. H. Conwell; a course of lectures on the Lord's Prayer by Rev. Dr. Baldwin; and a new edition of Whately's "Bacon's Essays."

—The fullest war-map we have yet seen is that just published by Mr. E. Steiger, of this city, and called "Schedler's Topographical Map." It is a photo-lithographic reproduction, and the physical features of the countries represented are printed in brown (for the mountains) and blue (for the rivers), leaving the names of places in greater relief in black. The Parisians seem determined to make a war-map still useful to spectators of the great conflict, and this one, which covers the whole field of actual and prospective hostilities, has also plans of Strasbourg, Metz, and Paris and its environs. It can be folded away in the pocket, and is quite worth the dollar which is asked for it.

—We referred incidentally last week to the decease of Mr. Henry Clarke Wright, formerly a clergyman, but of late an independent lecturer in almost every branch of reform, and in some branches of agitation which have yet to prove themselves reforms. As an author whose works were widely read, if not famous, he deserves additional mention here. He was a native of Connecticut, but was bred in Ohio, and was rather more identified with the West than with the East. An incessant traveller, he had traversed the West so thoroughly that he used to say he could find his way about blindfold. He had a classical education, and a sufficient aptness for languages to make the Greek and Latin authors his pocket companions; but his style was noticeably unindebted to his acquaintance with the ancients. His mind, occupied by a few simple ideas, seemed to have but one mode of expressing each of them. "Chairman," he has said a thousand times if once, "if the Bible sanctions slavery, I trample upon the Bible." Mr. Wright was physically a giant, and no one could have been better qualified on that score to be an apostle of non-resistance. His work for children, "A Kiss for a Blow," has had a very extensive circulation, and contains Christian doctrine which Christians by common consent, the Quakers excepted, omit to put into practice. Mr. Wright's visit to Europe to try the water-cure system under its founder, Priessnitz, produced "Two Years in Graefenberg," if we remember the title rightly. His European experiences are also narrated at length in his autobiography, of which he was, we believe, preparing a second edition at the time of his death. A work of more importance than all of these is Mr. Wright's "Marriage and Parentage." It does not, of course, solve the problems of the married relation, but it is one of the few books of the class written from a pure motive, and from a painful sense of the evils which it seeks to remove. Mr. Wright was an indefatigable writer, and his correspondence and journals must have been simply enormous in volume. He was 73 years old when he died last month at Pawtucket, R. I.

—We had occasion the other day to speak of that nicety of ear in the Chinese which forbids them to accept as a true rhyme the sameness of sound of *here?* (with the rising inflexion) and *spear* (with the falling inflexion). The *tone*, so to call it, being different, the identity of rhythm and rhyme in verses counts for nothing, or little. This is well and perhaps commonly known, but further illustration of the fact that tone is so very important in the Chinese may be of interest, as showing the difficulties with which business men, missionaries, and others labor in the attempt to master the Chinese tongue. The most fastidious and dignified of Bostonians will thankfully fall back on the "ridiculosities" of Pidgin English rather than bring on their housekeeping the ruin that would come upon it should they attempt correct Chinese when Ah Sin displaces Bridget. A writer in the Shanghai *Cycle* relates that once a missionary at Ningpo preached a sermon on the text, "Strait is the gate and narrow is the way which leadeth unto life," and it might have been an excellent sermon, but the effect of it was marred by the preacher using a wrong tone in pronouncing one word, and bothering his hearers by talking throughout of the *blind* gate of heaven. Another missionary was astonished at seeing all his audience suddenly rise up. He thought he had just told the congregation that God would be angry with them if they kept on worshipping idols; but he had so pronounced the word for *angry* as to make of it an order that his hearers should rise up in their places. On the matter being explained to them, they laughed and sat down, and profited, it is to be hoped, by the rest of the discourse. Still another preacher, addressing his flock on the sin of idol-worship, insisted on it, as he thought, that "idols ought not to be worshipped," but actually told them that idols were absolutely necessary. *Pa'-veh-tih* and *'pa veh tih* are spelled with the same Roman letters, but in one *pa* is in the upper third tone, and in the other it is in the lower second tone, and the difference of tone makes the difference between "ought not to be worshipped" and "absolutely necessary." So one may send his servant for the tobacco, and when he comes back with the salt-box may give him one of those cursings which sweeten the intercourse of the Chinaman with the Foreign Devil, when really the assumed stupidity of the servant is one's own tonal blunder in pronouncing *yen*. In short, says the *Cycle*, it is necessary for all students of Chinese who would make real progress at once thoroughly to disabuse their minds of the notion taught by some that tone "may safely be passed over as a stumbling-block that has stood in the way of many a beginner's progress." So is Chinese a stumbling-block that has stood in the way of many a beginner's progress. Tone is a part of the language, and so important a part that to neglect it is to expose one's self to the liability of making the grossest and most dangerous blunders.

—Recent English publications, as usual at this season, are scarcely of noticeable importance. The great conflict across the Channel has produced a few new works of a military and politico-historical character, but, on account of its suddenness and rapidity, has rather favored the sale of old stocks of works relating to the European balance of power and to the European campaigns during the present century. The Longmans have published, and perhaps by this time regret it, "The Military Resources of Prussia and France, and Recent Changes in the Art of War," by Lieut.-Colonel Chesney, of the Royal Engineers—a work that should have sold better in the last week of July than in the last week of August, when it actually appeared. Another publication by the same house will have the benefit of the present war-excitement without being so dependent upon it for success—"History of the Overthrow of the Germanic Confederation by Prussia in 1866," by Sir Alexander Malet, Envoy-Extraordinary and Minister-Plenipotentiary at Frankfort, in a single octavo volume, with maps. Timely, we suppose, may be called, or might have been, "Hodgson's "Life, Times, and Opinions of Turgot;" and a waning interest may attach to W. Tayler's "Popes of Rome from the Earliest Times." Mrs. Gordon, the daughter of Sir David Brewster, publishes a work on his "Home Life." Mr. D. Beale, Principal of the Ladies' College at Cheltenham, edits, with a preface, a volume of nearly 300 pages, containing "Reports issued by the Schools Enquiry Commission on the Education of Girls, with Extracts from the Evidence."

—"Echoes from the French Poets" is the title of an anthology by Harry Curwen, embracing specimens from Baudelaire, de Musset, Lamartine, Victor Hugo, Chénier, Gautier, Béranger, and the rest. How much some of these are to be held responsible for the present war and the humiliation of their country, we will not pretend to decide. De Musset, who has been most quoted of late, does not seem to us to have shown the extreme of the national feeling in his "Nous l'avons eu, votre Rhin allemand," though there is one verse of the poem—the one which reminds the German of the pleasure his daughters felt in pouring out the Rhine wine for the Frenchman—which is sufficiently expressive of a sentiment which makes the Frenchman so particularly dear to the guardians of female honor; and throughout all the poem, the insolence of its assumption of French ability to recover the Rhine whenever the game should be worth the candle, betrays the self-illusion of a people utterly intoxicated with martial glory. In poetry, even of the patriotic stamp, the French do not shine beside the Germans, and are fated to be lyrical only upon paper. The unfitness of the French language for musical expression was pointed out a century ago by Rousseau, in an essay which time has not refuted; and while English and American correspondents have recorded their infinite annoyance at hearing the Marseillaise shrieked in their ears at all hours of the day and night, not one, so far as we know, has been disturbed by the songs of the German soldiers or people. The illusion we just now spoke of has been nowhere more conspicuous than in the revival of the Marseillaise when scarcely a syllable of it is applicable to the present crisis. There lies before us a war-lyric, born of these days, and much in the form of the Marseillaise, with which it is equally a curiosity. Like the French themselves, it ignores causes, and looks only at the situation, and reads very much like some of the Southern war-poetry during the rebellion.

"Sur notre sol rebelle à l'esclavage,"

for instance, is a line that might have been dictated in Richmond as well as in the shadow of "personal government." The foreigner, the stanza goes on to say,

"Il veut planter son drapeau détesté
Et de la France accomplir l'esclavage."

To resist this there is no resource but waking up the sons of '93:

"Réveillez-vous, fils de quatre-vingt-treize!"

And here is the truth in a nut-shell, with a single emendation:

"Oui, trop longtemps nous avons supporté
De ces soudards les menaces de guerre;
Et pour la France [la Prusse], et pour l'humanité,
Finissons-en par un coup de tonnerre."

Put these lines, *mutatis mutandis*, in the mouth of a Prussian, and you have one of those "historical verities" which the author of the "Vie de César" has declared no less sacred than religion. To the *coup de théâtre* at Saarbrück the Germans have certainly replied with a *coup de tonnerre*.

—It is proposed, in the Zoölogical Section of the French Academy, to make Mr. Darwin a member, and probably that honor will be conferred upon him. There is, however, active opposition. M. Charles Robin, when the matter was last discussed, gave it as his opinion that, as regards proved facts introduced into science, there are a hundred zoölogists who should have precedence over Mr. Darwin. M. Brongniart declared that variation in plants, as asserted by Mr. Darwin, is a thing that has no existence; Darwinism is, in fact, he said, but a fairy tale; the appearance of species is a fact which can only be accounted for by the assumption of a supernatural cause. M. Blanchard made the charge that Mr. Darwin upheld the false theory that man is descended from the apes. To this M. de Quatrefages replied that Mr. Darwin did not uphold that theory. As he, M. de Quatrefages, had said before, Mr. Darwin was a very eminent naturalist, who desired to remove from science the continual positing of a first cause, and to seek an explanation of the facts of the organic world in second causes, as has long since been done in chemistry, geology, and physics. Beyond that he had not gone, and it was not right to judge him by the language of some of his disciples, who, it sometimes seemed, had not read his works; to hold him responsible for the exaggerations and errors of everybody who sheltered himself behind his name would be injustice. M. Milne-Edwards reminded M. Brongniart that the sea sometimes discloses fairy tales, and spoke of the great value of Mr. Darwin's "Monograph of Cirripeds"—a sub-class of crustaceous animals, we may say to the unlearned reader, of which the common barnacle or the acorn-shell are the representatives, and of which Mr. Darwin, some twenty years ago, made an exhaustive study, embodying the fruits of his researches in one of the most important monographs possessed by zoölogical literature. M. de Quatrefages, no more than M. Milne-Edwards, is a Darwinist in the common acceptation of that term, but he makes a strong fight for Mr. Darwin, and has been his principal supporter in the discussion, so far as that has yet gone. There are two men, he said, included in Mr. Darwin—a naturalist-observer, sagacious, exact, patient; and a theoretical thinker, often just indeed but sometimes rash and hasty. Yet he is not the less one of the glories of science. And his election would not make the Academy Darwinian, for men know that the institute appreciates work apart from doctrine and theory. That the theory with which Mr. Darwin's name is popularly associated has in it something which at least is plausible, M. de Quatrefages thought sufficiently proved by the fact that it had been worked out by Darwin, Wallace, and Naudin, working independently and in different paths; and he enquired how it happened, if Darwin's ideas were such as some of his opponents represent them to be, it could have happened that they had, in less than ten years, obtained the support of such men as Lyell, Hooker, Huxley, Vogt, Lubbock, Haeckel, Filippi, and Brandt himself, who has just been elected correspondent in opposition to Mr. Darwin. M. de Quatrefages proceeded then to enumerate specifically Mr. Darwin's claims to the respect and gratitude of scientific men, and said that, apart from his more popular works on the origin of species—whose arguments, if used to establish the principles which regulate the propagation of *races*, instead of the propagation of *species*, would be, M. de Quatrefages held, incontrovertible—apart from the works on the origin of species and on the variation of plants and animals under domestication, the world owed Mr. Darwin, according to Dr. Hooker, the most beautiful discoveries of the last ten years in vegetable physiology; one of the most valuable of zoölogical monographs; and, finally, seven great memoirs in geological literature—namely, on coral islands; on volcanic islands; on South American geology; on the distribution of erratic blocks in South America; on the geology of the Falkland Islands; on Patagonian saliferous deposits; and the connection between South American geological phenomena. It remains to be seen whether the simple doctrine, always so hard of acceptation, that academies of science are not bound to be also active conservators of all kinds of theories, will be accepted by the Zoölogical Section of the Institute. To judge of the work of men of science, independently of the doctrines they hold, would seem still to be almost as difficult for men of science themselves as for the men whom the scientists call superstitious.

—As everybody knows, the man who for any reason has during the last month desired to shut his own eyes or other people's to the essential characteristics of the two European combatants, has found it easy to stay on the surface with a good deal of plausibility. He may have been a Tammany Democrat, and a French sympathizer only because Napoleon was a despot with an occasional plébiscite, or he may have been a French sympathizer for no better reason than that he had misread the history of his own race here and in England, and had saturated his mind with Mr. John S. C. Abbott; but no matter how feeble or pretended his reasons for being anti-German, he certainly could make some show of having real reasons of weight. Frederick William is no doubt a firm and consistent believer in his divine right to reign absolutely over the people of Prussia; he is, no doubt, as willing a believer in despotism as ever Louis Napoleon was; Count von Bismarck no doubt is just as astute a plotter and as high-handed and overbearing a despiser of the aspirations of the people as the Emperor ever has seemed to be; there certainly is French liberalism of thought and toleration of religious opinion, and there certainly has been recent oppression of Jews in Protestant Prussia, and much intolerance and bigotry in German religious circles. But he offers no answers to the questions towards what form of freedom in government Prussia gravitates inevitably; what measure of firm-held and moderately used constitutional liberty has she already attained; what is the deep desire, towards whose accomplishment Bismarck, with all his force and ability, is but an instrument, which animates all Germany in this conflict; whither tends the typical German habit of mind as regards religious matters and speculative thought—towards ultimate freedom of speculation and tolerance or towards the ultimate end of the Jesuitism that is so strong in Catholic France; is the Prussian triumph the triumph of honesty and honest laborious work, and is the French downfall the downfall of a generation of fraud and cunning that has been imposing on itself and the world as wisdom; is not this sudden and irretrievable failure of the Napoleonic system a crushing criticism upon it? However, we intended not to ask our sympathizer these questions, but to confess to the American admirer of the Empire, or hater of the German people in arms, some things that make for his side of the question. Prussia has a school system which probably has been, in past years, the best in the world—has taught more children more thoroughly than that of any other country in Christendom, Catholic or Protestant. But the King is personally absolutist, and prefers that the people should not cultivate too enquiring a habit of mind. That people should be good rather than clever is the more attractive formula in which this opinion of the right relations of men to their superiors takes shape. That the people know too much when they know more or want to know more than is told them by their superiors, is the form it takes when it is closest to the spirit of the majority of men who hold it. The Prussian clergy, actuated by the fear that much cleverness is, as a rule, permitted by God to root out goodness in the heart of man, became alarmed some years ago at the spread of speculative thinking, and heartily joined with the King in making the schools small religious seminaries rather than schools for instruction. Herr von Mühler, a reactionist of the most bigoted type, and apparently a man of feeble mind, is the King's chosen Minister of Education, and he, with the help of the clergy, has worked great damage to the higher schools of the country, while the elementary schools he has nearly ruined. There at present the children practically learn nothing but reading, writing, a little ciphering, and many hymns and texts. Under this deterioration of the system, the schools suffer in many ways. The instruction in the training-schools for teachers, for example, is now of an inferior quality; the masters are forbidden to read Goethe and Schiller and the other national classics; field-hands and artisans are converted hastily into schoolmasters, to the great detriment of education; such teachers as were conscientious and ambitious leave the business of teaching, which inferior men take up and are encouraged to take up. Here, indeed, is cause for encouragement which outweighs even so serious cause for discouragement as the gloomy outlook offered us by Herr von Mühler. The country where thousands of men give up a much-loved task because they are not allowed to work at it as hard and as conscientiously and as profitably to others as they desire to work, is not long bound hand and foot, and at the mercy of a reactionist Minister of Education.

—As a sample of the sort of mental and spiritual pabulum with which Herr von Mühler and the clerical party feed the small Prussian, we append this ridiculous hymn, which that young gentleman may be imagined chanting with all the national earnestness and gravity:

> "Almighty God, I am content to remain the dog that I am. I am a dog, a despicable dog. I am conscious of revelling in sin, and there is no infamy in which I do not indulge. My anger and quarrelling are like a dog's. My envy and hatred are like a dog's. My abuse and snappishness are like a dog's. My robbing and devouring are like a dog's. Nay, when I come to reflect upon it, I cannot but own that in very many things I behave worse than the dogs themselves."

There would seem to be, by the bye, in this way of catching your citizen young, and making him, by means like these, into a submissive and mannerly subject, a curious illustration of the German habit of dealing with all sorts of phenomena—mental and sentimental as well as others—after the high philosophical method applied with a true classificationist's rigidity of detail. But it is the method in its dotage.

TÉNOT'S "PARIS IN DECEMBER, 1851."[*]

M. Ténot's "Historical Essay on the *Coup d'État*" was published in Paris before the shackles of the press had been sufficiently removed to allow the truth about the origin of the Second Empire to be told without reserve. But, notwithstanding the difficulties the writer had thus to contend with, he has succeeded in laying before the French people a picture of events as truthful and undisguised—though devoid of all lively coloring—as any that could be published in Belgium or England. What made it possible was mainly the circumstance that the net-work of lies, perjuries, and treacheries by means of which Napoleon usurped supreme power in France was a scarcely concealed combination of tentative criminal advances, successively lied and sworn away, until the moment seemed propitious for the last and decisive leap, which, after all, only the contentious rage and party blindness of both parliamentary camps prevented from becoming a *salto mortale*. To this must be added the convenience afforded the author for detailing the most atrocious part of the drama by a number of Bonapartist narratives of the final events, some issued on the morrow of intoxicating victory, when all restraint seemed superfluous, and some, of later date, by important abettors of the deed—like Dr. Véron and Granier de Cassagnac—on whose cynical revelations no restraint could easily be imposed. M. Ténot, in order to compose a most terrible indictment of Louis Napoleon, had only to arrange chronologically a large number of public documents—including speeches, solemn declarations, official oaths, proposed laws, proclamations, despatches, decrees, and proscription lists—to connect and explain them by historical threads and remarks of a not necessarily pronounced character, and to strengthen his points by a convincing display of impartial criticism; and this is exactly what he has done in the succinct narrative before us, a work equally remarkable for its chaste diction, lucidity, and calmness. The book has met with an immense success in France, and we cannot but give credit to the American translators and publishers for reproducing it in a tolerably readable English version—which, however, here and there betrays too much haste in execution—accompanied by a large number of useful biographical and explanatory notes, drawn chiefly from Vapereau's "Dictionnaire des Contemporains" and Block's "Dictionnaire Général de la Politique."

---

[*] "Paris en Décembre 1851; étude historique sur le Coup d'État. Par Eugène Ténot, rédacteur du *Siècle*, auteur de *la Province en Décembre* 1851." Paris. 1868 (first edition).
"Paris in December, 1851; or, The *Coup d'État* of Napoleon III. By Eugène Ténot, editor of the *Siècle* (Paris), and author of 'La Province en Décembre 1851.' Translated from the thirteenth French edition, with many original notes, by S. W. Adams and A. H. Brandon." New York: Hurd & Houghton. 1870.

We cannot, within the narrow limits allowed us here, follow M. Ténot through the tortuous windings of Napoleon's presidential strategy aiming at the overthrow of the republican constitution of 1848. Besides, we have lately given our readers a fugitive sketch of its dark outlines in our review of the first volume of Delord's "History of the Second Empire" (No. 242 of the *Nation*)—a history written by a man of the same school as M. Ténot, and of equal candor, but more fortunate as to the time of publication. There is, however, one move among the many made by President Napoleon which, following the book before us, we cannot refrain from noticing, involving, as it does, the most surpassingly impudent, and therefore the most characteristic, of all his public utterances. Visiting, in the latter part of 1849, Ham, where, under Louis Philippe, he had atoned by years of captivity for his insurrectionary attempt at Boulogne, the traitor of 1840 and future traitor of 1851 made the following address to the mayor of the town:

> "I am profoundly moved by the affectionate reception which I receive from your fellow-citizens; but, believe me, I have not come to Ham from pride, but from gratitude. I have long felt a desire to thank the inhabitants of this town and of its environs for all the marks of sympathy they so incessantly showed me at the time of my misfortunes. But having now, by the choice of all France, become the legitimate head of this nation, I could not boast of a captivity the cause of which was an attack on a regular government. When one has learned what evils the most righteous of revolutions bring with them, one can hardly comprehend the audacity of him who dares to assume the terrible responsibility of a change. I complain not, therefore, of having expiated here, by six years of imprisonment, my temerity in rising against the laws of my fatherland; and it gives me extraordinary pleasure to propose, at the very place where I suffered, a toast in honor of the men who are determined, notwithstanding their convictions, to respect the institutions of their country."

The characters of the men who executed the *coup d'état* are not so fully drawn by M. Ténot as by M. Delord, and, of course, still less fully than by Mr. Kinglake, in the famous chapter on that event in his history of the "Invasion of the Crimea." But his narrative, though more reserved and cautious, agrees at every point with those of the others. The baseness of such accomplices as Saint-Arnaud, Magnan, and Maupas he lays almost entirely bare, while throwing a thin veil over the characters of Morny, Persigny, and Fleury. Morny—to whose illegitimate blood-relationship with Louis Napoleon he guardedly alludes—he represents as the soul of the movement, in its culmination. The centre of the activity in those days and nights, he says, "was not at the Élysée. It was at the Ministry of the Interior, in the cabinet of M. de Morny. Everybody has heard of the coolness, determination, and presence of mind displayed by M. de Morny under those circumstances; but it is our opinion that the preponderance of his part has not yet been sufficiently appreciated. We have no fear of being mistaken in asserting that the deed of the Second of December was decreed by Louis Napoleon, but *executed* by M. de Morny." It is also to Morny that he attributes the plan of operations for the Fourth of December which was adopted at the war council of the preceding evening, and which he sums up as follows: "To concentrate the troops in great masses, care for them, feed them well, and keep them from all contact with the people; to withdraw the too feeble posts; to dispense with patrols; not to prevent the construction of barricades; then, having carefully chosen the moment for action, to attack unexpectedly and with compact forces, and crush all resistance." And the full and terrible meaning of this plan Morny made thus clear, in a dispatch to General Magnan: "City warfare can be carried on only by keeping entirely aloof, by surrounding a quarter and reducing it by famine, or *en l'envahissant par la terreur*." Generals Saint-Arnaud and Magnan—the Minister of War and the Commander of the Forces of Paris, both improvised for the occasion—gave their military instructions accordingly—instructions of which the massacre of the innocents on the fashionable boulevards by the brigades of Canrobert and Reibell, on the fourth, proved a terrible illustration, though probably not, as M. Ténot admits, a premeditated application.

A certain measure of "*terreur*" was, however, distinctly prescribed for those boulevards by Morny. "Strike hard in that direction," was his injunction to General Magnan. The public announcements of Saint-Arnaud and of Maupas, the Prefect of Police, were no less terroristic: "Any person taken constructing or defending a barricade, or with arms in hand, *will be shot;*" "Pedestrians standing or collecting in groups on the public thoroughfares will be dispersed by force *without previous summons.*" And our author adduces plenty of evidence, from Bonapartist sources, to the effect that what the abettors and admirers of the *coup d'état* called the requirements of martial law was by many an officer and official executed with heartless rigor. Thus Colonel Rochefort, to cite only one instance, scattered a gathering of well-dressed people, who made no resistance, so effectively that thirty dead bodies remained upon the pavement. The number of those who perished singly or in small groups, with or without arms in hand, amounted to hundreds. In regard to the wholesale massacre just mentioned, M. Ténot proves "that the cannonade and fusilade had been directed with fury against the houses of the boulevard; that the roadway was strewn with corpses; that they were seen lying from Tortoni's as far as the Gate Saint-Denis, a distance of nearly a kilomètre, here and there in groups; that twenty-five corpses were heaped up in front of the Hôtel Sallandrouze; that several hours later the videttes still occasionally fired upon passers-by." And all this fury was exercised not in repressing a formidable rising, but in efforts to terrify the Parisians from attempting a serious resistance—efforts which proved but too successful, combined as they were with skilful manœuvres to deceive and divide the sentiment of the people. Owing to both terrorism and division of sentiment, "the number of the defenders of the barricades did not exceed 1,000 or 1,200 men," but these men, a mere handful compared to the immense forces brought against them, fought with a bravery worthy of the brightest days of the history of Paris.

Lives of the Founders of the British Museum; with Notices of its Chief Augmentors and other Benefactors. 1570–1870. By Edward Edwards. (New York: J. W. Bouton. 1870. 8vo.)—In the writing of biography nowadays two tendencies are especially noticeable—first, the tendency to whitewash bad characters, and, if necessary, blacken their neighbors for contrast; and, second, the disposition to string together sketches of men who have any similarity of character or profession or circumstance—as generals, judges, retired monarchs, wits, beaux, court-fools, and what not. So keenly has this method of book-making been followed up that strings for the purpose are becoming scarce, but that which Mr. Edwards has found, though somewhat weak, is not one of the worst. It gives him a chance—while relating the lives of men who had at least this resemblance, that all were collectors, and were lovers of books or art or science—to sketch the whole history of the British Museum, one institution, at least, in which Great Britain surpasses every other country.

The book begins with a useful chronological table of the chief gifts and other accessions to the Museum from its foundation, and closes with a good index. What is included between the two tables is not equally praiseworthy. The stories are long-winded and the reflections commonplace; the style is formal and pointless, resembling a second-rate Parliamentary report; and the want of room, of which the author several times complains, does not prevent his inserting such incongruous matter as a defence of the Church of England and statements of his opinions on natural theology, Christian evidences, and the Stowe-Byron controversy.

The early lives contain some new and important matter, derived from the author's own researches among the manuscripts in the Rolls House and in the Museum. The first is the best. Sir Robert Cotton (1570–1631) has not had his due place in English history, and of late has met with harsh treatment from English historians. Mr. Edwards vindicates him, and gives a picture of his character, which may be true since it is not wholly pleasing. Cotton, who was proud of his descent from the Bruce, was early a member of Parliament, and, though not a good debater, was a good worker, a man valuable on committees, eager in matters of administrative reform, and to be relied upon in all questions which were to be determined by knowledge of precedents. His library was collected with a view to illustrate the history, and especially the constitutional history, of his country, containing many documents which ought to have been in the possession of Government and of city corporations, and would have been, had not those bodies been as careless of their records as many of our town-officers are. Cotton did something to enrich his own library by numerous reports and memorials which he wrote on public questions. It is interesting to see him discovering the same abuses in the management of the Navy under the first Stuart king that Pepys found under the last. It was by his advice that the order of baronets was established. He was mixed up, not altogether to his credit, in the Spanish marriage negotiations, and gave frequent advice to the unfortunate Duke of Somerset and his successor the Duke of Buckingham. Indeed, he was consulted by everybody on all points of precedent, of English genealogy and history. Camden, Ben Jonson, Lisle, Peiresc, Ralegh, were among his correspondents. In the great contest of the Petition of Right, his close fellowship with Eliot and Pym, and the good service he then did the Parliamentary cause, forbid that he should ever be spoken of as a mere antiquary. His patriotism brought him into disfavor at the court, and led to the sealing up of his library for more than a year—the irritation arising from which, he averred, caused his death. It may well have been so, for, as one of his contemporaries said, "if you could look at Sir Robert Cotton's heart, 'My Library' would be found inscribed there;" and the dark point in his character is that he appears to have sometimes been a little unscrupulous as to the means by which he increased it. His grandson transferred the collection to the nation in 1700, and fifty-three years later the British Museum was founded by its incorporation with the Harleian collection of MSS. and the Sloane Museum. The latter, which Sir Hans Sloane had inherited from an ardent naturalist, Wm. Courten or Charlton, and increased by constant and liberal purchases, contained above 200,000 articles.

Of course, rich as the Sloane Museum was, and valuable as was the Cottonian Library and Harleian MSS., the whole formed only a nucleus around which a great national institution might grow, and in the next fifty years less than £10,000 was granted by Parliament for its increase. And, in fact, one of the most remarkable features in the history of the Museum is the extent to which it is indebted to the generosity of private benefactors, and the comparatively scanty support it received, till the present generation, from Government. Even the more liberal appropriations of the last thirty years seem to be due in a very great measure to the exertions of one man, the late principal librarian, Sir A. Panizzi.

As for the rest of the book, the lives of Henry, Prince of Wales—England's Marcellus—of the collectors of the Arundelian and Harleian MSS. and the Sloane Museum, finish the division of Early Collectors; next come the Organizers and Early Augmentors; next to those the Later Augmentors and Benefactors, and the Librarians Planta, Ellis, and Panizzi; and, lastly, an account of the plans for dividing the collections, sending Science to South Kensington or elsewhere, and of the plans by which it is hoped that room may be found for all on the present site. There are also reminiscences of Mr. Edwards's own early services at the Museum, giving some account of the framing of the famous rules for cataloguing which we have not before seen in print.

Hammer and Anvil. A Novel. By Friedrich Spielhagen. From the German by Wm. Hand Browne. Author's edition. (New York: Leypoldt & Holt. 1870.)—Spielhagen's central idea in the present novel cannot, perhaps, be more concisely stated than by quoting his own words—which, by the way, are true of all the rest of his books, and give, it seems to us, sufficient confirmation of the verdict we feel disposed to find against him. There was that quotation from Goethe about "problematic characters," which formed the text of the first of the translations from him, and which one after another of his reviewers inevitably quoted as being the gist of his work. A paragraph or so could be found in any one of them in which his purpose is succinctly stated, to do duty like the painter's "This is a horse," in guarding spectator and reader from unconsciously mistaking the meaning of the work:

> "Our systems of government, our nobility, our religious institutions, our official arrangements, the organization of our armies, the condition of our laboring classes—everywhere the scarcely hidden relation between masters and slaves; everywhere the critical choice whether we will be hammer or anvil. All our experience, all our observation, seems to prove that there is no second alternative. And yet no greater misconception of the real state of the case is possible. Not hammer *or* anvil, hammer *and* anvil is the true word; for every man is both, and both at once, in every moment of his life. With the same force with which the hammer strikes the anvil, the anvil strikes the hammer; the ball is thrown off from the wall at the same angle under which it impinges upon it; the elements which the plant has appropriated in its growth it must exactly restore in its decomposition—and so throughout all nature. But if nature unconsciously obeys this great law of action and reaction, and is thereby a cosmos and not a chaos, then should man, whose existence is subordinated to precisely the same law, acquire an intelligent knowledge of it, and endeavor intelligently to shape his life in conformity with it; and his work increases or diminishes exactly in proportion as he does this or neglects it. For though the law remains the same, whether the man knows it or knows it not, yet for himself it is not the same. Where it is known, where the inseparableness, the unity of human interests, the inevitableness of action and reaction, are recognized, there bloom freedom, equity, justice, which are all but varying expressions for the same law. Where it is not known, and he fancies in his blindness that he can with impunity make a tool of his fellow-man, there flourish rankly slavery and tyranny, superstition and priestcraft, hatred and contempt in all their poisonous luxuriance. What man would not naturally wish to be hammer rather than anvil, so long as he believes that the choice lies open to him? But what reasonable man will not cheerfully renounce the part of hammer when he has learned that the part of anvil will not and cannot be spared him, and that every blow that he gives smites also his own cheek; that the serf corrupts the master as well as the master the serf, and that in politics the guardian and the ward are rendered equally stupid."

On this statement—which is itself tedious and long-winded to a degree out of all proportion to the value of the idea—Spielhagen has built a story which is far from being a bad one in some ways, but which is of such a preposterous length as to repel many readers whom the fact that its author is a man of undoubted ability, who thinks seriously about life, and has observed many phases of it closely, would otherwise attract. It is undeniable, too, that it is an unwieldy length that he drags after him; his playfulness is heavy reading. Apparently, he would be a much more serviceable workman in the cause of freedom of thought and action and the equality of rights and conditions if he laid aside fiction and betook himself to the work of political and social pamphleteering. At present, many people who would read him for the sake of his views would be likely to need to hold similar views already, with an earnestness which would make them willing to undergo afflictions for the sake of them, to induce them to submit to the severe labor of getting through his novels. The present story has been put by Mr. Wm. Hand Browne into better English than fell to the lot of either of its predecessors.

To Collectors of Choice Books

The undersigned begs to invite attention to his extensive assortment of STANDARD, ILLUSTRATED, and FINE ART WORKS, embracing the largest and best-selected stock of Imported Books in the country, all of which are offered at reasonable prices for cash.

J. W. BOUTON,
IMPORTER AND BOOKSELLER,
706 Broadway, New York.
Catalogues sent to any address upon receipt of a stamp to pay postage.

Fruit and Ornamental Trees
FOR AUTMUN OF 1870.

We invite the attention of Planters and Dealers to our large and complete stock of

Standard and Dwarf Fruit Trees.
Grape Vines and Small Fruit.
Ornamental Trees, Shrubs, & Plants.
New and Rare Fruit and Ornamental Trees.

Descriptive and Illustrated priced Catalogues sent prepaid on receipt of stamps, as follows:
No. 1. Fruits, 10c. No. 2. Ornamental Trees, 10c. No. 3. Greenhouse, 5c. No. 4. Wholesale, FREE.
Address,

ELLWANGER & BARRY,
Rochester, N. Y.
ESTABLISHED 1840.

Philadelphia Evening Bulletin.

PUBLISHED DAILY, SUNDAYS EXCEPTED.

No. 607 Chestnut St., Phila.

The EVENING BULLETIN offers special advantages by its Large Circulation in Business and Family Circles, for all departments of Business Advertising. As the oldest and best Philadelphia evening paper it is the most desirable advertising medium, and is printed on fine paper, large quarto, forty-eight columns, containing the fullest Telegraphic News, Commercial and Financial Reports, Foreign and Domestic Correspondence, Literary and Art intelligence, and all the requisites of a first-class Business and Family Newspaper.

Published by PEACOCK, FETHERSTON & CO.,
607 Chestnut St., Philadelphia.

HURD & HOUGHTON,

PUBLISHERS,

13 Astor Place, New York,

WILL SOON ISSUE:

I. The Life of Arthur Tappan.

By Lewis Tappan. With a Portrait on steel. In 1 vol. 12mo, cloth.

⁎ The prominent part taken by Mr. Tappan in social and moral questions of the last half-century will render this book a valuable contribution to contemporaneous history.

II. First Steps in English Literature.

By Arthur Gilman, A.M. In 1 vol. 16mo, flexible cloth, $1.

⁎ A hand-book for the reader and a text-book for the use of High-schools and students in English literature on both sides of the Atlantic. The plan of the book is to give a connected view of English literature in its relations to history and language, showing the growth of the language and literature, and individualizing the sketch by brief, animated vignettes of representative authors both in England and America. The book will be found brief enough to be mastered, without being dull or contracted.

III. The Choice of Paris.

A ROMANCE OF THE TROAD.

By S. G. W. Benjamin, author of "The Turk and the Greek." In 1 vol. 16mo, cloth, $1 25.

⁎ In this romance Mr. Benjamin has inwoven the tales that cluster about the siege of Troy, bringing the various scenes into their logical connection, and giving a bright and attractive picture of the famous period. The coloring of landscape and human life is drawn from the author's varied and intimate acquaintance with life in the Levant.

EARLY ORDERS SOLICITED.

J. SABIN & SONS,

BOOKSELLERS AND IMPORTERS,

84 NASSAU STREET, NEW YORK,

Keep constantly on hand a large and varied stock of

English and American Books.

They give special attention to fine rare and curious Books and Standard English Works, and they have on hand a most extensive stock of Americana.

One of the firm has recently been established in London, making connection with the European Book market direct, and enabling them to fill foreign orders promptly and cheaply.

Public libraries and private book-buyers will find it to their advantage to transmit to J. SABIN & SONS their orders for large and small parcels of

English and American Books.

Send for a specimen copy of Sabin & Sons'

AMERICAN BIBLIOPOLIST:

A Monthly Journal devoted to Notes and Queries, and miscellaneous matters of interest to book collectors, as also a catalogue of Books for sale, and a list of New Publications.

J. SABIN & SONS

Offer their services as purchasers of

Miscellaneous Books at Auction,

the judgment and experience of the senior Mr. Sabin rendering it safe for country buyers to trust him with commissions. Five per cent. on the amount of the purchase is the charge.

Auctioneers' catalogues forwarded to buyers.

New Books of the Season,

PUBLISHED BY

HARPER & BROTHERS, New York.

⁎ *Sent by mail, postage prepaid, to any part of the United States, on receipt of the price.*

CHARLES DICKENS: The Story of his Life. By the Author of "The Life of Thackeray." Portraits taken at various times, and Views of his Residences. 8vo, paper, 50 cents.

DICKENS'S SPEECHES, LETTERS, AND SAYINGS. Speeches, Letters, and Sayings of Charles Dickens. To which is added a Sketch of the Author by George Augustus Sala, and Dean Stanley's Sermon. 8vo, paper, 50 cents.

⁎ The two above works, bound in one volume 8vo, cloth, $1 75.

THE GENIAL SHOWMAN. Being Reminiscences of the Life of Artemus Ward, and Pictures of a Showman's Career in the Western World. By Edward P. Hingston. Two Illustrations, 8vo, paper, 75 cents.

MAN AND WIFE. By Wilkie Collins, Author of "Armadale," "Moonstone," "No Name," "The Woman in White" etc. With Illustrations. 8vo, paper, $1; cloth, $1 50.

MISS THACKERAY'S WRITINGS, Complete. The Writings of Anne Isabella Thackeray. Illustrated. 8vo, paper, $1 25; cloth, $1 75.

⁎ Harper & Brothers will send either of the above works by mail, postage prepaid, to any part of the United States, on receipt of the price.

Important Educational Works

PUBLISHED BY

G. P. PUTNAM & SONS.

Washington and the American Revolution. A History: for Students and young persons. Condensed from the larger work. By Washington Irving. Illustrated, in one vol., large 12mo, 712 pages.

Irving's Life of Columbus. Popular edition for Students and young persons. With illustrations. 12mo, cloth, $1 75.

A German Primer. By M. Th. Preu. Illustrated, small quarto, cloth extra, $1.

"An attractive book for those who begin their study of German at a tender age, and not without profit for older learners."—*Evening Post.*

Also, by the same Author:

First Steps in German. 1 vol. 8vo, $1 25.

⁎ These two excellent text-books, recommended by Dr. Lieber and other high authorities, have been introduced in the Public Schools of New York, and many private schools.

Astronomy without Mathematics. By E. B. Dennison, LL.D. Edited by P. E. Chase, A.M. 12mo, $1 75.

"A simple, clear, and concise exposition of the science; minute and practical enough for the student and descriptive enough for the general reader."—*College Courant.*

The Principles of Psychology. By John Bascom, Professor in Williams College. Author of "Political Economy," "Philosophy of Rhetoric," etc. 12mo, $1 75.

"An exhaustive contribution to the science of mental philosophy."—*N. Y. Albion.*

A New, Handsome, and Cheap Edition of

Gibbons's Roman Empire. From the original text. Complete in 3 vols., large 12mo, cloth, bevelled, $7 50.

Haydn's Dictionary of Dates, relating to all Ages and Nations, for Universal Reference. The new (13th) English edition by Benjamin Vincent. In one very large vol. of more than 1,000 pages, price $9; half russia, $11.

This is the only complete edition. The work called "Haydn's Dictionary of Dates," published for $5, is an abridgment of the 12th edition.

G. P. PUTNAM & SONS,

4th Avenue and 23d Street, New York.

Besides their own publications, they keep on hand a full stock of Educational Books, and make a specialty of supplying Schools on favorable terms.

NEW PUBLICATIONS.

Letters from Rome on the Council.

By Quirinus. Reprinted from the *Allgemeine Zeitung.* Authorized Translation. Vol. I. (First and Second Series.) Preliminary History of the Council and Letters I.–XXXII. Price 75 cents each part.

Letters of Spiritual Counsel and Guidance.

By the late Rev. J. Keble, M.A., Vicar of Hursley. Uniform with Keble's Memoir. $2.

The Annotated Book of Common Prayer:

Being an Historical, Ritual, and Theological Commentary on the Devotional System of the Church of England. Edited by the Rev. J. H. Blunt, M.A. The Large Paper Edition, 2 vols. imperial 4to, price $18.

The Reformation of the Church of England:

Its History, Principles, and Results. A.D. 1514–1547. By John Henry Blunt, M.A., Vicar of Kennington, Oxford. Second Edition. 8vo, $4.

The Church of God and the Bishops:

Considerations upon the Œcumenical Council. By Señor von Liaño. Authorized Translation from the German. $1 25.

POTT & AMERY,

COOPER UNION, FOURTH AVENUE, NEW YORK.

HOMŒOPATHIC MEDICINES.

Established in 1835.

BOERICKE & TAFEL

(Successors to Wm. Radde),

Homœopathic Pharmaceutists and Publishers,

145 Grand St. (bet. Broadway and Elm St.), New York.

Constantly on hand a full assortment of Medicines and Books for Physicians and Family use. Orders per mail promptly attended to.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 15, 1870.

The Week.

THE last act of the great Franco-German war drama is apparently opening. The Prussians, having advanced on the shortest roads from Sedan and Châlons, have arrived before Paris, and by the time another week is passed, that capital will probably be cut off from communication with the country, and the world will look with suspense at the spectacle, unwitnessed since the times of Nineveh and Babylon, of a city with millions of inhabitants defying, with more or less earnestness of determination, the horrors of a siege, for the sake of national honor and integrity. The principal question will be, how long will Paris be willing to stand a siege? Victor Hugo, who has just returned from exile, with no portion of his effervescent patriotism and astonishingly silly grandiloquence left behind, has no hesitation in telling th world that, "this city, which yesterday was Sybaris, to-morrow may be Saragossa;" and, after warning William, Moltke, Roon, Bismarck, and the Princes, of forts, and ramparts behind the forts, and barricades behind the ramparts, and "mines of powder ready to blow whole streets into the air," he flings at them the "terrible sentence: To take Paris stone by stone; to extinguish that great light in each street, in each house, soul by soul." We, on our part, do not believe that Paris, degraded as she has become during the two decades of Napoleonic rule, has sunk quite to the level of a Sybaris, nor do we believe her possessed of the degree of fanaticism required in even attempting to play Saragossa. Such fanaticism is kindled only by struggles for existence. Neither Saguntum, nor Carthage, nor Numantia would have been destroyed, "stone by stone," had the contest been waged for boundaries, nor would Jerusalem have been extinguished, "soul by soul," had Titus demanded only the cession of a strip of land in Galilee.

And it appears plain that the men in power in Paris, Trochu, Jules Favre, Gambetta, and all, take the same view of matters. They are doing their best in rendering the capital defensible and in encouraging the people to resist, in order to gain time for negotiating a peace, and to add weight to their demand that its stipulations should not be unbearably humiliating to France. To stand a siege with the resolution of concluding peace only after victory, could be thought of only if a rescue by a national army in the field, or by foreign allies, could in time be expected; but the regular armies of France are either entirely annihilated or entirely cut off; no new levies can be raised and armed powerful enough to cope with the victorious hundred thousands of the enemy; and as for waiting until the Russians or Austrians, were they willing to do it, could "march on Berlin," or even threaten Silesia, Paris with its millions has too many mouths. There can hardly be any doubt that both Russia and Austria, and with them all other states of Europe, apprehensive as they all are of the extraordinary growth of the power of Prussia, desire France to come out of the contest as uncurtailed in extent and strength as still possible, but effectively to aid her at this crisis none is both willing and able. Russia, though she does not conceal her repugnance to the republican form of government France has proclaimed, offers her good services in mediating for an armistice; Austria, who would have no objection even to a red republic were it only likely to stem the tide of Prussian expansion, does the same; Lord Lyons, Señor Olozaga, and Chevalier Nigra are busy in turn working for the same purpose; and Switzerland, Spain, Italy, and Portugal have gone as far as to acknowledge the new French Government after the example of the United States; but this is all that has been done for France in her hour of supreme trial. She is left to her own vanishing resources, or rather to the tender mercies of King William and Count Bismarck.

What the ultimate intentions of these two high personages are—after the stupendous successes the Prussian arms have achieved—successes such as might turn the head of the coolest and wisest of conquerors—it is hard to surmise. On one side we have had the assurance of Bismarck—expressed, it is true, before the surrender at Sedan—that Prussia desires no annexation of territories inhabited by populations unwilling to become citizens of Germany, and that she will insist only on the surrender and cession to the Confederation of the fortresses of Strasbourg and Metz. On the other hand, we have a telegram from Berlin, of the 9th inst., announcing that "after a protracted conference among the members of the North German Confederation, it has been decided that the French provinces of Alsace and Lorraine are to be annexed to Germany," though not specially to Prussia. The pressure of public opinion in Germany seems also to be very heavy in this direction. The more or less weighty influence the advice of England and the other neutrals can exercise with King William, will probably all be thrown into the scale in favor of France. Other arguments for moderation may be suggested by the heavy cannon of the forts of Paris, and by even a temporary attitude of boldness and energy on the part of Trochu and his associates, especially if it should meet with a responsive echo in the departments. The King seems to consider and to treat Napoleon as the still legitimate ruler of France, and there are indications that, in spite of the apparent adhesion generally given by the French people to the Republic, there are among them many who look at it in the light of an interregnum, to be terminated either by a Napoleonic restoration, as Piétri, Schneider, and those Bonapartist members of the majority expect who left the late Corps Législatif before the *déchéance* was pronounced, or by the final decision of a new Constituent Assembly. If Thiers, as is reported, has entered upon a tour of negotiations with the neutral great powers, his diplomatic mission will probably embrace the dynastic question no less than the territorial, whatever his instructions may be.

We do not know in whose name, whether as subjects of the captive Emperor or as citizens of the new Republic, Marshal Bazaine and General Ulric continue their gallant defence of Metz and Strasbourg, respectively. It was insufficiency of numbers, coupled with a fatally blundering strategy, which destroyed the armies of France in this war; the tactics of the commanders proved of unequal merit on the various battle-fields; but the prowess of the French soldier remained uneclipsed even among the greatest disasters. In the defence of fortified places, where overwhelming forces are sure of success only in the long run, and where energy and vigilance take the place of strategy and tactics, the French generals and gunners have shown themselves everywhere worthy of their trusts. The only fortified places the Prussians have as yet succeeded in reducing are Lützelstein, Marsal, Herny, and the citadel of Laon, all insignificant, while they have suffered checks before Pfalzburg, Verdun, Montmédy, and Toul, have not even attempted the investment of Bitsch, Thionville, or Longwy, and are making slow progress before Strasbourg and Metz. Toul seems to be annoying them greatly, situated as it is on their main road of communication with Germany, by which they receive their reinforcements and supplies. The report published in Paris of a repulse of the enemy by the garrison of that little fortress, which placed "more than 10,000 Prussians *hors de combat*," belongs, of course, to that class of news which is employed to "fire the heart." We doubt whether all the besiegers and defenders together amounted to that number. The explosion of the citadel of Laon, after its surrender, seems not to have been destructive of French lives alone. Among the wounded is Duke William of Mecklenburg, a brother of the commander of the Prussian Sixth Army.

But the Prussians can easily console themselves for not having as yet reduced any of the important fortresses of France, after penning, at the Royal headquarters at Rheims, or reading in the journals of Berlin, an official announcement like the following: "More than 25,000 French prisoners were captured in front of Sedan, before the capitulation on the 2d inst. By the capitulation, 83,000 prisoners fell into our hands. Of these, 14,000 were wounded. Besides the prisoners, 400 field-pieces, including 70 mitrailleuses, 150 siege-guns, 10,000 horses, and an immense amount of war material, were surrendered." Of the many reinforcements sent to MacMahon from Paris, only the force under General Vinoy, which did not reach him, has returned to that city. Vinoy, who, like Trochu, commanded a division in the Italian war, is now one of the few somewhat prominent generals left to France after the capture of MacMahon's army and the surrounding of Bazaine's. What they may be able to do with the demoralized or yet unorganized materials now under their hand will soon be seen if a speedy peace does not spare France a further and probably useless effusion of blood. Baraguey d'Hilliers, who some weeks ago was sent to Tours, may possibly be organizing the much-spoken-of but as yet rather shadowy army south of the Loire. Marseilles is, of all distant towns, the most zealous in sending mobile guards to reinforce the garrison of Paris. That southern town evinces the most of that spirit invoked by the French Republican Government—the spirit of 1792. Paris itself is tranquil, little disturbed by the now stifled demagogic ravings of the *Marseillaise*—a newspaper the sanctum of which that redoubtable adventurer, General Cluseret, of Franco-American notoriety, managed to invade for a time.

The King of Prussia has, it is said, not yet recognized the Republic as his adversary, and does not show much disposition to do so, which is not wonderful. To do so is to make worthless his Imperial captive, one of the most magnificent prizes ever made in war, and whom he has gorgeously caged in Hesse-Cassel. Besides this, he has to be a little careful that any body of persons whom he now treats with as representing France not only holds the reins of authority amid the tumult of the present crisis, but is likely to hold it, and have its acts endorsed by the French people after the war is over. It is easy enough for lookers-on to "recognize the Republic;" a recognition costs nothing, and just now secures a good deal of gratitude from Frenchmen; but those who have to make contracts which shall bind France may be forgiven for doubting whether the Provisional Government is authorized to bind it, and for awaiting more light. It is only about four months since the French people confirmed Louis Napoleon in possession of the Imperial power by an enormous majority, and they did not provide that he should be dethroned in case he lost a battle or was taken prisoner by the enemy. Thus far, therefore, the Prussians may fairly say that he is still the legitimate sovereign of France, and the Provisional Government usurpers who have taken advantage of the public misfortunes to foist themselves into power with the aid of the mob. If it be said that France is tired of the Empire, the answer is ready that France must show this in the regular way, by a popular vote; that the only evidence of it thus far is newspaper reports; that what universal suffrage has set up, universal suffrage only is competent to overthrow; and that there must be an election before the Republic can be said to be established. That this position, or something like this, will be taken by the King, is rendered all the more probable from his detestation of republicanism, though Bismarck will doubtless be in favor of taking a practical view of the matter, and treating anybody as France who will pay over money and cede fortresses in her name. We have no doubt that King William will refuse as long as he can to acknowledge that he has really dethroned a brother monarch and set up a republic.

About the French Republic, our advice to people who attach importance to the formation of rational opinions on all questions, home and foreign, would be to suspend their judgment for the present. No French republic is worthy of confidence, support, or respect which keeps up the standing army, as French republics have hitherto done. The course of the present one on this point, after peace is made, will indicate whether it is a real republic or only a sham. It is impossible to judge it by the men who have come first to the front in the Provisional Government. They are almost sure to be swept away, as the Lamartines, Ledru Rollins, and Louis Blancs were in 1848. We have the highest respect for most of them, and their course thus far has been marked by courage, ability, and good sense; but they are not France, and they cannot of themselves make a republic. That of 1848 was ushered in under much more favorable auspices, and the first thing it did was to elect a military adventurer as president, and in the second year of its existence it sent an army to subjugate the Romans and restore a stupid and effete despotism. At the same time, with such men as Favre, and Pelletan, and Gambetta—who has just defined his position in a very able and sensible letter—at the helm, we ought not to allow ourselves to be prejudiced against the new régime by the "lyric cries" with which Victor Hugo, Georges Sand, and other political philosophers of the same school are greeting it. There is no use in Frenchmen telling us any more that they could have a very fine republic in France if only certain wicked people would abandon their evil ways, and certain foolish people act wisely. In setting up governments, the existence of knaves and fools is one of the conditions of the problem, and success in solving it depends on the ability of the better part of the community to have its own way against the worse.

The position of England, which has all along been a very active peacemaker—Lord Lyons having labored earnestly with the Duc de Gramont before the outbreak of the war—is now becoming positively ludicrous. Looking about to see who is most to blame for all that has happened, the French, Prussians, Austrians, Danes, and Russians, not to speak of the Fenians, seem to be heartily agreed that it is England, and that she ought to get a good thrashing from somebody, though we suspect the general readiness to assail her is due to the fact that she can't be got at on land, and nobody has a fleet big enough for the job of assailing her at sea; so that abuse of her furnishes harmless entertainment, and relieves the feelings of the combatants without expense. The French are intensely irritated by the sympathy for Prussia displayed by the people and press, and the Prussians by the continued sale of arms, munitions of war, and of coal to the French—a resource from which Prussia is cut off by the want of a navy. The sympathy for Prussia is partly due to Teutonism, Protestantism, and race; the hostility to France to the discovery of the Benedetti draft, which showed that her Imperial ally was ready to seize Belgium, whose existence she had guaranteed, and join Prussia in chastising her if she resisted. The French fury against her is a just retribution for having helped more than any other power to build up the Empire, and make it respectable. The Queen was the first sovereign to kiss Louis Napoleon and welcome him into the royal tribe; and the Crimean war was undertaken partly to win his good graces, and ended in his glorification and the humiliation of England. The commercial treaty which sanctified him in Mr. Cobden's eyes, whatever its economical value, was owing to the manner of its negotiation, one of the greatest of the Imperial outrages on the French people, and the chuckling of the English free-traders over it was very discreditable. In short, no power in Europe did nearly so much to bolster the Emperor up as England; and his relations to her made the Belgian proposition even worse than it seemed on the surface.

She has, by way of keeping out of scrapes like the *Alabama* affair, passed an amended act for the enforcement of her neutrality, that provides all the machinery for the fulfilment of her international obligations which the United States asked for during the war, and which was scornfully refused. This some papers, the *Evening Post* and *Harper's Weekly* among the number, hail as a formal surrender of the English position on the *Alabama* question; but it in reality does nothing for the settlement of that question. Our contemporaries apparently forget where the controversy was left off. The United States insisted on submitting to arbitration, first, the question whether England was right in recognizing the belligerency of the South when she did; and, secondly, whether she exercised "due diligence" in trying to stop the *Alabama*. England refuses to submit either of these to arbitration, but offers to pay the damage done, without further discussion of the origin of the quarrel, and without any formal confession of wrong-doing. This the United States says will not do. How, then, does the new Neutrality Act help the matter?

The papers do the regulation amount of talking of the regulation sort, but the Republican is a rare one who sees just how the party was benefited by the State Convention at Saratoga last week, unless, indeed, it is salutary for Republicans that Mr. Fenton and Mr. Conkling should get together, Mr. Thomas Murphy being added to them, and "have it out" with each other, using the delegates, the platform, the Federal and State patronage, as the men, means, and munitions of the private war that they are carrying on for their own and our glory and honor. No one not down in the ring himself can understand the manœuvring of New York politicians; but the general battle seems to be simple in its outlines. Fenton wished to show the Administration and the Senate that he "runs the machine" in this State, and that though Conkling may have the President's ear, it is he who lays down the law in the rural districts. It is said that, at one time, he "had the convention fixed"—that is to say, could count a majority of the delegates as "Fenton men." Mr. Conkling's simple game was to tell every Fenton man who was at all weak in the knees that to go for Fenton was to go against the Administration; or, to put it roughly, if he assisted Fenton's plans, Conkling would see that his office, if he had one, should be taken away from him, while, if he did what Conkling wanted, an office, if he had none, should be given him. These negotiations went on actively all night, but it is alleged that, more time being desirable, on the morning of the decisive day a gang of Conklingites, from this city, broke into the hall, and made a lively fight, which secured an hour or so of delay before they could be ejected. As the result of these labors and some less violent sharp practice, which we regret that we have not space to dwell upon, the Fenton men were beaten. But as the party, strange to say, is going to get a sound thrashing at the polls in November, Fenton is understood to have been not sorry for his defeat, as he cannot be held responsible for a policy not of his framing and men not of his choosing. The Conkling men seem to have been rather embarrassed by their victory, for they made little use of it. For a moment it looked as if they might give us something better than the hack politicians for candidates; but this was only for a moment. Mr. Curtis, who would have made a good fight, was thrown overboard, and so was Mr. Greeley, who was understood to have the friendship of Fenton and, at least, not the ill wishes of Conkling, but who really has the ill-will of most of the managers, and is never rewarded by them for his services. The candidate is General Stewart L. Woodford—a name of no weight, but strong in that organization known as the Grand Army of the Republic, which seems to take more interest in politics than it used to say it did.

The resolutions that the convention passed are as worthy of curious contemplation as Mr. Murphy's handling of his Custom-House, or the skilful obedience to Mr. Conkling's orders of Mr. Charles Spencer, who still adorns the party. Platforms, to be sure, are never apt to be very satisfying reading. This one congratulates the noble German people on its righteous victories, and hails with unmingled joy the establishment of the Republic by the noble French people. It sympathizes with Cuba. The prohibitionists having sent a committee to enforce their claims on the framers of the party policy, the convention resolved that so long as the people of towns and cities have the right to license the sale of intoxicating beverages within their corporate limits, they should also have the right to prohibit the sale—an order of arrangement and a pair of statements that may placate the lager-beer drinkers. The payments made on the national debt are applauded, and so is the reduction of taxation. Election frauds are denounced, and Grant's Administration praised in the usual terms. On one thing the platform speaks out plainly, denouncing the subventions to sectarian schools. The missing resolutions about the Republican opinion that Georgia's case needs no more of Mr. Bullock's attention; that the internal revenue system needs overhauling; that the Civil Service system which keeps Collector Murphy at Saratoga threatening and promising and pulling wires, and brings him home to cut off the heads of a hundred and fifty custom-house clerks "after the Saratoga Convention," needs some looking after; that the party intends to lower taxation still further; that it will do what it can to put an end to monopolist tariff-rates, and thus remove the heaviest and most odious of our taxes—these resolutions which do not appear, make it plain that the Republican party's national policy will have to be hammered out in Washington next winter, and that it has none now.

We have had one or two glimpses of the dreadful fires which glow beneath the gentle humanities and smooth platitudes of the platforms, in a pair of "little digs" at Mr. George W. Curtis which have appeared in the *Tribune* on two successive days, and which indicate that, in Mr. Greeley's opinion, Mr. Curtis would have been glad to get the nomination, and bid for it in his speech, and, by allowing his name to be used, ruined Mr. Greeley's own chances, and has changed his mind about office since he refused the Secretaryship of State last year, and was guilty of very unhandsome behavior in saying on that occasion that he thought editors ought not to take office—the editor of the *Tribune* being then a candidate for the State Comptrollership, and that, in short, Mr. Curtis is, on the whole, rather a sorry fellow, who would be the better of being pinched or having sand put in his bed.

In Massachusetts, the New York doctrine of local prohibition has been elevated into law, the Legislature having at its last session authorized any town that wished, to vote on the first Tuesday of the month on the question whether they would permit the sale of ale, strong beer, and lager-beer. The voting took place, and was everywhere light, the general result being that in the cities and large towns such liquors may hereafter be sold, and in small towns they may not. The lightness of the vote is to be in great part accounted for, we suppose, by the fact that most of the drinkers of these and similar liquors can buy them with perfect freedom even as the matter stands now. The fact that, light as the vote was, it was in most of the towns very disproportionately light on the side opposed to prohibition, is to be explained in part by the reason just given, and in part, it is likely, by the fact that many men who use liquors, and many men who disbelieve in compulsory temperance as temperance of a poor sort, and who think the compulsion odious, would nevertheless answer No to a question whether they wished a dram-shop next door. The prohibitionists will be still dissatisfied, but we imagine they will lose some of their strength as well as some of their ardor. They urge against local prohibition, that it betrays the principle that it is the state's duty to stop the traffic, and they add to this the argument from expediency—that if one town allows the sale, and the next does not, the beer-drinkers will merely take a walk and collect in the second town. But the smaller towns, at least, have adopted prohibition in such numbers that it seems as if the system would be almost a county system rather than a town ship system. However, it is of little practical consequence; it will be pretty much as before—the prohibitionists will have about as much law as they like, but not quite, and the others about as much liquor, but not got with quite so much ease and openness.

The Vermont and Maine elections would seem to show that while there is no doubt that numbers of the more expectant, and more exacting, and more intelligent of the supporters of Grant for the Presidency have been more or less disappointed in his course—though certainly never to the degree of condemning his general course or giving him up—the people, the average voters, are, on the whole, well satisfied with his Administration. It is proper to remember, however, that in Maine the party said pretty plainly, in promise to the people, that while it believed in paying the national debt, it wished a reduction of taxation, both internal and external, and thought manufactures too much "protected." This, no doubt, had some influence on the result. There are Democratic gains in both these States, too, and in Maine they are heavy. Something over 12,000 was the Republican majority last year and this year, although the vote is very heavy; and although, despite Speaker Blaine's assertion that there has been no organized campaign, the popular interest was very lively; and although the Republican strength was not divided by the secession of the strict prohibitionists, the majority will probably fall as low as to 5,000, and may fall below that number. It is not easy to make a New England State give up its favorite party, and the political leaders of the Republican party may look on the present condition of things as full of warning. It is impossible to say, as we write, whether Mr. Chamberlain or Mr. Morrill has most friends in the Legislature. Should the Republican differences not be settled in caucus, it is not unlikely that the Democrats and Mr. Chamberlain's friends will have things all their own way.

THE TERMS OF PEACE.

The proclamation of the Republic in Paris has, in the minds of a great many people in this country, completely changed the character of the conflict now going on in France. It has, they think, put Prussia in a different position before the world, and France too, and made necessary what may be called a revision of our sympathies. Prussia, a great many of us think—and the French evidently think so too—ought now to be satisfied with what she has done, and withdraw her troops. The Emperor, who was the real originator of the war, having been overthrown, the object of the war is accomplished, even if its object was vengeance as well as security; and the form of government in France being now republican, it is imperative on Americans to transfer their sympathies to France, and wish her well out of her present scrape without any detriment or humiliation beyond what she has suffered from the recent defeats.

In so far as this change is one of feeling, there is little to be said against it. There is no use in telling anybody that he ought not to feel sorry for the unfortunate. The gods love the victors, but Cato the vanquished. We all instinctively range ourselves by the side of the man whose sword is broken and whose strength is exhausted, and there is in the spectacle of French defeat an unusually large number of claims to commiseration. But if this feeling is going to influence our national policy, as expressed through the State Department, or is going to color the utterances of the press to such a degree as to mislead the French as to the exact nature of their situation, it becomes fair matter for criticism, and it becomes matter for very severe criticism when attempts are made to justify it by misrepresentation of facts or playing on words—when, for instance, the cause of the quarrel is misstated, or the word "republic" jingled in people's ears by way of distracting their attention from the question of right or wrong, expediency or inexpediency.

In the first place, it has to be remembered that the past unscrupulousness of Bismarck has nothing to do with the merits of the present quarrel. His victims in 1866 were Germans, and we submit, with great respect to the consideration of those Americans who are constantly working themselves up into indignation about his conduct in that year, whether, seeing that the Germans have forgiven him for what he did—nay, that the vast majority of Germans consider him a great public benefactor—there is not something ludicrous in the pious wrath of foreigners over his rapacity. He has been simply doing for Germany what Richelieu did for France, and Cavour strove to do for Italy; and when Saxons, Hanoverians, Frankforters, and Bavarians now embrace him and fight enthusiastically under his flag, the tears of their friends in New York and Philadelphia are, as it seems to us, a little out of place. France did not forgive him, but she had the decency not to pretend that it was out of sympathy with Austria or the smaller states that she hated him. No French writer, not even one so candid and moderate as Prévost-Paradol or Mazade, made any secret of the fact that his objection to Bismarck's policy was that it united Germany, and that Germany united would prove so powerful as to wrest from France the controlling influence in European affairs which she had long enjoyed.

Now, on what did this influence of France rest? On her preeminence in art or literature or science? On her political freedom, order, and progress? No; on none of these things; and had it rested on these things, the unification of Germany could not have shaken it. It rested on the ability, real or supposed, of France to bring into the field a stronger and better-led army than any other European power, or, in other words, on her superiority of military (physical) force. Now, no right can rest on simple force. As Rousseau says, "if force makes right, the effect changes with the cause, and any force which can supplant the first one succeeds to its prerogative." The kind of predominance which France enjoyed—and in which Frenchmen of all parties, if not satisfied with it, have certainly taken pride and delight—was one which any power which could collect a larger and better army than she, was perfectly justified in wrenching from her hands. The consequence, and the unavoidable consequence, of German unity was the creation of such an army; and the war which the Emperor began in July, and which most French politicians thought he ought to have begun in 1866, had for its object to prevent, no matter at what cost of peace, dignity, or security to Germans, the rise in Germany of a larger army than France had. This is the naked truth of the matter. France has for sixty years sacrificed her peace, her liberty, her literature, and her art to the perfection of her military machine, and has rested satisfied with such influence as it gave her, until even the best Frenchmen had gradually worked themselves into the belief that she had acquired through it a sort of divine right to regulate the affairs of all her neighbors, to decide for Italy whether she ought to be free, and for Germany when she ought to be united, and for Belgium whether she ought to exist, and for the Palatinate who ought to own it. The German revolt against such a claim, resting on such a basis, was certainly a service to civilization; and we hold that if Germany makes peace on any terms which shall not clearly mark its extinction, and shall not prevent its revival, as far as its revival can be prevented by the destruction of all external aids to French self-deception, she will fail in her duty both to herself and to the rest of the world.

It will not do now for France or her friends or well-wishers to try to make the Emperor the scapegoat for the expiation of her sins. She put herself freely into his hands in 1851, after he had committed one of the greatest of crimes, and proved himself one of the basest of men. She bore with him for twenty years, though he gagged and robbed her month by month, simply because he gratified her insane thirst for military glory. She confirmed him last winter in possession of his power by a heavy popular vote. He plunged into the present wicked war in the belief—and, in the opinion of the best judges, in the well-founded belief—that, if he were successful in it, it would enable him to avoid all further concessions to liberalism, and even escape the operation of those he had made. He was followed into it by a roar of popular enthusiasm, and he has been dethroned, not for having made war, *but for not having made it successfully.* Very few voices were raised in opposition to the war, and those that were raised asked not for the complete abandonment of these guilty designs, but the postponement of their execution to a more convenient season. All acknowledged—yes, *all*—that some day or other the "greatness of France" would call for the irruption of 400,000 Frenchmen into Germany, the devastation of German soil, the plundering and burning of her cities and villages, and the slaughter of hundreds of thousands of her citizens, and the humbling in the dust of her rulers—in other words, for the infliction on her of the very evils under which France, by a stroke of awful retribution, now lies groaning and asking for that pity which one short month ago found no place in any French heart and no expression from any French tongue.

There is room, however, even in pity for justice. If we are going to be moved by the sufferings which this mad conflict has brought on France, let us not forget that 50,000 Germans lie dead on French soil, and perhaps 150,000 are agonizing in hospitals, plunging a million of happy German homes in desolation, and all because the King of Prussia would not order the Prince of Hohenzollern not to change his mind ("*revenir sur sa décision*") about taking the Spanish crown after he had refused to take it.

The Germans owe it to the better civilization they profess, and we believe truly, to defend and spread, and to the public opinion of all other countries, which has up to the present sympathized with and applauded them, to show moderation in the hour of their triumph. We do not ask them to spare France on the ridiculous plea that the Republic is not responsible for the dying sins of the Empire, or that, the Empire being gone, there is nothing to be feared any more from French ambition or aggressiveness or restlessness—a plea which the whole course of French history belies; but in the interest of future peace, and in the interest of that orderly and intellectual progress of which the world now expects Germany to set the example. All absorption of territory, whose inhabitants are not German in feeling as well as in origin, will not only lay Prussia open to the charge of rapacity in carrying on the war, but furnish France with a far more respectable motive in preparing for a renewal of the struggle at no distant day than the bitterness which mere defeat is sure to leave behind. Even the retention of the two fortresses of Strasbourg and Metz, which is talked of, ought to be for a term of years only, or for a term to be settled by arbitration, in order to secure for it the character of a measure of precaution simply, and not of a menace or a trophy. To capture Paris, as a mere piece of vengeance for the purpose of humiliating Frenchmen, would be a paltry act, and could add nothing to the fame of the matchless army which is now marching on it. But in the interest of justice and political morality, there should be no tenderness in exacting the cost of the war to the uttermost farthing; and if Bismarck would include in it a reasonable compensation to the families of the killed and to the wounded, he would not only do justice to the sufferers, but would introduce into international usages a precedent which would bring forcibly to the minds of bellicose nations a far more vivid idea than they have now of the nature and consequences of war.

NEUTRALS AND CONTRABAND.

It is impossible for anybody who watches the course of the present struggle in Europe to avoid being struck by the increasing difficulty of the position of neutrals in all wars. The close relations, as far as time and space are concerned, into which steam and the telegraph and commerce have now brought all civilized powers, make every armed struggle an object of intense interest to lookers-on, as well as to those actually engaged in it, and this interest, in turn, makes the belligerents increasingly sensitive and exacting. There being plenty of "sympathy" to be had, and the newspapers being very active in the expression of it, each wants as much of it as possible; and if he does not get as much as he thinks he is entitled to, or more than his adversary, he boils over with indignation, and warns defaulters that, as soon as he gets his hands free, he will pay them off. At this moment there exists, in part at least on account of the improper refusal of "sympathy" during hostilities, great exasperation on the part of the United States towards England and France, on the part of Italy towards Prussia, on the part of Russia towards Prussia and (in a greater degree) towards Austria, and on the part of both Prussia and France towards England. The position of England has indeed become almost comic in its embarrassment. The press and the mass of the people sympathize with Prussia, as a Protestant and Teutonic power, and are very demonstrative in expressing their feelings; while only some of the old Conservatives—for reasons a little difficult to fathom—stand by France, or at least did so during the existence of the Empire. Accordingly, the French are furious, and vow vengeance dire whenever a favorable opportunity presents itself. On the other hand, the Prussians, far from being satisfied with the enthusiastic articles in the English papers, are full of indignation—first, because England made no attempt to restrain the French before the outbreak of the war; secondly, because the London *Times* has had the impudence to talk of intervention on the part of England, with its army of 40,000 men, at the moment when half-a-million of Prussians are marching on Paris; but, lastly—and this is the most serious cause of offence—because the French draw arms and munitions from England in unlimited quantities, while Prussia, being strictly blockaded, is to a certain extent excluded from the market. The consequence is that the tone of the Prussian press towards England is very virulent, and, it is said—though this is doubtful—that its remonstrances and denunciations have been backed up by a very acrimonious official despatch.

Now, the Prussian complaints of the English sale of supplies to France open up a question of immense importance—namely, what is contraband of war, and whose duty is it to see that neutrals do not supply it to belligerents. We have no hesitation in saying that, should the doctrines which are gaining ground on these points finally prevail, it will be almost as cheap—putting aside the loss of life—for a nation, whenever a quarrel breaks out between two of its neighbors, to take part in the fray and, by giving vigorous aid to one side, help to bring it to a speedy close, as to remain at peace. In the first place, the term contraband is every year receiving a wider and wider application. Its meaning has never been very accurately defined. The only certain rule of international law on the subject is that weapons and munitions of war, and the harness of cavalry and artillery, are contraband; but from time to time, either by the assumption of belligerents, or by special treaty, it has been made to cover a great variety of articles, even provisions intended for the general use of the population, and not for the garrison or inhabitants of a besieged or blockaded city. The decisions of courts and the dicta of elementary writers on the subject are as vague and unsatisfactory as possible. Wood for shipbuilding has been held to be contraband, and, by parity of reasoning, so now should iron. Coal has become contraband since the introduction of steam; telegraphic apparatus, doubtless, would be held to be contraband; and if food be, under certain circumstances, contraband, why not cloth and leather? Indeed, as the application of scientific processes to the purposes of destruction spreads, we may expect the list of prohibited articles to be indefinitely extended; and it would be extended to such a degree as to interfere seriously with the industry of neutral nations but for one thing—namely, the ancient and invaluable usage which imposes on the belligerents the task of stopping contraband on its way to the enemy.

That usage now appears to be threatened with abrogation. As the excitement caused by war becomes intensified and widely diffused, there is an increasing disposition on the part of belligerents to treat trading with the enemy on the part of the citizens of a neutral state as a hostile act, for which the government of the neutral state may fairly be held responsible, thus throwing on those who have had no hand in getting up the war a duty which formerly had to be, and always ought to be, performed by the belligerent cruisers and custom-house officers. The doctrine of international law with regard to war has always been that it was an exceptional state of things, the loss and inconvenience resulting from which ought not to fall on anybody but the parties to the quarrel; that those who choose to stand aloof from it, and pursue their avocations in peace and quiet, have a perfect right to do so; and that the interests of civilization require that they should be encouraged and protected in doing so; that in order to limit the area of the conflict, however, and make it, as far as possible, a trial of strength between the combatants, and them only—and thus be as speedily as possible brought to a close—they are permitted to search ships trading with the enemy, to see that he is not supplied from the outside with the means of protracting the struggle. But, inasmuch as this concession was in itself a hardship to neutrals, and inasmuch as trading with either belligerent is a perfectly legitimate act *per se*, the trouble and expense of making these searches or otherwise preventing the transmission of contraband has always been imposed, and justly and properly imposed, on the belligerents. If they caught anybody engaged in it, they could punish him by the loss of his property, but they were not to treat him as a criminal or an immoral person or to hold his government responsible for his acts. The running of a blockade, for instance, is not an immoral or hostile act. It is an act which a trader performs at his own risk, but if he succeeds he simply exercises a right anterior to all belligerent rights, that of selling the proceeds of his own industry in the best market he can find. Nevertheless, what with the ambiguous terms in which the citizens of neutral nations are warned by their governments at the outbreak of hostilities not to engage in it, and the excitement of the belligerents, it is getting to be gradually looked on as an act of hostility which the neutral power is bound to prevent or punish. Nothing was commoner, for instance, during the rebellion, than to hear blockade-runners talked of as "pirates"—a term which was fearfully abused, some of our most distinguished publicists using it, even on state occasions, in three or four different senses. Belligerents are now beginning, if they have a fleet and can institute blockades, to look at blockade-running in this way, and insist on neutrals using municipal law to help them in stopping it; on the other hand, if they have no fleet and are themselves blockaded, as in the case of Prussia, they are anxious to impose on neutrals the duty which they themselves are unable to perform, of catching and stopping munitions, arms, and other contraband articles on their way to the enemy's markets, or their delivery to him after purchase.

Now, it is the interest of the human race that the position of a belligerent should be as onerous and unpleasant as possible; that that of neutrals should be as irresponsible and agreeable as possible. The things which make for peace are the things which it should be the policy of all governments to promote and foster. During the late war the United States were, for the first time in their history, placed in a position which made it their interest to press the rights of belligerents to the uttermost limits, and labor for the restriction of those of neutrals. We believe the rights of belligerents were not pressed, however, against any European power any further than American precedents warranted, but the controversy with England begot temper which has ever since inclined the public to overlook the fact that the real interests of the United States, as well as those of humanity, lie in the limitation of the area reached not only by the actual operations but by the losses and inconveniences of war, or, in other words, in pushing the rights of neutrals to any extent which will not be likely to transfer the havoc of war from property to life. In all legal controversies arising out of the present struggle between Prussia and France, it behooves us to remember not only that "those who make the quarrel should be the only men to fight," but that the men who do not fight are entitled to have their goings and comings and dealings subjected to as little burden or restriction as possible. If any country, for instance, does not choose to keep a navy, or is unable to keep one, we are not to be obliged to make it up to her, whenever she goes to war and gets her ports blockaded, by selling nothing to her adversary which is likely to help to prolong the contest.

THE NORTH-EASTERN FISHERIES.

Since the Treaty of Ghent, which closed the war of 1812, the assertion by the United States of the right to fish upon the north-east coasts presented the most important and difficult diplomatic question remaining open between this country and Great Britain until the time when the *Alabama* case arose. Although for a while obscured by the magnitude of the more recent discussion, this old dispute has lost nothing of its interest and importance, and still exists unsettled, ready at any moment to be changed into a system of angry retaliation, or even to be developed into war. It is not a mere contest of words, for, as lately stated upon the floor of the House of Representatives, and indeed as has happened in other cases since that statement was made, and as is still happening or likely to happen, several American fishing-vessels have already been seized during the present season by British authorities for an alleged violation of the foreign territories.

The fisheries question is often, and perhaps generally, spoken of as though it embraced but a single point at issue. In fact, however, it includes two very different claims, which rest upon entirely different principles of international law. The first and by far the least important of these claims involves the right of American vessels to fish near the British dominions, within the headlands of wide-mouthed bays, but at points more than three miles distant from the shore, and depends for its solution upon the general doctrines of the law respecting national territory. The second involves the right of American vessels to fish in all bays, creeks, rivers, and inlets, and upon any portions of the north-eastern coasts, without reference to the distance from the shore, and depends for its solution upon a proper construction of various treaties between the United States and Great Britain, and upon the effects which the war of 1812 produced upon the conventions then existing.

The argument by which the first of these assertions of right is supported lies in a nut-shell, and the position of the two powers in reference to it may be stated in a few words. It is established by the consent of all jurists, and by the universal practice of all civilized governments, that territorial sovereignty extends for some distance over the waters of the ocean which wash the coasts of every maritime country; that this sovereignty is limited by a line which marks the ordinary range of cannon planted on the shore; and that this coast-line of defence does not follow the minuter sinuosities of the land at low-water mark, but is measured in a straight direction from those headlands which are near together. Finally, the distance of this exterior boundary from the shore or from the headlands is, for purposes of accuracy, often fixed by treaty at three miles. Such an agreement exists between Great Britain and the United States. All modern writers upon the principles of international law concur in the reasons for this rule, and by no one are they set forth in a more clear and convincing manner than by Ortolan, in his "Diplomatie de la Mer." No nation can establish an exclusive sovereignty over the high seas, because it is impossible to maintain any permanent command over those waters to the exclusion of other claimants. But it is possible to maintain such a permanent command, to the exclusion of other claimants, over a narrow belt of the ocean which washes the shore, and over all parts of gulfs, bays, and inlets whose mouths are sufficiently contracted, because coast batteries may at all times control these portions of the sea as easily and as completely as the land itself. Our Government has of course conceded these fundamental principles. Independent of express concessions, no American vessel may fish within three miles of the Canadian shore, nor within any gulfs and bays whose mouths are less than six miles in width.

But the British Government goes beyond these universal rules of the international law, and asserts its exclusive sovereignty over the entire surface of all gulfs and bays which indent the coast, although the mouths of such gulfs may be broader than the double range of cannon, and although there may be large portions of such bays which cannot be reached by any shot fired from the shore. In other words, she demands that her coast-line of defence shall run three miles at sea from promontory to promontory, without any regard to the distance between these consecutive headlands or the convexity of the intervening shore, and prohibits all foreign fishing within the space thus enclosed. In opposing this peculiar and extensive claim, we are supported by all the modern Continental jurists, who are unanimous in rejecting the assumption of Great Britain, and in pronouncing those waters of broad-mouthed gulfs and bays which are more than three miles distant from any part of the land to be free to all the world for the purposes of fishing. We are supported also by the reason of the thing; for, as actual military power is the test of territorial jurisdiction, it makes no difference whether a particular portion of the ocean is one mile or a hundred miles beyond the reach of warlike weapons; it is, in either case, equally open to all mankind. "*Terræ potestas finitur ubi finitur armorum vis.*" The United States has, therefore, constantly insisted upon the right of her citizens to fish in all the gulfs and bays upon the Canadian coasts whose mouths are more than six miles wide, provided the vessels do not trespass upon the space within three miles of the concave shore.

This minor right, however, is swallowed up in the second and broader claim that, by force of existing treaty stipulations obligatory upon Great Britain, American citizens may take fish on any part of the north-eastern waters, in all bays, inlets, and creeks, and at any distance from the shore. As a preliminary to a discussion of this phase of the fisheries question, it is necessary to examine the doctrines of the international law as to the effect of war upon prior treaties between the two belligerents. A war can only produce one of three results upon these compacts. It may leave them in full force, not in the least diminishing their obligatory character; or it may entirely destroy them, so that, upon a return of peace, they can only be revived by a new agreement between the parties; or it may simply suspend their operation during the hostilities. These are the only alternatives possible; but how far they respectively apply, and what practical result they work upon treaties, have been by no means clearly established, either by the theoretical statements of elementary writers, or by the parliamentary discussions of statesmen, or by the practice of cabinets. Certain classes of treaties are universally regarded as destroyed by a war, among which are ordinary commercial conventions, and the opinions of English writers and the demands of the English Government would lead to this result as the general rule. But it is as universally conceded that stipulations of another character—those which acknowledge independence, determine boundaries, or cede territory—are not affected by subsequent hostilities between the contracting parties, unless, indeed, one nationality is entirely overthrown by the other. Are there any other international compacts analogous to cessions and demarcations of boundary, and which like them are unaffected by war? Martens describes a class which he calls transitory, including treaties of cession and of boundary, and those which establish a servitude according to the public law, and declares that all these are perpetual by the very nature of the thing. Wheaton incorporates these propositions of Martens with his text. The principle thus stated seems to be clear and natural, but there is no general agreement among writers or statesmen as to what national rights are included among the servitudes which are protected against the effects of war. The Supreme Court of the United States, in an important case growing out of the treaty with Great Britain of 1794, laid down a fundamental rule substantially the same as that announced by Martens. Mr. Phillimore, in his great work, discusses this subject at large. He advocates the doctrine that treaties are in general destroyed by a war, but admits a few exceptions, and among them those parts of treaties which contain a final adjustment of a particular question, such as the fixing a disputed boundary or the ascertaining any contested right of property. This class of permanent stipulations corresponds to a certain extent with Martens's transitory treaties. The final adjustment of the one is identical with the cessions, exchanges, and determinations of boundary of the other. Both would also include acknowledgments of independence. But Martens's creations of public servitudes find no place in Mr. Phillimore's exception, unless that servitude were in its nature the final adjustment of a disputed right.

The United States has planted itself upon the principle set forth by the great German jurist, and has insisted, and doubtless still insists, that a public and permanent servitude over the British waters has been created in her favor, which her own consent alone can relinquish. By the third article of the treaty of peace of 1783, between Great Britain and the United States, it was agreed that the people of the latter shall continue to enjoy unmolested the rights of fishing on the Banks of Newfoundland, in the Gulf of St. Lawrence, and also on the coasts, bays, and creeks of all other British dominions in America. No change was made until the war of 1812. During the negotiations preliminary to the treaty of Ghent, the British ministers informed the commissioners of the United States that their Government did not intend to grant to the United States gratuitously the former privileges of fishing. Our agents replied that they were not authorized to treat on that subject, but that our Government claimed that no further stipulations were necessary, and that the rights created by the treaty of 1783 were still subsisting. The treaty of peace concluded in 1814 at Ghent was therefore silent on the subject of the fisheries. The English Government thereupon expressed their intention to exclude American fishermen from those portions of the sea within three miles of the coast, and from all gulfs, bays, and inlets. In the diplomatic correspondence which ensued, the British Cabinet asserted that the right to fish conferred by the treaty of 1783 was in all respects similar to the ordinary provisions of a commercial convention, to the privileges of importing goods free from duty, or of admitting ships free from imposts; that it was a concession conferred from motives of expediency, and was abrogated by the subsequent war. The United States Minister claimed that the permission given to the American people to fish in the places designated was analogous to a cession of territory, to the fixing of a boundary, or the acknowledgment of independence. He urged in substance, although not in language, that the treaty of 1783 created a public servitude of fishing in the British waters identical with the private servitude of way over another's farm or of aqueduct over another's land, well known to the municipal law; that this convention granted to the people of the United States a permanent right of property—not indeed the *dominium*, but the *jus in re alienâ* of the Roman law—a property which was no more destroyed by the war than was the ownership of the national territory. This controversy was brought to a close by the treaty of 1818, which was concluded upon the basis of a compromise. American citizens were permitted to fish anywhere on the coasts of Newfoundland and Labrador; but the United States, on its part, renounced for ever any liberty theretofore enjoyed or claimed to take fish within three miles of the coasts, or in the bays, creeks, or harbors of other British possessions in America. This agreement continued in force until the Reciprocity Treaty of 1854, in which it was stipulated that Americans may fish on the coasts and shores, and in the bays and harbors of Canada and other British dominions, without regard to the distance from the shore. While the latter compact remained in existence, our citizens enjoyed the same privileges which they held under the first convention of 1783. But the Reciprocity Treaty of 1854 was annulled by the President in 1865, and the matter of the fisheries is in greater confusion than ever.

The amicable settlement of the difficulty requires the separate answer to the following questions: As the rights to fish in the territorial waters of the north-eastern coast belonged to the American people previous to the treaty of 1783, because enjoyed by them as British colonists, and as that treaty in terms acknowledged these rights as then subsisting, did the third article thereof in fact create and confer a public servitude—a species of national property as permanent as territorial sovereignty? Or, on the other hand, did this article create and confer mere privileges which were annulled by the war of 1812? If the latter or British view be correct, we possessed no rights at all after the peace of Ghent until we obtained those that were conceded in 1818. The question will then arise, Did the termination of the Reciprocity convention of 1854 revive the treaty of 1818? If this effect was produced, the treaty of 1818 and the restricted rights under it are now subsisting; if not, there is absolutely no treaty on the subject, and the people of the United States have no rights of fishing in the territorial waters upon the north-eastern coast. As a consequence, for Great Britain to exclude us entirely from her dominions, she must maintain two independent propositions; that the grants contained in the third article of the treaty of 1783 were destroyed by the war of 1812; and that the subsequent concessions of 1818, which were enlarged in 1854, were not restored by the termination of the latter convention.

If the doctrine held by the United States in reference to the treaty of 1783 be correct, we were from that time the absolute proprietors of a right to fish in the territorial waters upon the Canadian coast—a right which was a species of property, and which we could only lose involuntarily by actual conquest. But we might restrict ourselves in its use by agreement. In this view, the treaty of 1818 was a concession on our part rather than on the part of Great Britain. Should the United States succeed in establishing its construction of the fundamental compact of 1783, it will be for the interest of Great Britain to maintain the proposition that the abrogation of the treaty of 1854 revived that of 1818, and for our interest to maintain the contrary; for if the latter convention be still in force, we have restrained ourselves thereby from falling back upon the more extensive rights granted in 1783.

It is plain from this sketch that the fisheries question is one involved in great difficulties, and that an amicable settlement of the controversy will demand the most complete knowledge of international law, and will require the employment of the amplest resources of diplomatic skill and experience.

NOTES ON THE WAR.

I.

The words of General Von Moltke on the Prusso-Austrian war which terminated in the campaign of 1866, that it was a "historical necessity," may be with equal fitness applied to the Franco-Prussian struggle now raging so fiercely. The former was but the culmination of the long and bitter rivalry which had descended as an heir-loom to the two great powers of Germany from the strife between Frederic the Great and Maria Theresa, in which the latter was stripped of Silesia, thus bringing Prussia on one of the flanks of Bohemia, and giving her an advantage in a military initiative of which she profited in the movements that immediately preceded the recent battle of Sadowa, or Königgrätz, where the leadership of Germany passed, probably for all future time, out of the hands of the house of Hapsburg.

Had it not been for the decisiveness of this crowning victory, which threw Prussia, and particularly her military prowess, into such prominence, the struggle upon which the eyes of the world are now so intent might have been put off to some still distant day, so far as the parties to it are alone concerned. For the aspirations alone of France for the Rhine as her frontier, of which the dark speeches of Napoleon III.—thrown forth as the distant mutterings of the spirit of discord—were but the manifestations, would, in the present day at least, had any action been taken to realize them, have evoked another gigantic coalition of Europe, so fatal to the Bonapartes. But each party felt that the hour had come, and that no time was to be lost in carrying into effect their respective schemes. As Italy had been made a cat's-paw of by Prussia in the Prusso-Austrian war, so Spain might, in her turn, serve the same end in a struggle between France and Prussia. At least such, without any violent interpretation of this movement to place a German prince on the throne of Spain, might have seemed to France the object of it; and she was placed by it on either horn of the dilemma—to let a member of the house of Hohenzollern quietly seat himself upon the throne of Spain, and, after quelling the anarchy and improving the resources of that ill-conditioned kingdom, stand a permanent menace to France; or else, by making this a cause of war, to enlist the sympathies of the civilized world against her, for endeavoring to prevent another independent nation from doing what she had just professed to have done—electing her own ruler by a popular vote. Here was again a "historical necessity," and the antecedents of the parties had left, besides, abundant causes of heartburnings and hatreds. Prussia had still her memories of her humiliations by the First Napoleon, from the crushing blow he dealt her in 1806, and the mortifications to which he had subsequently subjected her up to the patriotic uprising of the Prussian people consequent upon his disasters in 1812 and 1813; and France had been long chewing the sweet cud of anticipated vengeance against Prussia for the prominent part which her armies, under the leadership of the grim, relentless Blücher, the "Marshal Vorwärts," as his soldiers styled him, had played in the campaigns of 1814 and 1815, piling disaster upon disaster upon her, until that final stroke at Waterloo which shivered the First Empire, and, in the second occupation of Paris, wrenched from the hands of France those conquests which were at once the tokens and pride of her widespread triumphs.

The battle of Sadowa, the cause of the early *dénouement* of this "historical necessity," did more than seat Prussia in the leadership of Germany. It threw into activity at once the jealousy and the fears of France. Here was an astounding event, the causes of which it behooved her to examine into. Such large, well-appointed, and thoroughly-drilled armies as had shown themselves in Bohemia, sweeping before them the Austrian hosts to the very gates of their capital, however much French confidence might have felt itself unshaken from the reassuring fact that the Austrian army had but recently met with a similar fate at French hands at Solferino, was something to be looked into; and the examination, if one may credit General Trochu and other reliable French military authorities, was anything but reassuring to the Emperor.

Prussia has been nothing if not a pre-eminently military nation from the time of Frederic the Great to the present day. In the earlier period of this epoch, her military constitutions were more or less examples which other nations tried to work up to. In France, the system of Frederic had many admirers, who were desirous of introducing it into the French armies, the most noted of whom were Mirabeau and Guibert, who both wrote and spoke a great deal on the subject. But whilst these discussions, with some changes, were going on, came the tornado that swept all else from the thoughts of men, the French Revolution; and whatever of military prestige Prussia had acquired was for a time obscured by the successes of the French Republican armies, in stemming and then driving back the flood of invasion from Germany.

This military lesson, and the disastrous campaigns of 1806 and 1807, which left to Prussia but the semblance of an independent government, so completely was she subjected to the interference of the Imperial satraps, forced her to scrutinize closely the defects of her military system. Under Frederic the Great, and under his immediate successor, Frederic William II., the Prussian army was separate from the body of the people. In fact, it was composed in a great degree of foreigners, many of them deserters from other services, and mostly of the most depraved classes of society. So low had the military profession fallen in public estimation that, during the peaceful closing years of the reign of Frederic the Great, recruits for the army could not be obtained, not only from the more easy classes, but from those of the shop-keeping and the class of mechanics. The men recruited under such a state of things had to be guarded like imprisoned criminals, and a system of mutual espionage kept up over them to prevent them from deserting. This in its turn called for the most rigid means of discipline, mostly of a brutalizing character, which necessarily gave rise to desertions on a large scale, to attempts on the lives of the officers by the privates, and to frequent suicides among these miserable wretches, to whom life had been made a burthen too intolerable to be borne. Such was, in brief, the army, amounting to 200,000 men, that Frederic the Great left to his nephew and successor. Under this last sovereign, the number of foreigners in service was reduced to one-half of the effective strength of the army, which, at his death, amounted to about 240,000 men, whilst the population of the kingdom was only about eight millions and a half. Besides this reduction in the number of foreigners, important changes were made in the tactics of the troops, arising from their contests with the French Republicans; and the formal, rigid system of manœuvres, which had played so conspicuous a part in the triumphs of Frederic the Great, gave place to an imitation of the French tactics of the moment.

Although very important ameliorations were made in the military organization by Frederic William III., who succeeded his father in 1797, the inherent vices of the system that had come down to him, and the consequences of the corrupt court and system of administration of the preceding reign, had laid the foundations of the disasters by which Prussia was overwhelmed by Napoleon I., and from which she only began to emerge in 1813, when, at the urgent demands of his able minister, Scharnhorst, the nation, which had voluntarily risen, was called to arms to enter upon what was not inaptly called the War of Independence; for, from 1808 until this period, although great changes and ameliorations had taken place in the administration of the kingdom generally, they were made by the sufferance of Napoleon I., who allowed Prussia to keep up an army of but about 40,000 men, and these to serve as a French contingent, whenever called upon to do so. By a law of March 17, 1813, the now celebrated landwehr system, by which the whole arms-bearing youth of the nation was placed at the disposal of the Government, was called into existence.

The uncompromising war made by the allies against Napoleon I., from his disastrous campaign against Russia to the closing decisive victory at Waterloo, gave Prussia the chance she was longing for and was prompt to improve. Since this epoch, having reassumed her rank among the great powers of Europe, Prussia has devoted no small portion of her attention and means to strengthening and improving all her military forces. These gradual changes and improvements may be briefly summed up as follows: By laws and decrees of 1814 and 1815, every Prussian subject was called upon to bear arms for the defence of the state; and, with certain exemptions, each one was obliged to serve in the active army from 20 to 23 years of age, from 23 to 25 in the reserve, from 25 to 32 in the first ban of the landwehr, from 32 to 39 in the second ban; and, besides this, there was the service in the landsturm, which comprised all who were competent for military duty, from the ages of 17 to 49, who formed no part either of the army or of the landwehr.

The permanent army in time of peace was by these laws raised to about 140,000 men, admitting of an increase to 190,000, by adding to them the men of the active reserve force; and the chasseurs, artillerists, and pioneers of the landwehr being a part of the army in time of war, its complete effective force became about 200,000 men.

The first ban of the landwehr, which comprised only infantry and cavalry, when mobilized, could furnish 150,000 men. The active army for the field comprised the permanent army and the first ban of the landwehr, and, after detaching some 30,000 men for the defence of the fortresses, could bring into the field 340,000. Besides this, the Government could provide, from recruits, about 50,000 men as an active reserve.

The second ban of the landwehr, which did not exist in time of peace, when called out could furnish 110,000 infantry and cavalry. Its chief duties were, with the 30,000 men detached from the permanent army and the first ban, the defence of the fortresses. In cases of necessity the Government could also mobilize the landsturm.

Thus the effective military forces of Prussia comprised, first, the army in the field; second, the troops of the reserve, composed in the same manner of the troops of the army and of the first ban of the landwehr, in equal parts; third, the troops of the second ban of the landwehr for garrison duty, and, in certain eventualities, of the troops of the landsturm, amounting in all to about 530,000 men.

This military organization, for which it is claimed that it called for but slight sacrifices in money or in the time of the citizen during peace, and presented a formidable defence in time of danger, was maintained during the reigns of Frederic William III. and Frederic William IV. The campaigns of 1848–49, and the mobilizations called for in 1850 and 1859, however, revealed some important defects in this system. Too much stress, it was seen, had been laid upon the patriotic promptings of the people in times of ordinary danger; when, in fact, the grand element can only be counted upon to break forth, with overwhelming enthusiasm, in those rare and fortunately few cases where the national heart is stirred to action by some great cause of indignation. For this and other results of experience, the present King William I., in 1859–60, decided upon a reorganization of the three principal constituents of the military force.

In the first place, the first ban of the landwehr was no longer to form a part of the army in the field; but, to compensate for this deduction, its effective strength and that of its reserves were augmented; these last were not only to complete the army in the field, but to repair its losses, and to co-operate in the defence of the fortresses; the duration of service in it was on this account increased to four years. The landwehr was still composed of two bans: the first, of citizens from the ages of 26 to 36, but forming no part of the army in the field—its object being the defence of the fortresses, in conjunction with a part of the reserve; and in case of necessity, the second ban of the landwehr can be called out for the performance of the same duties. The result of these changes is that the effective strength of the army for the field has remained the same, that of the reserves is nearly doubled, and that the troops for garrison duty have been considerably augmented, and can, as formerly, be doubled by the mobilization of the second ban of the landwehr.

Besides these organic changes in her own military system, Prussia has kept an attentive outlook upon the phases that the art of war was going through in Europe and elsewhere. Her admirable military administration has let no occasion pass to improve the tactics of the army and its armament. Every improvement in cannon and small-arms has been carefully scrutinized and adopted at the first favorable moment. Looking forward to her increasing commerce, great attention has also been paid to her navy, and to covering her sea-coast from invasion. Such, in brief, was the military position of Prussia previous to the Prusso-Austrian war, from which resulted her triumphs on that occasion; and such was the position in which she was found at the outset of the present struggle, but with increased strength through her new alliances, and with the added experience brought from recent military operations on a gigantic scale.

Laying aside the causes of demoralization which have affected her administration throughout every branch of her service, France was in an unprepared condition for the great struggle that was upon her, through causes of a purely military character. Ever over-confident in her own prowess, and looking with a scarcely disguised feeling of contempt on the military status of all other nations, her traditions of the triumphs of the First Empire, the practical training given to her troops in Africa, the Crimean campaign, in spite of the great losses incurred in it, and the short Italian one closing with the battle of Solferino, and, as a result, expelling the Austrians from Italy, seemed, in her own eyes, and very much so in those of others, to have clothed her with the attribute of irresistibility. She assumed that she had nothing to learn from others on the art of war, and she took but little pains to see if there was anything to be learned. She had seen the armies of Austria fall before her, on the fields of Magenta and Solferino, and she took, therefore, little heed to enquire whether the narrow field of action, and the almost individual combats in Africa, were the best school for training able strategists. She had seen the Russian hosts fly before her African troops, the Mexican making but a feeble resistance to them, and these were sufficient grounds for inferring that nothing could stand before her Turcos and her Zouaves. Such, at least, was the public opinion, and such, unfortunately perhaps, that of the army itself.

It is true that General Trochu, and other able and thoughtful men of the French army, looked at this state of things from a different point of view, and by their pens endeavored to attract attention to the dangers that were before the country; but their words of warning fell upon unwilling ears, or, if heeded at all, action upon them came too late. The thunders from the battle-field of Sadowa were the first to rouse the minds, at least of some of the leading military men in France, to the imminence of this danger, and to impel them to look into their own military institutions and compare their prospective efficiency with that of the nation which through hers had just achieved such decisive results. In January, 1868, Marshal Niel, who distinguished himself in the Italian campaign, and whose guiding counsels led to the capture of Sevastopol, was called to take charge of the War Office. An indefatigable worker, a scientific soldier in every respect, and thoroughly conversant with the military resources of the Empire, no better man probably could have been found for this post. Through his efforts mainly a law was passed in February, 1868, reorganizing the military system, and taking as a basis the then organization of that of Prussia.

Without entering into details, which would probably interest only a military reader, the provisions of the law in question may be briefly stated as follows: The standing army was to consist of 750,000 men, and the Garde Mobile of 600,000 men. The regular army comprises what is known as the active army and the reserve. The men, whose period of service had been changed by this law from 7 to 9 years, are required to serve 5 years in the first and 4 years in the latter body. The reserve can only be called out in time of war, and by an imperial decree. The Garde Mobile is composed of the same classes, as to age, as those who form the active army and the reserve; the term of service in it is five years. Very rare exemptions are granted from this service. The officers of this force are appointed by the Emperor. Its duties are to garrison the fortresses of the interior and sea-coast, and to preserve order within the Empire in war-time. It can only be called out by a special law. With these fundamental modifications of its military organization, the claim is made for France that, without demanding as great sacrifices from the private citizen as that of Prussia, and less rigid in its requirements, it still approaches the latter in its best points, giving, like it, an efficient military training and organization to the whole of the arms-bearing population, and, in case of need, being able to avail of their services in time of war; whilst it avoids assembling under the colors or calling out the married men in time of peace.

Such, in brief, are the antecedents and the present conditions of the military systems of the two great powers now face to face. The one has been long tried, and has become a part of the national being. The other is upon trial, and, like all new machinery, has hardly had time for all its parts to work smoothly and without friction. That this and the other military defects alluded to in the French system have had a preponderating influence in favor of Prussia in the contest now going on, there can be no question. Speculation as to the final result would be here out of place.

D. H. M.

West Point, August 9, 1870.

THE PRUSSIAN LOSSES—FIELD MAIL SERVICE.

Berlin, August 30, 1870.

You remember old Frederick William I., the father of Frederic the Great, that economical King of Prussia, who even to preserve his coat took it off when he worked, who smoked tobacco and drank beer in the evening, and, in spite of his royalty, declared Holland the greatest country in the world on account of the industry, cleanliness, and thrift of her inhabitants. This same King, who has been so admirably sketched by Carlyle, one fine morning walked through the Wilhelmstrasse in Berlin, which he was just then laying out. The first man he met was a little Jew, who timidly tried to steal away. Old Frederick William stopped him, and grimly asked him, "Why do you run away?" "Because I am afraid of your Majesty," replied the terror-stricken Jew. "Infernal scoundrel that you are," cried the King, "I want you to love me, but not to fear me;" and, to inculcate love in the poor fellow, *manu propria* inflicted a sound thrashing on him.

What Frederick William did by royal prerogative, the German people now performs at the invitation of the French. They are whipped first, will respect us next, and, I trust, will finally live on good terms with us, as sensible neighbors ought to do. Prussia, which is the undisputed leader of Germany in this national struggle, has never learned the art of making herself beloved; on the contrary, in a quite unusual degree she possesses the art of making herself hated without any reason. She is rough, often even coarse, and generally shabby; but solid, healthy, energetic, and full of vitality. From the beginning of her history she had every hour to be prepared for battle, to fight her way, and to gain ground inch by inch and foot by foot. She had always first to beat those by whom she wanted to be respected and loved, and, by a good administration, cheap justice, careful education, and manly deeds, she has finally succeeded in winning the affections of even those who by wars or intrigues became a part of her. There is now, for instance, no more Prussian province in sentiment and feeling than Silesia. The Southern German States have just been going through the same process, and the French, I hope, will follow suit. As we Germans do not claim anything from them which does not belong to us by right, and as we whip them at their own request, they will in time learn to respect if not to love us.

It is, however, a hard and a cruel thing for a nation to be compelled to beat and kick, to wound and kill, for the sole purpose of maintaining its independence. We have a better work in store for the next century, there are nobler aims for our ambition, there are more glorious laurels to be reaped in civil life than on the battle-field. The war business is too bloody, too full of misery and heart-rending even for the victors, not to enjoin a speedy termination. There is hardly a family all over Germany which has not to mourn the loss of one of its members, so fearfully have destruction and death raged in our ranks. The reason for these enormous losses is as obvious as the result. For the first time in military history we see two warlike nations in a desperate struggle with arms which science and technical improvements have brought to a wonderful perfection. Our most competent judges say that the chassepot is decidedly superior to our needle gun, and that the former in the hands of our soldiers would already have ended the war. The French are too inexperienced and too quick in the handling of this tremendous weapon. As when used it "kicks" badly and hurts, they fire too high or at random. The mitrailleuse is not as dangerous as it has been represented by the French, but its value has been underrated by us, for its wounds are fearful, and the appearance of the soldiers killed by the mitrailleuse is ghastly. Its efficiency is in some way limited, as its bullets do not spread. For this reason it was rejected by our military men when offered to them some years ago. Some of our men had five or six bullets in their breast, running parallel with each other. If our soldiers are inferior in point of arms, they are superior in cool bravery and exact aiming. In the battles round Metz we have lost as many men, if not more, as in the two battles of Leipzig and Waterloo together. We must lose more, as we have always to attack in the open field, while the enemy generally only defends his fortified positions. In the whole Bohemian campaign of 1866 we lost 13,000 men—about 6,000 by cholera and 7,000 killed and wounded. In this campaign, the battle of Vionville, on August 16, alone cost us more than 15,000 men. Some battalions were almost annihilated, two and even three cavalry regiments were reduced to one, and the death of one-third of the officers seemed the general rule. In order to detain and to retain the enemy on his retreat from Metz, the cavalry of the Guards had for hours to bear the brunt of the battle. As sure death was before them, and as they had to spare their numbers, the single companies drew lots which should first attack the enemy. Not the six hundred—"into the valley of death rode" the six thousand. Light and heavy brigades were reduced to one-fourth of their original number. Not less bravely fought the infantry of the Guards at St. Privat, which was the key to the enemy's position on the 18th of August. The riflemen (Schützen) lost all their officers, the majority of them killed, and the remaining four hundred men, of originally one thousand, were led back by an ensign. Among the killed at the same place was Prince Felix Salm-Salm, Major of the Fourth Grenadier Regiment of the Guards, the same officer who served during the last war in the United States, and whom President Lincoln encouraged with the words that his quality as prince would not prevent his promotion if he behaved well. He afterwards did well under and towards poor Maximilian. At St. Privat he fought and fell like a hero. Salm's wife, well known to the former Army of the Potomac, is one of the most efficient nurses in the field, and nobly works in the hospitals. Of Berlin boys, the son of Secretary Count Itzenputz was killed, while Bismarck's son was severely wounded near Metz, both serving as privates in a cavalry regiment. Sons of men of science, like young Langenbeck and young Grimm, were also killed in that battle. The officers of the Twenty-fourth Infantry announce the death of fourteen of their comrades killed in the battle of the 16th, where the Seventy-second likewise lost thirteen of their officers. In short, every day, every newspaper brings us the sad news of a fearful havoc among our troops. The loss of rank and file is always in proportion to the above numbers, and, still worse, we lose in our privates the flower of the nation, while on the French side the educated classes do not serve in the army. Our young men are not the proper opponents to Zouaves and Turcos.

It is a blessing for humanity that seven-eighths of these Africans have been extirpated. The favor which other French prisoners regularly ask from our keepers, is to be kept separate from the Zouaves and Turcos. In the beginning, the latter were received in the private hospitals, but they have committed such outrages that they now are sent to the royal hospitals. They attacked the stewards in a most cowardly manner, and grossly insulted the nurses whe tended them. Here in Berlin, and in a neighboring town, two sick Turcos tried to violate two Sisters of Mercy. For these reasons they must now be watched like wild beasts by armed sentries.

The French officers taken prisoners generally behave well. During daylight they are allowed to go free. When they first arrived they put on airs, but since they have been threatened that they would be confined to their rooms, they strictly obey every order. Our soldiers even have to salute them first when they meet them in the streets. It strikes our officers that the superiors of these French prisoners care so little for their subordinates that they rarely ask for the condition of the wounded, do not assist or advise their men, or show them any sympathy. As a significant illustration, I record the fact that, out of one hundred and thirty French officers—I say *officers*—who are confined at Königsberg, seventeen cannot write their names. Their special business of marching at the head of civilization has evidently prevented these seventeen officers from learning to write. I copy this fact from an official statement. As another illustration of the standard of the school education of the two armies, I will mention the extent of the correspondence of some of our troops in the field. According to a publication made by the General Post-Office Department, there are in Berlin alone forty-five clerks working exclusively for the field service. They receive from and send to the army 200,000 letters per day, and daily forward, besides, 40,000 thalers, consisting in great part of money letters of one or two thalers each. The mail matter for our soldiers is daily sent from Berlin in two lots, containing 238 mail-bags altogether. Since the mobilization of the army, ten million corresponding cards have been distributed. These cards are about six inches by four, of stiff, good paper, and have the blank of the address printed in front, while on the back there is room for a short letter, which may be written in pencil or ink. They do not require an envelope, and are especially adapted for short communications. On the whole, the field post service is admirably organized and conducted. It is performed by the active field post-offices. Every one of the thirteen corps has a general field post-office and four field-post expeditions, viz., one for the general and staff command of the corps, two for the infantry divisions, and one for the reserve. Besides, there are special offices for the headquarters of the King and for the chief commands of the three great armies, for the six cavalry divisions, and for the four landwehr divisions. All the field post-offices, amounting to seventy-one, and the whole *personnel* of about 1,000 men, besides many hundred wagons and horses, march along with their respective divisions, conducting their post department. They receive the letters from home for the soldiers, assort and prepare the field post correspondence for distribution, which must take place in regular order, beginning with the battalion and so on downward. They likewise receive and regularly collect the letters which the soldiers write home, and assort them for the different routes they have to take. To keep up the communication between the troops in the enemy's land and home, there are field post-offices along the military roads. Each of the three armies has one field post-master for the military roads and two inspectors; they are under the chief command of the military roads, which has to secure the connection of an operating army with its base of operations and with the territory to which the latter belongs. The chief command of the military roads is charged with providing the means and expenses of the transport of the mails. While no letter has been lost which was written home by the soldiers in the field, it has happened here and there that, on account of the inaccurateness of the address, a letter written to the soldier has been lost or miscarried. As a rule, it can be said that every letter which, besides the name of the soldier, had the number of his regiment, has been delivered. Owing to the bad state of the partly destroyed roads, a letter from Berlin to Nancy requires four days.

For those of your readers who, during your war, were members of Union Leagues or Defence Committees, it may be interesting to learn what victuals and drinks were collected here by private contributions and distributed among our soldiers by ladies and gentlemen, acting as volunteers. From July 23 to August 12, or within 20 days, 151,000 men left or passed through Berlin. They received from the committee formed for the purpose of refreshing them 5,100 bottles of wine, 110,000 large glasses (Seidels) of beer, 2,300 bottles of selters water and three casks per day, 4 casks of brandy, 430 bottles of lemonade, 64 bottles of Jamaica rum, 250 pounds of coffee and 150 pounds of sugar, 75,620 sandwiches, 950 large breads for sandwiches, 650 pounds of butter, 50 pounds of lard, 228,600 cigars, 20,500 packages of tobacco, 2,700 pounds of sausages, 550 pounds of ham, and 150 pounds of cheese. For the benefit of those who object to the free use of alcoholic drinks, I will add that our Government considers brandy an excellent drink for the army in the field, and that it even compels every soldier to fill his flask before he leaves camp. The flasks of the privates are not small, and hold a little more than the contents of a claret bottle. As far as I have learned, brandy has not yet done any harm among our men, and probably never will.

FRIEDRICH KAPP.

NEWPORT.

SEPTEMBER 5, 1870.

THE season at Newport has an obstinate life. September has fairly begun, but as yet there is small visible diminution in the steady stream—the splendid, stupid stream—of carriages which rolls in the afternoon along the Avenue. There is, I think, a far more intimate fondness between Newport and its frequenters than that which in most American watering-places consecrates the somewhat mechanical relation between the visitors and the visited. This relation here is for the most part slightly sentimental. I am very far from professing a cynical contempt for the gaieties and vanities of Newport life: they are, as a spectacle, extremely amusing; they are full of a certain warmth of social color which charms alike the eye and the fancy; they are worth observing, if only to conclude against them; they possess at least the dignity of all extreme and emphatic expressions of a social tendency; but they are not so far from "*was uns alle bändigt, das Gemeine*" that I do not seem to overhear at times the still, small voice of this tender sense of the sweet, superior beauty of the local influences that surround them, pleading gently in their favor to the fastidious critic. I feel almost warranted in saying that here this exquisite natural background has sunk less in relative value and suffered less from the encroachments of pleasure-seeking man than the scenic properties of any other great watering-place. For this, perhaps, we may thank rather the modest, incorruptible integrity of the Newport landscape than any very intelligent forbearance on the part of the summer colony. The beauty of this landscape is so subtle, so essential, so humble, so much a thing of character and impression, so little a thing of feature and pretension, that it cunningly eludes the grasp of the destroyer or the reformer, and triumphs in impalpable purity even when it seems to condescend. I have sometimes wondered in sternly rational moods why it is that Newport is so loved of the votaries of idleness and pleasure. Its resources are few in number. It is emphatically circumscribed. It has few drives, few walks, little variety of scenery. Its charms and its interest are confined to a narrow circle. It has of course the unlimited ocean, but seafaring idlers are of necessity the fortunate few. Last evening, it seemed to me, as I drove along the Avenue, that my wonderment was quenched for ever. The atmospheric tone, the exquisite, rich simplicity of the landscape, gave mild, enchanting sense of positive climate—these are the real charm of Newport, and the secret of her supremacy. You are melted by the admirable art of the landscape, by seeing so much that is lovely and impressive achieved with such a masterly frugality of means—with so little parade of the vast, the various, or the rare, with so narrow a range of color and form. I could not help thinking, as I turned from the great harmony of elegance and the unfathomable mystery of purity which lay deepening on the breast of nature with the various shades of twilight, to the motley discord and lavish wholesale splendor of the flowing stream of gentility on the Avenue, that, quite in their own line of effect, these money-made social heroes and heroines might learn a few good lessons from the daily prospect of the great western expanse of rock and ocean in its relations with the declining sun. But this is a rather fantastic demand. Many persons of course come to Newport simply because others come, and in this way the present brilliant colony has grown up. Let me not be suspected, when I speak of Newport, of the untasteful heresy of meaning primarily rocks and waves rather than ladies and gentlemen.

The ladies and gentlemen are in great force—the ladies, of course, especially. It is true everywhere, I suppose, that women are the central animating element of "society;" but you feel this to be especially true as you pass along the Newport Avenue. I doubt whether anywhere else women enjoy so largely what is called a "good time" with so small a sacrifice, that is, of the luxury of self-respect. I heard a lady yesterday tell another, with a quiet ecstasy of tone, that she had been having a "most perfect time." This is the very poetry of pleasure. In England, if our impression is correct, women hold the second fiddle in the great social harmony. You will never, at the sight of a carriage-load of mild-browed English maidens, with a presiding matron, plump and passive, in the midst of them, suspect their countrywomen of enjoying in the conventional world anything more than a fictitious and deputed dignity. They neither speak nor act from themselves, but from their husbands and brothers and lovers. On the Continent, women are proclaimed supreme; but we fancy them, with more or less justice, as maintaining their empire by various clandestine and reprehensible arts. With us—we may say it without bravado—they are both free and unsophisticated. You feel it most gratefully as you receive a confident bow from a pretty young girl in her basket-phaeton. She is very young and very pretty, but she has a certain delicate breadth of movement which seems to you a pure gain, without imaginable taint of loss. She combines, you reflect with respectful tenderness, the utmost of modesty with the least possible shyness. Shyness is certainly very pretty—when it is not very ugly; but shyness may often darken the bloom of genuine modesty, and a certain feminine frankness and confidence may often incline it toward the light. Let us assume, then, that all the young ladies whom you may meet here are the correctest of all possible young ladies. In the course of time, they ripen into the delightful women who divide your admiration. It is easy to see that Newport must be a most agreeable sojourn for the male sex. The gentlemen, indeed, look wonderfully prosperous and well-conditioned. They gallop on shining horses or recline in a sort of coaxing Herculean submission beside the lovely mistress of a phaeton. Young men—and young old men—I have occasion to observe, are far more numerous than at Saratoga, and of vastly superior quality. There is, indeed, in all things a striking difference in tone and aspect between these two great cities of pleasure. After Saratoga, Newport seems really substantial and civilized. Æsthetically speaking, you may remain at Newport with a fairly good conscience; at Saratoga, you linger on under passionate protest. At Newport, life is public, if you will; at Saratoga, it is absolutely common. The difference, in a word, is the difference between a group of three or four hotels and a series of cottages and villas. Saratoga perhaps deserves our greater homage, as being characteristically democratic and American; let us, then, make Saratoga the heaven of our aspiration, but let us yet awhile content ourselves with Newport as the lordly earth of our residence.

The villas and cottages, the beautiful idle women, the beautiful idle men, the brilliant pleasure-fraught days and evenings, impart, perhaps, to Newport life a faintly European expression, in so far as they suggest the somewhat alien presence of leisure—"fine old Leisure," as George Eliot calls it. Nothing, it seems to me, however, can take place in America without straightway seeming very American; and, after a week at Newport, you begin to fancy that, to live for amusement simply, beyond the noise of commerce or of care, is a distinctively national trait. Nowhere else in this country—nowhere, of course, within the range of our better civilization—does business seem so remote, so vague and unreal. Here a positive organic system of idleness or of active pleasure-taking has grown up and matured. If there is any poetry in the ignorance of trade and turmoil and the hard processes of fortune, Newport may claim her share of it. She knows—or at least appears to know—for the most part, nothing but results. Individuals here, of course, have private cares and burdens, to preserve the balance and the dignity of life; but these collective society conspires to forget. It is a singular fact that a society that does nothing is decidedly more picturesque, more interesting to the eye of sentiment, than a society which is hard at work. Newport, in this way, is infinitely more picturesque than Saratoga. There you feel that idleness is occasional, empirical. Most of the people you see are asking themselves, you imagine, whether the game is worth the candle, and work is not better than such toilsome play. But here, obviously, the habit of pleasure is formed, and (within the limits of a generous morality) many of the secrets of pleasure are known. Do what we will, on certain lines Europe is ahead of us yet. Newport falls altogether short of Baden-Baden in her presentment of the improprieties. They are altogether absent from the picture, which is therefore signally destitute of those shades of color produced by the mysteries and fascinations of vice. But idleness *per se* is vicious, and of course you may imagine what you please. For my own part, I prefer to imagine nothing but the graceful and the pure; and, with the help of such imaginings, you may construct a very pretty sentimental counterpart to the superficial movement of society. This I lately found very difficult to do at Saratoga. Sentiment there is pitifully shy and elusive. Here, the multiplied relations of men and women, under the permanent pressure of luxury and idleness, give it a very fair chance. Sentiment, indeed, of masterly force and interest, springs up in every soil, with a sovereign disregard of occasion. People love and hate and aspire with the greatest intensity when they have to make their time and privilege. I should hardly come to Newport for the materials of a tragedy. Even in their own kind, the social elements are as yet too light and thin. But I can fancy finding here the plot of many a pleasant sentimental comedy. I can almost imagine, indeed, a transient observer of the Newport spectacle dreaming momentarily of a great American novel, in which the heroine shall be infinitely realistic, and yet neither a schoolmistress nor an outcast. I say intentionally the "transient" observer, because I fancy that here the suspicion only is friendly to dramatic peace; the knowledge is hostile. The observer would discover, on a nearer view, I rather fear, that his possible heroines have too unexceptionally a perpetual "good time."

This will remind the reader of what he must already have heard affirmed, that to speak of a place with abundance you must know it, but not too well. I feel as if I knew the natural elements of Newport too well to attempt to describe them. I have known them so long that I hardly know what I think of them. I have little more than a simple consciousness of vastly enjoying them. Even this consciousness at times lies dumb and inert. I wonder at such times whether, to appeal fairly to the general human sense, the prospect here has not something too much of the extra-terrestrial element. Life seems too short, space too narrow, to warrant you in giving in an unqualified adhesion to a *paysage* which is two-thirds ocean. For the most part, however, I am willing to take the landscape as it stands, and to think that, without its native complement of sea, the land would lose much of its beauty. It is, in fact, a land exquisitely modified by marine influences. Indeed, in spite of all the evil it has done me, I could find it in my soul to love the sea when I consider how it co-operates with the Newport promontories to the delight of the eye. Give it up altogether, and you can thus enjoy it still, reflected and immobilized—like the Prussian army a month hence.

Newport consists, as the reader will know, of an ancient and honorable town, a goodly harbor, and a long, broad neck of land, stretching southward into the sea, and forming the chief habitation of the summer colony. Along the greater part of its eastward length, this projecting coast is bordered with lordly cliffs and dotted with seaward-gazing villas. At the head of the promontory the villas enjoy a magnificent reach of prospect. The pure Atlantic—the Old World westward tides—expire directly at their feet. Behind the line of villas runs the Avenue, with more villas yet—of which there is nothing at all to say, but that those built recently are a hundred times prettier than those built fifteen years ago, offering a modest contribution to our modern architectural Renaissance. Some years ago, when I first knew Newport, the town proper was considered extremely "picturesque." If an antique shabbiness that amounts almost to squalor is a pertinent element, as I believe it is, of the picturesque, the little main street at least—Thames Street by name—still deserves the praise. Here, in their crooked and dwarfish wooden mansions, are the shops that minister to the daily needs of the expanded city; and here of a summer morning, jolting over the cobble-stones of the narrow roadway, you may see a hundred superfine ladies seeking with languid eagerness what they may buy—to "buy something," I believe, being a diurnal necessity of the American woman of substance. This busy region gradually melts away into the grass-grown stillness of the Point, in the eyes of many persons the pleasantest quarter in Newport. It has superficially the advantage of being as yet uninvaded by fashion. When I first knew it, however, its peculiar charm was even more undisturbed than at present. The Point may be called the old residential, as distinguished from the commercial, town. It is meagre, shallow, and scanty—a mere pinch of antiquity—but, as far as it goes, it retains an exquisite tone. It leaves the shops and the little wharves, and wanders close to the harbor, where the breeze-borne rattle of shifted sails and spars alone intrudes upon its stillness, till its mouldy-timbered quiet subsides into the low, tame rocks and beaches which edge the bay. Several fine modern houses have recently been erected on the water-side, absorbing the sober, primitive tenements which used to maintain the picturesque character of the place. They improve it, of course, as a residence, but they injure it as a spectacle. Enough of early architecture still remains, however, to suggest a multitude of thoughts as to the severe simplicity of the generation which produced it. It is picturesque in a way, but with a paucity of elements which seems to defy all effect. The plain gray nudity of these little warped and shingled boxes seems utterly to repudiate the slightest curiosity. But here, as elsewhere, the magical Newport atmosphere wins half the battle. It aims at no mystery. It clothes them in a garment of absolute light. Their homely notches and splinters twinkle in the sun. Their steep gray roofs, barnacled with lichens, remind you of old scows, overturned on the beach to dry. They show for what they are—simple houses by the sea. Overdarkened by no wealth of inland shade, without show or elegance or finish, they patiently partake of the fortunes of the era—of the vast blue glare which rises from the bay, and the storms which sweep inward from the ocean. They have been blown free of all needless accretion of detail—scorched clean of all graceful superfluities. Most of the population of this part of Newport is, I believe, of Quaker lineage. This double-salted Quakerism is abundant motive for this soundless and colorless simplicity.

One of the more recent movements of fashion is the so-called "New Drive"—the beautiful drive by the sea. The Avenue, where the Neck abruptly terminates, has been made to prolong itself to the west, and to wander for a couple of miles over a lovely region of beach and lowly down and sandy meadow and salt brown sheep-grass. This region was formerly the most beautiful part of Newport—the least frequented and the most untamed by fashion. I by no means regret the creation of the new road, however. A walker may very soon isolate himself, and the occupants of carriages stand a chance of benefit quite superior to their power of injury. The peculiar charm of this great westward expanse is very difficult to define. It is in an especial degree the charm of Newport in general—the combined lowness of tone, as painters call it, in all the earthy elements, and the extraordinary elevation of tone in the air. For miles and miles you see at your feet, in mingled shades of yellow and gray, a desolate waste of moss-clad rock and sand-starved grass. At your left surges and shines the mighty presence of the vast immediate sea. Above the broken and composite level of this double-featured plain, the great heavens ascend in innumerable stages of light. In spite of the bare simplicity of this prospect, its beauty is far more a beauty of detail than that of the average American landscape. Descend into a hollow of the rocks, into one of the little warm climates of five feet square which you may find there, beside the grateful ocean glare, and you will be struck quite as much by their fineness as by their roughness. From time to time, as you wander, you will meet a lonely, stunted tree, into the storm-twisted multiplicity of whose branches all the possible grace and grotesqueness of the growth of trees seem to have been finely concentrated. The region of which I speak is perhaps best seen in the late afternoon, from the high seat of a carriage on the Avenue. You seem to stand just without the threshold of the west. At its opposite extremity sinks the sun, with such a splendor, perhaps, as I lately saw—a splendor of the deepest blue, more luminous and fiery than the fiercest of our common vespertinal crimsons, all streaked and barred with blown and drifted gold. The whole vast interval, with its rocks and marshes and ponds, seems bedimmed into a troubled monotone of glorious purple. The near Atlantic is fading slowly into the unborrowed darkness of its deep, essential life. In the foreground, a short distance from the road, an old orchard uplifts its tangled stems and branches against the violet mists of the west. It seems strangely grotesque and enchanted. No ancient olive grove of Italy or Provence was ever more hoarily romantic. This is what people commonly behold on the last homeward bend of the drive. For such of them as are happy enough to occupy one of the villas on the cliffs, the beauty of the day has even yet not expired. The present summer has been emphatically the summer of moonlights. Not the nights, however, but the long days, in these agreeable homes, are what specially appeal to my fancy. Here you find a solution of the insoluble problem—to combine an abundance of society with an abundance of solitude. In their charming broad-windowed drawing-rooms, on their great seaward piazzas, within sight of the serious Atlantic horizon, which is so familiar to the eye and so mysterious to the heart, caressed by the gentle breeze which makes all but simple, social, delightful *then* and *there* seem unreal and untasteful—the sweet fruit of the lotus grows more than ever succulent and magical. You feel here not more a man, perhaps, but more a passive gentleman and worldling. How sensible they ought to be, the denizens of these pleasant places, of their peculiar felicity and distinction! How it should purify their tempers and refine their intellects! How delicate, how wise, how discriminating they should become! What excellent manners and fancies their situation should generate! How it should purge them of vulgarity! Happy *villegianti* of Newport!

Correspondence.

THE SPOLIATION OF BELGIUM.

TO THE EDITOR OF THE NATION:

SIR: In the discussions which have grown out of the denial by the Emperor Napoleon that he authorized Benedetti's proposition for the absorption of Belgium by France, I do not know that attention has been called to the following extract from the "Memoirs of Baron Bunsen," published in 1869. It is a part of a letter from Bunsen to Baron Stockmar, and may be found on page 185 of the second volume:

"20th January, 1852.

"X. related to him that, when he was away at Vienna, Schwarzenberg sent for him one day, and said, 'The President offers, through Persigny (in exchange for the Rhine frontier and Belgium), to Prussia, Hanover and Oldenburg; to Austria, Moldavia and Wallachia; to Russia, Constantinople.' The Emperor Nicholas said the same to Lamoricière. They both shrugged their shoulders."

It would seem from the above that the Emperor's contemplated spoliation of a peaceful and unoffending neighbor has been a plan cherished for many years, and the events of the last month show that the continued prosecution of it in another form has finally brought him to destruction.

G. T. D.

PORTLAND, September 5, 1870.

UNITED GERMANY.

TO THE EDITOR OF THE NATION:

SIR: The sympathies of the *Nation*, in common, I suppose, with all who favor liberal institutions, have been with Prussia and Germany in the war so wickedly and foolishly provoked by Napoleon. Yet our detestation of Cæsarism, and our hopes for the advancement of intellectual emancipation, as represented by Germany, should not blind us to the dangers attendant upon the domination of the united Teutonic race under the guidance of so unscrupulous a leader as Bismarck.

It is the fashion just now to represent the Germans as an inoffensive race, anxious only to pursue the peaceful arts of industry within the territory that belongs to them, and only to be provoked to arms by aggression from without. No one who has the slightest familiarity with the career of the race, since the days of Clovis and Charlemagne, can observe without a smile these idyllic eulogies of our Teutonic friends. In fact, no more warlike and aggressive people can be found anywhere; and if they have been forced to remain within the boundaries assigned to them by the treaty of Verdun in 843, it has only been because of the anarchic constitution of the Empire rendering them, as a general rule, powerless for foreign conquest in consequence of home dissension. Whenever they could be persuaded to abstain from cutting each other's throats, their swords have always been ready to draw against their neighbors. Barbarossa's destruction of Milan, Otho's battle of Bouveries, and Edward III.'s appointment as Vicar of the Empire, are sufficient illustrations of their habitually peaceful mood: nor are the aspirations of Charles V. for the universal monarchy, which kept Europe in confusion for thirty years, a whit more reassuring.

In this bad eminence, Prussia unquestionably occupies the highest place. The mark of Brandenburg was founded by the unwearied swords of the Teutonic Knights, and the kingdom sprung from it has grown to its present portentous size by continuous acts of spoliation, more audacious, if possible, than any which marked the career of even Napoleon I. Silesia, Poland, and the Duchies are the examples in the past by which we can forecast the future; nor is there anything in the history of the Prussian nation to lead us to believe that it will prove an exception to the general rule—that the greater the power, the greater will be its abuse.

While respecting the aspirations of the race for German unity, and feeling that the defeat of Napoleon has saved Europe from the calamity of French domination, it therefore seems to me impossible for any reflecting and impartial mind not to fear that the complete triumph of the Germans, and the re-establishment of the Empire under the Hohenzollerns, bode ill for the interests of peace and civilization. That the rest of Europe can long submit to the domineering arrogance sure to attend upon the astounding success of the campaigns of 1866 and 1870 would seem to be impossible. The insolence of Von Thiele's recent note to England on the neutrality question is an earnest of what is to follow; and however much we, as Americans, may like just now to see England snubbed for taking advantage of her position as a neutral, our natural feelings of resentment towards her should not blind us to the rights of the matter nor to the meaning of the portent.

There are still outlying fragments of the Teutonic race which the craving for Germanic union will render fit objects for the exercise of "manifest destiny." The German populations of Austria, the Germanic provinces of Russia, as well as Denmark, Holland, and Switzerland, are all tempting morsels, whose absorption can readily be justified by arguments as cogent as those which are so liberally applied to Alsace and Lorraine. Nor will the intoxication of success long delay the practical application of such arguments. The natural dread of the powers interested will probably seek to anticipate further aggression, and we may look forward to some tremendous coalition to crush Germany, such as finally destroyed Napoleon I., plunging Europe once more into the horrors of a contest equal in magnitude to those which marked the opening of the century.

To avert this, the only thing would appear to be that Germany, once united, may recognize the political power lying latent in forty or fifty millions of intelligent, educated human beings, and may refuse longer to be the sport of feudal knights like King William or audacious adventurers like Bismarck. The latter may find that, like Frankenstein, he has created a giant whom he cannot control, and that united Germany may reject the trappings of the worn-out Empire. If it should seek, in the peaceful evolution of liberal institutions, the true fields for displaying its energies, the world may possibly have cause to rejoice at the birth of a new nation. Even this, however, is doubtful; for republics, like monarchies, are liable to the "earth-hunger," and popular passions are as easily aroused and as reckless as the ambitions of kings.

H. C. L.

PHILADELPHIA, Sept. 5, 1870.

[From the foundation of the monarchy to the present day—one hundred and fifty years, including the reign of Frederick the Great and the war of the French Revolution—Prussia has enjoyed one hundred and twenty-five years of peace. We doubt if either France, England, Austria, or Russia have within the same period enjoyed twenty-five years of peace all told. With her present military organization, it is safe to say her peaceableness will be greatly increased. The "earth-hunger" is rarely found to be very strong among people who have themselves to do the fighting necessary to gratify it. It is fiercest where the "expansion" has to be worked by hired soldiers. There is nothing like putting a man in a regiment, and then letting him stay with his family till war is declared, for taking the fight out of him. The peace of the world, too, would be greatly promoted, we feel sure, if newspaper editors had to serve in a separate battalion for desperate enterprises, such as assaults on fortified positions, the cutting-out of ships in the enemy's harbor, and the occupation of exposed points for the purpose of drawing the enemy's fire, and no military organization under a popular government will be perfect which does not include this.—ED. NATION.]

GREAT CRY AND LITTLE WOOL.

TO THE EDITOR OF THE NATION:

SIR: You and your correspondent "M. A." are to be congratulated on being at last distinctly told just what is Young Yale's complaint: "Ministers are, as a rule, inferior men." To know just what the disease is, is half the cure.

I, sir, belong to the party of "Young Yalensians," so far as years go, for I graduated in the same class with the self constituted champion of the rights of that party. But I do not sympathize with him in all respects in this matter. Nor do I believe that the majority of the graduates of these later years stand with him and with "Alumnus." We all want to see our Alma Mater making the utmost progress. We don't believe in holding on to things of the past, simply because they are of the past. We are not at all anxious, in view of their eminent (!) services, to retain the "Six Senior Senators" in the corporation of Yale College. We would like to see the alumni have more voice than at present in the management of the college.

And yet it does seem to me—and I cannot but think that many, even of "Young Yale" men, will agree with me—that the method of improvement proposed by "Alumnus" utterly breaks down. (1.) It is sheer folly, even if it is not false—(I claim that it is false)—to say that "ministers are, as a class, inferior men," to say that "there are few of them who are not inefficient in thought, narrow-minded, and in the true sense of the word uncultivated." This is a mere assertion that could be uttered just as well as regards any other class of men. The truth is that there are men of all grades in every profession. Young Yale must try stronger weapons than mere wholesale assertion without foundation in fact, if he expects to carry his point.

(2.) Your correspondent "believes that if trial could be made of an equal number of Yale laymen as managers of the university, in ten years the truly liberalizing effect of a graduate's education on his mind would be five times that which his education under the present clerical system gives him." What is the "belief" of "Alumnus" worth against the actual facts in the case? When the college has been growing steadily into a complete university; when it has kept fully up with the best progress—though not the hollow, empty, merely boasted progress—of the age; when Yale graduates all the land over are leading in their various callings, and these are the simple facts in the case—it is certainly fair to conclude that the management has, on the whole, been good, even though it has been the "clerical system."

The Young Yale party is doubtless sincere and well-meaning. If they can show good arguments—not mere assertions and beliefs—why changes should be made I for one will give my vote on their side. But the remedies they have thus far proposed for real or imagined evils seem to be simply these:

Oust the ministers from the government of the university.

Secure the son of the President of the United States for his college course to Yale.

Bring some man with a big name—whether his brains correspond or not—to sit on the commencement platform.

I confess, Mr. Editor, that in view of these weighty suggestions, I have no hesitation in subscribing myself

ONE OF THE (SO-CALLED) "INFERIOR CLASS."

[We have been requested to say that the correspondent who signed himself "Alumnus," in the *Nation* of August 11, is not the same person as the "Alumnus" who also spoke for "Young Yale" two weeks since.—ED. NATION.]

AN ACT OF CONTRITION.

TO THE EDITOR OF THE NATION:

SIR: In what purports to be a criticism of the *Modern Thinker*, you call Mrs. Croly's essay "a novel." You say the short paragraph about Universology is an "article." You declare that Noyes's contribution is "on flesh-colored paper and red ink," when it is printed in blue upon blue; and are so inaccurate (to use no harsher term) in other matters of fact that I am forced to believe that you flippantly passed judgment upon an important work after reading the title-page and "flirting" the leaves with your fingers. Is this honest? Is it fair to yourself or just to

D. GOODMAN,
19 Bank Street?

NEW YORK, Sept. 5, 1870.

[We are in contrition about the flesh-colored paper and the red ink. Mr. J. H. Noyes does indeed, as Mr. Goodman points out, appear in a dark-blue ink on a light-blue ground, and to deny it would be mendacity. The flesh-colored paper with red ink is matter that has nothing to do with the Oneida communist, except that it refers at some length to some of the pleasing practices of the Noyes confraternity. And as for Mrs. Croly's "Love-Life of Auguste Comte," we were wrong again there. The last part of it is a "novelette," translated by Mrs. Croly, but the first part, we confess, is an essay. We confess further that we have not perused the *Modern Thinker;* that we had not perused it when we made the notice of it; and that, when we wrote the notice in question, we had not a copy of the book in this office. Such are some of the exigencies of the reviewer. But we are not going to admit that a short article is not an article; and we stand by all that we ever said about the remarks on the Universology of Mr. Stephen Pearl Andrews.

Seriously, we had given an examination to the *Modern Thinker;* and we had pondered a notice of it; but somebody made off with our copy of it, and the notice which we published was based on our recollection of its contents; and that, we are afflicted to say, failed miserably as to the flesh-color and the light-blue, and the dark-blue and the red or carmine, and the novelette. As to the real merits of the magazine, however, our memory served us so well, as we find after a renewed examination of the contents of the *Modern Thinker*, that we have no disposition to find the least fault with it.—ED. NATION.]

Notes.

LITERARY.

THE large public in this country whom Japanese art has interested in the Japanese people, will be glad to learn of a book soon to be published by Messrs. Macmillan & Co. It is entitled "Tales of Old Japan," and the translation is the work of Captain A. B. Mitford, formerly an attaché of the British Embassy at Yeddo. The publishers say that the tales are as attractive as the "Arabian Nights," and that, besides the interest belonging to them intrinsically as stories, they throw a good deal of light on the civilization of the singular people among whom their scenes are laid. Additional light of this kind will be got, it is promised, from Captain Mitford's copious annotations. An interesting feature of this interesting work will be the forty full-page illustrations, of which the blocks were drawn and engraved for Capt. Mitford by native artists, and which are said to be of a humorous character.——The complete edition of the late Mr. F. S. Cozzens's works contains "The Sayings of Dr. Bushwhacker;" "The Débardeur," a novel; "Acadia: a Month with the Bluenoses;" "The History of New Plymouth;" and, better known than any of the others, "The Sparrowgrass Papers." Messrs. Hurd & Houghton are the publishers of this edition, which will be complete in five volumes. The same house will publish at an early day these other works: In the last volume of their Household Edition of Dickens they will give us "The Mystery of Edwin Drood," with an illustration by Darley. Lucretia Maria Davidson's poems, edited by her kinsman, M. O. Davidson, are to be published in an illustrated volume, with designs by Darley, and two portraits on steel. Some time ago, Messrs. Hurd & Houghton began a series of volumes of famous English sermonizers. We believe the announced fourth volume of South's sermons—the last of which will come in a fifth volume—is also the fourth of the series. "Black Peter" is partly a translation of the rhymes of "Der schwarze Peter," but it is also twenty pictures in silhouette by Paul Konewka, whose "Midsummer-Night's Dream," in a series of extremely graceful silhouettes, gave the public so much pleasure last year. "Suburban Sketches" is to be the title of a volume containing Mr. W. D. Howells's excellent essays, contributed to the *Atlantic Monthly* within the past two or three years. "A Hand-book of Legendary and Mythological Art," by Clara Erskine Clement, gives in alphabetical order, and in a concise and intelligible form, the myths and legends, Christian and Pagan, with which plastic art so largely deals. Other legends have not been neglected—as those of the Rhine, for instance—and the various symbols employed in art get attention. Finally, Messrs. Hurd & Houghton will this fall issue the fifth and last of the famous reports issued by the Sanitary Commission since the close of the war. The first division of the new volume will contain an analysis of four hundred and thirty-nine "Recovered Amputations in the Contiguity of the Lower Extremity;" the second treats of "Amputation at the Ankle-joint;" and the third, which is the work of an ex-Confederate surgeon, of "Hospital Gangrene as it prevailed in the Confederate Armies."——Mr. Carleton announces a new book by "Fanny Fern," called "Ginger-snaps;" a novel, "Chris and Otho," by Mrs. Julie P. Smith, written as a sequel to "The Widow Goldsmith's Daughter;" and, in due time, "Josh Billings's Farmer's Alminax" for the coming year.——Messrs. G. P. Putnam & Son have in preparation: "Tent-Life in Siberia, and Adventures among the Koracks and other Tribes in Kamtchatka and Northern Asia," by George Kennan, a young American who has travelled the entire distance from Behring's Straits to St. Petersburg. In October, "The Heavens," an illustrated table-book of popular astronomy. In November, two reprints—from the *Atlantic*, "Joseph and his Friend," by Bayard Taylor; from *Putnam's*, "Eirene: A Woman's Right," by Mary Clemmer Ames—stories of American and New England life respectively. Another work announced by the same house is "The Sunnyside Book," to consist of writings by Bryant, Curtis, Irving, Howells, etc., illustrated by well-known artists. They will also publish economical and handsome editions of Irving's "Washington" and of Gibbon's "Roman Empire."——Messrs. Harper & Bros. are about to publish several novels whose titles we append: "The Heir Expectant," by the author of "Raymond's Heroine," etc.; "In Duty Bound," by the author of "Mark Warren," etc.; "Which is the Heroine?" "A Dangerous Guest," by the author of "Gilbert Rugge," etc.; "Estelle Russell," by the author of "The Life of Galileo." To the foregoing announcements they add a number of text-books, a new edition of "Tom Brown at Oxford," and—*magnum opus*—an Index to *Harper's Monthly* for the first forty volumes, which ought to have the effect of bringing the whole series into request. Country newspaper-offices and country libraries, in particular, would do well to procure it, and when one remembers how much the *Monthly* has consisted of extracts from books (especially works of travel and adventure), the Index, it is clear, will be highly valuable as a guide to the bibliography of the past twenty years within the *Monthly's* range of selection.——Messrs. J. B. Lippincott & Co. have in press these works: The Second Part of Mr. Baring-Gould's "Origin and Development of Religious Belief"; "The Conservative Reformation and its Theology, as represented in the Augsburg Confession and in the History and Literature of the Evangelical Protestant Church" (the Lutheran), by the Reverend Professor C. P. Krauth, of Pennsylvania; "Sir Harry Hotspur of Humblethwaite," by Anthony Trollope; "Ranald Bannerman's Boyhood," by George MacDonald; "Mark Logan, the Bourgeois," a novel, by Mrs. J. H. Kinzie; "Fernyhurst Court," by the clever author of "Lettice Lisle"; and, finally, "Stories from Waverley for Children." The business of crumbing up great authors seems to be a good deal overdone.

—It is proper to call the attention of teachers, superintendents of education, and all other buyers of school-books to the "educational number" (July) of Leypoldt & Holt's *Trade Circular*. It begins with a very large and complete list—occupying twenty-five pages—of school-books published by American houses. We find under the head of "Algebra," which opens the list, no less than thirty-five titles, accompanied in each case by a statement of the price of the work and the publishers' names. Every other branch of educational literature is treated with the same fulness, from "Zoölogy" to "Bible History," "Chaldee," "Punctuation," "Perspective," and "Phonographic Short-hand." Following this valuable list are thirty or forty pages of advertisements, which are themselves of considerable value as an index, and which supplement the list by adding many titles of school-books published abroad and sold here in the importers' stores. There is, for instance, a page filled with the titles and prices of the Teubner editions of classical authors. On the whole, in spite of the fact that some few of the smaller houses appear to have been careless about giving information to the compiler of this work, he has succeeded in getting together a mass of facts in regard to American educational literature such as has never before been gathered, and he has so arranged it as to make it perfectly easy of access.

—It may well be asked whether there is any glory of the French nation during the past twenty years that will compare with the peaceful mud-dredging at the Isthmus of Suez. The Emperor, whose encouragement rendered the canal a success, had long been possessed with the notion of cutting a ship canal through the Isthmus of Nicaragua; and it is altogether probable that the Emperor Maximilian was a sacrifice to this "idée Napoléonienne" evolved at Ham. To plant a powerful Latin state, under the patronage and control of France, at the two points on the globe which offered the shortest communication between the two hemispheres, was a project which may be praised for its audacity. The failure of it in Mexico leaves the question of a canal between the Atlantic and Pacific to be solved by this country, if it covets the undertaking. The history of the numerous unsuccessful experiments to determine the line of this canal points to the necessity of a thorough survey of Central America, there being few parts of the globe as to which the maps and the narratives of explorers are so much in error. A pamphlet, discussing the practicability of a ship canal across the Isthmus, has been prepared by Mr. S. T. Abert, C.E., and published by R. W. Carroll & Co., Cincinnati. The author appears not to be practised in writing, but he has evidently made a careful study of his subject, and furnishes a great quantity of statistics relating not only to his immediate enquiry, but to the Suez Canal, the Mt. Cenis and Hoosac Tunnels, etc., with diagrams of each.

—The late Mr. Kennedy left behind him a number of manuscript volumes which are to be stored in Baltimore until the year 1900, when they are to become the property of the Peabody Institute. Meantime, before they are boxed up, there is to be published such part of his correspondence and his reminiscences as may seem good to his literary executors, who are the Hon. Robert C. Winthrop, of Boston, Mr. Josiah Remington, and Mr. Henry T. Tuckerman, the well-known writer, upon whom will probably fall the preparation of the work for the press.

—The winter promises to be unusually rich in dramatic and musical entertainment, and among its sources we have to number Mrs. E. S. Dallas, who, as Miss Glyn, has won on the English stage such fame as only few actresses have ever achieved. More recently, she has been giving, in England, Shakspearean readings, with a success which, perhaps, nobody but Mrs. Kemble has equalled, drawing and holding large audiences in London night after night. She has just arrived for the purpose of giving a series in this country, beginning with New York, and will probably open with *Macbeth*, as the best known of her plays, but will eventually read *Antony and Cleopatra*, in which she has achieved most distinction. Her *Cleopatra*—a part of which Mrs. Siddons is said to have been afraid—is pronounced by the best English critics to have been in London a striking success.

—Yale College has, we trust, made a very valuable acquisition—indeed, we can hardly think of one of its kind more valuable—in the purchase, for the extraordinarily low price of $1,200 in gold, of the library of the late Professor Rau, of Heidelberg. It contains 4,400 volumes and 2,000 pamphlets, all on politico-economical subjects, and we doubt if there are many, if any, better collections in this field in Europe; there is certainly nothing like it here, and it will furnish students of economical science in America with facilities they have never had before. The college has telegraphed, closing with the offer of the professor's representatives, and it is to be hoped has not been anticipated. It is as well to say, for the benefit of colleges and public libraries and private book-collectors, that the coming year is likely to be an unusually favorable season for making purchases in Germany. What with deaths in the army, and the impoverishment of families, and the interruption to lines of study wrought in various ways by the war, a considerable number of libraries of special value will probably be thrown on the market.

—An odd feature of the present war in Europe is the large number of prophecies that the German booksellers are publishing. Old "parsons," old "shepherds," old hermits and monks, to say nothing of Nostradamus and other authorities, who in times of peace are looked on as exploded prophets, are now coming to the surface in great numbers, and all of them, it appears, long ago predicted the downfall of the Emperor Napoleon at or about this time. Of Antichrist and the infallibility dogma we hear less; the war prophets have as effectually overslaughed their brethren of peace as the war news has put out of sight news from Rome and the Council; but by-and-by Dr. Cumming will no doubt make a new count of the times and half-times in the Book of Daniel, and with Bismarck, instead of Napoleon, for the he-goat with a notable horn between his eyes, or the ram with two horns pushing westward and northward and southward, we shall have a revised view of the Scarlet Woman, as interesting and profitable as the old one. More curious than any of the prognostications that we have seen—except one of Nostradamus's which is an excellent specimen of the humbug that lies in oracular ambiguity and obscurity—is one concerning Louis Philippe and Napoleon, which has, to be sure, gone the rounds of the press several times since the *coup d'état*, but which most of our readers will have forgotten. Louis Philippe, this prophetic calculation goes, was born in 1773; his queen was born in 1782; they were married in 1809; they began their reign in 1830. Now, if we add to 1830 the sum of the figures composing the year of Louis Philippe's birth, we get 1848, the year of his downfall. One, seven, seven, and three are eighteen, and 1830 and 18 are 1848. Again, if we treat the figures making up the year of his queen's birth as we treated those making up the year of his own, we get 1848. So, too, if we add to 1830 the sum of the figures composing 1809, the year of the marriage, we get again 1848. In the case of Napoleon and Eugénie, the same process produces the same curious effect of always bringing us to 1870, the year of his downfall.

Louis Napoleon was born in	1808
Eugénie was born in	1826
The pair were married in	1853
They two ascended the imperial throne in	1853

Using these figures as before, we arrive in each case at 1870—

1853	1853	1853
1	1	1
8	8	8
0	2	5
8	6	3
1870	1870	1870

It is true that it was in 1852, and not in 1853, that Napoleon got into the throne as Emperor, and that if we were to take that date instead of the year when Eugénie joined him there we should have his downfall twice predicted for 1869, and in the case standing third as above given, we should have 1868 for the year. But good prophecy is so scarce that a prophet who hits the target at all is not to be blamed if he does it by taking every advantage of the ground before making his shot.

—M. "Azamat-Batuk," of the *Pall Mall Gazette*, who was arrested as a Prussian spy in the employ of a paper subsidized by Bismarck, having returned to London, has been delivering a lecture in which he sets forth what were his opinions of the chances of France after Wörth and Gravelotte. They were very good, it seemed to him; the English and other people were altogether too fast in thinking that France's case was hopeless. Sedan has happened since his lecture, which, of course, needs now a good deal of revision. It is, however, not violently French, though sufficiently so to make it evident that the writer is so much a lover of France as not to weigh with necessary coolness the probabilities of Prussian success. He has little that is new to tell us. Previous to Weissenburg and Wörth he found the French standing idle, not, as people thought, because the Emperor is of a vacillating disposition, but because his soldiers came in slowly, and food more slowly still. He intended an offensive war, and spread out his front to a length of a hundred miles, expecting that as they entered the Palatinate, and passed through a country which would in that case be devastated, the soldiers would the more readily procure supplies. Metz and Strasbourg, which were to be the main points of the French base, were found by M. Azamat-Batuk to be ill supplied and incapable of serving as a base of offensive operations. While the Emperor thus waited, out of temper with his marshals, his état-major, and everybody eels whose business it had been to keep the army efficient, and while the troops, officered by men ignorant of the country and destitute of maps, were getting demoralized on half-rations, down came the Prussians, converted the war into a defensive campaign, for which France was still worse prepared than for the offensive campaign projected, and there was nothing but ruin. But the country would at once rouse itself, the lecturer thought, and the disasters of the beginning would be speedily atoned for. So he goes on, misunderstanding, with as thorough a blindness as that of any French journalist of a month since, the perfection of the Prussian plans. All rested with France. France had but to do so and so. But we speak of his lecture, not to note this feature of it, nor to get facts from it, but for the sake of citing an example or two of M. Azamat-Batuk's method of dealing with his audiences and his subject. His peculiar humor does not fail him under any circumstances. He apologizes for his broken English by saying that he wishes to get money for the peasants of Lorraine and Alsace, whom he knows to need it, and he adds a little remark as to a peculiarity which he has observed in the English nation:

> "This is the chief reason why I took the liberty of appearing with my bad English before Englishmen, who, as a rule, do not themselves excel in pronouncing foreign languages, but, at the same time, often object when their own language is not properly pronounced. . . . . A secondary stimulus acting in me was of a more practical nature. When I have paid over the money raised with your gracious aid into the hands of the French ambassador, I shall ask him for a receipt. This receipt I will put in my pocket, and start to-morrow back to the Continent to fulfil the duties which the *Pall Mall Gazette* entrusted to me; and if I am again arrested as a Prussian spy, or as a correspondent of an English paper in the pay of Prussia, I shall show this receipt of the French ambassador to every blessed gendarme who may intend to arrest me."

Here is how he pays his respects to the ladies:

> "I am sorry that in the picture I attempt to sketch of the state of France I must give a very bad part to the fair sex. Not only all the habits of my Turkish nationality, but all the tendencies of my heart and soul, are strongly inclined toward the ladies. But all my thoughts are against them, for, notwithstanding all the achievements the ladies attribute to themselves, and all the rights they claim, I have seldom seen yet that they should, as a body, anywhere conduct themselves properly."

He declares that, although Marshal MacMahon was bred to his business in Algeria, where fighting is not conducted in anything like a gentle manner, he was, nevertheless, far too delicate in his method for the ladies. They reproached him for superfluous gentleness because, although there were about forty thousand Bavarians in a forest not far from Hagenau, or somewhere close by Wörth, he marched away, and did not set the forest on fire, and so destroy this concealed body of enemies:

> "How was the wood to be set on fire? How long would it take to burn? How were the Prussians to be kept in it? Nothing of this was enquired into, but the ladies of France wished the wood to be burned and the Prussians to be roasted in it. And they talked so long on the subject, that a great part of the male population of Eastern France began to repeat the same thing."

The women spread all manner of fabulous tales, M. Amazat-Batuk reports, magnifying an ordinary wound into some impossible mutilation, and multiplying fables as to outrages, mountains of slain, conflagrations; and as to spies, they went crazy over them, demanding the immediate and total destruction of every accused person immediately on suspicion attaching itself to him:

> "With reference to spies, again, the men have never attempted to arrest so great a number of English and even French citizens as the women have done; and, while the former have invariably insisted upon a suspicious person being examined as to his personality, or ejected from the country, the latter have constantly excited the mob by demanding that the person should be immediately torn to pieces."

—In the last forty years, what European city has grown in population in the highest ratio? The capital of what is now the foremost power on the Continent. In 1832, Berlin was less peopled than Boston or Chicago now is, having but 250,000 inhabitants. In 1869 it rivalled New York, having 800,000—that is to say, an increase of 220 per cent. Paris, on the other hand, which has grown from 890,000 to 1,950,000 in the same interval, shows only 118 per cent. increase, and London (1,624,000–3,214,000) only 98 per cent. All the great cities are proved by similar statistics to have multiplied their population at a rate considerably higher than that of the country at large—Paris outstripping France, for instance, by five to one in this respect. Madrid (190,000–390,000) has increased since 1832 by 105 per cent.; Liverpool (190,000–520,000) 174 per cent.; Glasgow (202,000–401,000), 99 per cent.; Vienna (310,000–640,000), 107 per cent.; Naples (358,000–600,000), 67 per cent.; Moscow (280,000–420,000), 50 per cent. Dublin, Lisbon, Manchester, and Amsterdam show an increase of less than 50 per cent. The authority for these figures is *Les Annales de Voyages* for June.

LEGGE'S CHINESE CLASSICS.[*]

BEGINNING with the "Confucius Sinarum Philosophus" of Intorcetta and others (Paris, 1687), the Chinese canonical books have all, with perhaps one exception, been translated into some one or other of the European languages, and some of them more than once. But Dr. Legge has undertaken to give us a translation of the whole canon, the Five Classics and Four Books, with introductions, notes, and indexes, on a scale not hitherto attempted, and the work is now so far advanced that we may hope to see it completed. After many years of preparation, the first two volumes, containing the Four Books, which are chiefly occupied with the sayings and opinions of Confucius and Mencius, were published in 1861; four years later, the "Shu King," the "Book of History," appeared in two volumes; and now, after a still longer interval, the "Book of Poetry" is understood to be nearly ready for publication. Dr. Legge's translation may safely be pronounced the most faithful yet produced, though falling far short, as any translation must, of the brevity and force of the original. Sometimes this marked quality of the Chinese classical style seems to us unnecessarily sacrificed, and we should be inclined here and there to transfer to the text of Dr. Legge's translation the more liberal rendering given in the notes. The following extreme example is taken from the "Doctrine of the Mean," chap. xiii. 3: "*When one cultivates to the utmost the principles of his nature, and exercises them on the principle of reciprocity*, he is not far from the path." What we have put in italics is expressed in the Chinese simply by two words, *chung shu*, meaning, the first, "faithfulness;" the second, "consideration for the feelings of others." Setting aside the question of the correctness of Dr. Legge's translation, it were certainly better to lose, if need be, some shade of meaning, rather than, by such a paraphrase, all the force of the original. Again, Confucius ("Analects," book vi., chap. i. 1) says of one of his disciples, Yung, as translated in the note, "He might be employed with his face to the south," *i. e.*, sit as the princes in the time of Confucius did, and as the Emperor still does, facing the south; but in the text of Dr. Legge's translation we have the colorless rendering, "He might occupy the place of a prince." But the value of Dr. Legge's edition, at least to scholars, lies not so much in the translation as in the introductions, which are full of learning, the notes, drawn largely but with independent judgment from native commentaries, and the full indexes, especially the index of Chinese characters and phrases, serving as a dictionary and concordance to each classic. These ensure to the work a high and permanent value, even if the translation should in some cases, as perhaps in the "Book of Poetry," prove, from its great obscurity, unsatisfactory. To students of Chinese, especially, the work is in the highest degree useful; they will hardly find a better help. We have serious apprehensions, however, that it will be generally regarded as a dispensation from the study of the language rather than a help to it. The number of those who will wish to go back of the translation is not large.

The danger to which Dr. Legge is most exposed is not the common one of exaggerating the importance of his subject, but rather the opposite—want of sympathy with it. His estimate of Confucius in particular, which is briefly given in the following extract, seems to us unjust:

> "But I must now leave the sage. I hope I have not done him injustice; but, after long study of his character and opinions, I am unable to regard him as a great man. He was not before his age, though he was above the mass of the officers and scholars of his time. He threw no new light on any of the questions which have a world-wide interest. He gave no impulse to religion. He had no sympathy with progress. His influence has been wonderful, but it will henceforth wane."

Dr. Legge is not alone in the opinion that Confucius was less religious than his countrymen before him. Some even charge him with putting an impersonal law in the place of a personal God. It is true that he uniformly speaks of "Heaven," but the "Shu King" also, the document of most weight in the question, uses this term far oftener than "Supreme Ruler." Dr. Legge assumes that the latter was, in the faith of the Chinese, the original name for God, and "Heaven" only a synonym; but the reverse is far more likely to have been the real order, and "Heaven," at first in a more material, afterwards in a more spiritual, sense, the earlier as it is still the highest, object of worship. If so, the greater antiquity of the term would recommend it strongly to the choice of Confucius. From his silence on certain subjects, we may not conclude that he disbelieved concerning them, but only that he did not consider them profitable for discussion. To one of his disciples, who asked about death, he replied: "While you do not know life, how can you know about death?" To another: "You need not wish to know whether the dead have knowledge or not. There is no present urgency about the point. Hereafter you shall know it for yourself." "Spiritual beings" are enumerated among the subjects on which he did not talk, and his definition of wisdom was "to give one's self earnestly to the duties due to men, and, while respecting spiritual beings, to keep aloof from them." Such language we do not find, with Dr. Legge, unworthy of the sage, but, taking into account the tendencies of his age, quite the contrary. That the national religion, Confucianism, as it is often incorrectly called, has escaped in great measure the degrading superstitions into which Buddhism and Tauism have fallen, is due largely to the influence of Confucius.

[*] "The Chinese Classics. With a translation, critical and exegetical notes, prolegomena, and copious indexes. By James Legge, D.D., of the London Missionary Society. Hong Kong and London." In seven volumes. Vol. I. "Confucian Analects, the Great Learning, and the Doctrine of the Mean." 1861.—Vol. II. "Mencius." 1861.—Vol. III. (In two parts.) "The Book of History." 1865.

"The Chinese Classics: A Translation. By James Legge, D.D." "Confucius and Mencius." New York: Hurd & Houghton. 8vo. 1870.

Little better foundation has the other charge, that he was "no friend of progress." He describes himself, it is true, as "a transmitter and not a maker, believing in and loving the Ancients." But in his political philosophy, which combines with much practical wisdom a clear insight into the conditions of social and political well-being, in his admiration for Yau and Shun, the first superiors, and the attempt to apply the lessons which he had learned, or persuaded himself that he had learned, from them to the cure of the disorders of his own time, Dr. Legge will probably find little ground of objection. The implication is, rather, that he is in some way responsible for the obstinate conservatism which now governs China, but which, we conceive, is due to other causes. Chinese civilization had worked out its problems centuries ago, and has since been travelling over the same ground, clinging to its old forms with the instinct of self-preservation. That, unlike other ancient civilizations, it has come down to us by an unbroken, living tradition is due above all to the wonderful conservative force of the Chinese character. With one phase of this character, the opposition to foreign intercourse, we are only too familiar, and we shall be less impatient with it if we reflect that we owe to the conservatism from which it springs all that makes the intercourse of value to us. The extravagant worship which the Chinese pay to the name of Confucius too often forces the Christian missionary into a position of antagonism to him, and Dr. Legge has thus been led, quite unconsciously, to do him less than justice. Mencius arouses no such opposition, and consequently meets with fairer treatment at his hands. No suppression or distortion of facts can, however, be laid to the charge of Dr. Legge, and, with the abundant materials which he has provided, it ought not to be difficult for any one to make the needful correction.

Dr. Legge's edition, though the expense of publication was generously assumed by an English resident in China, Mr. Joseph Jardine, is still too costly for general use, and a considerable portion of each volume, the Chinese text and notes bearing upon it, of little value except to the Chinese scholar. Messrs. Trübner & Co., Dr. Legge's English publisher, issued in 1867 an edition of the "Confucius" for the general reader, containing, besides the translation, so much of the introduction and notes as are needed to make it properly intelligible. We hope to see similar editions of some, at least, of the remaining volumes. But a bare reprint of the translation, like the volume which has recently come from the Riverside Press, containing the "Confucius" and "Mencius," without notes and without other introduction than short sketches of the two philosophers, is undesirable. The prospect which is held out when Dr. Legge's work is completed (and the reprint likewise) of an additional volume, to contain the necessary introductions, is too remote to be considered here. Even the translation seems not to have been printed with extraordinary care. By an oversight the last chapter of the first book of the "Confucian Analects" (chap. xvi.) is omitted, though the reference to it in the index is retained. It is this, and it were a pity to lose it: "The Master said, 'I will not be afflicted at men's not knowing me; I will be afflicted that I do not know men.'" We must confess, also, that, if we had reprinted Dr. Legge's translation, even without his permission, we should have thought him entitled to a more respectful treatment than he receives from the anonymous editor of this edition; but this is perhaps only a foolish weakness on our part.

MR. WILKIE COLLINS'S "MAN AND WIFE."*

FORMERLY Mr. Collins made mere stories, he said—narratives readable not because they taught some lesson, nor, primarily at least, because they contained lifelike personages, but mere stories interesting in virtue only of their incidents. He even used to make prefaces avowing in so many words this faith of his, and defending and commending it. As a matter of fact, however, it was a faith which he seldom and imperfectly put in practice, and which in this last story he openly abandons. If, as their author asserted, his earlier works were in no sense "novels of purpose," and if they depended but little upon their personages, there is, nevertheless, almost none of them that is not as little a mere story pure and simple as if it had been written by the author of "Alton Locke" or the creator of Becky Sharp. They hold the reader's attention, not as an Arabian Night's tale, for instance, by the straightforward flow of incidents more or less novel and agreeable, but rather as it is held by a chess-problem or a rebus. It is doubtful if any of Mr. Collins's readers ever cared to read one of his stories twice, any more than one cares to turn again to a riddle one has already guessed. To construct a puzzle, to involve the personages of his tales in an elaborate complication seemingly inextricable, or intended to seem inextricable, and then to extricate them with an ingenuity usually too ostentatious and with such degree of probability as may be—this has always been Mr. Collins's method. And as his efforts to do simple story-telling have never come to much; so his effort in this novel to do something as a social reformer gives additional proof that he is essentially and always a constructor of elaborate plots. In these are involved personages who look something like humanity, and who would really look not unlike living beings if they were involved in events less improbable; and there is always in the books, together with the plots which are their substance, and the personages, who sometimes give evidence of the author's abilities as an observer, some thoughtful writing which at least shows his willingness to philosophize upon what he sees. Still, whether he is writing "The Woman in White," or formally marches into Mr. Charles Reade's and Mr. Dickens's territory, and sets himself to the task of demolishing muscular Christianity and the Scottish law of marriage, as his predecessors had attacked the circumlocution office, or the cruelties of private mad-houses, he is, after all, seen to have little liking for anything but the old puzzle business.

"Man and Wife" is confessedly a novel of purpose. It has in view two purposes, of which the one that Mr. Collins professes to have most at heart, and the one which does indeed best serve his turn as a novelist—the one which is of value in making the tangle—is not the one which really he has most at heart. He is utterly disgusted—almost, one would say, with the disgust that a feeble man may be supposed to feel at the strength which is as much beyond his reach as the moon—he is angry and disgusted with the prevalent worship of athleticism in England. The rising generation of English gentlemen, he asserts, are in process of being ruined by the admiration given to physical strength. To row well, to box well, to be swift-footed, to jump well, to develop the biceps, is the degrading and brutifying ambition of Young England. The result, he maintains, is that Young England has a beast's strength, but also a beast's weakness: it is without mind, soul, or morals. It has more than a beast's weakness; the muscular power of a man is no measure or guaranty of his vital power, and the typical athlete sacrifices to the surface life of the muscles the inner life of the heart, lungs, and brain. And as these organs are physically feeble, so are those powers of the man's higher nature which the words heart and brain express. Morally and mentally uncultivated Young England is not civilized, it is savage; it is not enlightened, but full of ignorance, pride, cruelty, perverted will, and gross stupidity. The young Prussian is training for command or for scholarship, is preparing himself to make his country great or to push forward still further the boundaries of human knowledge, while the young Englishman is training for a foot-race or a rowing match—all his efforts ending in and with himself, and having no higher object than to make him a match for a waterman on the water and for a sparring-master on land. In short, Mr. Collins would probably say, without hesitation, that if English gentlemen lashed innocent negresses and ferociously murdered innocent negroes in Jamaica, under Eyre, and if they blew Sepoy soldiers into fragments in India, they did no more than give free expression to the characters which athletic England tends to form and does form.

In all this there is doubtless some truth; and much exaggeration. At all events, Geoffrey Delamayn, the villain and athlete of the story, is a mere monster, who may exist, but who, we imagine, is about as fair a specimen of the young Etonian or the Oxford rowing man as the "Girl of the Period" is of the average British young lady. He is gigantic in strength; he is gigantically stupid; he is remorselessly cruel and selfish; he is rudeness personified; he drinks beer when he is in training, and quantities of brandy when he is not; he talks, when he does talk, slang or monosyllables; he is unequal to the society of ladies; he "goes stale" when he runs the great foot-race and loses it on account of his defective vital power, diminished by excessive muscular development; he seduces a beautiful and very refined, clever, and good governess; he begs his best friend (reminding him at the moment that once his petitioner saved his life) to carry a message to the girl, and then, discovering that he can betray him, he deliberately asserts that his friend is married to his mistress; forced to take back the heroine and acknowledge her as Mrs. Delamayn, his brutish mind seeks a safe way of murdering her, and to find it he has recourse to a set of the Newgate Calendar; he is by this time "gone stale" to the extent of having paralytic strokes because of his four or five years of violent sports, and just as his athleticism is coming to an appropriate ending in homicide, the book closes—everything coming out happily of course.

---

* "Man and Wife. By Wilkie Collins." New York: Harper & Bros. 1870.

As we have said, Mr. Collins puts more feeling into this one of the two sermons that he preaches in "Man and Wife" than into the other. That, however, is the one on which his plot depends, and, in consideration of the fact that his protest against athletic pursuits is so overcharged as to be nearly worthless, and of the further fact that the plot does depend on it and that the plot is the novel, the second sermon, which is on the uncertainty of the Scotch law of marriage, is the more important. Miss Anne Silvester is the daughter of Mrs. Vanborough, whose husband, being an ambitious man, and having become, after his marriage, an immensely wealthy man, desired to rid himself of his wife, whom he thought beneath his station. She had been a singer on the stage. He discovers that there is an old Georgian act which renders his marriage invalid, and, without remorse for the mother of his child, he casts her off. She dies, leaving her daughter, who bears her mother's maiden name, to the charge of Lady Lundie, who receives her, while the mother says, "She is Anne Silvester as I was. *Will she end like Me?*" Now, the lawyer who discovered the flaw in the marriage of Mrs. Vanborough was a Mr. Delamayn, and thus Geoffrey Delamayn, the villain of "Man and Wife" and the seducer of the second Anne Silvester, is the son of the man who, not so directly, broke the heart of Anne Silvester the first. Having narrated these facts in a "Prologue," and thus obtained an appearance on the boards of that brummagem Destiny, or Fatality, or Iron Necessity he is so fond of, and having made some severe remarks upon the infamous character of the English law which Mr. Delamayn expounded, Mr. Collins proceeds to his real business, and narrates the trials of the heroine, and the miseries which, by means of the infamous Scottish laws, Geoffrey was able to work on her and all her friends. And the English law as at present existing also comes in for a further attack, one of the minor characters—one of Mr. Collins's regular deaf and dumb, mopping and mowing mysteries, with a blighted life—is a middle-aged murderess, who was compelled to smother her husband because, in virtue of the authority which the English law gives the *baron* over his *feme couverte,* he made her life disastrous and an intolerable burden to her. It is of no consequence, but this personage kills her husband in so ingenious a way as never to have been suspected, and would never have been found out if she had not written "My confession, to be put into my coffin, and to be buried with me when I die," and kept it in her stays. This document, we may add, Geoffrey gets hold of, and, by operating on the fears of the old woman, he causes her to arrange matters for the murder of Anne in the same way in which she had arranged them for the successful murder of Joel Dethridge. As we have spoken of this minor matter, we may say that, in other small things, he is much the same as usual—such touches as that of "My confession, to be put into my coffin, and to be buried with me when I die," reminding one of Dickens when he is at almost his worst, are about as frequent in this as in any of the former books, and there are here, as there, other indications of Dickens's influence. We do not know if the necessary suggestion of Mr. Reade in the notion of making an attack on a social abuse the basis of a novel may not be the reason why we noticed, or thought we did, an attempt at following Mr. Reade in other particulars, and being familiarly philosophic in an epigrammatic way when the reader is to be enlightened as to the true explanation of certain anomalies to which the novelist calls his attention.

The novel has rather more than we had expected of the power—which we had been thinking Mr. Collins would not exert again in our own case—of securing the attention of the reader. This we attribute in part, but only in part, to the likableness of one or two of the characters, and to the amusingness of another—an old rascal of a Scotch waiter, whom our author hits off more than fairly well, though certainly he is worth a little more careful handling than he gets from Mr. Collins. Here is his first though not altogether his best appearance:

> "Anne made no reply. She watched the landlady out of the room—and then struggled to control herself no longer. In her position, suspicion was doubly insult. The hot tears of shame gathered in her eyes; and the heartache wrung her, poor soul—wrung her without mercy.
>
> "A trifling noise in the room startled her. She looked up and detected a man in the corner, dusting the furniture, and apparently acting in the capacity of attendant at the inn. He had shown her into the parlor on her arrival; but he had remained so quietly in the room that she had never noticed him since, until that moment.
>
> "He was an ancient man—with one eye filmy and blind, and one eye moist and merry. His head was bald; his feet were gouty; his nose was justly celebrated as the largest nose and the reddest nose in that part of Scotland. The mild wisdom of years was expressed mysteriously in his mellow smile. In contact with this wicked world, his manner revealed that happy mixture of two extremes—the servility which just touches independence, and the independence which just touches servility—attained by no men in existence but Scotchmen. Enormous native impudence, which amused but never offended; immeasurable cunning, masquerading habitually under the double disguise of quaint prejudice and dry humor, were the solid moral foundations on which the character of this elderly person was built. No amount of whiskey ever made him drunk; and no violence of bell-ringing ever hurried his movements. Such was the head waiter at the Craig Fernie Inn; known far and wide, to local fame, as 'Maister Bishopriggs, Mistress Inchbare's right-hand man.'
>
> "'What are you doing there?' Anne asked sharply.
>
> "Mr. Bishopriggs turned himself about on his gouty feet, waved his duster gently in the air, and looked at Anne with a mild, paternal smile.
>
> "'Eh! Am just doostin' the things, and settin' the room in decent order for ye.'
>
> "'For *me?* Did you hear what the landlady said?'
>
> "Mr. Bishopriggs advanced confidentially, and pointed with a very unsteady forefinger to the purse which Anne still held in her hand.
>
> "'Never fash yersel' aboot the landleddy!' said the sage chief of the Craig Fernie waiters. 'Your purse speaks for you, my lassie. Pet it up!' cried Mr. Bishopriggs, waving temptation away from him with the duster. 'In wi' it into yer pocket! Sae long as the warld's the warld, I'll uphaud it anywhere—while there's siller in the purse, there's gude in the woman!'
>
> "Anne's patience, which had resisted harder trials, gave way at this.
>
> "'What do you mean by speaking to me in that familiar manner?' she asked, rising angrily to her feet again.
>
> "Mr. Bishopriggs tucked his duster under his arm, and proceeded to satisfy Anne that he shared the landlady's view of her position, without sharing the severity of the landlady's principles. 'There's nae man livin',' said Mr. Bishopriggs, 'looks with mair indulgence at human frailty than my ain sel'. Am I no' to be familiar wi' ye—when I'm auld eneugh and ready to be a fether to ye till farther notice? Hech! hech! Order yer bit dinner, lassie. Husband or no husband, ye've got a stomach, and ye must e'en eat. There's fesh and there's fowl—or, maybe, ye'll be for the sheep's head singit, when they've done with it at the tabble dot!'
>
> "There was but one way of getting rid of him: 'Order what you like,' Anne said, 'and leave the room.' Mr. Bishopriggs highly approved of the first half of the sentence, and totally overlooked the second.
>
> "'Ay, ay—just pet a' yer little interests in my hands, it's the wisest thing ye can do. Ask for Maister Bishopriggs (that's me) when ye want a decent, 'sponsible man to gi' ye a word of advice. Set ye doon again—set ye doon, and don't tak' the arm-chair. Hech! hech! yer husband will be coming, ye know, and he's sure to want it.' With that seasonable pleasantry, the venerable Bishopriggs winked, and went out."

Besides Mr. Bishopriggs, there is the pleasant figure, more conventional, however, of Sir Patrick Lundie, who does the representing of "the old school"—the times when gentlemen were polite, and when snuff and social conversation had not been superseded by croquet and briar-wood pipes. The niece, Miss Blanche, also, who is one of Mr. Reade's young ladies, is agreeable like her prototypes; and there are one or two sketches of figures that are workmanlike and clever. We may add that the picture of the foot-race, though labored, is anything but effective, and shows an entire want of sympathy with the sort of struggle which the author is describing. The murdering scenes, also, we failed to be impressed by.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 22, 1870.

The Week.

JULES FAVRE and his colleagues seem to be gradually awakening to an exact sense of their situation, and to the absurdity of asking the Germans, after all that has happened, to treat half-a-dozen gentlemen, made into a "Provisional Government" by a "crowd in the streets," in place of a dynasty solemnly confirmed in possession of the throne by a popular vote less than six months ago, as beyond doubt or question representatives of France, and competent to cede territory and promise to pay money in her behalf. "Provisional governments," as their very name indicates, exist simply for the purpose of preserving order until a more regular and permanent machinery can be set up; it is preposterous to claim for them the right to declare war and make peace without consulting the nation at large. Whether a republic exists in France at this moment, we do not know; and one would not be wanting in respect to the powers who have "recognized the French Republic" who should assert that nobody knows. There are a certain number of persons in Paris who call themselves a republic, and whose orders the army thus far has obeyed; but as to what extent their authority is acknowledged by the country we have no information. In some of the great towns it is quite certain the Reds have full swing. Of course it is very inconvenient to have no government at this juncture competent to treat, but it is hardly incumbent on the Prussians to offer to share this inconvenience with the persons who created it by suspending their operations and thus endangering their final success.

It must be remembered, too, in judging of the conduct of the Germans, that the great body of the French people, and especially the Parisians, applauded the war; hardly anybody raised his voice against it, and the Emperor has been dethroned simply and solely because he did not succeed in invading and ravaging Prussia. To ask Prussia, under these circumstances, as the Provisional Government has done, to evacuate French territory after having fought half-a-dozen bloody battles in order to effect a lodgment in it, and as a preliminary to all negotiations for peace, is hardly the way to lead Bismarck to believe that he is dealing with serious and responsible men. It sounds more like the request of a slightly intoxicated *ouvrier* than that of sober statesmen. However, reflection seems to be bringing wisdom, and the hastening of the election of the Constituent Assembly by fixing it for the second of October, shows that Paris is losing confidence in fine words and songs as means of deliverance. We have given elsewhere some reasons for believing that the talk of exterminating the Prussians by means of a popular rising is mere declamation. It is eight years since the Duc d'Aumale, in a celebrated pamphlet, asked the Bonapartes, "What have you done with France?" On seeing the debauched and materialized capital, and the cowed and indifferent peasants who now talk of "'92," the question assumes a terrible significance.

Dr. Von Holtzendorff, the German publicist, has published a pamphlet on the terms of peace, which undoubtedly expresses the general feeling in Germany, and will do a great deal to mould opinion into definiteness where it is not already formulated. They are, the annexation of German-speaking Alsace and Lorraine to Germany, not to Prussia; the conversion of Metz and Strasbourg into federal fortresses; and the solemn renunciation, on the part of France, of all claim to meddle, in any way, in German affairs, or to dispute the validity of any arrangement of them already made, or that may hereafter be made, and a promise from her, also, to recognize any title that may hereafter be bestowed on the King—meaning, of course, Emperor of Germany. France will, to all appearance, have to make up its mind to the loss of territory.

There appears to be little or no doubt that Bismarck, though very willing "to talk matters over" with Jules Favre, or anybody else who can find a fair excuse for approaching him, is determined not to treat with the Provisional Government until it can show better credentials than it has now, or give some proof that France is a republic. Ordinarily, it might be held that the election of a constituent assembly by a popular vote would meet the difficulty, and furnish a body with which Germany might safely negotiate; but even after the election is held on the second of October, it will still be open to Bismarck, if he is disposed to go to extremities, to dispute the validity of an election held under the present circumstances, with one-half the country devastated by war, and the other half under martial law, or no law at all, and with all the great lines of communication broken and the capital besieged. Should he take this view, there would be nothing for it but to bring back the last product of universal suffrage, the old Emperor himself, and make him sign what was wanted. But our belief is that Bismarck will not stand long either on ceremony or forms, and that as soon as he finds somebody able to support its pretensions to be the government of France by the delivery of the Alsatian fortresses and the payment of a handsome sum of money, he will make peace. In the meantime, the French have made no offer whatever, and continue their ridiculous appeals to the King to withdraw his troops and desist from his "wicked war." The usual invader's announcement, made in his proclamation on entering France, that he warred only with the army, and that civilians if they kept quiet had nothing to fear, has been distorted both here and in France into an admission that he only made war against Louis Napoleon. Hence, it is argued that, Louis Napoleon being overthrown, the Prussians ought to go home, and support their own widows and orphans and wounded, pay their own costs, and keep ready for another fight whenever another French "Saviour of Society" said the time has come to "chastise Prussian insolence."

The war is vigorously carried on by the Prussians, but merely by marches, investments, and sieges; for no battles take place, the French forces in the field, wherever and whatever they may be, being still paralyzed by the stunning effects of the disasters which terminated the Empire. No Army of the Loire, no Army of Lyons, has as yet made its appearance in the neighborhood of the Prussian camps. No flying detachments, no partisan bodies, have anywhere attempted to pierce the enemy's extended lines of communication, or even to harass his flanks. Even the isolated German army corps which carries on the siege of Strasbourg is left entirely unmolested by any attempt at a rescue or a diversion, which the gallant defenders of that fortress would so well deserve; and the most important cities of the Upper Rhine, Colmar, Mulhouse, and Belfort, have been abandoned without a blow to an insignificant force of Baden troops. Thus almost the whole of Alsace is now in the hands of the Germans. Of the towns mentioned, Belfort is the most strategically important, forming, as it does, a kind of gate to the province, from the side of Besançon and Vesoul. The reports about Schletstadt are conflicting.

The siege of Strasbourg seems to be pushed forward with the utmost vigor, which renders its obstinate defence the more worthy of praise. Metz, too, withstands with gallant firmness, though the hostile circle around it is tightening from day to day, and gradual exhaustion within must be getting no less alarming. Sickness thins the ranks of both besieged and besiegers. The Prussian grip appears to be the strongest on the south-west and south, on both sides of the Moselle, from Gravelotte, by Ars, to Courcelles; which is quite natural, as a breaking through of French forces on the north could only lead to their surrender on this side or the other of the Belgian frontier, while an escape south, were it possible, might prove both ultimately successful and destructive to the Prussian position between Toul and Strasbourg. No attempt of this kind, however, has been made by Bazaine since his repulse at the close of last month, and the reported escape of Canrobert, with six thousand men, marching straight on Paris, was but a foolish piece of fiction. A small balloon with soldiers' letters from Metz is announced in Paris to have been caught near Neufchâtel (*sic*, probably for Neufchâteau, in the Department of Vosges), conveying among encouraging expressions the surest evidence of the complete investment of that fortress. The Prussians are also making great efforts to reduce Toul, in spite of which this little stronghold continues its brave resistance. Its example is imitated by Soissons, which the Prussians seem to have completely invested. Against Verdun no new attempt has been made. Were there any active French forces left in the field, the position of the invading armies would be greatly endangered by the garrisons in their flank and rear.

But the only considerable force of combatants besides Bazaine's, in Metz, which is still to be encountered in the northern half of France—the southern is now a kind of *terra incognita*, much fabled about—is now enclosed within the fortifications of the capital, and almost entirely surrounded by the main forces of the invasion; for the Associated Press telegram from Paris, of the 16th, according to which "all the regular troops, as well as the Francs-Tireurs, have left" the city, to fight in the field, seems as little deserving of credit as the statements accompanying it—that "all non-combatants" have been ordered to leave; that "the forests around the city have been entirely consumed;" that a number of vagrants, lately expelled, "endeavored forcibly to re-enter Paris, but were driven away by the troops;" and that Trochu received "the advance-guard of a corps of 10,000 American volunteers." And the coil of the Prussian armies which is to encircle those fortifications—of course, not without considerable gaps, which might prove fatal to the enterprise were Trochu's troops of the right mettle—and to menace their weak sides, is hourly drawing closer and closer. Fighting—on a small scale, it is true—is already going on in the very suburbs of the city, to which nearly all approaches by rail have been cut by the enemy, the bridges around being blown up by the French themselves. Cannonading and skirmishing have taken place around Villeneuve, Ablon, Athis-Mons, and Juvisy, on both sides of the Seine, the Prussians evidently endeavoring to occupy the hills south of Paris, on which batteries can be planted against the forts of Bicêtre, Ivry, and Charenton. They have also appeared in force at Creteil, near the Marne, about three miles to the south-east from the last-named fort, while the fort of Vincennes, to the north-east of Charenton, is reported blown up as untenable. The gap thus created between the forts on the south-east and the forts on the east—Rosny, Romainville, and Noisy—Trochu seems to intend to defend by the strongest portion of his army, while other portions will have to be detached to the opposite side, where the fortifications between Forts Issy and Mt. Valérien have, from the beginning, been defective. Nor can the woods of Clamart and Meudon, adjoining Forts Issy and Vanves, which heavy rains prevented from being burned, definitively be abandoned, for they would offer a shelter to the enemy, whose advance-guard has already appeared in that vicinity, as well as at Versailles and various adjoining places. The northern line of fortifications is regarded as the safest. Trochu, in public, speaks with confidence of his ability to hold Paris, and his hands are strengthened by the orderly, tranquil behavior of the inhabitants, though there are indications of a Red Republican undercurrent of sentiment, which threatens fatal consequences. Red Republicanism is said to be rampant at Lyons in defiance of the new Government.

Bordeaux, Marseilles, and various other towns of the south and west are reported to evince much patriotic zeal in voting subsidies and equipping contingents for the defence of the country. These cities are, of course, themselves perfectly safe, and their action is therefore untrammelled by pressing anxiety. Much paralyzing perturbation seems to reign, on the other hand, in the rich commercial towns of the North and Northwest; which, should the war be protracted, would certainly be exposed to capture by flying columns of the enemy, as no French army, supposing new armies to be formed, would be inclined to venture north of Paris, where defeat is most likely to involve destruction or surrender. The fleet, which has ended its inglorious cruise with the raising of the blockade, is therefore summoned to defend Havre, Dieppe, and other maritime towns, from which stores of merchandise are even hastily shipped to England for safe-keeping. The report, which perhaps lacks confirmation, that in Tours itself, the partial seat of the republican Government, collections of value are packed up for removal, is a still more alarming sign of the prostration pervading the French provinces, and a striking refutation of the frequent announcements of armaments going on south of the Loire.

The London *Spectator* has an interesting speculation as to the cause which led the principal Paris papers to propagate and pretend to believe, week after week, all the outrageous fictions about the progress of the war which were set agoing by the Ministry, in the closing days of the Empire, and deduces from it some melancholy conclusions as to the moral condition of the editors and writers. But there is nothing new about this. During the Italian war, the French newspaper correspondents openly avowed not only that they avoided making any revelations which would injure their own army, but that they published lies to deceive the enemy, and it may fairly be questioned whether the press in any country has yet reached such a lofty notion of its vocation as would prevent its spreading falsehoods, in a time of great national peril, when it was of the last importance to keep up the popular morale. We doubt very much whether, if a battle had been lost at Hastings, and an invading army were marching on London, and twenty-four hours' tranquillity in the city was absolutely essential to the completion of the defensive preparations, the leaders of the London press would not be willing to say that after giving the enemy a terrible thrashing the British forces were falling back on the capital, and "drawing him on," so as to make sure that after the next fight none escaped. The editorial comments of the leading American papers were, during the rebellion, wonderfully candid, but the correspondents were allowed to supply the public with comforting intelligence to an extraordinary degree. But this was part of the American system of editing, which differs from the English in surrendering to reporters and correspondents as much space as they require, and letting them put almost anything they please into it that will make interesting reading. This makes a good deal of American correspondence, both morally and intellectually, much below the editorial level of the papers in which it appears—so that the curious phenomenon is often presented of a statesman gravely commenting before the public, in the editorial columns, on news furnished on the next page by persons with the mental characteristics of a strolling minstrel.

As is not wonderful, the "campaign stories" continue to circulate and are curiosities in their way. The Paris correspondent of the London *Daily News* says that a good many of the most comical have been invented by Americans in that city, and set afloat for their own amusement, thus taking a mean advantage of the ridiculous condition of the French mind. The tale of "the discontented old Huguenots" of the Cevennes rising up to mob the Catholic Bishop of Nismes, by way of avenging the revocation of the Edict of Nantes, looks as if it were of Fenian origin, perhaps the composition of Head-centre James Stephens. The stories of the Prussian desecration of Catholic churches, and insults to images of the Virgin, and the intrusion of Lutheran ministers into Catholic pulpits, have also a Fenian air, and to those who know anything of the Prussian army, and that there are nearly as many Catholics as Protestants under King William's lead, they have all that outrageous improbability in which Celtic chroniclers delight. We are glad to say, too, that that beautiful story, clearly of French origin, of the young Comte de Leusse, who went down burning with ardor to his chateau in Alsace, and, arming his servants, defended it against the Prussian advance, and was with his beautiful young wife killed dead, and his house devastated, is all a fiction. The Count is alive, and so is the Countess. There has been no fight or thought of fighting; and the Count, being sane and humane, has given up his chateau to the wounded. It appears pretty certain, too, that the Empress did want Trochu to fight for the dynasty, and never said "she preferred pity to hatred," or not till she found that pity was all that was to be had.

On the 19th of August, Visconti-Venosta was explaining to the Chamber of Deputies at Florence that the Convention of September, 1864, remained in full force, and was indeed the basis of Italian liberty of action in regard to the Roman question, as it had been of previous demands for the withdrawal of the French troops. On the 20th, by a fair majority, the Government's foreign policy was sustained against a dozen "orders of the day," more or less explicitly insisting upon the immediate occupation of Rome. In three weeks, the Italian forces which had been concentrated on the Papal frontier began to cross it on all sides, Gen. Cadorna from the north, and Gen. Bixio from the north-west, by way of the coast; while other forces, under leadership not stated, occupied Terracina, where there had been a "demonstration," and successively Frosinone, Velletri, Valmontone, etc. The former met with little resistance from the Papal troops, except at Civita Castellana, where an hour's fighting sufficed to reduce and capture the garrison. On Saturday last, his headquarters were Monte Rotondo, and on representations from the Pope through the Prussian ambassador that he was powerless to prevent resistance by the troops in Rome, a delay of twenty-four hours was granted before proceeding to invest the city. On Tuesday, Rome had not been occupied, nor had Gen. Bixio, as last reported, taken Civita Vecchia, possibly waiting at Corneto till the fleet should arrive off the port to assist in its capture. The King made a proclamation on the 13th of his purpose to bring peace, order, and self-government to the Romans, and to maintain the Holy See inviolate. It is supposed the form of a plebiscitum will be gone through with to confirm the occupation of the States. It is not the Pope who has any doubts of the result of the voting.

The way in which our city politicians pay the reverence to virtue which after all most men do somehow or other pay, is a way of their own, certainly. We say nothing about some of the Republican managers, whose performances are not so obvious to the public eye, but here are half-a-dozen or so of leading Democrats, whom everybody who knows New York knows to be—what it is tiresome and almost disgusting to say, so strong has the language to be, and yet so devoid of effect. They are thieves; they have murders done in their interest; if they are on the bench, they send their agents to suitors and ask bribes; when they are public prosecutors, some murderers and burglars they hang and with some they are in league; they are liars, who are constantly perjuring themselves; they regularly override the vote of the largest State in the Union by means of fraudulent votes; of the kind of men whom they set over the rest of us to rob us, the late Alderman Florence Scannell is a not very bad specimen—an Irish shoulder-hitter, hardly come to his majority, who could not write his name, who was killed in a riot of his own making, and whose brother has just shot a man who is said to have killed the Alderman. In short, we have here, as everybody knows, half-a-dozen men enormously wealthy, and of such character that it is impossible not to regard them as public enemies. However, as we say, they too pay, after their fashion, tribute to virtue: occasionally, with the gravest face, as if they expected anybody to believe them, and with an air of believing themselves which alone would justify a vigilance committee, they parade before us the most impudent inventions by way of excuse for their other rascalities. It is, for instance, as sure as that the earth moves that it was intended in 1868 to carry this State for Mr. Hoffman by means of cheating at the polls, and we all know perfectly well that it was so carried, and that he is Governor to-day, not because the voters chose him, but because certain men here in the city wanted him. But we all recollect the proclamation which the Mayor issued on that occasion—the most impudent document since General McClellan's Harrison's Landing letter to Lincoln. It charged the Republicans of the city with meditating the rascality which its own people have made a trade, and at which they worked then, as always, "electing" their candidate. They are out now with a proclamation which demands that the Common Council, seeing that the census of this city has not been fairly taken by the Federal marshals, should order it taken over again by agents of the municipality. A delightful compilation a census would be which should be taken by Mr. James Scannell at the instance of Mr. Florence Scannell and his colleagues.

It is probable that there is not one word of truth in the whole of the proclamation, and that the Mayor was perfectly aware of that fact at the time of its composition. At all events, out of all his charges, there is none of which the Marshal, General Sharpe, and the Superintendent, General Walker, do not dispose with apparent conclusiveness. For example, the Mayor alleges that there is evidence in his office which goes to show that the Superintendent, when he made out his list of questions to be asked by the assistant-marshals, omitted one question, the answer to which he afterwards had to get the New York police to procure for him. This the force did, and did well, thus showing, according to Hall, that the Census Bureau is ill-managed, and that the policemen are better than the marshals. The facts are, that the law under which the census is taken—and under which, by the way, Whigs, Democrats, and Republicans have taken it, and at the same time of the year, for many years—is a law not in all respects what it ought to be; and statisticians being disappointed in their efforts to have it amended last winter, the Superintendent followed the practice of his predecessors, and begged mayors of cities to secure for him, if they could, an enumeration of the horses within corporate limits. As the law stands, horses not on farms are not asked for. There was, then, no failure on the part of the Census Bureau in this instance, but rather there was zeal and faithfulness that outwent requirement. It is just as satisfactorily proved that some at least of the letters which have been printed, containing charges of inefficiency on the part of the assistant-marshals, the books of the marshal show to have been false, and the statements of the real owners of the names show to have been forgeries. There is no evidence that the census is not being taken honestly, whether perfectly or not; and there is little belief, notwithstanding the disappointment of the queer sort of pride—the pride in living in a city of ten thousand more inhabitants, instead of one with ten thousand less—that the outcries we hear are anything else than the clamor of our rascally makers of fraudulent majorities.

We have spoken elsewhere of Mr. Phillips's appearance on the political stage, but the particularly nice political mess he would seem to have got into we have not there pointed out. But, for that matter, a fatality has always dogged the footsteps of our reformers, when they turn "practical" politicians, of getting at once and all over into the most malodorous pools, and in company with the unsavoriest of companions. In old days, it was not by might nor by power that the thing was to be done, we used to hear, but by my spirit, saith the Lord; so there was always some poor devil of an anti-slavery man up for punishment for holding the heresy that testimony might be borne by means of primary meetings as well as by other means. To-day, appearances are deceitful if Mr. Phillips, at the head of the Labor Reformers, who would narrow the sphere of woman; and of the Woman's Rights women, who would learn trades and get men's wages; and of the Prohibitionists, who hold St. Paul's views about woman, and would cut off the Labor Reformers' whiskey—appearances are deceitful if he, and Doctor George B. Loring, and Mr. James M. Usher—an ex-clergyman, who edits a prohibition journal—appearances are deceitful if these three former "war-horses" are not pulling like wheel-horses for the purpose of giving control of the Massachusetts Legislature to B. F. Butler. That, at any rate, is held to be the not improbable result of the movements now going on in Massachusetts. Senator Wilson is to leave the Senate; Doctor Loring is to be Governor after all; some one yet to be designated is to go to the Senate—possibly Butler, possibly Phillips, possibly Dawes—but whoever goes anywhere, Butler is to be the general patron and manager. We cannot say that we object to a "new deal" in Massachusetts, but what about the spirit of the Lord in these rearrangements? That the proposed combinations were ever projected, or that they will ever be made, is more than we could make oath to; but it is so said. Mr. Butler, however, informs the Boston *Advertiser* that anybody who says he wants to go to the United States in anybody's place is "a liar." This ought to be conclusive; but somehow people still wait.

WILL "THE MIRACLE OF 1792" REPEAT ITSELF?

In the summer of 1792, France was partly invaded and partly threatened by armies of an extensive coalition. Prussia and Austria were marching against her; the Empire and the King of Sardinia were ready to join them; Spain, Rome, and Naples were expected to follow suit; Russia promised aid to the invaders; the English Parliament rang with thundering appeals against the invaded. In one word, the whole of Europe seemed to enter upon a crusade against an isolated state, and that a state convulsed and shaken to its very foundations by an unparalleled revolution, a state whose ruler was a captive in his own blood-deluged capital, whose army was demoralized and half-disbanded, and whose legislature was dictated to by frenzied mobs. Revolutionary France seemed to be lost, her leaders doomed to terrible vengeance. But revolutionary France, instead of sinking upon her knees before Europe in arms, only redoubled the inner fury which seemed to consume her, and by dint of that fury drove the foe beyond the frontier, and carried war, convulsion, and freedom into the lands of the invaders. The world was astounded by this extraordinary phenomenon, and even posterity calls it still "the miracle of 1792." And at the time of our writing, seeing France again invaded, convulsed, and menaced in her integrity and with but slight chances of an ordinary escape from the terrible consequences of folly and disaster, the observer, led by a more or less sympathetic curiosity, anxiously asks himself and history, Is there much probability of the miracle of 1792 repeating itself? Can France, the ensnared giant, once more arise like a Samson, and by one grand exertion shake off the foes? The answer of history, if studied with candor in connection with the present, is—we must state it—sadly discouraging to the friend of France, and that on various grounds.

First, the invasion of 1792, compared with the one which last month laid low the armies of Napoleon III., was far from being in any degree powerful, in spite of the vast dimensions it apparently assumed. The armies sent against France were neither numerous nor brought up in the school of victory; their movements were slow and vacillating; their commanders pedantic or imbecile followers of an old traditional strategy, which became entirely worthless when the genius of revolution created its own in the French camps; the monarchies which sent them were as hostile to each other as they were to the common enemy. The stupid intermeddling of the French refugees, who were so influential in bringing about the coalition, the intrigues of the wretched statesmen—Thugut, Haugwitz, Lucchesini, and others—who at that time managed affairs at the courts of Vienna and Berlin, the secret plottings of the allies against each other, and the rivalries of the respective commanders, made all harmonious action by the Prussian and Austrian armies impossible. The mere resistance of Kellerman to the cannonade at Valmy sufficed to cause the retreat of the Prussians under the Duke of Brunswick; and Dumouriez's indecisive fight at Jemappes, to throw the Austrians, under Clairfait, upon the defensive. The first—endangered minor members of the Empire—the clerical electors of Mentz and Treves, and the Palatine—afraid of their own plundered and outraged subjects no less than of the French republicans, abandoned their territories without daring to strike a blow. The troops of the Sardinian despot were driven from Savoy by his own revolted subjects. Spain engaged in the war only when victory had declared in favor of the Republic, and then under the auspices of Godoy, a queen's favorite, of whom it was believed—Lord Holland relates it—that, as Minister of Foreign Affairs, he did not know the difference between Russia and Prussia. Rome and Naples hesitated, as became their impotence, and, when Spain was beaten, wisely preferred to do nothing. Catharine was too much engaged in fighting and dismembering Poland to keep her promise on Western battle-fields; and England, when she resolved on war, could do little more than waste her treasures on worthless allies, who finally betrayed and deserted each other. And is it necessary, in order to show the vast difference between the invasion of 1792 and that of 1870, to draw parallels between that tool of charlatans and mistresses, Frederic William II., and William I.; between the Prince of Coburg and Moltke; between Lucchesini and Bismarck; or between Valmy and Jemappes and Gravelotte and Sedan?

And then, in fighting the ill-commanded, scattered, and disunited forces of the then degenerate, womanish, and generally priest-ridden courts of Vienna, Berlin, Turin, and Madrid, revolutionary France drew her courage, inspiration, and boldness not only from her first, almost unexpected military successes, but from deeper and mightier sources. These were—the necessity of conquering or perishing, of destroying or being destroyed; the fanaticism of new ideas, more powerful than any that had ever agitated Europe, ideas which acted with the magic of a world-regenerating revelation; the intoxication with which the recent victories, in the name of equality and fraternity, over caste, the throne, and the altar had filled the masses of the self-disfranchised people; the concentrated power of volcanic forces which an all-crushing terrorism knew how to elicit from the scattered members of a nation suddenly aroused to terrible self-consciousness; and, finally, the certainty of meeting with allies burning with equal passions wherever a breach could be made in the ramparts of effete tyranny. At the moment when Ferdinand of Brunswick began his retreat, retiring like a lamb after having roared like a lion, the Convention met, and decreed a new era for France and the world. France believed in it, and her hosts carried their faith triumphantly far beyond her borders, as the followers of Islam had carried theirs from Mecca to the Pyrenees.

Now, all these sources of inspiration and success are wanting to the menaced France of to-day. She has not only to fight well-organized and well-led armies, flushed with patriotic enthusiasm and the pride of wonted victory; she has not only met with crushing and humbling reverses at the very opening of the contest; but, what is worse, she is devoid of even a spark of that fanaticism which saved here in 1792, and made Paris a world-shaking volcano in the following years. She entered the lists with a bad conscience, and debauched and enervated by twenty years of the most degrading of tyrannies, and that a tyranny based on mere materialism, and accepted from political apathy and cynical unbelief in ideas; and she has now, in this supreme crisis, no other moral resource to fall back upon but ordinary patriotism, a sentiment capable of great sacrifices, but not of miracles. The grand ideas which by turns inspired or agitated France after 1789 have all sadly spent their force. The republic, instead of founding fraternity and freedom, led, in the first instance, through the massacres of Paris, the *noyades* of Nantes, the *mitraillades* of Lyons, and the like, to the 18th Brumaire; in the second, through the 10th of December, 1848, and the 2d of December, 1851, to the ignominious self-abdication of the sovereign people in 1852. Bonapartism—that is, "la Gloire"—ended, in the first instance, after the sacrifice by France of millions of her sons to that idol, with the surrender of Paris and the captivity at St. Helena; and, in the second, with the more humiliating surrender at Sedan and the farcical captivity at Wilhelmshöhe. Revived Bourbon legitimism killed itself, in July, 1830, by its own stupidity. Orleanism, which replaced it, showed its inherent want of vitality by being swept away by a slight revolutionary blast, in February, 1848. Socialism made itself hateful by leading to the carnage of June, 1848, in which it was stifled; and universal suffrage lost all its sanctity by sanctioning every act and demand of triumphant usurpation. And, to make the case worse, while France is without faith and without enthusiasm, the enthusiasm of her foes, the Germans, and their proud belief in their own intellectual and military superiority, have risen to a pitch never before reached, and are productive of astounding displays of energy.

At the moment, too, when France has to make her supreme effort, her organism, as of late constituted, finds itself almost fatally deranged, not to say destroyed. Paris, which has become both her head and heart, is, so to say, severed from the trunk of the country, and its other disjointed members, from which the effort is expected, are left palpitating, but without sufficient life of their own. This condition is owing to the stupendous centralization which the Revolution created, the First Empire developed, and all subsequent reigns strengthened, and which, radically transforming the organism of the nation, has finally almost entirely drained the provinces of brains, impulse, and self-directing power. All authority—military, judicial, or administrative—all political or intellectual leadership—all higher talent, in whatever branch of mental activity—has been turned into that one grand reservoir, Paris. All French men of eminence in the ruling spheres of national life are Parisians by education or in consequence of their public career. The country is accustomed to receive from that all-directing centre its administration, its guidance, its convictions, its intelligence, its impulses, its very life-blood. All this, again, was vastly different at the time when revolutionary France was invaded and menaced. There was life, independent vitality, and animation in all her limbs, and the common focus, Paris, served to unite and regulate the national forces without anywhere exhausting them. Nay, Paris at that time received its inspiration, its greatest intelligence, its violent impulses, in main part, from the country, which teemed with talent and passion. The first armed resistance to the absolutism of Louis XVI. came from Dauphiné and Bretagne. Provence sent to Paris the most powerful orator of the time, Mirabeau, and the almost equally eloquent Girondists, Isnard and Barbaroux. Vergniaud, Guadet, and Gensonné, the foremost leaders of the Girondist party, came from the department from which it derived its name; their able and noble-hearted associate, Lanjuinais, from Rennes; Buzot, from Evreux; Pétion, from Chartres; Roland, from Lyons. Bretons formed the club out of which that of the Jacobins was developed, and the most terrible of terrorists, Barère, Merlin de Thionville, Billaud-Varennes, Fabre d'Églantine, and Robespierre himself, with his two nearest associates, St. Just and Couthon, were provincials, as were also the most conspicuous clerical revolutionists—men widely different in character—the Abbé Grégoire, Bishop Talleyrand, and the Capucin Chabot. Mme. Roland and Charlotte Corday came from the provinces, and so also "the organizer of victory," Carnot, and its great promoter, the Marseillaise. For such abilities and passions it is vain to look to the country districts of the France of to-day, while Paris is isolated, paralyzed, and perhaps on the eve of a surrender. Patriotic endurance, blunders on the part of Prussia, and the intervention of disease or of foreign powers, may still restore France in her integrity; but salvation through a repetition of "the miracle of 1792" seems to us as little possible as salvation through the appearance of another Joan d'Arc.

WHY THE WAR HAS NOT BEEN MORE DISASTROUS TO TRADE.

Probably no one topic connected with the war now pending excites more general remark in American business circles, or leads to more frequent enquiry, than the fact that, financially and commercially, this gigantic war has been productive of so little disturbance. With the exception of a sharp but very temporary panic in Frankfort, of a similar but far more circumscribed panic in London, some trouble in the English cotton markets, a momentary flare in gold in New York, and minor disturbances in all the countries largely engaged in trade with the combatants, the effects so far have been insignificant, compared to what was anticipated from a war that five years ago would have convulsed the financial and commercial worlds from centre to circumference. In seeking to ascertain the reasons why this particular war has been so unproductive of disturbance, we must necessarily first ascertain the reasons why other wars have, on the contrary, been eminently productive of the very disturbances whose absence we now hail with a satisfaction not altogether unmingled with doubt and hesitation.

Attentive readers of the *Nation* need not be reminded that the foreign trade of even the most commercial peoples of modern times is utterly insignificant in amount compared with their domestic trade. The people of the United States possess in their decennial census, imperfect as it is, better means than any other nation of establishing with some degree of accuracy the relative proportions of these two classes of trades. In 1860, the United States, according to their census of that year, produced commodities of the aggregate value of 8,000 millions of dollars. The best statisticians, knowing the method of obtaining these figures, consider them very largely below the true value. We will, for convenience' sake, assume what is indeed far more nearly correct, that the total value of the products of that year was 10,000 millions of dollars. In the same year, our imports from foreign countries were, in round numbers, 300 millions of dollars, or really only *three per cent.* of the value of our domestic product. Our domestic product changes hands, in the course of remanufacture and distribution, probably oftener than the articles imported from abroad, so that the actual amount of domestic trade is far larger in proportion than what we have stated. But enough is shown to give a clear understanding of the fact that the amount of the foreign trade of a nation is insignificant compared to its domestic trade, amounting in our case to only two or three per cent. This fact once established, we immediately recognize the important distinction between wars that affect the domestic trade of a nation and those that affect its foreign trade. Our war of secession temporarily destroyed our entire domestic trade, and it was this that made its outbreak so disastrous to ourselves and, *in consequence*, so ruinous to all nations dealing with us. Our entire foreign commerce might have been swept away, and the loss to ourselves, and consequently to friendly nations, would not have been great; while the destruction of our domestic trade involved us all in ruin, and thereby prevented us from fulfilling our engagements with foreign nations, who suffered accordingly. Prussia's foreign commerce is almost entirely destroyed, yet the consequences are comparatively insignificant, for her domestic trade is unharmed. France, with her foreign trade untouched, is commercially disorganized, through the destruction of her domestic trade by invasion. We shall see further on why the ruin of French domestic commerce has been less injurious to other nations than might seem natural.

The destruction of the foreign commerce of a nation by a war of its own or of other nations may, however, be very disastrous, if it involves the inability of procuring certain articles of food, or certain raw materials, on which any large portion of its domestic trade is essentially dependent. The cutting-off of England's cotton supply through our war worked incalculable injury to millions of people in England, and would have been tenfold more injurious if the enormous crops of the two preceding years had not caused such an accumulation of this important staple of English industry as to enable her gradually and measurably to accommodate herself to the deficiency, or to supply it from other sources. Nothing of this kind has taken place in the present war. Prussia's cotton industry is comparatively unimportant, while that of France, of much greater magnitude, is not in danger of deficient supplies, owing to her superiority at sea. In this way another very important element of commercial disturbance is eliminated from this war. Again, both nations are large producers of food. France, a moderate buyer of foreign cereals and meats, is not interfered with in her obtaining her supplies from abroad; while Germany, who produces a surplus for export, suffers only to the extent of not being able to dispose of her excess.

The ever-widening area of commerce tends in itself to diminish the violence of the effects produced by war. Where all nations are trading in all the markets of the world, the temporary loss of one market is less severely felt than it would be were any nation dependent on that market alone. And the extraordinarily rapid increase of means of conveyance and communication between nations tends still further to modify the evil. French goods destined for the German markets, German goods destined for France, which ten years ago, on the outbreak of war, would have been stopped in their course, and remained unsalable and valueless in the hands of manufacturers, have now, in hundreds of cases, thanks to railroads, steamships, and telegraphs, been with lightning speed placed beyond reach, forwarded to England or here, and frequently been paid for by telegraph before the ink on the declaration of war was fairly dry. Orders for merchandise from the antipodes, which might not have been paid for on arrival, were stopped by the silent messengers under the sea, and vessels in the most distant oceans were taught to seek the shelter of neutral ports or hasten home. Scarcely a Prussian vessel has been seized by French cruisers. In the same way, moneys due or about to become due to merchants of either belligerent nation were forwarded by telegraphic order from the four corners of the globe, and thus thousands of solvent and responsible houses saved from the bankruptcy that would otherwise have become inevitable. The ocean cable has done more to mitigate the commercial and financial evils of war than a dozen Treaties of Paris.

But more than by all these circumstances combined has been done by a single fact to limit the commercial and financial disturbances of the present war, a fact repeatedly referred to in these columns—*the great* *diminution of speculation everywhere.* Whatever demagogues or country newspapers may say to the contrary, speculation is an effect, not a cause. Half-a-dozen gambling sharpers in Wall Street, or in the Chicago grain-market, or on the race-course, may sometimes combine to raise or depress an article artificially, and may accomplish their object, although in nine cases out of ten they fail. But, with these rare exceptions, speculation does not cause the fluctuations in prices—it is the fluctuations in prices that cause the speculation. Now, since the Napoleonic wars, there has not been a destruction of property, a disturbance of production and of commerce, equal to that resulting from our war of secession. These causes inevitably produced the most violent fluctuations in values all over the world, and just as inevitably resulted in a fever for gigantic speculations, from which no corner of the globe seemed free. It took three or four years after the close of the war to restore the equilibrium between production and consumption the world over, and to bring back regularity to the ebb and flow of commerce, which is nothing but an unconscious effort to maintain this equilibrium at all times and at all places. This equilibrium has been restored; for two years past, the violent fluctuations in price of almost all articles of trade have been naturally diminishing, and have gradually ceased, until during the last year, and especially since this spring, the temptation, the motive, the very opportunity to speculate, have been wanting in Europe as well as here. Now, the practical course of speculation is this: One speculator buys an article which is not wanted at the moment, in the expectation that it will be wanted shortly, and that he can then sell it at a profit; this speculator, then, has goods on hand which may be very valuable at some future time, but which for the moment are unsalable. Another speculator agrees to deliver an article which is in active demand at the time, in the expectation that, before he is called upon to deliver it, the demand will be less or the supply greater, so that he can then buy it at a profit; this speculator, then, has agreed to deliver goods which at some future day may be abundant to excess, but which for the moment are scarcely obtainable at any price. When war breaks out during the prevalence of such speculation, in many cases the holder of the momentarily undesirable goods is forced to sell, the price rapidly declines, the article becomes entirely unsalable in one market, the stock on hand is rapidly sent elsewhere and forced on sale, the extra supply overstocks that market too, prices there decline likewise and the article becomes unsalable, and this will continue, and has repeatedly continued, so far that the forced realization of one article speculatively held in one market has involved all the markets of the civilized world in common panic and ruin. The reverse action takes place with articles sold speculatively. The enormous advance creates as great loss in one case as the fall in the other. On the outbreak of war, the natural tendency everywhere is to close up such speculative contracts. Where speculation has been large and general, the number of contracts, and the consequent confusion and loss, will be correspondingly great. In fact, the worst losses and panics on the outbreak of war result precisely from the closing up of such speculative transactions; and this explains why the recent cessation or diminution of speculation everywhere has prevented the present war from causing as much disturbance and confusion as everybody had anticipated.

There is another important element tending to diminish the evil effects of this war on commerce and finance. When war breaks out, and trade is interrupted, and prices fluctuate, and merchants lose money, then credit suffers. No one knows how long he may be able to command the same credit facilities as he has had heretofore in the transaction of his business. Every one, therefore, tries to possess himself of all the cash that he can get. Every one collects his debts and sells property, so as to have plenty of cash. The effect of this is, that all countries owing money immediately have to send away money to pay their debts. Heretofore, the only way people had of paying their debts was to send gold coin, the circulating medium of the country. This shipping away coin always led to making coin scarce, to making money tight, and of itself created the most violent disturbances in the money and merchandise markets of the world. During the last few years, so great has become the confidence of the three principal nations of Europe in the safety and value of the United States bonds, that they have become more readily salable in all their markets than any other kind of movable property whatsoever. Being easily transported, indeed far more easily and more safely than coin, they have, throughout the earlier stages of the war, been very largely used for the purpose of paying debts between the three countries, and have thus in a measure obviated the necessity of shipping coin backward and forward, and thus disturbing the circulating medium of the country, with all its attendant evils. Strange as it may seem, the holding of a thousand million dollars of our bonds in Europe has had the same effect, as far as the war is concerned, as an addition of that amount to the coin circulation of the countries holding them.

In summing up, then, the causes why this gigantic war has not been more injurious to trade, we find that Prussia is not to any extent dependent on her foreign trade, and that her domestic trade is comparatively unharmed; that France maintains her foreign trade, but suffers seriously at home; that the losses of all nations in their foreign trade are very much mitigated by the extension of the telegraph and of steam communication; that the losses of France especially, and of all other nations with her, are comparatively light, owing to the absence of speculation; and, finally, that the war has not interfered as much as formerly with the coin circulation of the nations, owing to their possession of a large amount of United States bonds, which have been substituted for coin in payment of international balances. What effect the war may have in the future, if not speedily ended, lies hidden from the sight of even the shrewdest financial authorities.

TERTULLIAN AT THE AMPHITHEATRE.

EVERYBODY possessing even a slight acquaintance with ecclesiastical history knows with what energy Tertullian thundered against the circus and its sports, and with what awful earnestness he warned believers of the danger, as well as the sin, of even a single visit of curiosity. He tells of one pious young man who, going for the mere purpose of satisfying himself as to the nature of its horrors, speedily fell a victim to its unholy fascinations. "*Spectavit, clamavit, exarsit,*" says the Father. The youth, as he looked on, soon joined in the pitiless roar of applause which rewarded the victor and sent the vanquished to his death, and glowed with the diabolical excitement of the heathen about him. Tertullian's language was not of the choicest, and modern theologians smile over the striking resemblance which some of his denunciations of heretics bear to the editorial articles of the Knoxville *Whig* or the Louisville *Journal* in the days when Parson Brownlow and George D. Prentice gave to the world through these journals their opinions of their country's enemies and of their own. But his preachings had no little part not only in the overthrow of the amphitheatre, but in the creation of that horror of theatrical amusements which the church, in all denominations, has preserved down to our time as a sacred tradition. Many a New York or Boston Christian who abstains from theatre-going has little idea how much the thunders of this long-deceased doctor against the *spectacula* of ancient Rome have had to do with the rule which keeps him at home from Wallack's or the Globe. We may imagine, therefore, what the sensations of an early Christian would have been if, on entering the amphitheatre, he had seen Tertullian standing up among the knights, and frantically applauding the quick throws of the net, or the steady thrusts of the sword. Or, to use modern illustration, suppose, on entering a travelling circus, we were to recognize a bishop of the Protestant Episcopal Church engaged in the performance of the hoop-trick from the backs of three horses, clothed in flesh-colored tights, and wearing a garland of artificial flowers on his head, which of us could restrain his indignation, and whose indignation would long stand in the way of his amusement?

And yet, there is a spectacle not very unlike Tertullian's appearance in the Flavian Amphitheatre at a gladiatorial show, or Bishop Potter's engagement as a champion acrobat—we ask his pardon for this use of his name, even in jest—by the managers of the Continental Circus and Menagerie, to be witnessed at this moment in Massachusetts, in the appearance of Mr. Wendell Phillips as the candidate for the governorship, nominated by two political parties—the Prohibitionists and "Labor Reformers"—with a powerful support, it is said, in the shape of campaign speeches from the friends of woman's suffrage. Indeed, the whole combination irresistibly recalls the circus and its feats. It is neither more nor less than the well-known pyramid trick performed in the political arena, the floor covered with the rhetorical "soft sawder," and a good anti-slavery "record" spread out under the athlete's feet, in lieu of the drugget which keeps the dust from the tumblers in the actual circus of our childhood. These little arrangements made, the strong man takes his stand, firmly planted on his legs, and his arms akimbo. Up one side of him lightly skips the Prohibitionist, and up the other side lightly trips the Labor Reformer; each perches himself on one of his shoulders, amidst thunders of applause. And now, when the audience is already well satisfied, appears Lovely Woman, kisses the tips of her fingers to the crowd, and, smiling, dashes up the champion also, and, with a lift from the Prohibitionist and a counter-lift from the Labor Reformer, plants herself over all, and forms the apex.

There are people who think this very fine, and there are others who think it simply funny. We do not agree with either, and we propose, in all seriousness, to give the reason why. It makes but little difference, on the whole, who is Governor of Massachusetts; and Mr. Phillips, if elected—which we suppose there is no chance of his being—would, perhaps, make quite as good a governor as most of his predecessors, and better than a great many. But it makes a great difference to us all whether men who go into politics, and have secured—no matter how—enough of popular confidence to get the support of any body of persons sufficiently large to be called "a party," bear themselves like charlatans or like honest men. Mr. Phillips has spent a considerable portion of his waking hours, for thirty years, fiercely abusing people who thought good might be accomplished in this country by remaining connected with political organizations. On this, or on any question of expediency or tactics, of course it is permitted to every man to change his mind or his course of action; but decency requires that anybody who has made himself for half a lifetime a railing and vituperative supporter of one view, should go over to the other, if not gradually, at least in silence and without *éclat*. It is possible, we suppose, for a bishop to become an acrobat; but a bishop who had familiarized a whole generation with his denunciations of the spectacular drama, and who finally became satisfied that it was his duty to figure on the tight-rope or in the ballet himself, would owe it, we will not say to his office or to the church, but to the dignity of human nature—to the regard that everybody born of woman has, or ought to have, for at least the appearance of reasonableness and consistency in human conduct—either to put an interval of considerable length between his preaching and his degradation, or to enter on his new calling in a strange place. It would not be possible for the men whose characters he had defamed and vilified, and whose motives he had traduced, and whose views of duty he had ridiculed, because they chose to attend the theatre, to see him appear as a mountebank on their own stage without feeling their gorge rise.

But this is not all, and is not the worst. We suppose that there is no doubt amongst rational men that it is the duty of anybody who has got influence—no matter how—over any number of his fellow-men, no matter how small, to avoid rousing feelings of bitter hostility between class and class, on the ground of alleged wrongs committed by one against the other, unless he is sure they are wrongs, and is *prepared to suggest a remedy*. The mark of the "demagogue," indeed, that which enables people to distinguish him from the reformer, is that he never has any cure to propose for the evils he denounces. The set of people called Labor Reformers in Massachusetts, as well as elsewhere, as well as can be made out from their proceedings, complain of two things—the lowness of their wages and the length of their hours of work. They propose to remedy these evils by compelling all workingmen to work for eight hours only, and all employers to pay as much for the eight as for the ten hours' labor, and seem to have vague ideas also about legislation in aid of loans of money at low rates of interest and about the equal division of the soil. We are not aware, however, that Mr. Phillips has on the whole labor question more than one rational idea—namely, that leisure is a good thing, and that poverty is a bad thing. His letters and speeches convey the impression that long indulgence in epigrammatic and vituperative rhetoric has deprived him of the power of consecutive thought on any subject; and his itinerant habits can hardly have left him much time for study, even if he had still the power to study with profit. At the close of a rhapsody about labor delivered a few months ago in Boston, he cited, as proof that he was "treading on solid ground," the example of Mrs. Flint, the Boston dressmaker, who, in her treatment of her workers, had, he said, solved the labor problem. Within a few days, a notorious trial revealed the fact that she was a very ordinary specimen of her class. During the Reconstruction agitation he screamed for confiscation, and entertained his disciples with the affirmation, in support of this view, that all that was valuable in the French Revolution was due to the confiscation of the land of the nobles for the benefit of the peasantry. An hour's reading would have shown him that it had no foundation in fact, and would have led his disciples to suspect that, like a good many of his "historical" illustrations, it was manufactured on the spot. Nevertheless, though without any plan for the reorganization of the relations between labor and capital, without ever having uttered one thought on the subject of the slightest value either to the legislator or to the philanthropist, and he himself living, and having always lived, on the interest of capital accumulated, kept, and used in the ordinary way, he has no hesitation in informing his labor reformers that "it is a shame to our Christianity and civilization for our social system to provide and expect that one man at seventy years of age should be lord of many thousands of dollars, while hundreds of other men who have made as good use of their talents and opportunities lean on charity for their daily bread."

This, if it means anything, means that Christianity teaches and the law ought to provide that those who, through talent, energy, industry, or self-denial have accumulated thousands of dollars, ought not to be permitted at seventy years of age to enjoy them, but ought to be forced to divide with everybody who would like a share of them, and who says he has "made a good use of his talents and opportunities." And this pernicious nonsense is uttered in the presence and hearing of hundreds of thousands of ignorant laborers all over the country, who are thirsting for a life without toil, and whose efforts in pursuit of it are disorganizing nearly every branch of industry, are marked by every variety of crime and outrage, and are exercising a markedly deteriorating influence on the arts.

But his performances on the question of Chinese immigration, though part and parcel of the labor-reform exhibition, deserve a separate mention, the more particularly as we have in our drawer one or two letters, from friends and admirers of his, trying to persuade us that, in laughing over him recently, we have been pulling the beard of a prophet. We might travel far and wait long before we could light on a finer specimen of political legerdemain. The way in which he and his confederates cover up their refusal to apply to the Chinese "the principles of the Declaration of Independence" is, first, by calling Chinamen brought to the United States under contract "coolies"—a question-begging epithet, which at once gives them the benefit of all the horror excited by the history of the coolie trade in the Spanish and French colonies. Nevertheless, they know perfectly well that the "coolie trade" cannot be carried on with any country in which there exists no penal machinery for the enforcement of the contract; and that as long as Mr. Sampson, at North Adams, for instance, cannot put his Chinamen in prison, or have them flogged, if they leave his service, there is no more of the "coolie" about them than about the German or Irish laborers. He has no more control over them than he has over his cook. Mr. Phillips, feeling probably that the "coolie" device would not work, produced in his organ a prodigious cloud of declamation on the justice and expediency and humanity of welcoming to these shores men of every race and color, and declared that we should all be the better for the mixture. Thus far, he stood on the old humanitarian ground, and the Irish Crispins, who compose so much of his following, must have looked horror-stricken. But here he gave them the wink, and produced the qualification, which was, that the more Chinamen came among us the better, provided they came "spontaneously"—that is, he explained, did not have their passage paid by a capitalist. Now, the real meaning of this is—and we feel sure the Massachusetts Crispins have got hold of it as well as we, and have ere this many a time laughed about it over their illicit whiskey—that he is ready to receive all Chinamen into this temple of liberty, with open arms and open heart, provided very few Chinamen come. He will valiantly defend their "rights" as long as they don't seek to exercise them; maintain their "equality" as long as they don't claim it; and proclaim, trumpet-tongued, the desirableness of every Chinaman who can get here coming here, as long as hardly any mind what he says. The voyage from China to the United States is long and expensive; none but the very poor seek employment away from home, and are willing to make it; they are, therefore, sure not to make it if you forbid those who want their labor to advance them part of their wages to pay their passage, or, what is the same thing, forbid employers to enter into any contract binding the laborers to repay the money after they get here. Make the most stringent contract you please, and the capitalist cannot bind them effectually; but if you prohibit any contract at all, the capitalist will "import" no Chinamen, and therefore no Chinamen will come, and the labor reformers and their chief will have the credit of being first-class humanitarians and spread-eagle democrats and at the same time keep the labor-market to themselves. On similar terms, the Irish Crispins would never have got here. Had they been six thousand miles away instead of three, comparatively few would have made their way over; if "spontaneously" means paying their own passage, and not paying it with money sent from here, next to none; and the flag would have waved and Mr. Phillips have opened his eloquent bosom to the oppressed and downtrodden of the universe in vain. The truth is, the Irish and Germans, whom Mr. Phillips welcomes, are, to a large extent, "imported by the concerted action of capitalists." Capitalists build emigrant ships, organize emigrant associations, establish emigrant car-lines, form land companies for emigrants, send out agents to Europe, and for their own especial profit import Germans, Irish, and others, including not a few very low in the scale of humanity, in "overwhelming masses." "Native American" demagogues, as will be remembered, had no objections to a small number of Irish or Germans, provided they came in a "natural" way; but the "artificial" process and the stimulus given and the facilities afforded by "concerted capital," this it was that threatened danger and made combination necessary to prevent it. Mr. Phillips's watchword is: "When rich men conspire, let poor men combine." Strike out "poor men" and insert *Protestants*, and the epigram would have suited the Know-Nothing orator of 1855 to a nicety.

NOTES ON THE WAR.

II.

MUCH has been said of the unprepared condition in which France found herself for a great war; of the corrupt channels into which money appropriated for military purposes had found its way; and of the ignorance both of the nation and of the Emperor of the true condition of things. That there was no efficient directing head, the results have fully shown. In the place of such able war ministers as Marshal Vaillant and Marshal Niel had shown themselves to be, there were only a Lebœuf and a Palikao to take their places in the Emperor's estimation—the one who had shown himself more apt at gathering treasury pap at home, and the other loot in China, than in organizing and administering the forces of a great nation. That the Emperor should have been ignorant of this state of the army seems hardly credible; for it could not have been of very recent date, as Marshal Niel, who was placed in charge of the War Office in 1868, and died in this position in 1869, was too honest a man to have concealed it from him. As to what has been said as to recent remarks of Louis Napoleon, that the war had been forced upon him by public opinion, although it cannot relieve the French people from their mad eagerness for it, the question may be fairly put, Who had been most instrumental in forming this public opinion, and in taking advantage of characteristic national traits and weaknesses? Was it not the Emperor himself? With a muzzled press and a muzzled legislative body, with every attempt at honest investigation into matters that concerned the public interests stopped at once, whenever the authorities thought it was to their interest that they ought not to see the light, public opinion was what the head of the state might choose to make it—particularly on all points where the national vanity could be played upon.

That no inconsiderable share in the failure of the French armies in the present contest is due to the very training and the overweening confidence acquired by the soldiers in their African schooling, was stated in my last article (Sept. 15). This opinion, which had been previously expressed by the writer (Aug. 13) in a daily evening contemporary, in these words, "Had the French people any solid grounds for their confident expectations of success? Was the African service, in which her army has had its principal practice, the best for training the private soldier or for forming the great strategist for a great war? Was not the African service better calculated to make good partisan officers than great generals?"—was held, as it appears, by the highest military authority in Prussia, General Von Moltke, who, in a letter published in the *Salut Public* of Lyons—a translation of which appeared in the New York *Times*, Sept. 13—is reported to have said to a French officer who visited him at Berlin: "Do not talk to me of your military education in Africa. If you have never been there, so much the better; when you become general, you will be glad of it. The war you have been carrying on against the Arabs for forty years is a guérillerie of an inferior order. With that school, you will do no more than form other schools like it. The first great war will demonstrate your inefficiency." These remarks, from a most accomplished scientific theorist of his profession, who has seen war on its grandest scale, are of more than mere passing interest. They are true of all times and of all nations, and are worthy of the consideration of any nation in organizing and carrying into effect its military policy. The difference in the one pointed out by Von Moltke and that pursued by the French is that between the jobber who caters for some local market and the importer who supplies a country's wants.

This is no ideal view of the case. The first great war in which France has been engaged since the fall of the First Empire has demonstrated its truth. It has demonstrated most fearfully the inefficiency of her generals and her soldiers, though both classes teem with men splendidly brave and skilful, so far as their training went. Beyond the massing of MacMahon's, Bazaine's, and Frossard's armies on the frontier line, from Metz to Strasbourg, with an apparent intention of an offensive campaign, was there any clear evidence of a well-considered plan on the part of the higher French military authorities? None, thus far, has come to light. The movement appears almost an impromptu one. War had been declared, and something had to be done, and that something could only be done in the direction of the enemy, *et voilà tout*. The line occupied by the French forces has been spoken of as a long thin one, weak at all its points. This is not so. The French corps immediately in front of the Prussians, on the 1st of August, and holding the positions of Thionville, Metz, St. Avold, Saarguemines, Bitsch, and Strasbourg, numbered about 250,000. Besides these there were two corps of 30,000 men each, one at Châlons, the other at Belfort and Besançon. These, with artillery and reserve cavalry, made up a total force estimated at 350,000 men. Between Metz and Strasbourg there are only about one hundred miles, with good communications between the two places, several fortified points on this front, as Pfalzburg and Bitsch, and others, as Thionville, on the flanks. When Bonaparte made his first brilliant campaign in Italy, in 1796, his army, consisting of but forty or fifty thousand men, occupied a front of about eighty miles; and in the Austro-Prussian campaign of 1866, the Prussian corps that invaded Bohemia were fully ninety miles apart when they were passing through the difficult defiles of the Erz-Gebirge and Riesen-Gebirge ranges, which form the north-western and north-eastern boundaries of Bohemia, and had no means of mutual support until they reached the battle-field of Sadowa. These are not cited as strategical models, but as showing what may be done with good troops in skilful hands. In fact, if the French acted at all offensively, they could not well have made any other dispositions than were made at the outset. The blunders were subsequent.

After making the movement on Saarbrück, in which the Prince Imperial received his *baptême de feu*, as described in the farcical despatch of the Emperor to the Empress, the French suddenly commenced a retrograde movement from there, according to the official account of the immediate subsequent movements of the Prussians, in which it is stated that, "on the 6th of August, the First Prussian Army found itself between Saarbrücken and Saar Louis, facing the French Second Corps occupying Spichern Heights, near Saarbrücken. The Fourteenth Division attacked as the French were preparing to leave on their trains. . . . Frossard retired from Forbach to Metz." MacMahon, at the same time, who had previously been driven from Weissenburg, and had fallen back towards Nancy, was forced to give way, and finally continued his retreat to Reims. Bazaine's army, during these events, was in the vicinity of Metz; and from all that we have learned from the confused accounts up to this time, there seemed to be no head that could say, as Napoleon I. is reported to have said on a memorable occasion of like confusion: "The military chess-board is in a very confused condition. I alone can see my way clearly in it." As the official report referred to tells us: "Meanwhile, the First Corps moved on Metz, waiting for the Second Army, which had to lay a railway track as it moved along. On the 14th of August the First Army was placed thus," etc. Here commenced that series of engagements which enabled the Prussian army to cross the Moselle, plant itself between Bazaine's army and Paris, and drive that general under the walls of Metz.

The Prussians here repeated the strategy of Napoleon I. against the Austrians, which led to the surrender of General Mack and his army of 80,000 men at Munich, and which was the opening blow of the memorable campaign of 1805. But, in this case, Mack was surprised, however blamable his want of vigilance may have been, which left Napoleon I. to cut him off completely from his base, and close every avenue to his escape. This, however, could not have been the case with Bazaine. He must have been fully informed of the events that had occurred, have had data enough to guess with some accuracy the strength of the Prussians, and to infer his own inability to cope with them in the open field, before these movements, so disastrous to him in the subsequent bloody battles of the 17th and 18th of August, took place; and yet we find him holding his position nearly a week after MacMahon with the remnant of his army had got beyond the reach of immediate pursuit. Under the existing circumstances, there was clearly but one prudent course for him to take, so far as the safety of his own army, and the equally imperative steps to cover Paris before all else, and at the same time form a junction with MacMahon and with such new forces as could be sent to join him, were concerned. Metz, with its strong fortifications, might, as Strasbourg and other fortified points, have been left with an adequate garrison, which would have weakened his own army but little, to take care of itself. Why this obvious course was not adopted, we have only surmises to help us to an answer. As a general, at however low an order he may be rated, Bazaine could hardly have missed this conclusion, whatever confidence he may have had in his own abilities as a tactician and the fighting qualities of his troops. We are forced, then, to conclude that he was overruled by the Emperor, who, above all things, would be naturally averse to place himself in any position that would necessarily lead him back to Paris, and who, to avoid this humiliating position, cared not what sacrifices, that held out any hopeful results, he might be called upon to make.

Against MacMahon's course, from the time of his retreat up to his destroying the entrenched camp at Châlons, and moving towards Montmédy to endeavor to form a junction with Bazaine, nothing can be objected. At Châlons, with the *débris* of his own army, and receiving daily accessions to its strength, he was in a position to fall back upon Paris whenever necessary, and to force the Prussians to great circumspection in their movements towards it. The Prussians having to leave a large force to blockade Metz and keep Bazaine's army from escaping, he might have looked forward, in a short time, to seeing himself so strong as to be enabled to play a similar game towards them to the one which Napoleon I. adopted in the campaign of 1815 against the Allied armies, advancing along the Marne and Seine upon Paris. Such a defence, vigorously made, as it would have called for renewed efforts on the part of the Prussians, was also the best policy for the relief of Bazaine's army from the pressure upon it, as every day, the more that he could hold his own, must see some diminution of the enemy before Metz.

Why some such course was not adopted by MacMahon, we can only attribute to the same untoward influences that marred Bazaine's action. Looking at the positions that the contesting forces occupied at the commencement of his movement from Châlons, and supposing ordinary vigilance and promptness of movement on the part of the Prussians—military qualities of which they had given the most conclusive evidence—there was no chance of success for the end proposed by this movement but in gaining several marches in advance, and moving with a celerity that supposed the throwing aside of all *impedimenta*. What the result has been we know. Another memorable example of the Caudine Forks has been added to the pages of history, in the surrender of an entire army; whilst Bazaine and his army will, in all probability, undergo the fate of the unfortunate Mack. So history repeats itself. D. H. M.

West Point, Sept. 16, 1870.

Correspondence.

THE TIENTSIN MASSACRE.

Tientsin, July 23, 1870.

To the Editor of the Nation:

Sir: Notices of the Tientsin massacre have reached you already, doubtless; but you may not be in possession of the facts relating to it. Little more will be attempted now than to bring before your readers the main features of an event so horrible in its details that no one can think of it but with a shudder. Some reference will also be made to the conduct of diplomats in connection with this important and sad event.

For many months rumors were in circulation that the Catholics were guilty of taking out the eyes and hearts of children for medicinal purposes, which, though false, created much excitement. A contemplated uprising, having for its object the extermination of all foreigners, was also matter of common remark. These rumors increased in virulence till they burst forth in an infuriated mob, on the 21st of June, causing great destruction of life and property. Twenty-two foreigners, occupying various positions in life, were the victims of one of the most brutal massacres which history records, viz., the French Consul and assistant; Secretary of French Legation and wife (*en route* to Peking); three Catholic priests; ten Sisters of Charity; one French merchant and wife; and one Russian lady and two gentlemen. One of the Sisters was an English subject; the rest were subjects of France or other smaller Continental powers. The outrages inflicted on these persons before death released them from suffering, beggar description. In addition, some sixty or seventy natives, in some way connected with foreigners, were murdered in cold blood. There was also a very great destruction of property, viz., the French consulate; cathedral, with extensive premises, belonging to the Lazarists; the small premises of the Jesuits; large premises of the Sisters, containing a chapel, foreign and native hospital, and buildings for the accommodation of over 200 children; these buildings were burned. All the Protestant chapels, eight in number, were also destroyed. Two of these belonged to the mission of the American Board. The compound in which one of them was situated was large. The premises were purchased and repaired by the Society at an expense of about $6,000 gold, and were formerly occupied as residences by the representatives of the Society till health considerations rendered a removal from the city necessary. These are a mass of ruins. Fortunate, indeed, is it that they were unoccupied at the time of the riot, else a similar fate to that of the unfortunate dead would have befallen their inmates. The other chapel was a rented building, and of comparatively small value; it is also in ruins.

Reliable evidence of a most convincing character has been obtained, establishing the following points, viz.:

1. The plot has been maturing for weeks, if not months, and the time for its consummation had been arranged and known for days previous—viz., the 21st of June for the slaughter of those in or near the city, and the 24th for the attack on the residents of the foreign settlement. A heavy rain fell day and night of the 24th, which apparently saved us.

2. The plan embraced the destruction of every foreigner in Tientsin (those in Peking would then have fallen an easy prey), without distinction of nationality.

3. The plot was known, approved, and aided in execution by two, at least, of the leading city officials and some of the military officers, one of whom led foreign drilled troops to the attack, and encouraged the people in the work of destruction and death.

The recent Greek tragedy, which has excited so much sympathy and attention, is insignificant in comparison with this, when we consider the number of lives lost and nations insulted; and the mind naturally asks, what is doing by the representatives of foreign powers in Peking, and the Chinese Government, towards a proper adjustment of this terrible affair, so as to ensure the future safety of foreign residents here? For the latter, true to its native immobility when "outside barbarians" are concerned, we can only say *nothing*—absolutely NOTHING. Promises and demonstrations we have had in abundance; but except that extensive war-preparations are making, and tens of thousands of troops are collecting around Tientsin, nothing has been done. Of the representatives of France and Russia we know little; they keep their own counsels; but there are indications that they are quietly working out a policy which will ere long burst forth in a terrible, but merited, retribution on the heads of a corrupt and deceitful government, unless it does its duty in punishing the guilty. For the English-speaking Legations, judging from certain facts and indications, we can only reiterate a sad "*nothing*" as we think of the fate which would have befallen us but for the interposing hand of Providence.

More than a month has elapsed since the enactment of this fearful deed of blood and suffering, and yet no proof can be adduced to show that our representative in Peking has attained even an approximately adequate conception of the magnitude of the crisis which has overtaken us. The only *positive* information we have is that the members of the U. S. Legation are rusticating "at the hills," enjoying in undisturbed tranquillity the countless charms of their summer retreat. Report speaks of them as "calm and grand" in deportment, and so philosophically superior to what is occurring about them that they receive with a smiling suspicion all our notices of this sad catastrophe as the fanciful narrations of an excited brain. And what wonder, when we remember that their official adviser, our consular agent at Tientsin, is an alien whose *interests* are wholly with the Chinese Government, in whose employ he receives about $5,000 per annum?

"The Chinese Government," say they, "is most amicably disposed towards the treaty powers, and is ready to compensate fully those injured by the recent outrages." Indeed, in reading our recent advices from the capital, we are driven to the conclusion that some of the members of the *corps diplomatique* desire nothing more earnestly than that we cheerfully grant the pardon of these awful crimes by the reception of "hush-money" from these grievously criminal offenders. They would have us gloss over the fact that great and honorable nations have been grossly insulted by brutal acts, accredited only to uncivilized and barbarous tribes, and view as a matter of secondary importance the butchery of their unoffending representatives, because, forsooth, *we* escaped the fate intended for us. And they ask that we will precipitately settle this nefarious business by receiving gratefully the money by which they would buy the privilege of once more, ere long, imbruing their hands in innocent blood. They invite us to complicity in a compromise as dishonorable and dangerous in its character as the late massacre was perfidious and murderous.

That the above is not overdrawn may be gathered from the following facts:

The foreign ministers were informed that, for a considerable period previous to the fatal day, the anti-foreign feeling in Tientsin and the surrounding country had been deepening and intensifying; that it had been increasingly manifested in the conduct of the official classes; and that, in manifold and specious ways, it was gradually permeating all classes of society. The same facts were often referred to by those resident in Peking. The expulsion of the hated foreigner was known to be matter of common desire and expectation.

It was known to them that this general feeling throughout China had found expression, during the last three or four years, in a series of attacks on foreigners, all emanating from the same sources, aiming at the same end, and, in degree, following an ascending scale of gradation; and that innocent blood of a preceding year remained still unavenged. They were at last informed that the climax had been reached in fearful deeds of violence and blood. The terrible events of that never-to-be-forgotten day were minutely described to them, and of the dire results they were fully apprised. They were told that a score of foreigners—the most of whom were unoffending, delicate women—were horribly murdered in broad daylight—that they were subjected to the most cruel barbarities that fiendish ingenuity could invent; that, when death had at last ended their sufferings, their remains were treated with every possible indignity—haggled, cut in pieces, and cast some into the water and some into the flames. They were told how the corpses were rescued from the river at the foreign settlement, hacked, mutilated, almost beyond recognition—such spectacles of ghastly horror that the stoutest hearts, in gazing, were terror-stricken and bowed down in grief.

They were told that when the coffins sent by the mandarins, and said to contain the bodies of the Sisters of Charity, were opened, there were found only a few ashes and a melancholy collection of charred bones. They know that several score of natives, Christians and others in foreign employ, were robbed, beaten, tortured, and not a few murdered, for no other crime but that of connection with us. They have been informed that many buildings in more than a dozen localities—some of them imposing structures erected at great cost, others the houses of Christians and friendly natives—were looted, torn in pieces, or consigned to the flames.

They have had ample information of the fact that this event was not the result of a sudden outburst of popular feeling, but has been a matter of gradual and extensive preparation. They have been distinctly acquainted with the fact that this movement was openly directed against all foreigners without distinction, and that the plan, as related to us, was not abandoned, but only delayed in execution. Of greater importance than all this, an overwhelming amount of incontestable evidence has been laid before them, criminating many native officials in these savage proceedings, and fully confirming the opinion of many thoughtful men, that this massacre is only a part of a matured determination and gigantic plan to overthrow all the foundations on which foreign intercourse with China is based. Increasing and convincing proofs of this are daily becoming manifest here, and reaching us from other places.

That such an event was soon to occur, and was known many hundreds of *li* from here before it actually took place—even to the day and general plan—has been amply set before them. Many facts of minor importance have also been brought to their notice, all bearing, in their connections, but one interpretation. Yet with all this astounding and incontrovertible evidence of the barbarous violation of treaty rights in the murder of many innocent victims and the destruction of much valuable property; knowing that there is no decrease of excitement, but a continuous demand on the part of thousands of the infatuated people for the complete extermination of the hated "barbarian;" that warlike preparations are being pushed forward as rapidly as possible; and that, to the present time, not an arrest has been made; knowing that if such a calamity had befallen Chinese subjects not connected with foreigners, hundreds of heads would have paid the penalty in less than a week's time, and that yet, in *this* instance, only promises have been made—with all this knowledge in possession, yet the evidence collected by those on the spot is treated with a scepticism bordering on disdain. Only a glimpse can be had of their policy in such utterances as these: "The Chinese are sorry—they are ready to pay indemnity; prepare your claims—the sooner settled, the better for all concerned—*we* are not politically involved—exercise control—excitement will soon pass by—be patient—*don't* excite THEM"—only this, and nothing more.

Some may think this an overdrawn picture; but I assert it to be given on credible evidence. It is substantiated by documents in our possession; it is borne out by competent judges in the capital; it is proved by the demand already made on Tientsin residents to prepare estimates of losses sustained, in order to the immediate payment by the Chinese Government. And all this, while the villains—who tore down our chapels, searched in them for the missionaries with avowed intent to kill them; beat and killed the native Christians; cut in pieces foreign officials, and cut off the breasts, run spears *up* through, and ripped open the bodies of innocent and defenceless women—are still running at large, vaunting their blood-stained booty, boasting of their valor in perpetrating these diabolical deeds of crime and shame, and stirring up the people to commit further outrages.

S. A.

ANOTHER NOSTRADAMUS.

TO THE EDITOR OF THE NATION:

SIR: The arithmetical and prophetical calculations in reference to Louis Philippe and Louis Napoleon, which you have copied from the newspapers, are interesting and truly very odd. It is a pity, therefore, that they fail so materially as to be based upon the mistake of a year in the case of Napoleon III. Here are other additions which, taken out of the *Almanac de Gotha*, are all correct:

Napoleon III. was proclaimed Emperor December, 1852, and dethroned September, 1870. He reigned, then, 17 years. Now, he was born in 1808, and $1+8+0+8$ is 17 years. He was married and crowned in 1853, and $1+8+5+3$ is 17 years. Eugenie was born in 1826, was crowned in 1853, and reigned 17 years. Now, $1+8+2+6=17$ years, and $1+8+5+3$ is 17 years. Again, Louis Napoleon was made President in 1848, December 2, and expelled September 5, 1870. He was, then, in power 21 years. Add $1+8+4+8=21$ years. He was raised to royalty from ordinary rank in 1852, and driven out of it again in 1870. And $1+8+5+2=1+8+7+0$. Or, again, his father died in 1846, his mother in 1837, and $1+8+4+6=1+8+3+7$. So himself and wife were born 1808 and 1826, and $1+8+0+8=1+8+2+6$.

Notes.

LITERARY.

AFTER a revival lasting nearly three years, *Putnam's Magazine*, it is announced, will shortly be merged in the transformed *Hours at Home*, known as *Scribner's Monthly*. The news is doubtless a surprise to the public, but the magazine's want of support has for some time been privately conjectured. Its disappearance for a second, and, we presume, the last time, will be regretted by many, including not only those whose favorite it was but those who, without giving it a high rank among other periodicals, nevertheless wished it well; by none more than those ingenious gentlemen of letters, whom the multiplicity of magazines has made a remarkable phenomenon, who "board round," as it were—now appearing in an article in the *Atlantic*, next month in *Lippincott's*, again in the *Galaxy*, by turns in all the rest, and not seldom simultaneously in two or three. The reviewer whose monthly task it is monthly to read all the magazines is the only person, perhaps, who is delighted at the cutting off of any one of them. As for the publishers, Messrs. G. P. Putnam & Sons, they at least return to their main business with one less care than formerly. Their fall announcements we noted last week. Some foreign agencies which they have undertaken remain to be mentioned: first, of the new periodical called "Art," published by Sampson Low, and embellished with photographs of a high order; and next, of two series of art publications, from, we believe, the same English house, viz., autotype reproductions of drawings by the great masters preserved in English collections, and "oleographs"—*i. e.*, fac-simile reproductions in color in a style quite superior to the best results of chromo-lithography. Of the two last we shall probably have occasion to speak more particularly hereafter.——Messrs. Baker, Voorhis & Co. announce a number of law publications, of which we cite two as not wholly of a technical character: "A Comparison of the Common and Civil Law Systems as embraced in the Jurisprudence of the United States," by Judge William Archer Cocke; and the "Law of Insanity," being a digest with the leading cases in full, by John J. Elwell, M.D.——Messrs. Macmillan & Co. add to their announcements "The Iliad of the East," which is a translation of legends selected from Valmiki's "Ramayana;" Julia Wedgwood's "John Wesley, and the Religious Revival of the Eighteenth Century;" "The Beginnings of Life"—including an account of the present state of the spontaneous generation question—by H. C. Bastian; "A Treatise on Magnetism," by the Astronomer-Royal, Airy; "Fine Art: A Sketch of its History, Theory, Practice, and Application to Industry"—lectures delivered at Cambridge University—by Sir M. Digby Wyatt; a revised and enlarged edition of Mr. James Bryce's "Holy Roman Empire;" a Life, by Mr. W. D. Christie, of the First Earl of Shaftesbury, for which the materials are new papers from the French archives and others in the possession of the present Earl.

—The *Hearth and Home*, an illustrated journal of family reading, from which politics and controversial religion are excluded, and to which its editor, Mr. Donald G. Mitchell, has given a pretty decided horticultural and agricultural and landscape-gardening bias, was founded some year or two ago by Mr. S. M. Pettengill, the well-known advertising agent. We believe it has had very fair success in all ways. It now changes hands, having been bought by Messrs. Orange Judd & Co., the publishers of the *American Agriculturist*, whose name has for many years been a household word in almost every American farm-house. Doubtless, *Hearth and Home* will now be made a little more agricultural still; but it will not cease to deal, after its own fashion, with the right conduct of life inside the farm-house as well as outside. It will still have recipes for the housekeeper; riddles and stories for boys and girls; stories, essays, and poetry for young ladies; and a "News Supplement" for the head of the house, and, in general, will be, as it has been, a very good journal for home reading as home reading goes in this country of newspapers. *Hearth and Home* will not be merged in the *American Agriculturist*, but will remain entirely distinct.

—The library of the late Jared Sparks, biographer of Washington, Franklin, and many other of our worthies, is to be sold during the coming winter. It is said to be an excellent working library for an American historian, very rich in works on the Revolution, well supplied with State histories and early State laws, and containing not a few of the rarities of our early history, which, nowadays, fall to the lot only of the rich collector. It would be a good nucleus for a new college or city library; and we do not see why Americans should always go to Germany to buy libraries in the lump, and permit collections made here, and, of course, much better adapted to our wants, to be dispersed by auction. Mr. Sparks's historical MSS., consisting chiefly of copies made at the London State Paper Office, at Paris, Salamanca, and elsewhere, which are especially valuable in relation to the Spanish colonies, were deposited in the library of Harvard College some years ago.

—The number of rich men who return their accumulated wealth, by their wills, to the public, would appear to be unmistakably on the increase. The bequest of the late Mr. John Simmons, of Boston, is remarkable not only for its munificence—it amounts to nearly two millions of dollars—but for the direction which it has taken. The Simmons Female College to be endowed by it is not an addition to the perhaps too numerous small institutions of learning similarly founded, but has an entirely original purpose: to teach "medicine, music, drawing, designing, telegraphy, and other branches of art, science, and industry best calculated to enable the scholars to acquire an independent livelihood." It is curious to note the circumstances which led the testator to conceive of this form of benefaction, and to devote to the realization of it the last sixteen years of his life, during which, retired from active business, he invested his fortune in real estate, and built those elegant stores and residences which are, of themselves, an evidence of public spirit, and among the finest by which Boston is adorned. Mr. Simmons was a native of Rhode Island, in the last century, but removed early to Boston, where he subsequently became the pioneer dealer in ready-made clothing, a business in which the city continues pre-eminent. As a manufacturer of these goods, says a writer in the Boston *Advertiser*, he naturally had a wide and painful experience of the needs and incapacity of workingwomen—of needlewomen especially—and his charitable feeling for them doubtless prompted him to devise the remedy which has just been revealed to the public. It will be tried most appropriately in a State notorious for having a surplus of women.

—Very likely, by the time the fund has sufficiently accumulated to warrant starting this college, instruction in medicine, at least except in the rudiments of anatomy and physiology and botany and chemistry, will be so easily obtainable by women at professional schools, as to make it scarcely advisable for the college to compete with them. And probably some other branches will be as well provided for elsewhere. On the other hand, we may trust that the common-school education will have so much improved as to send a higher grade of pupils to the college than it could now muster if instituted at once. In art instruction particularly, it is clear great progress will have been made. Last May the Massachusetts Legislature passed an act requiring every town of more than ten thousand inhabitants to furnish free instruction in industrial or mechanical drawing to persons over fifteen years of age, either in day or evening schools. Boston proposes not only to fulfil those requirements, but to elevate the standard of instruction in drawing in every grade of school, and to import an instructor from England for the express purpose of training the teachers in this branch, Mr. Charles C. Perkins having generously offered to procure the necessary models, such as are supplied to Art Schools from South Kensington, and to give them to the School Committee. A hall in the new Girls' High and Normal School has been, by private liberality also, set apart for the exhibition of casts and photographs illustrative of ancient art. Casts to the value of $1,087 have been subscribed for, chiefly by the ladies of Boston, and are expected to arrive shortly. They embrace the frieze of the Parthenon, and a number of mythological and portrait statues, busts, bas-reliefs, etc., etc.

—Professor Whitney's "German Reader" appeared originally without its notes and vocabulary, which fill a supplementary volume. The publishers, however, have now put reading matter, notes, and vocabulary together in a single volume, which intending purchasers will find handier than the other form of the work. We speak of it here as containing, in the vocabulary, one of the best pieces of lexicographical work of its kind that need be desired. Makers of vocabularies, and printers of them after they are made, may both study it with profit for its clearness to the mind of the student and its clearness to the eye of the examiner. Six kinds of type are used. First there is the large German type, in which appears the word to be translated. There is the English type, in which appears the word of translation. There is, however, in case the German word to be translated and the English word translating it be from the same root, a small-capital type used in the words of translation. But again, in case the German word and the English be derived from different roots, but yet are the same in composition, then there is used still a different English type. We have not in our fonts types with which to give with exactness the appearance of the vocabulary, for which, indeed, types were expressly cast; but the reader will understand this last-mentioned point when we say that the English rendering of "mitleid" being "compassion," "sympathy," and the composition of all these words being the same, while yet there is not identity of roots, the fact of this like use of different materials the vocabulary indicates by a type different from any used for its other purposes. Finally, there is some italic type and some smaller German. The execution thus admirable in its technically typographical aspect is also, as is evident, helpful to the eye of one using the vocabulary, and, of course, the learner reaps benefit from the philological thoroughness and the insistence upon certain philological points to which all this typographical skilfulness helps to give expression. We should add that references to the author's grammar are frequent.

—The *Christian Union*, criticising what we said recently about Prussian culture, acknowledges that it is all true; but maintained that the end achieved by the Prussians—that of making good soldiers, scholars, artists, and philosophers—is after all (comparatively) a poor one; that the truly "successful man is he whose first aim is not to gratify himself, but to serve others, who lives as in God's sight." With this we heartily agree; but after taking as good a survey as our means will permit of the other nations of the earth, we have no hesitation in declaring our belief that there is in Prussia on the whole as "much living for others," as "much purity in body and soul," and as much practical recognition of the Divine government of the world, as in any other country. If the *Christian Union* finds reason to be satisfied with the spirituality of life amongst the mass of people either in the United States or in England—we mention these as the two countries whose moral condition it probably puts above that of Prussia on religious grounds—all we can say is that its mode of measuring these things must be different from ours. We are far from holding Prussia up to view as a perfect national organization; but we have no hesitation in assuring American Christians that its culture wouldn't do them any harm; and that, if they try it, they will find themselves as acceptable as ever in the eyes of the Almighty. It is often very amusing to find what a dread of "culture" there is among some reformers and politicians. One would think sometimes, to hear them talk, that no real purity of character or earnestness of life was to be attained except by keeping as ignorant and uncouth as possible—that is, that the more of a brute or a savage you were, the nearer you were to God. Yet the difference between the eleventh century and the nineteenth, and between the New England farmer and the Irish peasant, is simply one of culture. And it is hard to see what force the *Christian Union's* objections to the Prussians can have, unless it means us to draw the conclusion that it is their culture which prevents them from attaining the true end of existence. This argument would, however, prove a little too much, for it would prove that the more civilized man grows, the less likely he is to exhibit the highest type of character—a position which the *Union* will hardly take up. The ordinary reformer's and religious man's horror of "culture" indeed differs only in degree from the Pope's, and is based on equal forgetfulness of the fact that men of culture differ from others simply in being more civilized—that is, in having got a little further along the road on which the best portion of the human race is painfully toiling.

—The *Woman's Journal* says it has "private reasons" for believing that Florence Nightingale is the writer of the letter which recently appeared in the *Nation* on the Englishwomen and the "Contagious Diseases Acts." An ordinary guess at the authorship we should let go for what it was worth, but the mention of "private reasons" makes it proper to say that the *Woman's Journal* is mistaken. Miss Nightingale did not write the letter in question.

—One of the most striking and instructive portions of Maine's treatise on "Ancient Law" is that in which the author, after pointing out the wide prevalence of patriarchal institutions in primitive times, proceeds to show "that it is more than likely that joint-ownership, and not separate ownership, is the really archaic institution." He draws his proofs from the village communities of India, Russia, and the Danubian provinces, in which the patriarchal character is clearly distinguishable in different degrees of completeness. These views have been further supported by the discovery of analogous institutions in other communities, and one is interested to find the latest piece of evidence brought to light in regard to Mr. Maine's own country. It is a learned German that has detected an order of things which English students appear to have overlooked. A late number of Sybel's *Historische Zeitschrift* contains a review of a monograph by Nasse—"Ueber die mittelalterliche Feldgemeinschaft, etc., in England"—which proves the existence of a village community in early times, lacking, it is true, the patriarchal elements, which it may be supposed to have outgrown. "It is still possible to reconstruct a complete picture of the dwelling and court-yard, with little grass-plot fenced in near by, of arable land and meadow, in separate possession, it is true, but with common rules of management (*Benutzung*), and of the common pasture-land." When manors were formed, even after the Norman conquest, they were forced by the nature of things to adapt themselves to the village system, and even to form a part of it; and it was not until the time of the Tudors that the system was outgrown—although even to this day it has not wholly disappeared. It would be worth while to examine how far the early settlers in this country were influenced by the traditions and surviving remnants of this system, and how far, on the other hand, similar causes led to similar results. For the first colonists of New England had a free field before them, like the Saxon conquerors of Britain; and many points in the early land-tenure of New England are strikingly like those described in this article. When a town was organized, the process was that "the General Court granted a tract of land to a company of persons. . . . The land was held at first by the company as property in common" (Palfrey, ii. p. 13). This company of proprietors then proceeded to divide the lands by assigning first house-lots (in Marlborough varying from fifteen to fifty acres), then tracts of meadow-land, and in some cases "mineral land;" that is, where bog-iron ore was found. Pasture and wood-land remained in common, as the property of the company. New persons admitted as freemen would appear for a time to have become members of the company; but a law of the General Court, in 1660, provided "that hereafter no cottage or dwelling-place shall be admitted to the priviledge of commonage for wood, timber, or herbage, or any other the priviledges that lye in any towne or peculiar, but such as are already in being, or hereafter shall be erected by consent of the towne." From this time the "commoners" appear as a kind of aristocracy among the inhabitants. Sometimes new members were admitted by special vote, and the commons were gradually divided up. The right of the proprietors to do this was challenged sometimes by the non-proprietors (as in Woburn, in 1741); but was maintained by the law of 1660. In Ipswich, the rights of the commoners continued in existence until after the Revolutionary war, when (in 1788) they granted their rights to the town for the purpose of helping to pay the debts of the town.

—Few persons not librarians will get any notion from them, the faculty of attaching any definite value to large numbers being a rare one; but these figures about the British Museum will interest some of our readers Besides, we doubt if there are many ways in which a man who writes can be of more service in our day and country than he can be by calling attention, as often as possible, to the existence elsewhere of the great libraries, the makers and furnishers of scholars and students, which as yet we lack. Last year there were added to the Museum's library 32,013 volumes and pamphlets, 26,331 parts of volumes or separate numbers of serials and works in progress, 2,582 pieces of music, 1,181 complete files of newspapers, and 5,783 "sundries"—making in all nearly 68,000 articles added to the treasures of this great institution. On an average, there were each day in the reading-rooms 356 students, each consulting 13 books during his visits. The total number of readers was 103,884, and the number of visitors to the general collections was 460,635.

—In spite of the restrictions imposed upon correspondents, the large number of men of ability representing the British press at or near the seat of war cannot but succeed in making some very good and interesting reading. In letters in the *Times*, the *News*, and the *Pall Mall Gazette*, there has been a good deal of really excellent writing—work as effective and nearly as well done as if the man writing had been carefully finishing a chapter of a novel, or elaborating an essay which he was to acknowledge as his, and on which he intended to abide judgment. We might, if it were worth while, quote a good many proofs of the truth of this statement, which was suggested at the moment by a *News* correspondent's description of the rendering of the "Marseillaise" by the somewhat celebrated Mademoiselle Agar. Those who have heard the most declamatory of national songs, delivered with proper energy of leg and arm gesticulation by a good Frenchman, will understand how decidedly exciting Mlle. Agar's performance must be—especially when some thousands of Frenchmen in a state of patriotic exaltation unite to give the chorus. Mlle. Agar is an actress, with a reasonably good voice, which she knows how to manage, and with a person which serves her fairly well upon the stage, and excellently for her new *rôle* of embodying the genius of France when France is full of tigerish energy. As she comes forward, the spectator notices that her bare arms are muscular and well shaped; her hair hangs loose, and is black in color; her forehead is low and broad; her eyes are full of excited light; she is clothed in a white dress or robe, which allows the free play of her figure, none of whose movements is concealed.

She advances in a half-crouching attitude, suggesting the movement of the tiger, and her voice, as she begins, is suppressed and hoarse as though she were choking with rage and passion. When her chant commences, says the correspondent, she reminds one of a Brocken witch murmuring an evil incantation. As she goes on, every line is dwelt upon with an exaggerated emphasis, which, however, does not produce the effect of grotesqueness, because the vast assemblage listens with terrible and oppressive earnestness to every word, and almost to every syllable. When the climax is reached the tricolor is unfurled, mademoiselle kneels down, the audience rises, and the chorus is sung by everybody. As one reads this description, one thinks of the Spartan phalanxes advancing

> . . . "to the Dorian mood
> Of flutes and soft recorders;"

and thinks also of the character of the air of the song now heard whenever Germans get together—

> "Was ist des Deutschen Vaterland?"

It is at first almost plaintive, and never makes a nearer approach to the rage and exhausting fury of the "Marseillaise" than in being, as it goes on, firm and valiant music—

> . . . . "such as raised
> To height of noblest temper heroes old
> Arming to battle; and instead of rage
> Deliberate valor breathed."

In fact, the German patriotic poetry, as has been well observed, is far oftener tender, pathetic, domestic, and romantic than it is warlike or military; and furious or cruel it never is.

—Students, and teachers also, we may say, of the French language will find a desideratum in M. Auguste Brachet's "Dictionnaire étymologique de la Langue française," to which M. Egger, of the Institute, supplies a preface (Paris: Hetzel.) The work is divided into two parts. The introduction states, concisely and methodically, the principles of French etymology, and the vocabulary, which contains nearly all the words in the Academy's dictionary, indicates the certain or probable derivation of each. Doubtful etymologies are supported by adducing the laws of phonetic changes, with illustrative examples. Where a number of words exhibit the same transformation, it is fully explained in the first instance that arises, to which afterwards a simple reference suffices. Such a dictionary enables a most instructive and fascinating comparison to be instituted between the Latin, French, and English languages, and ought to make the way smooth for learning all three together, not to speak of the philological training by which one may easily become a more general linguist.

THE SECOND EMPIRE IN ITS BLOOM.*

We have given our readers a brief review of the first volume of Taxile Delord's "History of the Second Empire," warmly recommending this work to their attention. On perusing the second volume, we not only find no reason to retract our favorable opinion of that comprehensive production, but, on the contrary, are impelled to declare it the most valuable as well as the most interesting contribution to the history of our times which has come under our notice. Unaffected and unadorned, and everywhere displaying a most amiable candor and independence of judgment, it presents us with a precise and detailed account of the doings and workings of the neo-Napoleonic Empire, and a lively and comprehensive picture of the political and social life of France under it. It generalizes little, philosophizes little, and neither exhorts nor perorates; but it gives such an abundance of incontrovertible facts from which generalizations and lessons for the future can be drawn, and gives them so well grouped and so well illumined, that the reader cannot fail to form the most important conclusions concerning the past and the future. And those conclusions cannot vary much from the following: The Second Empire has been the sum of all villany; if continued as it was in its palmiest period, it must eat the vitals out of the French nation and render it a reproach to mankind.

Such is the richness of matter contained in the second volume that it would by far exceed the limits of a review in this paper merely to specify all the topics which would be of interest even to a non-French reader. Briefly, however, we must mention the most interesting: the *agiotage* fever, with its effects on society, industry, and commerce; the rise of prices and rents, and the advent of M. Haussmann; "Cæsarian Paris" with its "courtesans and bankers;" the baptism of the Prince Imperial, and the presentation by the Pope of a golden rose to the Empress; the Senate chastised by an *avertissement* for a slight fit of independence; debates on the Law of Regency; persecutions of the republicans; proscriptions and dungeons in the departments; the horrors of deportation; the funerals of Armand Marrast and Lamennais; conspiracies, infernal machines, and attempted assassinations of the Emperor; the execution of Pianori; royalist manœuvres; activity and decline of legitimism; Berryer and others at work for the Comte de Chambord; defection of Larochjacquelein; futile attempts to bring about a fusion of Orleanism and legitimism; meeting of Chambord and the Duc de Nemours at Vienna; the decadence and debasement of journalism; the cheap press, the feuilleton, and the advertisements; the gagging and falsification of public opinion; subsidization and semi-officialism; journalistic metamorphoses operated by De Morny, Véron, Mirès, Émile de Girardin, and others; transmutations of the religious press; the church in active league with Bonapartism; a crusade against philosophy; the Archbishop of Paris, Sibour, humbled by the Ultramontanes under the lead of Veuillot; coronation of Napoleon III.; proclamation of the dogma of Immaculate Conception; the revival of miracles; superstition fostered by the Government; opposition of the Academy; reception, as members, of Montalembert, Dupanloup, Berryer, and De Broglie; Imperial measures to curb the Academy, to reform the University, and to curtail higher instruction; opposition of the salons; Sainte-Beuve, Mérimée, and Gauthier surrendering to the Empire; assassination of the Archbishop of Paris; legislation concerning commerce, banking, and railroads; deaths of Béranger and General Cavaignac; attempt and death of Orsini; a new reign of terror under General Espinasse, as Minister of the Interior; fresh deportations; election of Jules Favre and Picard; opposition of Montalembert; the Italian war of 1859; the proscribed in Belgium, England, Switzerland, and Spain; granting of a partial amnesty; loosening of the dictatorial sway. With the opening of the year 1860 the second volume closes, and the third will probably bring us both the decline and the fall of the Second Empire.

Of the thirteen chapters into which the second volume is divided, none is more interesting than the one devoted to "Journalism," though the two following, which treat of "The Clergy" and of "The Academy, the University, and Literature," are hardly of less merit. The characters, practices, and juggler-like mutations of some of the principal representatives and managers of the press are depicted in most curious traits. The history of almost all Parisian organs of importance is sketched. But the history of no other organ is so characteristic of the baser sides of the period as that of the *Univers*, the chief Ultramontane journal, and no man who ever wielded the journalist's pen in Paris—not excluding even Véron, the Cassagnacs, and De la Guéronnière—has shown himself under more repulsive chameleon colors than its leading editor, Louis Veuillot. To trace the changing course of the *Univers* during the Revolution of 1848 and a number of subsequent years—a course which, throughout that period, ran parallel with that of the *Constitutionnel* and a number of other non-clerical journals, ultimately the main propagators of Bonapartism—is to show the depth of self-degradation of which journalistic demagogism is capable. *Ab uno disce omnes.*

In February, 1848, the *Univers*, ultra-conservative though it had been, hailed with shouts of delight the downfall of monarchy in France. "Immoral under Louis XIV.," these were its words, "scandalous under Louis XV., despotic under Napoleon, unintelligent till 1830, astute—to say no more—till 1848—monarchy succumbs under the weight of its faults." The *Univers* was not satisfied with the republic in France, it preached universal republicanism. That pious Catholic paper mocked at Catholic Austria, the last crumbling prop of royalism, and accused bigoted Ferdinand II. of Naples of attempting to introduce the pest into Sicily. After the bloody conflict of June, it mourned with the republicans, and only expressed a fear "lest liberty should be made to expiate the crimes of faction." The socialists, it charitably believed, had been led into error by purely Christian impulses. It advocated the spending of some millions by the state for the purpose of trying by practical experiments the value of some of the communistic theories; "France is generous, she pays willingly for the glory and folly of her children." The right of instruction it said was, under certain circumstances, "the most sacred of duties;" every illiberal principle it branded as "anti-Christian;" the refusal of the freedom of the press it considered "a scandal;" free association and freedom of conscience were its "rallying words." It demanded free worship for all dissident sects no less than for Catholics. Democracy, to hear the *Univers*, was a child of Rome, where it received its baptism from the hands of Pius IX.; the church was free only in "the glorious republic of the United States." Bonapartism beginning to raise its head, the *Univers* became indignant: "It is not the Committee of Public Safety but the Code Napoléon which has destroyed France." "The Empire was no monarchy, it was a despotism; despotism is only a form of anarchy." Louis Bonaparte appeared to it "running after a dictatorship which could be nothing else but a parody." In 1850, the *Univers* turned legitimist. It could expect for France no return to order except through monarchy with the elder branch of the Bourbons. It advocated the fusion of the two branches. A year or two later it was on its knees before imperialism made triumphant by the *coup d'état*. It glorified Napoleon I. and Napoleon III., and spoke with detestation of the enemies of the latter, the revolutionists, "whose doctrines inspired horror," and the parliamentarians, "whose obstinacy elicited pity." Against these demoralized foes it saw two armies clasping hands, "the one composed of four hundred thousand warriors, in all the vigor of discipline and youth, ... the other . . . . the army of charity, numbering forty thousand priests and fifty thousand nuns." It then entered upon a crusade against philosophy, classical studies, and liberalism under all its forms.

---

* "Histoire du Second Empire. Par Taxile Delord." Vol. II. Paris: 1870.

Such were the chief allies of the Second Empire in the arena of public discussion. The Empire amply reciprocated their favors; but it did much more in the way of watching and disarming all opposition in the same field. An *avertissement* was sent to a journal on account of "an acrid criticism of the law of March 29, 1852, on sugar;" another was decreed for an article representing Napoleon I. as an apostle of the revolution; another, for a comparison of the downfalls of Charles X. and Louis Philippe with that of Napoleon I.; another, for the following statement in a Protestant religious paper: "Five persons have recently abjured in Edinburgh the errors of Roman Catholicism;" another, for a severe criticism on an act of the municipal authority in the dramatic feuilleton of a provincial paper; another, for polemical acrimony "exceeding the limits of good taste," according to the æsthetic sense of the prefect of the Lower Loire; another, for the publication, during the Crimean war, of news from Constantinople, "probable but not official;" another, for an article "in opposition to the national sentiment;" another, for "attacks on the allies of France;" another, for passages offensive to the Pope in a feuilleton by George Sand; another, for a doubt in the veracity of a note in the *Moniteur*. The *Phare de la Loire* having said in its report of the opening of the parliamentary session: "The Emperor then delivered the speech which we have published, and which, *according to the Agence Havas*, elicited repeated cries of *Vive l'Empereur!*" etc., it received an *avertissement* "in consideration of this dubitative form of expression being so unbecoming in face of the striking enthusiasm with which the words of the Emperor have inspired the great bodies of the state, as well as all good citizens." And all this is but the milder side of the late Napoleonic despotism. The accounts of the more serious persecutions of its enemies by military and civil authorities are quite differently startling. But we have no room to follow our author further.

ORTON'S AMAZON.*

AMERICAN literature is probably more deficient in works of travel than in any other records of human effort. We are not without ambitious chronicles of journeyings on most of the continents, but beyond half-a-dozen works we have nothing to show which deserves to live to mark the restlessness of our people. To the discoveries of Africa and Australia, we have contributed nothing except a very little, and that long ago, by the surveying expedition which carried Dana to the latter region. In Asia, Pumpelly's geological work may claim for us a place in the history of the discovery of the greatest continent—if we may use the word *discovery* in reference to the continent which is the mother of races. Our great expeditions which have explored the broad and difficult country between the easternmost borders of the Rocky Mountains and the Pacific with a rapidity and thoroughness unequalled in the history of geographical discovery, show very plainly that there is no want of talent for this sort of work among our people. But though the names of our travellers are not to be linked with the history of the explorations of the continents of the Old World, there is a good prospect that we may secure a fair place in the history of the discovery of our twin continent of the New World. The government explorers, Herndon and Gibbon, Hassaurek, Agassiz, and (to a certain extent) Fletcher, have done good work as travellers in that region.

Mr. Orton is clearly entitled to a fair place among the explorers of South America. His journey, although for a part over the pretty well-beaten paths of South American travel, carried him over some hundreds of miles of country which has rarely been traversed by modern explorers. From the uplands of Ecuador to the main stream of the Amazon, Mr. Orton's journey was through a region which has never before been adequately described in our language.

The main motive of our traveller was that which has led so many intelligent naturalists to South America; and although his book does not treat us to a large amount of special scientific information, we get through the whole the sort of information which the professedly scientific traveller is most apt to obtain. The structure of the great chains of the Andes, the history of their great volcanoes, the character of the relics of the aboriginal peoples, all are treated in an intelligent manner. The three hundred and fifty pages of the book contain a remarkable amount of information on a great variety of subjects. The copious note-books of the author have poured their treasures into his pages with a lavish profusion. Generally, the observations show the trained traveller; sometimes, indeed, comparisons of what he saw with things seen in other lands are almost unnecessarily introduced to show that he is not on his first journey. This parade of knowledge sometimes takes a more objectionable shape. Who cares to be told that "the same year which saw Shakespeare carried to his grave beside Avon witnessed the founding of Pará"? But the genius of indirection does not always possess our traveller; the very chapter so inauspiciously begun gives us a very good, succinct description of Pará.

When Mr. Orton reports the results of his own observation, he generally gives some trustworthy information; when, however, he collects the statements of others, he sometimes shows a wild credulity worthy of Herodotus. Speaking of the Napo women, he says: "They render their husbands idiotic by giving them an infusion of *floripondio*, and then choose another consort. We saw a sad example of this near Reobamba, and heard of one husband who, after being thus treated, unconsciously served his wife and her new man like a slave." This is worthy to go with the stories of the "succession powders" and other medical chimeras of former centuries. The same capacity for the appropriation of questionable statements is still more evident where our traveller pauses in his journey to treat us to general discourses on the geological history of the region he is traversing. The chapter on the "Geological History of South America," containing a vast amount of poetically rendered misinformation, is indeed a sad defacement of the clear, simple narrative which it cuts in twain. We take from the first paragraph: "Long protracted eons elapsed without adding a page to the geology of South America. The Creator seems to have been busy elsewhere. Decorating the north with the gorgeous flora of the carboniferous period, till, in the language of Hugh Miller, 'to distant planets our earth must have shone with a green and delicate ray,' he rubbed the picture out, and ushered in the hideous reptilian age, when monstrous saurians, footed, paddled, and winged, were the lords of this lower world. All the great mountain chains were at this time slumbering beneath the ocean. The city of New York was sure of its site, but huge dinotheria wallowed in the mire where now stand the palaces of Paris, London, and Vienna." The worst balderdash which has afflicted our language during the last ten years has come from amateur geologists. No sooner does a man become possessed of a few of the great conceptions which the science affords than he begins to break all linguistic bounds. As soon as he enters into the illimitable past, his gambols lead one to suppose that he must be possessed of the spirit of a pterodactyl, or some other vagarious creature. What else could lead a discreet man to assert that, in the lifting of the Andes, "a man's life would be too short to count the centuries consumed in the operation"? Allowing the extreme time that the calculations of the most indulgent physicists have granted to the physical history of the crust, we have but two millions of centuries; to count this number would occupy an active man about a month.

But these faults, though it is the critic's duty to point them out, are more than outweighed by the many good qualities of the book. We can pardon a good deal of fine writing in a traveller who has the courage to give us, without any of the palliation of false delicacy, the following picture: "We found the governor, one day, taking lice for his lunch. Sitting behind his little boy, he picked out the little parasites with his nails, and crushed them between his teeth with a look of satisfaction. Eating lice is an old Indian custom, and universal in the Andes. In Inca times, it was considered an infallible remedy against sore eyes. We have seen a dozen women sitting on the ground in a row, picking out vermin from each other's heads." The honesty which causes our author to represent things just as he saw them leads him to a most commendable care in crediting to the works of other travellers in the same region all that he has gleaned from them—we are sorry to say, not a very common virtue in travellers.

---

* "The Andes and the Amazon; or, Across the Continent of South America. By James Orton, M.A., Professor of Natural History in Vassar College." New York: Harper & Brothers. 1870.

The closing chapter gives clear and full directions as to the methods and cost of travel in South America. Having taken the reader with him by his most interesting narrative, he offers him a chance to make the journey himself for six hundred dollars in gold. The book is well got up. The map, despite the wretched way in which the mountains are misrepresented, gives the route very well, and the index is a sufficient guide to the contents.

GAZZAM'S TREATISE
On the Bankrupt Law for Business Men.
BY AUDLEY W. GAZZAM,
SOLICITOR IN BANKRUPTCY, UTICA, N. Y.

This work has been carefully prepared by a Solicitor in Bankruptcy, for the use of Business Men, and others who desire to *understand* the workings of the Bankrupt Law.

The arrangement of the text is something entirely new and original, and the several provisions of the Law are treated of as they usually occur to a reader seeking information and instruction. The notes having been compiled from the latest English and American cases, will be found very full. *This is the only work containing the recent Amendments to the Bankrupt Law.*

Price, in cloth, $2 50; half law sheep, $3. Sent free by mail on receipt of price.

GEORGE T. DELLER, Publisher,

Illustrated Travels

ALL ROUND THE WORLD:

A Record of Discovery, Geography, and Adventure.

EDITED BY H. W. BATES,
Assistant Sec. of the English Royal Geographical Society.

Prospectus.

In the present busy age, when steam navigation is bringing the most distant countries into closer relations, and the spirit of enterprise is opening up new sources of wealth and new fields of supply, a knowledge of the various regions of the earth is becoming daily of more importance. The small modicum of such knowledge as we obtain by the ordinary dry and uninviting methods is wholly insufficient to enable us to comprehend the whereabouts of the interesting events which are continually becoming subjects of social and political discussion.

The "ILLUSTRATED TRAVELS" is copiously illustrated with beautiful and authentic engravings, and gives accurate information of foreign countries, in the form of narratives, by travellers of the highest repute who have recently visited them.

In the choice of subjects for each monthly part, preference will be given to those countries which happen to be of the most general interest at the time. Thus the different parts of the world will be treated of in succession, and in course of time a body of useful information and entertaining reading on the most interesting subjects will be brought together, relating to the position, physical features, and natural productions of countries, and to the characteristics of their inhabitants, their institutions, customs, opinions, and everyday life. No branch of knowledge connected with geography, and treated of in the best books of travel, will be excluded.

The Political and Religious Aspect of Nations, Historical Geography, and Visits to the Sites of Important Events in Classical and Biblical History, Physical Descriptions of Interesting Regions, Narratives of Naturalists, Hunting Adventures in Wild Regions, Alpine Climbing—all these will be included in the range of subjects, as well as Narratives of Sea Voyages, Journeys of Discovery, and Descriptions of the Modern Condition of Countries.

UNITED STATES.

Based on Seavey's Goodrich's History. By L. J. CAMPBELL. With Maps and other Illustrations.

This little work relates briefly, but clearly and accurately, the leading events in the history of our country. It is believed to be at once the most concise, as well as the most accurate, School History now before the public.

BREWER & TILESTON,
17 Milk Street, Boston.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 29, 1870.

The Week.

THE Prussians push the siege of Paris with their wonted energy, though hardly any shelling has as yet been attempted, and very little fighting has taken place since the engagement of the 19th. The reports which reached us from Orléans and Beauvais, respectively, about heavy fighting in the field south and north of Paris, turn out to have been idle fictions. The engagement of the 19th, or, as it is called, the battle of Châtillon—from the small village opposite Forts Vanves and Montrouge, near which the main part of the contest took place—was a disastrous affair to the arms of General Trochu. It is said to have been fought against his better judgment, silenced by the persuasion of General Ducrot, who had just escaped in disguise from Sedan. Preceded by a reconnoissance on the 18th, which revealed the advance of the Prussians towards Versailles, and their half-accomplished occupation of the woods of Verières, Clamart, and Meudon, the assault by the three divisions under Ducrot was made about daybreak, but portions of his troops incautiously advanced too far, and came under a destructive fire; others—inexperienced Gardes Mobiles—fired into the ranks of a regiment of regulars who preceded them, which caused confusion and a retreat; while the troops on the left, on the heights of Villejuif and Vitry, were thrown back still more precipitately towards Paris, the streets of which, south of the Seine, were thronged with fugitive Zouaves. Ducrot was compelled to abandon a redoubt in front of Forts Vanves and Montrouge, and to retire behind the line of the regular fortifications, and the plan of fighting the enemy outside of them seems to have been definitively given up. Seven or eight position guns and several thousand prisoners were captured by the Germans, who are said to have on this occasion again displayed that wonderful familiarity with the battle-ground to which many of their late successes may in part be attributed, while the French seem, on the whole, to have proceeded with the carelessness and that confidence in mere *élan* which have so often proved fatal to their operations in this campaign. The Gardes Mobiles are extolled in the Parisian reports for having exhibited that *élan*, but the cowardice of the Zouaves is an unmistakable sign of increasing demoralization in the remnants of the old army. This demoralization paralyzes Trochu to a degree which makes "a defensive without an offensive" a necessity. Another cause of paralysis is the enemy within gates, Red-republicanism. However, Gambetta and Ferry announce to France and the world that Paris is undivided in sentiment, and determined to stand or fall fighting.

Toul, after a very strenuous resistance, has finally surrendered, yielding to a terrific and relentless bombardment. Its garrison obtained the conditions that were granted the army at Sedan. The capture of Strasbourg is reported, as we go to press, to have taken place on Monday. The reduction of Metz seems to be expected more from the operation of time, which must gradually exhaust the scanty resources of the large army there invested, than from active siege operations. Yet Bazaine continues to show himself defiant. The report, however, which comes from Saarbrück, of his having again—and again to his grievous loss—attempted to escape north—to Thionville—deserves no credit, as it refers to a rather old date, and the authorities in Berlin would certainly not have hesitated in making an official announcement of this new success of the German arms. Thionville is reported assailed and vigorously defended. Nothing further is heard about Soissons. Orléans has been evacuated. Chartres disbands its defenders, and resignedly awaits the enemy. Common fear, more than anything else, characterizes the resolutions and doings of most of the French towns more or less remotely threatened by the now almost unresisted advance of the invaders. Lille and Cherbourg, Lyons and Bourges, make preparations for defence, instead of pushing forward their men to assail or harass the exposed wings of the German army; and it is saddening to the friends of the French nation to read of *defensive* measures resorted to by the cities of the extreme south, Marseilles and Toulon. Nor is it less saddening to hear that some importance is attributed to the offer of a battalion of Spanish volunteers by Orense; to the attempted formation of Spanish guerilla bands in Languedoc; to the arrival of some volunteers from Italy, though without the red-shirted "liberator," who is guarded in Caprera; or to the offer by Mieroslawski of his rusty Polish sword—a sword which, in its brightest days—in 1848 and 1849—proved of very little use to either Poland, Sicily, or Baden, whose revolutionary causes it in turns engaged to serve.

The letter of our Paris Correspondent, written three weeks ago, which appears on another page, has been borne out very remarkably by the telegrams which have reached us within the last week. The Provisional Government are plainly afraid to do the only thing that is left for France to do—make peace on the best attainable terms. Thus far, although the whole French army—horse, foot, and dragoons—has been put *hors de combat*, and the capital is besieged, they have actually made no offer of terms to the invader. Jules Favre has gone to the Prussian camp and had a conference with Bismarck, but actually seems to have had nothing to propose, except that the Prussians should stop fighting and go home. Of course, on this basis negotiation was useless, and Favre has accordingly come back, and the Government has committed the almost incredible folly of postponing indefinitely the summoning of the Constituent Assembly, and a proclamation, signed by Crémieux, Glais-Bizoin, and Fourichon, announces in the usual fustian "that Paris is exasperated, and will rather bury herself beneath her ruins"—whatever that may mean—and that the Government is going "to respond to the insolent pretensions of the Prussians by resistance to the last extremity." Are these pretensions "insolent?" Let us see. France asks for an armistice in order that a government may be set up capable of making a valid treaty of peace. Prussia agrees, on condition that her military position shall not be worsened by the delay, or, rather, that it shall be worsened as little as possible. We need only point to the constitution of the Prussian army, and to the condition in which the war leaves Prussian industry at home, to show that, no matter what military precautions she may take, Prussia must suffer seriously from any delay. The shortness of her wars is an essential condition of her military system. France, on the other hand, must inevitably, no matter what she cedes in the shape of position or fortresses, gain by delay. She has chosen to swap horses while crossing the stream; and what she needs now, of all things, is time to recover her scattered senses, collect stores and munitions, and arm and drill her population. Therefore, a month is just now worth more to her than Strasbourg or Metz. The retention of these cannot save her; but a new army with a good leader might. Moltke therefore demanded, as compensation for the delay involved in the armistice, Strasbourg, Toul, and Verdun (Toul has since fallen), so as to keep his communications free. No military man will say this was unreasonable, and no intelligent civilian.

Next, as to the terms of peace, Bismarck has issued a circular in which he insists on the surrender of Metz and Strasbourg as necessary to the defence of Germany against French aggression. Are these exorbitant demands? We must judge them partly by reference to the German military position, and to the French means of resistance, and partly by the usages of civilized belligerents. Now, when we say that the French regular army has been either destroyed or shut up in besieged fortresses, which have no hope of relief; that what is left of it in Paris is so demoralized that, in the recent action at Châtillon, a regiment of the Zouaves, who have with the Guard formed the *corps d'élite*, threw away their arms and ran in wild disorder; and that the Prussians are around Paris 400,000 strong, under the leadership of the greatest living strategist; and that the campaign only began in August, and that France has no organized government—we present a state of facts on which it is impossible any set of men, rational enough to carry on a war, can base expectation of anything short of the subjugation of France within a very few months. As far, therefore, as the mere preponderance of force can justify pretensions, it is safe to say that no pretensions Prussia could put forward short of the total destruction of the French nationality could fairly be called "insolent." If, on the other hand, we judge Prussian demands by precedent, we find that no similar set of successes in the field has ever been followed by claims less exorbitant. No treaty of peace made by France with a conquered enemy since the Revolution has, considering the relative strength of the belligerents, let the vanquished off nearly so easily. The campaign of Jena cost the King of Prussia half his dominions, and compelled him to reduce his army to 40,000 men. To come down still later, the treaty of Paris deprived Russia of a great fortress and compelled her to abstain from keeping any fleet in the Black Sea; and the treaty of Villafranca deprived Austria of a great province, though her army was still capable of protracted resistance. In fact, if we look at the Prussian demands in the light of usage, and remember that war is not a mere game of skill, but a means of determining national rights and duties, and fixing international relations, we must admit that they are on the whole moderate.

What makes the French position all the more absurd is that that Government which has succeeded the Emperor, and which asks Prussia to treat the downfall of the Empire as the close of the conflict, does not contain a single man who can go to the Prussian camp and say: "I never was opposed to German unity; I never doubted the legitimacy of your longing for it; I never saw in it anything at which France could justly take offence; I never thought German weakness and discord necessary to French glory; and I never placed French glory in anything but liberty and industry. I never wanted France to annex the Rhine Provinces by force; and the reason why I opposed the present war was, that I thought all attacks on you unjustifiable, and not that it was simply inopportune and unlikely to catch you at a disadvantage." If there was a party in France which could use this language, which had opposed this war on its merits, which could show that a considerable body of the people shared its sentiments, and which had now obtained possession of power, it might indeed fairly claim the utmost indulgence and confidence from Prussia. But, we say it with great regret, there is not one public man in France at this moment—we do not except the members of the Provisional Government—whose position with regard to the foreign policy of France ever since 1866 does not render his talk of Prussian "arrogance" or unreasonableness positively ludicrous. It is a lamentable fact that the failure of the Empire to attack Prussia in 1866 contributed powerfully to strengthen the Liberal party, and enabled it to wring from the Empire the concessions of last January.

As to the chances of the Republic, the events of every day go far to justify the caution we took the liberty of addressing to our readers about it when the news of it first arrived. The plain truth is that there is only one class in France—the workingmen of the great towns—who desire a republic. To these we may add a few lawyers and literary men; but the republic the workingmen desire is a socialist republic; for such an one as Gambetta or Favre had in his mind they have, as was seen in 1848, as hearty a detestation as for monarchy. On the other hand, the peasantry, who form the great bulk of the French population, hate and fear the Republic, and will always help any one who undertakes to overthrow it, because in their eyes it threatens property. The *bourgeoisie* share their feeling. In fact, we believe there is not now in France a tithe of the republican sentiment there was in 1848. The events of that year went far towards killing it. The proclamation of the Republic in Paris is due partly to the hope of the Reds that they will have their way under it, and partly to the inability of the Moderates to suggest anything else. But the end is not yet; and though we dislike prediction, we are not afraid to express our belief that there is still a strong chance of a constitutional monarchy, or of something else than a democratic republic; or that if a republic is set up, it will be by no means the thing over which some Americans are waving their hats. Those who have gone crazy over it would, therefore, do well to put on their clothes and return to their homes.

The *Tribune* has, on all this matter of the European war, been so sensible and able, and given so many indications of a healthy brain, that we hate to inform against it—and yet duty is duty. On Tuesday, discoursing of the French Republic, it acknowledged that the Republic was hateful to the "ignorant and priest-ridden peasantry," but declared boldly that this did not matter much as long as it had "the ardent support of liberal and enlightened France;" and evidently hopes the Republic may be set up, whether the peasantry—that is, nine-tenths of the French people—like it or not. So it appears that, after all, a majority ought not to count for so much as an intelligent minority in fixing the form of government! Fie for shame! Does the *Tribune* seriously suppose that people don't read its annual article against college education, and that other annual article against the silly "educated American" who distrusts universal suffrage, and the numerous articles which have made it plain as a pikestaff that, with a good pair of legs and of arms, a good stomach and eyesight, a man is fit not only to be a citizen of anything in the way of state ever set up, but knows far better than either the bench or the bar or the clergy what laws ought to be passed? This is really awful. We would save the *Tribune* if we could, but it is too well known to make any disguise successful.

Rome was occupied by the Italians on Tuesday week, the 20th, after a resistance of very brief duration, and which inflicted no great loss on either party. Some little effervescence of the populace—the Roman inertness scarcely rose above that—was promptly suppressed by General Cadorna. Next Sunday is the day fixed for taking the plebiscitum. The various ways in which the conservative Italian press has accommodated itself to the abrogation of the September convention are quite amusing. According to one view, the Emperor personally was the second party to the treaty, and so long as he retained a shred of his sovereignty Italy was bound in honor to him. To this it was objected that it seemed like taking a mean advantage of Napoleon's misfortunes to repudiate the contract with him; whereas it was only necessary to assume that the engagement was with the Imperial Government, and this having been superseded by an Opposition that had always denounced the convention, there was an end of constraint on one side and obligation on the other. After all, Italy has entered Rome not only because she was compelled to, but because she could; and she could merely because neither France, nor any government of France, was able to interfere with her.

The *à priori* politicians have been coming in, surrendering, and begging for their lives in large numbers during the last four or five months, and, although mercy to them is cruelty to the state, we fear most of them have got off easily. Some, however, have actually of late been trying to make their escape, by disguising themselves as rationalists and experimentalists, and these certainly should have no quarter. A good many of them who were most insolent and abusive towards the opponents of the Chinese treaty, have actually since then had the impudence to come forward and refuse to admit the Chinese laborers to the American markets—their humanity notwithstanding—on simple grounds of expediency, and expediency of a very base sort, too—namely, the desirableness of keeping all the work there was to be had for the Aryan branch of the human family; and have discoursed with great fluency on the advantages of their arrangement to the nation; and, when you mention "natural rights" to them, put on a stupid, ignorant air, as if they had never heard of these things, and ask you where they grow. For these impostors, we trust there will be no compunction.

The State Convention of the New York Democrats was held in Rochester Wednesday week, and did nothing that was not expected, except, perhaps, that there was rather more tameness of submission to Tammany than some people had been anticipating. The so-called Young Democracy hardly put in an appearance, and made no attempt to contest the seats of the Tammany delegation. The country Democracy also was perfectly quiet, and the Tammany delegation was the convention, as, indeed, was no more than fair, if Mr. Tweed can keep his promise that this city and Brooklyn shall give Hoffman from fifty-five to sixty-five thousand majority. The platform is well enough made for party purposes, and there is one resolution which possesses national interest: "Our tariff of duties," it says, "should have the one only lawful purpose of obtaining necessary revenue . . . the present system of favoritism, miscalled protection, is simple robbery; . . . except in so far as the legitimate expenses of the Government may require, free trade is the policy of the country." The other resolutions declared, in substance, that a license law is more favorable to temperance than a law of prohibition; that Fenian raiders in jail have been there long enough, and should be let out; that Cuba, Ireland, France, and Germany have a claim on American sympathy—France for her bravery and for having set up a republic; Germany for having shown her overwhelming power and established her unity; Ireland for lying under hostile domination; and Cuba for the same reason, and because the United States Government has "actively aided Cuba's enemies;" that useless and vexatious taxes should be abolished, and the entire volume of taxation should be reduced; that, as "many of the issues which have divided good citizens in the past are now settled," conservative men of all parties should join in restoring ascendency in the Government to the principle on which it was established, but which is not stated, though no doubt it is Mr. Samuel Tilden's system of decentralization which is referred to. Mr. Tilden's hand it is, too, we suppose, which framed the eulogy on Governor Hoffman and the opening resolution which arraigns "the present Federal Administration."

Grant's administration, the Convention asserted, "has come short of the expectations of its own friends," which, we suppose, is true of all administrations since Solon's. It has "shown its inability to devise an intelligent financial policy," but the Democratic party has shown no ability to do better than Mr. Boutwell, while intelligent condemnation of Mr. Boutwell's policy, and effective modifications of it, have all come from Republicans; it "has failed to relieve our internal revenue of oppressive complications and intricacies;" but it has to some extent afforded such relief, and the Republican majority in Congress has had such pointed reproof from the Republican majority at home, that the next Congress will go still further on the road entered upon by the last. The administration has given "large grants of public lands to great corporations," but so have all administrations for many years, and with the popular approval, and with great good result, while to the popular belief that the system has been carried far enough the Republican majority in Congress last spring gave full effect. The administration has a "feeble foreign policy;" but no one can assert and prove, say before President Woolsey, that the administration has not shown exact justice to Cuban and Fenian, or that the country at large is not itself responsible for the condition of the *Alabama* business. The administration "hinders foreign immigrants from assuming the obligations of citizens;" but as thereby a very great number of fraudulent votes may probably be kept out of the ballot-box in this city, everybody but rogues might be tender and look on this error with lenity. The administration "retains in office unworthy men"—which is true, but what are the Democracy going to do about it? The Democrat is not alive, so far as we have heard, who favors a Civil Service bill, and as for having all officials good men under our present system, a guileless Sister of Charity would never think it—unless, indeed, Mr. Sweeny or Mr. Tweed were to tell her so. As for the other count in Mr. Tilden's indictment, that relating to the interposition of Federal troops in North Carolina affairs, it is enough to say that the blame of it rests with Holden, the Governor of the State, who made requisition for them. It was, as we think, a piece of roguery, but it was not Grant's, or Sherman's, or Belknap's.

The treatment of "the boys" was the only unexpected or particularly interesting thing about the Convention. Free tickets to the number of two thousand were given them by the Tammany managers, in the expectation, seemingly, that there might be need of their services to repel the assaults of Sheriff O'Brien's friends and deputies. But "the boys"—among whom, remarks the *Sun*, was "probably the undiscovered Nathan murderer"—are gentlemen whom for various reasons no city of the size of Rochester fancies as inhabitants or even very transient visitors, for which cause they were put upon a milk train instead of the fast express, and were landed in Rochester only an hour or so before it was presumed they would be wanted. There was exceedingly loud lament among them at having been kept on the rail about twenty-one hours, during which time, however, they "cleaned out" the eating-houses, bar-rooms, orchards, and bake-shops of such towns as the train stopped at, and, while the train was running, fought each other, picked each other's pockets, and got violently drunk. The people of Rochester, however, as they saw the debarkation in the morning, and observed the alacrity with which the boys "went through" restaurants and liquor-saloons, rose up and blessed Mr. Tweed that the rank and file had not arrived at ten the night before when the palace-cars brought up the officers. Hostilities not being necessary, the choicest of the army occupied advantageous positions in and about the hall of the Convention, and operated on the pocket-books and watches of delegates and visitors. Mr. Samuel Tilden, among others, got, we hope, a realizing sense of the company he keeps when he opens conventions and the like for Mr. Tweed, and Mr. Hall, and Mr. Hoffman. He had his pocket picked by a gentleman in attendance. To add to their wrongs, "the boys" were withdrawn from Rochester—the authorities of the place being, it is said, urgent with the magnates—at six o'clock in the evening, before dark; and on their arrival at Jersey City the local police made indiscriminate arrests and locked up large batches of them, including a Commissioner of Charities and Correction.

While no one knows what the President wanted a new Minister to England for, nor why Mr. Motley could not do what might be wanted, there is some satisfaction felt that the place is at last filled. Of course, there is no doubt of Mr. Morton's confirmation by the Senate, as he is in good and regular standing with his party, and in close communion with its leading counsellors, one of whom, in fact, he is. Perhaps there are few more influential civilians in its ranks. His authority, however, is rather that of a man who follows the drift of public opinion than of a man of great abilities—though he has very good abilities—or a man of ideas. He has, for example, enough of the mere politician in him to put himself, as he did a couple of years since, at the head of a repudiation movement in the West, as General Butler did in the East, because he thought the Republican rank and file intended to repudiate. He is not of the class of public men who have higher conceptions than that of their duty to party and people. He knows, however, when to lean to one side and when to straighten himself, and has never lost his place in the party, though the aberration above-mentioned, and certain other indications, have caused the pretty general persuasion that future presidential elections cause him some of his anxieties. His national reputation Mr. Morton first acquired when the rebellion broke out. He made as efficient a War Governor in Indiana as Governor Andrew in Massachusetts, and had far more than Governor Andrew's difficulties to contend against. He was surrounded by treasonable organizations; his State bordered more than half on Kentucky, whose loyal people, indeed, soon looked upon him as their Governor; his State legislature was so treasonable that it was only by a species of trick (advised by him)—the withdrawal of the Republican members, leaving the house without a quorum—that the Governor could free his hands so as to be of any service to the Union. His energy, readiness of resource, and resolute facing of all kinds of responsibilities, made him, during the four years of the war, one of the most valuable citizens in the country. Elected to the Senate in 1867, he has been, as we say, an influential member, though he has not there increased his reputation. Beyond the fact that he is a man of fair education, and a lawyer known in the West as being of more than average ability—a man of good natural parts, and a politician conversant with the feelings and wishes of the governing party in this country—his qualifications for the business of diplomacy are not known to us; but he will probably have nothing to do in London.

POLITICS.

There are only two of the States in which the canvass for the fall elections possesses features of much interest—Missouri and Massachusetts—and in both of these the interest is due to the rise of new questions which neither of the great parties has as yet definitively taken up. In Missouri, we have amnesty, civil service reform, and the reform of the tariff; in Massachusetts, prohibition, labor reform, with a slight dash of woman's rights, besides an underhand struggle for the United States Senatorship, and some old scores arising out of the great Hartford and Erie imbroglio. Alongside of all these there are, of course, the old issues between the Democrats and Republicans; but it must be admitted the greater part of them have greatly faded, and now seem to possess comparatively little exciting influence. That the principal one—negro suffrage—has lost most of its old power on the Democratic temper, it is easy to see from the rare mention made of it in the Democratic papers, and the admission of negro delegates to the Democratic Convention in Louisiana. Even reconstruction and the debt are only languidly assailed, and indeed it may be still said that the question which will be submitted to the people at the coming elections is generally which of the two parties has the most respectable antecedents. Neither has much to display in the way of intentions. The Democrats have stopped saying they are going to reinstate the States in possession of their "rights," and the Republicans have done so much already that they are unable to say what they will do hereafter, and content themselves mainly with pointing to the value of the acquisitions over which they stand guard, and to the suspicious appearance of their opponents.

It must be said, however, that, on the question of free trade or protection, or revenue reform, as it is more generally called, the Democrats have grown bold. Most of their platforms declare unequivocally in favor of duties for revenue simply. The Republican utterances on this point are much less decided, but there are, nevertheless, signs of advance. A year ago, the *Tribune* would hardly admit that a free-trader was anything but a Copperhead in disguise; but it now proclaims that, with regard to the tariff, the majority in each district should lay down the law for the party, and the minority should abide by it. *Harper's Weekly* claims, *apropos* of the split in Missouri, complete liberty of opinion, and uses that incident as a warning against a too rigid adherence to the protectionist doctrine. But about the nature of the incident there is a great deal of discussion. The bolt is ascribed by Mr. Schurz, who heads it, to a desire for tariff reform, and for an amnesty for the ex-rebels, while the regulars maintain that they are as much in favor of an amnesty as anybody (they qualify their desire for it, however, by saying that they are ready for it whenever "the safety of the State" will admit of it), and that the secession is due to the free-trade love of disorganization and to the evil nature of the St. Louis *Democrat*, whose heart seems wholly given up to iniquity. The whole affair is important, as the first open manifestation on the part of a powerful section of the party of a desire to insist on a positive policy with regard to new questions, and to refuse to rest any longer on its laurels. There can be no doubt this tendency will spread.

Both parties have naturally declared themselves on the events of the European war, which has really furnished the public mind with its only subject of interest since the 1st of July. The Republicans—certainly the most intelligent and zealous portion of them—sympathize strongly with the Germans, for all sorts of reasons, religious, social, and political. Indeed, the ideas which lie at the bases of Republican policy may be said to be those which the growth of German influence in Europe is helping to spread, and the Republican party has found amongst Germans in this country some of its ablest and most enthusiastic supporters. No hands bore the banner of free-soil on this continent earlier or more enthusiastically than German hands, and no portion of the population furnished the cause with a greater number of martyrs than the German portion. The Democrats, on the other hand, not only do not take kindly to German ideas, but have a strong sympathy with Bonapartist democracy, and, in addition to this, have to keep the Irish, who are all French partisans, in good humor. The Republicans, accordingly, have been plunged in difficulty by the overthrow of the Empire and proclamation of a republic in Paris, inasmuch as it apparently gave France a claim on them she did not previously possess, while the Democrats have by the same event been, in some degree, helped out of a bad scrape. But it must be admitted that the platforms of both of them wear on this theme a somewhat cloudy aspect. They are glad King William has conquered, and yet sorry that it should have been France which he conquered; while, on the other hand, they feel that his conquering France is the very best thing that could have happened her, inasmuch as it has turned her into a republic, which it is to be hoped will drive the Prussians over the Rhine, and yet without leaving Germany any worse off than she is now. The gist of the matter, indeed, seems to be that whichever wins it is all for the best, and not only for the victor but the vanquished. For Ireland, we see the Democrats desire the establishment of a republic, on the model of that of New York City, which is the first Irish republic ever established and possesses many novel governmental contrivances.

The great heat of the past summer has undoubtedly had much to do with the prevailing political languor; the course of the administration has had more. General Grant has certainly redeemed his promise not to have a policy of his own, and to confine himself rigidly to the execution of the laws. His only departure from this rule was in the St. Domingo affair, an incident which has never been satisfactorily explained. Nothing that is known of his character, or relations with other people, will fully account for the passionate way in which he pursued the acquisition of that island. But, with this exception, he has said or done nothing to light any flames of discord or to supply ammunition to party orators. He has given the Republicans little or nothing to defend, and the Democrats little or nothing to assail, and we think we may safely say that for this the country is sincerely grateful to him, and, if his appointments had been better, it would have had little or nothing to complain of. But on this last point—the only one on which the President is bound to have a policy—he does not seem to have had one at all, and it would puzzle anybody to say on what principle his selections or dismissals were made, or even under what influences they were made. Why Judge Hoar was removed we make bold to say nobody but General Grant knows to this hour; and Mr. Motley's dismissal is equally inexplicable. Both have been replaced by far inferior men, and, of course, to the injury of the Government. It is notorious that the *Alabama* matter will not be again brought up in London, and, this being the case, any objection there might have been to Mr. Motley on the score of legal qualifications falls to the ground. His successor is certainly no better diplomatist for purposes of negotiations; and for the duties of acquiring information or strengthening American influence in such a place as London, it is casting no real slur on Mr. Morton to say that a worse selection could hardly have been made.

THE CÆSARISTS AND SENTIMENTALISTS.

It has been very interesting and instructive to watch the flow of opinion, both at home and abroad, as affected by the events now occurring in France. While the Empire was still in existence, the course of the French was vehemently supported by all that class of politicians and social philosophers who hold what may be called the Carlyle theory of government—that is, that the masses should be ruled resolutely by one strong man; but who have modified their system, in order to calm and control the democratic fervor of the day, by the introduction into it of a "regulated" universal suffrage. They are willing people should vote, but they believe they ought to be told how to vote—the voting being a kind of anodyne. The New York *Tribune* published the other day a striking explanation of the way this system works in Europe, in an account of the manner in which the *plébiscite* was taken in Savoy, on its proposed annexation to France. The way it works in this country is well known to all who possess any acquaintance with the operations of Tammany Hall in this city. But it may be said with safety, that professional politicians of all parties and countries are more or less in sympathy with it. In the eyes of all of them, the people is not so much a judge to be persuaded as a simpleton to be coaxed or cajoled. Consequently, it would probably have been found, if the truth could have been got at, that this class all in their secret hearts sorrowed over the downfall of Louis Napoleon as the greatest "Manager" or "Man inside Politics" ever seen. His successes and splendors were all so many proofs of the value of shrewdness and dexterity, and of the imbecility and nothingness of the "theorists," and "philosophers," and professors. His "Council of State" was simply a caucus with a fine name, and his wars and rumors of wars, and heavy outlays in public works, were simply the devices, and, as it seemed, successful devices, of a prolonged "campaign" called "his reign." His overthrow is therefore regarded, and justly, as a heavy blow and great discouragement to the rapidly growing art of absolute government under constitutional forms, to which growing numbers both of political adventurers and of great capitalists in all countries looked forward as the best means of escape from that rising tide of democracy which, it has universally been acknowledged since 1848, cannot be stayed.

In his downfall, another school of politicians, whom we may call the Sentimentalists, have been, and are still, quite confident they see their own triumph. To this school, the principal seats of which are France and the United States, politics is not an art at all, much less a science, but simply the expression in legal phraseology of the nobler emotions of the human soul. It would quell a riot by reading an original poem, and, as the last resort, by publicly pronouncing the rioters disgraced men. (This last device was actually proposed by one of its members in the National Assembly of the first Revolution.) It would treat crime solely as a disease, and the criminal as an invalid, to be tenderly nursed and caressed. It has great distrust of the higher forms of culture, and indeed of the higher education, and would not carry education much further than would be necessary to enable a man to earn a living and to enjoy popular lectures and magazines. It is, at this writing, in considerable doubt about the institution of property, owing to its unequal distribution, and shows strong symptoms of hostility to all contracts, as being restraints on individual freedom. The Jeffersonian idea, that no nation can bind itself for more than nineteen years, it has nearly worked out into a theory that no man can bind himself more than one year, and has serious doubts whether this ought not to do away with marriage. To have a man restrained from doing a thing because he last year agreed not to do it, or *e converso*, seems to it a form of bondage. It looks on "honor," or the more delicate form of self-respect, as a feudal relic, and suspects anybody who shows signs of it of Epicureanism. But it may be said itself to discard the morality of rule altogether, and to live solely by the morality of happiness. It asks a man, not "Have you done your duty?" but "Have you got what you want?" Character, as something meaning a collection of virtues, and including especially truthfulness and honesty, it treats as a fiction. It has a great horror of all *machinery* of government, or, if it be shown that some machinery of government must exist, insists on its being as flimsy and simple as possible. It has strong suspicions even of representation, and would, as far as possible, have laws passed in assemblies of the people—three cheers and the "acclamation" of a crowd being the highest form of ratification. It looks on the past as inexpressibly gloomy, and denies that it contains any lessons. All our ancestors, it thinks, were either knaves or fools, and their sayings and doings, so far from being sources of instruction, as pieces of human endeavor after a better life, it treats as the cries of children or the struggles of lunatics. Its deductions, both in morals and politics, are all made from sentiments uttered at public meetings or in poems or lectures by some of its own members, and it would have little hesitation in founding a state, or remodelling a whole system of jurisprudence, on a suggestion thrown out by a popular orator. Of study, or prolonged reflection, as a preliminary to action, it has the strongest dislike, and looks on nearly all hesitancy or doubt, or regard for remote results, as a sign of a bad heart. We ought to mention, as the last but not least striking of its characteristics, what we may call its intense anthropomorphism. The admiration of its members for each other's physical traits almost approaches worship, and descriptions of their eyes, mouths, noses, hair, and figure, their smiles and expression of face, are a very prominent feature in its literature. This sketch may all seem exaggerated, but we are satisfied that it will not seem so to anybody who has made an attentive study of the school either here or in France, and there is not a word of it which we could not support with evidence.

It has not unnaturally looked on the overthrow of Louis Napoleon as the signal for its entry on power, and kept silence or feigned sympathy with the Germans as long as they were engaged, or appeared to be engaged, simply in the destruction of the Imperial régime. For Germany, *per se*, as the representative of rationalism in sociology, and as the great champion of culture, it has, as might be expected, the bitterest antipathy, and the news that the march of the Prussians would not be stayed at Sedan, and that Bismarck was carrying his cold legal ideas into the negotiations for peace, and had asked Jules Favre for some proof of his being "the French Republic," has thrown some of the leaders almost into convulsions of rage. One of them in this country raved over it last week like a lunatic, prayed that the German army might be swept away by disease, and called the German people a "horde of brigands"—the mere name of "republic" being, as it would appear, enough to unhinge whatever reason our Sentimentalist may naturally possess.

There is every reason to believe, however, that the great majority of people, and the better portion of the press in this country, see quite clearly the true state of affairs, and are not misled by names and sounds. The leading part which France has played in modern civilization, owing to the utter prostration of Germany by the Thirty Years' War, despite the brilliancy and value of many of her contributions, has been in many ways a great misfortune for the world. Upon no department of human activity has French influence been more injurious than politics, and we look on her decline, terrible and full of suffering as the process is, and the rise of Germany and of German habits of thought into supremacy, as one of the greatest gains humanity has made. There is nothing of importance to mankind for which human reason has thus far done so little as for the art of living in society. We have gone on from age to age under the influence of one dream or phantom after another, passing through one delusion only to fall into a fresh one, setting up and casting down prophets every year, and trying drugs innumerable in rapid succession, without finding our condition any more tolerable—there being in our possession all the while an instrument of admirable power and precision—the human reason, namely—by which alone can be undone those knots of existence whose undoing in this world Providence permits. The rise of Germany is not going to bring in the millennium or sensibly abate human misery all at once; but German skill in the use of this instrument, and confidence in it, is certainly going to render valuable aid in the clearing of some of those tangled brakes of human society from which so many unclean beasts now issue, and in which, for aught we know, the secret of our happiness lies hidden.

NOTES ON THE WAR.

III.

THE DEFENCES OF PARIS.

THE closing of the Prussians around Paris will, for some time at least, concentrate public interest on the coming military events at that point. Since the surrender at Sedan, the Prussian movements have been simply marches of concentration on Paris, unobstructed thus far by anything like a serious resistance, except what we learn by to-day's telegrams, Sept. 21, of the fighting occasioned by their advance from Corbeil, about twenty miles east of south from Paris, for the purpose of destroying the railroad to Lyons and Orleans, which, passing out of the city at its southeast corner, runs south to the two cities just named. Other telegrams tell us that there had been fighting in the wood of Meudon, and around the heights of Clamart, which are two miles and a half, to the southwest of Paris, from the two nearest forts, Issy and Vanves, near the villages of the same name; and also that the Prussians had been repulsed in open assaults made upon the fortress of Mont Valérien, which lies on the opposite side of the Seine to the Bois de Boulogne, and nearly due west on a line through the gardens of the Luxembourg; and upon Fort Ivry, near the junction of the Seine and Marne.

From all of these accounts, some of which are probable, and others, like the open assaults upon the forts, not at all so, we only gather that the besieging force is going through the usual necessary operations to *invest* the city, or to cut off all means of communication with it from without; and when we come to consider the great circumference over which the Prussian forces must be spread to do this, and leave no loophole of escape, in so large a city, in the centre of a deeply excited nation, the mind begins to have some inkling of the gigantic task they have undertaken.

Paris is fortified after what may be termed German ideas; that is, by an unbroken line of fortifications enclosing the city; and a line, at some distance exterior to this, of detached forts, each strong enough to force an assailant to the operations of a siege to reduce it; whilst the interior line is also of such strength as to secure it from an open assault. The leading idea being to prevent the city from being taken by a sudden, bold dash of an assailant, and thus forcing him into regular siege operations against the forts, which, with earthworks connecting them, would not only prolong the defence for the time necessary to capture these, but would give an army, covered by them and holding positions outside of the city walls, those favorable opportunities for action which seldom fail to occur to an active and vigilant beleaguered force. In terming this a German idea, we do not mean that detached forts, as they are termed, were not used for defence long before the present methods of fortification, whenever the locality, as a commanding height within cannon-shot of the city, demanded its military occupation; but that the Germans, since the peace of 1815, have been the advocates of this system, and have applied it to the defences of their cities; in which they have been followed by the French, notably in the fortifications of Paris and Lyons. The present, should the siege of Paris be regularly gone through with, will be the first test of the value of this system.

Of the fortified line immediately enclosing Paris, but little further need be said than that it is what engineers term a bastioned line: a system of fortification, as adopted by the two most eminent French engineers, Vauban and Cormontaigne, to which the French school of the present day still clings as the best. With nothing but open defences—that is, the armament and troops on the ramparts having no other shelters than the earthen parapet, or mask, in front of them—the line is comparatively a weak one, except the security it gives, by a high wall, from any open assault; but when we consider the part that mere earthen works, and those in many points weak and badly planned, played at Sebastopol in the hands of determined troops and a skilful engineer, we have a right to look for a prolonged and vigorous defence of Paris under anything like as favorable military circumstances.

As to the detached forts, as they are intended to bear the brunt of the attack, they are provided with all the best defensive means for their garrisons. They are what are termed bastioned pentagons, or bastioned squares; the former class being the larger and stronger. A few of them only, on the east side of the city, have any defences, or *outworks*, as they are termed, exterior to their ditches, except a comparatively narrow roadway, termed a *covered way*, bordering the ditches on the outside, which is covered from an enemy's fire in front by an earthen mask. Such are, in brief, the defences of Paris; admitting of a prolonged and vigorous defence in the hands of well-trained troops skilfully handled, and supposing the city itself to bear up under a bombardment.

As public interest, for the moment, is more directly centred on the operations of the Prussians on the south and west of Paris, some little detail of the topography and of the defences of these portions may help in understanding subsequent operations. The southern defences of Paris consist of an outer line of six detached forts, named, as we go from east to west, Charenton, Ivry, Bicêtre, Montrouge, Vanves, and Issy, from the villages near which they are placed. They are nearly in a right line, extending from Fort Charenton, in the angle formed by the junction of the Seine and Marne, to Fort Issy, at the extremity of the southern bend of the Seine, on the west of Paris. This line, which is the chord of the arc that the Seine makes in its course from the junction of the Marne through Paris to Issy, is about 10,000 yards in length, or nearly six miles. The forts vary from 3,300 yards, that between Forts Charenton and Ivry, to 1,800 yards, that between Forts Vanves and Issy, apart. They occupy the commanding points along this line; Fort Bicêtre, which is the highest, being about 270 feet above the level of the Seine, and Fort Charenton, the lowest, about 120 feet above the same level. The fortified line that encloses the city in the rear of forts lies from a mile and a third to nearly a mile from them—the nearest being Fort Bicêtre, from which the fortified line runs nearly west to the Seine, and from the same point about north-east to the river; the westerly portion being nearly four miles in length, the north-easterly less than one mile and a half.

The country in front of and to the south of the forts is undulating, the highest points being on the plateau between the villages of Clamart and Fontenay-aux-Roses, and about 450 feet above the level of the Seine. Profiting by their experience at the siege of Sebastopol, the French ought to have occupied these heights by earthworks; and it is possible that some of the fighting that is said to have taken place near Clamart and Meudon may have had some connection with the occupation of this point, which, by the way, is somewhat over 9,000 yards from Fort Ivry on the east, and somewhat over 3,000 yards from Fort Issy on the west of the line; and thus within the focus of fire of most of the forts and the fortified line behind.

On the west of Paris there is but one fort, known as the fortress of Mont Valérien, taking its name from that of the hill on which it is placed, and which is about the same level as the plateau near Clamart, or about 450 feet above the Seine. This fort commands all the ground within the range of its guns. It lies about one mile back from the Seine, and about two miles and a half in front of the fortified line, which here runs to the east of north, for about three miles from its southern point, through the Bois de Boulogne. The ground gradually falls away from it to the Seine at its north bend, and with more or less steepness to the two branches which form this bend. The best engineering talent of France was, of course, called into requisition to construct these works; and among other names of celebrity known to the military world were those of Vaillant, Niel, and Noizet—the two first well known to the public for their services in Italy and the Crimea. D. H. M.

West Point, September 21, 1870.

THE PROSPECT IN FRANCE.

Paris, September 9, 1870.

Now at last has the really great crisis come—the turning-point at which we shall see what France can do for herself. The miserable despot who, for twenty years, has not only been crushing the national life out of France, but has been pressing all his own vices and corruptions into the enslaved nation, has fallen a victim to his weakness and immorality; for the man's nature was so much more weak than it was anything else, that one cannot find it in one's heart to dignify his crimes with the name of ambition. He was a dreamer without poetry, a plotter without ability, a perturbator without courage, and whose one sole genuine conviction was that of the absolute vileness of human nature. Once only has Louis Napoleon's portrait been truly and fully painted, with no detail omitted; and that is in the first volume of Mr. Kinglake's "Invasion of the Crimea," in that famous "Chapter XIV." which the whole civilized world has read, and which the few impartial spirits whom circumstances drew into governmental spheres in Paris were obliged in bated breath to admit as the true and perfect picture of the man France has just cast off.

He is cast off at last; and so thoroughly did he feel that he dared no more affront an injured, outraged country that he preferred captivity among the Germans to any possible reappearance in Paris; and you will later find, as a fact in history, the report of Louis Napoleon having delivered himself willingly to his victors. Those who knew the man to his secret core have never ceased foretelling that when the great crisis of his fate should come (which they mostly saw in the form of revolution at home), he would be found under a table or in a cellar. When it was the fortune of war that decided against him, he was found huddled up in the rear of the active combatants, keeping himself safe among the camp baggage, and professing the opinion that "as he was prevented dying for his country at the head of his army, he would rather give up his sword to his enemy."

Now, as we all know, it never was forbidden him to "die" for France—quite the reverse: though he was pitilessly sentenced not to meddle with commanding the French troops, he was not for a moment desired to abstain from sharing their dangers. He might have "died" any day with so many brave men who did so, and those who knew nothing at all of his true nature had a kind of notion that he would do so too; but he had no idea of that kind, and, having for twenty years sacrificed a nation to his luxuries and enjoyments, he determined to skulk away when the time came for a possible reckoning.

Well, Louis Napoleon has gone to his fate; but what of the country to which he and his race have been so fatal? Does any student of history believe that a nation, or a race, can be for twenty years bent down beneath the stupidly crushing rule under which France has existed, and rise therefrom whole-hearted and able-bodied? This sort of process numbs, whether individual or nation, and when the weight is lifted, the limbs that bore it have mostly lost their elasticity and power. The men who have come into activity naturally upon the collapse of the Empire are, all of them, honest, upright men, from Trochu, Favre, and Gambetta down to Rochefort; but as for their being equally modern-minded or civilly courageous, equally fit for the real exigencies of the hour, I somewhat doubt. All who now belong to the Provisional Government of the country—to the new-born Republic—are members of that patriotic band of "eighty-three" who voted against the war in July; but is there amongst them one who will have the civil courage to save the nation by peace? There is the terrible doubt. France obeys fear too easily in all she does. Not having been soundly educated, and taught to look at her faults and shortcomings honestly, she has grown to fancy that whosoever dissents from her is her foe, and is plotting harm against her. She has always some phantom standing before her and frightening her into insanity.

In 1851 the "Reds" were this phantom; and had it not been for that, Louis Napoleon could never have crushed her as he did. During the last stage of the Second Empire and of this war, the phantom was Bismarck and the "Prussian spy," and there is no saying to what depths of misery France may not even yet be driven by the want of courage of the first Republican leaders, who, instead of breasting the popular fury by preparing an honorable peace, may be led into pandering to it through vanity, weakness, and want of modern-mindedness. There is in this unfortunate country no love of truth for its own sake, no admiration of the performance of plain, simple, everyday duty. The plain, simple, everyday duty which the present hour points out is the framing of an honorable, practical peace. All Europe will back the French nation now that Louis Napoleon is got rid of, and that the unity and power of Germany are more than amply secured; all Europe, north and south, will combine to advise Germany not to drive matters to (now) useless extremes; greater glory than France has already won by her splendid bravery in the field she can never win were the war to endure for ever; therefore, perfectly unhumiliated as the nation at present is, in the hour of her first severance from her infamous despot, it would be the wisest, the most politic, the most humane, and the most fitting thing now to allow the band of friendly neutrals to propose some of the first rough outlines of a possible future peace. But, as I said before, this is the line that plain, untheatrical duty points out, and hitherto it is more in accordance with the feelings of a French public to hear an orator exclaim that he will "expire under the ruins of the edifice in which he stands rather than surrender." Here it is that this gifted nation proves itself so antiquated, and, to use its own word, so *rococo*. It has no notion of what the progress of civilization has been; of what are the intellectual conquests of the mind of our age—in reality, it believes in brute force, in the defeat of a man or an army by another man or by another army just as it did in the days of Francis I. or even of Charlemagne.

From letters received by high-placed, influential persons from Germany and Holland, Belgium and England, there ought to be far less difficulty than might be supposed in obtaining from the Prussian Government very honorable terms. In the first place, it would probably be easy to stay the advance of the German army on Paris. None of the intelligent and responsible leaders of that army look with any particular satisfaction upon the vicissitudes of a long and weary siege in the beginning of the autumn and at so great a distance from home. If King William or Count Bismarck was the least in the world assured that a reliable peace could be attained without marching into Paris, depend upon it he would prefer such an alternative. If Count Bismarck or the King saw his way to a well-guaranteed peace with the French nation, enabling the Prussians to retire to their own homes and remain there pursuing their daily avocations and rearing their children securely, depend upon it he would be persuaded to forego all notion of "annexing" either Alsace or Lorraine. Count Bismarck is far too genuine a statesman to saddle Germany with a Poland or a Venetia out of "*gaîté de cœur*."

But in what temper are the French and their new rulers to listen to reasonable proposals? There is a senseless, childish cry of "victories" to come, of the necessity for "driving out the invader," which will probably provoke still further disasters. At the same time, however, there are in the new Republic one or two men of real and solid capacity and of genuine political value: General Trochu is perhaps *the* "man of the situation," and he is a moderate and large-minded man, who knows that what is possible must be taken into account; Picard is also a capable man, and not prone to exaggeration; Admiral Fourichon takes place by their side; Jules Simon is a bright intellectual star, and out-and-out the best Minister of Instruction France has ever had; Gambetta, I hope, is a thoroughly modern-minded man and a statesman. With him and with Trochu will rest much—but will any one of them all have the courage to breast the noisy mob and say: "Peace is the first duty"? Will any one dare to say: "It is no use to talk about saving country if you first make of it a heap of charred ruins with scant, starving populations hovering round them—therefore, *peace must be made* and the lessons profited by"? Will any one do this? If any one does, France will probably not lose Alsace or Lorraine, but if no one does she may lose a great deal.

THE FEELING IN GERMANY.

BERLIN, September 6.

"*Die Weltgeschichte ist das Weltgericht*," says Schiller. This monumental sentence cannot be translated into good English, but I will try to paraphrase it. There is a moral order, there is justice in the development of human affairs, there is a higher law, as your abolitionists used to say, there is a Nemesis in history, a logic of events, which connects the results with the motives of men's deeds. The destiny of the French adventurer has at last been fulfilled. One short month of fighting has finished the man who provoked this nefarious war. Since the establishment of the present law of nations, nay, since the battle of Pavia in 1525, where Francis I. of France was made a prisoner by Charles V., this is the first instance of a beaten sovereign surrendering himself to the mercy of the victor. In a corner of Eastern France, Napoleon delivered himself up to the same King to whom he had boastingly threatened to dictate the peace at Königsberg, in Eastern Prussia.

At Wilhelmshöhe, near Cassel, he has time to think over the desertion of his friends and the vanity of all things earthly. He is now at the same beautiful spot which was laid out and embellished by the old Landgraves of Cassel with the money they received from England for the sale of their troops; it is the same beautiful place where, in the palmy days of his Westphalian kingdom, Uncle Jerome celebrated his orgies; it was the residence of the Electors of Hesse-Cassel and of the last remnant of that fine concern, virtuous Diedrich, who a few years ago implored the assistance of its present inhabitant. Louis came to reinstate Diedrich, to undo all the war of 1866 had done, but, foiled in this attempt at philanthropy, the would-be protector now occupies, by the mercy and order of King William, the identical rooms of his protégé.

Grand as may be the result which our arms have achieved round Sedan, enormous as may be the harvest we have gathered on the battlefield, bright as may be the prospect that there will be no organized opposition to the march of our troops to Paris, all these fruits are small and insignificant with the moral consequences which have been gained on that glorious day. Modern Cæsarism lies defeated in the dust, and the Teutonic world resumes its work of peace and progress, in which it was stopped by the wars of the Reformation.

The claims of the French to superiority were exclusively based on the invincibility of her warlike legions, while in the departments of peace, of knowledge, science, and inventions, they had long ago been marching in the second line. Their productive period ended with the First Revolution, by which the nation had exhausted her mental powers as early as 1794. If they, nevertheless, afterwards appeared great on one and another occasion, it was only because other countries were then so insignificant. But now, since their armies have been defeated and annihilated in a manner thus far unknown in history, what remains of that superiority?

You cannot form an adequate idea of the enthusiasm exhibited by our people on the receipt of the news of the surrender of Napoleon and of his army. I have seen civilized, semi-civilized, and barbarous nations in their holiday attire, but I do not think that I exaggerate in saying that the Germans know best how to enjoy themselves and to do honor to the occasion. I cannot describe the popular demonstrations in Berlin, but let me select only one scene—Unter den Linden, near the King's palace. There stands the colossal monument of Frederic the Great, forty-three feet high, and to its right, a little more east, the statues of Blücher with his compeers, York and Gneisenau, while opposite to them we see Kleist and Bülow. All these statues were covered with flowers and wreaths. The old King, eighteen feet high, held a German flag in his hand and was crowned with an oak wreath. Boys had climbed on his saddle and were seated on the neck of his horse; even his stirrups were hidden by flowers. In the same way, the haut-reliefs (illustrious life-size contemporaries of Frederic) under his horse were profusely decorated. I saw a boy who kissed Lessing, and another who put a Prussian helmet on bare-headed, immortal Kant. You see we are in military Prussia; the philosopher even must have something of the soldier; the one lays down the categoric imperative, and the other obeys it. Noble old Blücher seemed to salute the King with his sword, covered with flowers, while his foot rested on roses and lilies instead of on his bronze cannon. It seemed as if even their features were animated with joy. Grave Gneisenau, the great planner of battles, alone stood imperturbable, well satisfied with so great a successor as Moltke. There was no end of singing, cheering, and frolicking. In the evening the city was illuminated; hundreds of thousands moved through the streets, and, there being no Irishman among them, not the least disturbance took place. On the banners carried by some processions I saw the inscription: "He (Napoleon) has been caught. William, Emperor of Germany!"

The proclamation of the Republic in Paris cannot affect us. The present form of the French Government can only be a transitory one. Its leading men are just as guilty of the provocation of this war as Louis Napoleon and his abettors. It was Crémieux, Favre, Gambetta, and *tutti quanti* who incessantly cried for vengeance for Sadowa, and blamed Napoleon for suffering our consolidation and unification. To us it is indifferent whether we have to fight Ollivier and Palikao or Favre and Gambetta, who, in their first proclamation to the people, still incite the popular passions, and, as the Roman law says, assume the imperial inheritance without even the benefit of the inventory. We are not in arms against a constitutional form of government, but against France and the French, and we are not so foolish as to discontinue suit against the old bankrupt concern. We will and must teach them, under heavy penalties, never to dare again to play the reckless game of 1870. Therefore, we shall not stop the march of our armies to Paris, and will there dictate the peace. If there be no legitimate power to treat with, we have time to wait until the French get sober.

We are not moved by the threat that the present Republic will, like her predecessor of 1792, drive the invaders from French soil. At that time, the Prussians and Austrians that had actually got into France were not quite 40,000 strong, but even that number would have been sufficient, if they had not weakened themselves by mutual jealousies. Each of the two belligerents tried to outwit the other; the real bone of contention was Poland, of which Prussia wanted to obtain a better slice than Austria. It is the merit of modern German historians, such as Sybel and L. Häusser, to have demonstrated that the Eastern and Polish policy of the two German powers at that time did more to paralyze their efforts against France than the heroism of her inhabitants. It took just two years before the Republic created brave soldiers and good generals. The mistakes and faults of the German leaders helped the French more than their own enthusiasm and bravery. The old Duke Ferdinand of Brunswick was the model of a cautious general, who shrank from personal responsibility, and consequently carried on a lame diplomatic war. Think of McClellan, and imagine him seventy-five instead of thirty-five years old, and you have the commander-in-chief of the German forces in 1792 and 1793. Besides, he threatened France with the loss of every right and advantage she had gained through her revolution. Consequently, every honest citizen felt it his most sacred duty to conquer the foreign ally of her domestic aristocracy and clergy.

At present, affairs have quite a different aspect. Whatever a vile press may say to mislead the masses, every intelligent Frenchman knows that we did not come uninvited. Their Republic does not represent any principle, and is simply the result of the failure of the old government, but not a rule of civil order and liberty, which alone can give it vitality. Besides, the peasants and the rich classes are not at all in favor of a Republic. Forty thousand men may be driven out of the country by an infuriated mob, but I doubt very much whether, without an army in the field, even a million or two of an unorganized mass can seriously hurt a well-disciplined and victorious army of about 700,000 invaders. If the French are in need of more German boarders, we can help them to another quarter of a million. Very soon the French must learn by their defeats that it is their interest to make peace on our terms.

The feelings of the German people, North and South, in relation to profitable conditions of peace, are best expressed in the following resolutions, which were passed by a large mass-meeting at Stuttgart on Sept. 4, and which are concurred in by similar addresses adopted in other cities:

> "The German people reject any attempt at mediation or intervention on the part of the neutral powers in negotiations for the conclusion of peace. The restoration of Alsace and Lorraine is for the German Empire the only possible guarantee against French ambition, and the natural reward of our national struggle and victory. With the adhesion of the South German States and the reconquest of the long-lost German provinces, the North German Confederation must be converted into a German Federal State. One single people, one army, one parliament, one German national system, are for Germany and for Europe pledges of a sure and lasting peace."

FRIEDRICH KAPP.

Notes.

LITERARY.

WE believe we have not before mentioned, as among the autumn publications of Messrs. Fields, Osgood & Co., the following works: "The English Governess at the Siamese Court"—a work of much interest, which will contain more than double the matter which has appeared from the author's hand in the *Atlantic Monthly*, and will be illustrated with sixteen full-page illustrations after photographs of Siamese idols, temples, street scenes, and so forth; "The Atlantic Almanac for 1871;" "Miriam, and Other Poems," by Mr. Whittier; "William Henry's Letters," by Mrs. Diaz, a writer for *Our Young Folks;* "Pussy Willow," by Mrs. H. B. Stowe; "A Child's Dream of a Star," by Dickens; Bayard Taylor's translation of "Faust" into English verse; "Vagabond Adventures," by Mr. Ralph Keeler; a "red-line" edition of all Mr. Lowell's poetical works; "Talks about People's Stomachs," by Dr. Dio Lewis; and, finally, an illustrated book for the holidays called "Winter Poems," and containing poems, new and old, by Emerson, Whittier, Longfellow, Bryant.——Messrs. Leavitt, Strebeigh & Co. announce for sale at an early day the library of the Hon. G. H. Holliday, of Illinois, which, among many expensive fine-art books got together at great expense, contains a very complete set of manuscript orderly-books of the Revolutionary war; complete sets of the publications of the English Record Commission and of the Shakespeare, Hakluyt, and Early English Text and Ballad Societies; a number of "mounted" books; and these original manuscripts: Dickens's "Hunted Down;" Fitz Greene Halleck's "Young America;" William Godwin's "Cloudsley," a novel; Mr. George H. Boker's "Podesta's Daughter;" Béranger's "Chansons" (the author's copy, with suppressed chansons in the poet's handwriting); Fenimore Cooper's "Life of Sommers;" and 153 pp. of Cotton's Mather's MS. addressed to his son. Half-dollar catalogues may be had of the auctioneers.——Dr. John S. Hart, principal of the New Jersey State Normal School, and author of a number of popular works on secular and Sunday schools, is preparing another, to be called "The Sunday-school Idea," an exposition of the principles underlying the Sunday-school system, together with its objects, organization, methods, and capabilities. Messrs. J. C. Garrigues & Co., Philadelphia, are to be the publishers. ——Next to showing people what to believe, to show them how to believe must be considered a service in matters of religion. The Pope undertakes the first, and the author of the really excellent little work called "Ecce Cœlum" has undertaken the second, say his publishers, Messrs. Noyes, Holmes & Co., in a new book called "Ad Fidem; or, Parish Evidences," which will be ready in October, and may perhaps be as fortunate as its predecessor in reaching a tenth edition.

—"We have always cherished with intense satisfaction," says the Chicago *Examiner*—which is the Rev. E. C. Towne's new magazine—"the sentiment of Christian fellowship. The illusion never forsakes us that church relations must be at bottom fraternal." This, we suppose, is true; but it sounds oddly afterwards to hear how some of the brethren seem to the editor of the *Examiner*. One prominent clergyman is, "to use plain terms, a TIME-SERVER." Theodore Parker said of him, "So-and-So showed in the John Brown affair that part of him which is Jesuitical—not so small a part as I wish it was." Mr. Fulton, who doubted if Dickens was a professing believer, and had been converted at the time of his death, is called "Believe-or-be-damned Fulton." So-and-So's evasion of the question, Is Dickens saved? was a falsehood—was hesitation, timidity, and faithlessness. A certain Congregationalist brother is "this disgusting Calcraft of preachers, with his blood-reeking gospel of pious ferocity." Doctor J. F. Clarke adopts a "confusedly sentimental method," and shows ignorance. Another Unitarian clergyman is "stupidly insolent," "a prodigious egotist," and "an ecclesiastical charlatan." Of still another pair of brethren—one "lends his support to a palpable iniquity," and the second disregards his pledges "as recklessly as if honor were but a name." Another "is the most positive and dismal of Pharisees." A well-known female lecturer, whom the *Tribune* of this city thought just the person—in virtue of her being "a deep thinker, an uncommon scholar, and a courageous woman"—to tackle a well-known orthodox doctor of divinity, the *Examiner* remorselessly pronounces a timid conservative as regards departure from tradition, a dogmatizer on insufficient study, and a person of opinions neither obtained by profound meditation nor expressed with the spirit of real thought—in short, not at all adapted to be a light of the Radical Club if the members of that body only knew the things that make for their good. But, then, she ought to be capable enough of handling the doctor of divinity; as for him, if you come to that, he is "a rude schoolman, who knows no better than to assault the truth with paving-stones," and "a tremendous blusterer." "A certain massive and portentous ignorance, a hopeless failure of perception," are what characterize the mental state of the brother in question; while as for his external and physical signs and marks, "his voice is the blind roar of a son of Anak." These proofs of the editor's cherishing always with intense satisfaction the sentiment of Christian fellowship and brotherly love, we have found scattered through all the pages of the *Examiner*, most of them occurring in the following articles: "Charles Dickens and his Christian Critics;" "The Woman and the Trial" (MacFarland case); "The Unitarian Situation;" and "Dr. McCosh in Boston." There are besides in this first number a long article translated from the *Revue des Deux Mondes*, entitled "The History of the Devil;" and a novel called "Crazy Chicago"—in which apparently some one or two popular clergymen sit for the portrait of Mr. Athanasius Channing Blowman—a picture anything but flattering. All these, and various other articles, long and short, are devoted to the general purpose of preaching rationalism—with what coolness of temper we have seen. The magazine is well printed.

—A sudden blow has fallen on the cause of education in Boston. The training-school, established in 1864, under the charge of two lady graduates from the central institution at Oswego, has been deprived of its individuality and character by being transferred to the same building with the Girls' High School, and therefore placed under the management of the master of that school, an accomplished teacher, but who has had no opportunity of knowing the Pestalozzian philosophy of teaching upon which the Oswego school is based, and who, therefore, will not be able to harmonize with its aims and methods. The Boston training department will perhaps retain its name, and be of some advantage, but it cannot be what it was hoped to be. Its friends were forewarned a year ago that the majority of the school committee had ceased to understand what they had in charge, when, on the occasion of the removal of the Assistant Principal to the charge of the Cincinnati Training School, they refused to supply her place from the parent school at Oswego, "patriotically" preferring to advance a Boston grammar-school assistant.

—Miss Elizabeth Garrett, M.D., is now, we presume, the most famous of her sex who has adopted medicine as a pursuit. Her passing successfully the examination for the Paris doctorate of medicine is fresh in everybody's recollection. The thesis by which she obtained her degree has lately been published in Paris, and treats of megrim—"Sur la Migraine." The London *Practitioner*, a journal as candid as it is conservative and eminently able, says of it that it "as well deserves the impartial study of the profession as any monograph on nervous disease which has appeared of late years." "We shall not," the editor continues, "pronounce any opinion as to the probability of lady doctors, in any considerable numbers, acquiring such a genuine knowledge of medical science as is displayed in Dr. Garrett's inaugural treatise; but we may at least say that we should personally be delighted to welcome as colleagues any number of ladies who should prove themselves to have mastered their profession as she has done." Then, he examines her views of the disease in question, pronounces them sound and in general agreement with his own—both holding, we remark for whoever may be interested to know, that megrim is primarily an affection of the brain and not of the stomach—and concludes by praising "the clear and fluent style" in which the treatise is written, "and the excellence of its French diction; these are remarkable and add much to the pleasure of the reader."

—There being nothing about which the average reader knows less than he knows accurately about science, it would seem as if his very liability to error, well known to him as it is, would itself be a safeguard against error, as leading him to shun all teachers except those who have the approval of scientific authorities. What men are authorities in science he may easily know quite well; but every day furnishes proof that the sciolists and wild theorizers have a clear field and plenty of favor, and admonishes us to look with distrust and incredulity on more than half the writing about scientific matters that constantly employs the press. For one sound scientific work which reaches the general reader, there are twenty journals with scientific departments managed by incompetents; a dozen school-books full of blunders and obsolete or premature and erratic theories; and a dozen or more pseudo-scientific works for popular use, which are the products of mere book-making, or of a sort of anti-religious zeal which is the reverse of any useful and fruitful scientific spirit. Dr. P. Austin Nuttall, a somewhat voluminous English author, who has just fallen under the notice of *Nature*, is the latest specimen we have met with of the misleading class of writers on natural science whom the popular interest in such researches breeds in such numbers. "A Dictionary of Scientific Terms" is his latest addition to the numerous educational works that bear his name on their title-pages, and a valuable contribution it seems to be. "A few of the principal metals," he says, "are black-lead, brass, magnet, ochre, pewter, and steel." The nitrogen of p. 230 "is unrespirable," although the nitrogen of p. 12 "forms about eighty parts of atmospheric air." "Alum is an earthy chalk, a sulphate of alumina *or* potash." "Oxygen generates acid." Edentatæ are an order of mammalia which violate the tenth commandment—"wanting some of the teeth of other animals." "Anacathartics are medicines that operate upward; a cough attended with expectoration." "All the Latin and Greek parts of him," as the Irishman said, of any of Dr. Nuttall's patients can be appropriately afflicted, for he knows of this list of complaints, and more besides, under the letter A alone: Acatharsia, acratia, acrisy, acropathy, acropy, acroteriasm, acrothymion, adenopharyngitis, aerophobia, agalaxy, agennesia, agrypnocoma, anagogy, anopsy, antispasis, antritis, apagma, apolepsy, apolysis, apotrepis, or arthropnosis. There are remedies, however, for this tale of woes. Still under the letter A, Doctor Nuttall knows of acidulum, acopicæ, adipson, alborga ("a kind of sandal-wood made of matweed"), aldehydic acid, alloxan ("the action of nitric with uric acid"), amylum ("a preparation of starch"), "antephiatic medicine, or arrow-root (consisting of starch, albumen, volatile oil, chloride of calcium and water)," and a number of others. How a respectable publisher consents to put his imprint on such works as this is something of a mystery; but the one in question bears the names of Strahan & Co. and other names as respectable. They are as numerous as quack medicines, and must be of the greatest comfort to the hearts of the Pope of Rome and Pastor Knak, of Berlin, who may easily feed fat their grudge against "science falsely so called."

—The Dutch Society of Sciences, of Haarlem, instituted last year, offers, says *Nature*, two large gold medals—one bearing the name and effigy of Huyghens, the other of Boerhave—each of the value of five hundred florins, which are to be awarded alternately, once in two years, to the man of science who shall have contributed the most during the previous twenty years to the advancement of one particular designated branch of natural science or of mathematical physics. One medal, the Huyghens, has this year been awarded. It was given to M. Clausius for his discoveries in thermo-dynamics. In 1874, it will be bestowed on some chemist; in 1878, on some astronomer; in 1882, on some meteorologist; in 1886, on some mathematician. The Boerhave medal will in 1872 be devoted to mineralogy and geology; in 1876, to botany; in 1882, to zoölogy; in 1884, to physiology; in 1888, to anthropology. In 1890, the Huyghens medal will again be devoted to thermo-dynamics, and in 1892, the Boerhave to mineralogy and geology, the series of subjects recurring. The medals will be given not alone to Dutch *savans*, but to Dutchmen and foreigners alike.

—Attention has recently been drawn to Pauthier's edition of the Travels of Marco Polo, published in Paris in two volumes, 1865. It is by far the completest of any ever attempted, and preserves all that is valuable in the commentaries of previous editors. M. Pauthier has endeavored to prove that the original narrative was written in French—a matter which has been somewhat open to question, inasmuch as forty-seven manuscripts exist, in French, Latin, Italian, and German, not to speak of printed editions, of the adventures. We at all events owe to the great traveller's nativity his adoption of Italian phonetics for representing Mongolian names of places, in which respect he has been imitated by scholars of the present day. These names are quite inconstant and frequently exchanged, so that it is not easy to identify all Marco Polo's nomenclature. Where it is possible to do so, however, his accuracy and veracity, now well established, are still further confirmed. A fine map of Asia accompanies M. Pauthier's work, and gives the route of Marco Polo, with all the contemporary names in red and the modern geographical names in black. There is an introduction, of great learning, and an appendix, containing the will of Marco Polo and other curious documents.

—"Zadkiel," the best known of the British watchers of the stars, has had bad luck with his prophecies this year, as his almanac for 1870 predicts for the Emperor Napoleon great prosperity. Nevertheless, he who holds to modern prophecy need not lose faith; the astrologers employed by "Moore's Almanac" might be Doctor Dee himself. The chief cut illustrating the work in question displays two eagles fighting in the air, of which the one may well be the black Prussian eagle and the other the imperial eagle of France. They overshadow with their wings vast hosts of armed men, "in decidedly foreign uniforms," engaged in bloody struggles. More specific is the text, which distinctly asserts that in 1870 there is to be war between France and Prussia, and that the month of July—nothing being said of August and Gravelotte, and September and Sedan—will be especially disastrous to Napoleon. Still the declaration of war, the beginning of French troubles, was made in July. But the *World* and the *Spirit of the Times*, and Mr. Wendell Phillips, with his "horde of brigands," and his Bismarck who has proved himself so great an ass, may wait in hope for next month: in October, "King William, if living, will meet with defeat," and the Ex-King of Hanover "will recover some of his prestige, if not his throne."

—The outbreak of the Franco-Prussian war found Laboulaye under a cloud. He had been hissed down in his lecture-room; the city of Strasbourg had demanded back from its favorite candidate the honorable gifts it had once made him. His offence lay in his having consented to work with the Imperial Government in developing what seemed to be its irrevocable concessions to constitutional liberty. The mistake, if Laboulaye erred, was akin to that which allied many well-meaning men in this country to Andrew Johnson. The result was similar—forfeiture of public confidence and then obscurity. Since blood began to flow, we have not heard a word from Laboulaye till recently, in extracts published from a private letter of his to an Italian friend, criticising severely the letter of Mommsen's with which we have already acquainted our readers. He has not more difficulty than had the editor of the *Perseveranza* in refuting the historian's claims of natural sympathy between Germany and Italy; but neither has he a word of reprobation for the war begun by Napoleon without justice and without provocation. Two years ago, in his "Prince-Caniche," he could satirize the habitual jealousy of France towards Prussia. "Si ces drôles-là," says the General of the Gobemouches, referring to their neighbors the Cocqsigrues, "sont les maîtres chez eux, alors nous ne sommes plus la grand nation. Ce ne sont plus les Gobemouches qui font trembler la terre; nous sommes diminués." Then, too, he could make Aristotle ask the Prince: "Is every citizen in your country a soldier?" and when answered, "No, we have a standing army," pronounce such a people barbarians. "Ce sont des Barbares." Now he asks of the Italians: "And what liberty will Prussia give you? . . . She has never known liberty; she has never been anything but an army"—*i.e.*, Aristotle's beau ideal of "chaque citoyen soldat." He is filled with apprehensions of what will happen "if Prussia crushes France," and sees, among other horrors, such as the restoration of the Germanic Empire (in other words, "ces drôles là maîtres chez eux"), the end of the Latin and Catholic races, and the sovereignty of the world assumed by the "virtuous Protestants of Germany." There is in this a degree of disingenuousness unworthy of Laboulaye's reputation, while his appeal to the two animosities—of race and of religion—which more than any other obstruct human progress, is entirely worthy of the Second Empire.

—The division of sentiment in Italy in regard to the Franco-Prussian war has been happily embodied in an individual citizen. Signor Edoardo Sonzogno, of Milan, is the proprietor of a radical paper called *Il Secolo*, which has lavished abuse with a free hand on all journalists professing French sympathies, and has even gone so far as to call them men without faith and without a country. Signor Sonzogno, it will be understood, holds two opposite faiths at once, and could be loyal on either side of the Rhine. He is also the publisher of a paper which appears simultaneously in Paris and at Milan, and is known at the one place as *L'Esprit Follet*, at the other as *Lo Spirito Folletto*. The former is French and imperialist (or was till the overthrow at Sedan), the latter is Prussian and republican—each according to its latitude. These papers are illustrated with designs for the times, borrowed chiefly from French artists, the same cut being used in each, but the legend being ingeniously altered for cis- or transalpine approval. Thus, in one such, a Turk is seen on his way to the field, accompanied by his odalisks, and the comment of *L'Esprit Follet* is "Abd-el-Kader, junior, enlisting as a Turco. Fine fellows, these sons of the Prophet!" *Lo Spirito Folletto* interprets the same in this wise: "All hope of succor from Italy, Denmark, and Austria having vanished, the Grank Turk alone is left to run to the aid of France." But it is as an impartial historiographer that Signor Sonzogno is especially to be envied. He publishes in duplicate a current record of the war, styled *L'Album de la Guerre* and *L'Album della Guerra*. One does not naturally look for two points of view in such a publication, but there is nothing which daunts the proprietor. In setting forth the causes of the war in French, he finds the Prussians to have brought it upon themselves, and that the French grievances were perfectly legitimate; in Italian, he disregards consistency, but comes nearer the truth, in throwing the blame altogether on France and the dynasty. For so accommodating a spirit no reward would seem too great; and perhaps a more friendly mediator between Paris and its besiegers would be hard to find.

THE MAGAZINES FOR OCTOBER.

THE *Atlantic* for October opens with a good article by Mr. James Parton, in which he gives a readable, pleasant, and, on the whole, trustworthy account of "Our Israelitish Brethren." Mr. Parton does not go very deep, but he falls into few errors, and they small and of little consequence—as, for instance—and this is very charateristic—when he puts into the mouth of the pious Jew, whenever he eats a peach, the prayer of thanksgiving which the pious Jew does indeed offer after eating a peach, but not unless it is his first peach of the season. It is worth while, too, when accounting for the fact that Jews are almost never agriculturists, to remember that, whatever may once have been their skilfulness in agriculture, it is many hundreds of years since they had any practice at it, and that it is likely that, even were all the world to adopt the Jewish faith and deduct only Jewish holidays from the working days of the year, it would nevertheless be some hundreds of years before our Israelitish brethren would divert their attention from trade and go to tilling the ground. In short, they have, naturally enough, lost what innate aptitude for farming they ever had. And one reason for this is, that a man who lives in contempt in a community will not, if he can help it, attach himself to the soil and root his family in one place. Even to-day and in this country there still remains in the minds of Jews, the most respectable and respected, a sort of consciousness or sub-consciousness of being despised, which operates to indispose them to establish themselves firmly among us as inheritors of lands; and that this reason operates more strongly in most other countries we may well believe. A most disgraceful and shameful confession this should be felt to be by every man who pretends to religion or liberality, but there is no doubt of its being a confession that all Christendom has to make.

The most important paper in the *Atlantic* is Senator Wilson's reply to Mr. Jeremiah Black's attack on Mr. Wilson, made in the *Galaxy* for July. Mr. Stanton's character is the matter in question; and while, as it appears to us, Mr. Wilson disposes very well indeed of Mr. Black's assault and appears to great advantage in the controversy, we do not see that either he or his antagonist has said anything that will change the general verdict on Mr. Stanton. That he was very fearless and patriotic is hardly more certain than that he could on occasions do a little double-dealing; if he was a war-secretary of gigantic energy, he also could be arbitrary, hasty, overbearing, and unjust to his subordinates; if it must be admitted and asserted that he turned out a statesman, it is true, too, that he had been a politician and knew something of a politician's ways. But there is no doubt that the people to-day recognize the fact that they owe him a very great debt of gratitude, nor that he fairly earned it all; and there is little doubt that posterity will confirm this judgment. Mr. Wilson's article, which is forcibly written and not intemperate, contains original letters, confirmatory of his positions, from Mr. Chase, Mr. Dawes, Mr. Cameron, Mr. Sumner, Mr. Howard, Mr. Chandler, Mr. Seward, and others in public life, and has some historical value.

One of the pleasantest sketches that has been seen for a long time is an excellent portrait, by "H. H.," of a German landlady of hers. People who do not usually read magazines may look at this with expectations of pleasure, nothing so good of its kind having been done for a long time. For the rest, the *Atlantic* has "Speckled Trout," by Mr. John Burroughs, a writer whom we commend to people who really know the woods, and also to people who think that the popular writers on the Adirondacks, for example, know anything about them; "Irony," by Dr. Hedge; an "Oldtown Fireside Story," by Mrs. Stowe's "Sam Lawson;" some reminiscences of Dickens; some book-notices; our curious and amused "Virginian in New England Thirty-five Years Ago;" and some other articles, make up the October number of the magazine, which is one of the best numbers we have had for some time.

The *Galaxy's* serial novel of "Overland" its readers will find spirited and exciting in this instalment, which continues its account of an attack by Apaches on Lieutenant Thurstane's wagon-train. But perhaps the description is too hurried and has too little of the element of suspense and uncertainty in it. We suspect, indeed, that there is no novelist living who would dare to expose a wagon-train, with his heroines and heroes and such low-comedy men as he has in his company, to capture by any of the Great Father's children. The catastrophe would necessarily be too complete, resultless, and nakedly horrible; so the reader makes himself perfectly comfortable while Little Bear and his friends whoop round the wagons, feeling assured that a greaser or two may have his hair lifted, and four or five Apaches get a bullet apiece sent through them, but that the train and the heroine will at last come off clear. The story-teller's only resource in such cases is, we suppose, to give us a vivid combat or two, that his materials be not lost; or, if he wants something more than the military glitter of the fight, he might give even his heaviest and hatefulest villain a sufficiently tragic end in an ambuscade of the kind where the white man, no matter how hard pressed and furious, saves the last barrel in his revolver for himself.

"In and about Peking," by Mr. N. B. Dennys, is apparently instructive and is amusing, though it is a little confused and is in places horrible. "L'Amour ou la Mort" is a translation from the Spanish, or rather an adaptation from the Spanish, by Mr. Antony Armstrong, and is perhaps not quite family reading, though clever enough. "Does it Pay to Visit Yo-Semite?" is a slapdash article, coarse in tone, but clever enough, too, in its way, and supposed to be "magaziny" and taking, though one might perhaps doubt it. "Will Murder Out?" is about the Nathan murder, and is interesting as containing copies of some of the letters that were sent to the detectives when they were working up the case. It is curious to note the malignity manifested in some of these communications, and the cruel willingness to trifle with reputation and personal safety for the sake of getting malicious pleasure. Our friends the Spiritualists also put in an appearance on that occasion, and, of course, so did great numbers of amateur detectives. Apparently, nothing whatever has come of all the exertions made for the purpose of discovering the murder, and our detective force has again afforded proof that, without the preliminary surveillance of all citizens and strangers which makes the French police system so effective, we are unjust to blame our police for its seeming inefficiency. Then, too, there is the matter of numbers to be thought of; the Frenchman is not so absolutely fabulous who came to New York for freedom and went back to Paris by the next steamer because of his lonesomeness—so few policemen dogging him about. "James Buchanan" is an article by the Hon. Horatio King, in which he argues that much injustice has been done Mr. Buchanan by the belief that he was a traitor in 1861 and a cool friend to the Union during the progress of the war. Mr. King gives us private letters, written by the Ex-President to him and to other gentlemen, which seem to bear out fully all that he states; and there is, we imagine, little inclination on the part of anybody nowadays to say all the hard things about Mr. Buchanan that we used to say. But neither Mr. King nor anybody else has ever shown that Mr. Buchanan was not a feeble and timid man, surrounded by traitorous counsellors, who did him and the country harm. We may admit, with Mr. King, that the temporizing and delay which brought it about that the South fired on Sumter, instead of being fired on by Sumter, may have been very advantageous to the Union. But to say that it was necessary for the Union, and that the North would not have roused itself had the first gun been fired by the Federal troops, instead of at them, is more than any one can say, or than many, we fancy, could at all believe. But let that be as it may, President Buchanan's course is not relieved of discredit by any such considerations. "The King of Prussia" is what seems a fair article, by Mr. Justin McCarthy; Mr. George Ward Nichols writes of the "Private Picture Galleries of Cincinnati;" and these, with Mr. Mark Twain's "Memoranda," some good book-notices, and two or three other articles, make up the number.

"Prussia the German Nation" is a sharp little essay in *Lippincott's* which does not spare hard words against Germany. Some of them the writer quotes, as this from Bismarck: "The disposition of mind which causes men to grow enthusiastic in support of foreign nationalities, even when their own fatherland suffers thereby, is a form of political disease which, alas! is found in Germany alone." Or this, which the same statesman said on one occasion to Lord Lyons: "My lord, you do not know the Germans yet. I can assure you that, if the people had enough money, every one of them would have his own king." Under both these utterances, as our essayist points out, may be discerned a perception of the individualism which, if it is political Germany's weakness, is the strength of Germany considered otherwise than politically. Thus it is that J. J. Döllinger can say: "The Germans have written better about Shakespeare than the English, and better about Dante than the Italians;" that Count Cesare Balbo can say: "These wonderful and conscientious Germans are step by step usurping to themselves all our learning;" that they teach English scholars how to study Anglo-Saxon and Old English; that they reconstruct Greece and Rome for the scholars of all other lands; that they are everywhere amalgamating themselves with other people, yet without, after all, losing their distinctive virtues and powers; that they are French in Alsace; Americans in Missouri; in Hungary Magyars, with Magyar names; in the Tyrol and Trieste, Italians. But Prussia, according to our author, and according to all appearances, is to do as much to cure this spirit as was done to protect it by the thirty-odd little principalities and duchies and kingdoms which the Confederation has displaced; and Germany is to be firmly welded together and be a political entity and power, as hitherto Germans have made the German name respected in the arts, sciences, philosophy, literature, and scholarship.

Other articles in *Lippincott's* is one about a tyrannical, pugnacious, and drunken Irish girl, named Mary Anne, and how she was superseded in the kitchen by the laborious, civil, and sober Chyng Loo, a Chinaman, and possibly not a fictitious and imaginary Chinaman. Another readable article in *Lippincott's* is about Gustavè Flaubert, the French novelist; and there is, besides, a portion of Trollope's newest novel, "Sir Harry Hotspur," a paper on our telegraph companies, headed "The Great Monopoly," some "Monthly Gossip," and various other matters.

There is nothing, we believe, in this month's *Harper's* which calls for the attention of others than the magazine's regular circle of readers. *Putnam's* has a good paper, giving a digest of the "Shakespeare Studies of a Realist," by Gustav Rümelin, which was published some four years since, and which still is an offence in the nostrils of all German worshippers of Shakespeare. Yet it no doubt contains things profitable to hear. But, though to those who see in Shakespeare the deepest discerner of the hearts of men, all these charges of careless construction, deficiency of sympathy with the national life, want of moral purpose, will seem of no great moment, it may easily be imagined that to "Shakespeare-high-churchism" they may seem nothing less than sacrilege; and, furthermore, that in time there may be a reaction, both in Germany and nearer home, against the sort of idolatry which no doubt binds too many of us. Of the other articles in *Putnam's*, "The Fox," by Mr. Burroughs, is good reading in natural history; for those who care to know, there is a description of Mr. M. O. Roberts's picture gallery by Mr. Eugene Benson; and there is a pleasant record of a visit to the Ammergau play.

Hours at Home has one more month of life, or, rather, one more month of life under its present name; for in December it swallows up *Putnam's*, puts itself into the hands of Doctor Holland ("Timothy Titcomb") as editor-in-chief, fills itself with illustrations, and calls itself *Scribner's Monthly*. *Hours at Home* has always been an honest magazine, with good sound reading for evangelical families of not too much rigidity and of some taste; and, while it has never risen above a certain level of merit or of interest, it has been always in all ways respectable, and will be missed by a good many readers who will find *Scribner's Monthly* not just the same thing. This month it opens with a eulogistic review of Mr. Bryant's "Iliad;" Jane Austen is very well criticised by the author of Mary Powell; "Hero," by Miss Craik, is concluded; Prof. Burt G. Wilder's talk about the fingers and toes comes to an end; and, among other articles, there is a strangely insufficient notice of Wierz, the Belgian painter, whose most remarkable pictures, if not his greatest, are such horrifying fantasies.

The Life of John Kalb, Major-General in the Revolutionary Army. By Friedrich Kapp. (New York: Privately printed. 1870.)—This work was written and translated into English in the early part of 1862, and the publication of it now we owe not only to the restoration of peace in this country, but to the author's return to his native land, and his desire to leave behind him an agreeable souvenir of his sojourn among us. Together with the "Life of Steuben," he says, it completes his design of recording the participation of German generals in the establishment of American independence. On the face of it, then, it furnishes a rejoinder to the partisans of France who ask us, amid her present misfortunes, to remember what generous and indispensable aid she afforded us during our Revolution. In reality, De Kalb came over here not as a German, but as a French citizen and officer, and with the secret encouragement of the French Government. He came in the same ship as Lafayette, and united more or less closely his own fortune with the latter's, and it is probable that, with different degrees of enthusiasm, the one was as much a lover of freedom as the other. Nevertheless, De Kalb, if he chose our service because of a decided sympathy with our cause, entered it above all for his own advancement; for, having been disappointed in his promotions and employment at home, he hoped that on his return he might claim the military grade which he should have won in America—or, rather, which was, without sufficient authority, assured him by Silas Deane. He came, too, as the confidential promoter of the designs of the Comte de Broglie, who aspired, with the most amusing ignorance of the Anglo-Saxon character, to "the position of a general and president of the council of war, with the title of generalissimo, field-marshal, etc.," and the control of political negotiations with foreign powers. The selfishness of these ends probably was not so striking to Kalb as the futility of them, and he did not concern himself about them when once arrived in the colonies. They illustrate, however, the general character of all the French interest in our revolt, the aggrandizement of France and the crippling of England being far more dear to Louis XV.'s ministers than the security of American liberties. Kalb came over to join our army in 1777, but he had been sent by Choiseul ten years previously to inspect the state of public feeling in the colonies, with the result of confirming the Duke in his designs on Corsica, since to England's disposition to interfere he had only to oppose threats of fostering the disaffection in America. Mr. Kapp, by the way, in praising Kalb's wonderful industry, on this mission, in translating articles from the public journals, seems to fall into the error of judging the importance of Salem and Newport at that time by their present rank as commercial or political centres. He speaks of them as "little towns," and implies that their opinions were not worth regarding; but this was as far as possible from being the case.

By singular good luck as well as assiduous research, Mr. Kapp has removed the obscurity of Kalb's birth and early life, and, with the exception of the period in which, having abandoned his Bavarian home, he is lost to view till he reappears as a lieutenant in the French service, leaves no part of his career unaccounted for. One may read this narrative with unqualified satisfaction as a piece of clear and vigorous historical writing, as a study of character, and for the light it throws on the French alliance with the colonies. It is particularly interesting, however, in its portrayal of the service in which Kalb was trained as a soldier, under Loewendal, Saxe, and Broglie, and in the account which he has left of the troops, leaders, and operations in the American service during the three years of his connection with it. For the former, we must refer the reader to the work itself. The France of Kalb was soon changed, but the Germany which made him a French soldier of fortune is but just leaving the state in which, as Mr. Kapp says, the troops she hired out to other powers were never encouraged with the name of Germans, but always: "Forward, brave Waldeckers! Hessians, show yourselves worthy of your ancient fame! Down with the rebels, my doughty Brunswickers!"

As a critic of American soldiery, Kalb must be thought of as "the most experienced, the most calculating, and the most circumspect commander of all the foreign officers who lent their swords to the struggling Republic." His views in regard to the system of drafting the militia in classes for two months' service only, may be imagined. He recommended that Congress should extend the term to three years, and enforce it. "The moneyed militiaman," he remarked—"and the majority are of this description—does not march himself, but hires a substitute, whom he pays from $200 to $1,000 for two months' service." Officers he saw leave their command on the eve of an engagement, with or without making an excuse to their superiors, "remain away till the action is over, and then return, and nobody refers to the subject." "Contractors, I have no doubt, make fifty per cent. on every contract, not to speak of the other defraudations, the mere enumeration of which would be endless." "The idea of wintering in this desert," he says, speaking of the camp at Valley Forge, "can only have been put into the head of the commanding general by an interested speculator or a disaffected man." And, amid all the hardships of these winter quarters, the officers were for ever ordering parades. It must have been a weakness of officers, for Kalb speaks in general of the soldier being "worried with parades—and such parades—three times longer than is necessary, and on marching days as well as others." Of Washington's personal character, Kalb always speaks with respect and even with affection; "but as a general," he writes, judging from first impressions, "he is too slow, too indolent, and far too weak; besides, he has a tinge of vanity in his composition, and overestimates himself. In my opinion, whatever success he may have will be owing to good luck and to the blunders of his adversaries, rather than to his abilities. I may even say that he does not know how to improve upon the grossest blunders of the enemy." "It is unfortunate," he subsequently says, "that he is so easily led. . . . I am convinced that he would accomplish substantial results, if he would only act more upon his own responsibility; but it is a pity that he is so weak, and has the worst of advisers in the men who enjoy his confidence."

The Decline of the Roman Republic. By George Long. Vol. III. (London: Bell & Daldy, York Street, Covent Garden. 1869. 8vo, pp. 482.)—Mr. Long's third volume presents the same characteristics as the earlier ones (see the *Nation*, No. 97). It is purely a *pragmatical* history, to use the convenient German term, aiming at nothing but a bare and accurate relation of events, with whatever discussion of the evidence may be found desirable. This latter feature is naturally the most prominent in the period treated—from the beginning of the Third Mithridatic War to Cicero's banishment; for almost our whole information with regard to this period is incidental rather than direct. Apart from the brief narrative of Velleius, and a few other abridgments, we have hardly anything but allusions and fragments of information scattered in speeches, correspondence, and other works. In sifting and piecing together these fragmentary scraps of evidence, Mr. Long is quite at home; and his accurate and extensive knowledge of Roman literature and antiquities makes him a most serviceable guide.

It is, however, rather as a negative critic than as a constructive historian that he will be found serviceable. He compares and weighs evidence with great sagacity; but, after all, the conclusion he arrives at is usually that there is very little to be known with certainty upon the subject. Meantime, the reader has probably lost the thread of the narrative, and is rather bewildered at the end of the chapter to find not only that he has come to no result, but that he has forgotten what he knew before, and must go back and take a fresh start. We repeat what we said three years ago, that this history is not to be read, but to be studied in detail, and that with a view to negative rather than positive results. For Mr. Long has not the kind of mind that discerns truth hidden under a mass of rubbish or of falsehood. He knows nothing which he cannot prove by evidence. We may therefore get invaluable aid from him; but, if we wish really to understand this epoch, we must have recourse to writers like Mommsen and Merivale, who possess the historical sense, which Mr. Long wholly lacks.

The omission of references is a serious defect, bad enough in a book like Mommsen's, but unaccountable and unpardonable in one of this character. If we could regard this work as a history, we would complain also of the practice of giving a detailed analysis of Cicero's speeches; but those analyses are so good that we should not be willing to lose them. Take the following (p. 288), with regard to the first oration against Catiline:

> "After making such a charge against Catilina, a charge of having planned a massacre, what does the consul do? So far from arresting this daring conspirator, he bids him go, leave the city, join Manlius (c. 5). Though he tells Catilina that he is openly conspiring against the state and the lives of all the citizens, he makes no offer to produce any evidence. But if he did know what he said that he knew, why could he not convince the Senate of Catilina's guilt and get rid of him, as he aftewards did in the case of the conspirators? We conclude that Cicero was afraid to touch the man, and that he could not prove what he said."

We should be glad to have every teacher and editor of Cicero's Orations read Mr. Long's shrewd comments upon them, that he might learn to appreciate the orator's buncombe. But why insist on *Catilina, Pompeius*, and *Antonius*, when he says without hesitation *Livy* and *Sallust?*

Pioneer Life in Kentucky. A Series of Reminiscential Letters from Daniel Drake, M.D., of Cincinnati, to his Children. Edited, with notes and a biographical sketch, by his son, Charles D. Drake. Ohio Valley Historical Series. (Cincinnati: Robert Clarke & Co. 1870.)—These letters relate entirely to the first fifteen years of the life of the writer—a period when, as Senator Drake observes, it was a longer and more arduous journey from Philadelphia to Fort Pitt (Pittsburg) than it now is from Maine to Oregon. The great material changes wrought during the short interval of threescore years and ten scarcely surpass, however, the development of population which has kept pace with them. Dr. Drake, for instance, was born in 1785, of parents who had been two years married, and who, when he was three years old, removed from Plainfield, New Jersey, to Mayslick, Kentucky. They were common farm laborers, with Quaker blood in them, could read and write, but were ignorant of grammar, geography, and arithmetic. Nevertheless they felt keenly the advantage of education, and supported to the utmost of their ability the teachers whom their fellow-colonists engaged in the new settlement. The boy Daniel, being the oldest, was selected to be the scholar of the family. Of his leaving home for Cincinnati (in 1800), there to become the first medical student the city had ever known, he observes feelingly:

> "The *caste* to which I belonged was to be changed; and in the arrangements of Providence I was made, unconsciously, the instrument by which that change was to be effected. The conception of this change was less my own than my father's. He was a gentleman by nature, and a Christian from convictions produced by a simple and unassisted study of the Word of

God. His poverty he regretted; his ignorance he deplored. His natural instincts were to knowledge, refinement, and honorable influence in the affairs of the world. In consulting the traditions of the family, he found no higher condition than his own as their lot in past times; but he had formed a conception of something more elevated, and resolved on its attainment; not for himself and mother, nor for *all* his children—for either would have been impossible—but for some member of the family. He would make a beginning; he would set his face towards the land of promise, although, like Moses, he himself should never enter it. Imperfectly as I have fulfilled the destiny which, under the arrangements of Providence, he assigned to me, I cannot doubt that, if he and mother should be permitted to look down upon the family group to whom you will read this epistle, they would gratefully exclaim, 'The cherished desire of our hearts will at last be gratified!'"

Dr. Drake's career in Cincinnati was honorable and prominent; his son, the United States Senator, has risen to distinction in St. Louis, the city of his residence; and the third generation issued from the farm laborers in Eastern New Jersey may very probably, before the close of the century, add to the good fame of the family as leaders of opinion or of public affairs in San Francisco.

We can neither dwell as we should like upon the character of Dr. Drake as briefly sketched by his son, nor upon his own reminiscences with which the volume is chiefly occupied. Of the former, it is enough to say that he was remarkable for public spirit, took broad views of the future of his adopted State and city, and was, as his works testify, a student of many things outside of his profession, though more or less related with it. He seems to have been always sensible of his defective education, and took every occasion to impress upon those who destined their sons to medicine the importance of early intellectual discipline. The account of his boyhood is well worth reading and re-reading, in order to realize accurately the pioneer backwoods life of his day. It is singularly minute in its details and yet comprehensive, and at the close one has scarcely a question to ask concerning the manners and customs, farm operations, rustic festivals, religious observances, institutions of the neighborhood in which Dr. Drake was reared. The incidents in his own experience he freely discusses for their effect on his character, and his reflections are always sensible. We take leave of the book, in which we only regret the lack of an *index nominum*, by quotations which bear upon a question not unfamiliar to the thoughtful. In his sixth letter, he had written:

> "But you will perhaps ask, Are there not multitudes who spend their whole lives in new countries, and yet die uninstructed in mind, unelevated in feeling, by the scenery around them? The answer is, that this seems to be the case; but we know not, in their destitution of so many palpable sources of knowledge and refinement, how much that is good in their character would have been absent if this also had been wanting. Because they do not *speak* of the beauties, solemnities, and sublimities of nature, we are not to conclude that those attributes have exerted no effect upon them. They are grown-up children. They do not analyze their own character, nor that of the influences which surround them, and to which, indeed, they give little of conscious attention; but God provides that his works shall affect us, even while we neglect to examine and admire them."

In his eighth letter, he writes, referring to Mayslick:

> "On a calm survey in retrospect of the whole community, I am compelled to say that in purity and refinement it did not rank very high. I doubt the correctness of what is sometimes said in favor of country life among the laboring classes; and lean to the opinion that city people of a corresponding grade as to intelligence, property, and pursuits, have, on the whole, more virtue and chaster manners."

⁂ Publishers will confer a favor by always marking the price of their books upon the wrapper.

MUSIC.

MLLE. CHRISTINE NILSSON.

It is a true delight to the critic when at last he may let his good-nature have full sway and can rest assured that for once his enthusiasm will not outrun the truth. His is usually a most unenviable task. For nearly every singer or actor there are wide allowances to be made. He must shut his eyes to many obvious defects and pick his way carefully among the adjectives, balancing often in his mind whether the merits of the artist will warrant any encomium, and what is the utmost allowance that the facts will permit. For if the absolute truth were told by any critic concerning that mass of mediocrities and incompetents and shams who make up the stock companies of our theatres and put themselves forward in our concert-rooms, the paper that published it would be thought guilty of an outrage, and the writer little better than a gross calumniator. Truth is a very lovely thing, but no man has yet been found bold enough to tell it absolutely and without mitigation in the critical columns of any newspaper, nor would it be either generous or proper for him to do so even if he dared.

There are now in this city two artists who free the critic from all these prudential restraints; one of them is Mlle. Christine Nilsson, the other is Madame Marie Seebach. It is only of the first that we now propose to speak. Comparisons are not usually in good taste, and yet they furnish to the general mind the readiest standard of judgment. In looking back over the long roll of great singers that have come to this country, there are but few whose names stand out so brightly as this last. One has almost to go back to her sister Swede to find the equal of Nilsson. Among those who may challenge comparison are Jenny Lind, Grisi, Bosio, Alboni, Sontag, Patti, and Parepa. There was also Malibran, confessedly the greatest singer that ever visited us, but the recollections of scarcely any of us go back so far. Grisi came to us when her voice was greatly impaired. It was never an unalloyed pleasure to hear her sing. Alboni had a voice beyond praise, of perfect balance and evenness, but she was gross in person, and lacked the celestial fire without which no singer is truly great. Sontag was almost everything that a great artist should be, and yet Sontag came here somewhat past her prime. Parepa we all know to be Parepa the magnificent, and, in certain directions, the incomparable, but she won more upon the admiration than the sympathies of her audience. She always lacked warmth and passion. Both Patti and Bosio left us before their powers had reached their fullest limit. We refer to Adelina Patti, of course. Carlotta certainly does not belong to the first order of singers, and to these only we now refer. The cloud of humbug that was thrown around Jenny Lind when she came would have obscured the merit of any singer less truly great. As a concert singer there has been none to compare with her, nor in this direction can even Mlle. Nilsson be said to take so high a place. But Nilsson comes to us with no drawback save that she appears in the concert-room and not upon the operatic stage. That perhaps will happen later, when she returns from the West. She is in the absolute maturity of her powers, and in the fulness of her personal loveliness. She has all the charm of youth. Her eye is bright with hope. Trouble has not written a single line of care upon her brow; the flush of perfect health comes and goes upon her cheek, her sympathies are broad and kindly; she looks out upon her audience with radiant smiles, and draws them at once to her confidence; she gazes earnestly at them with the fearlessness and steadfastness of innocence and goodness. She is full of the vivacity of girlhood, and does a hundred odd and off-hand little things out of the mere exuberance of life and spirits. To see her as she stands upon the stage is to see a picture that delights the eye. Her form has the slender shapeliness of youth, but not the angularity of first youth, her face is fair and smiling, the blue eyes greet all with bright looks. She is at once on friendly terms with her audience, and takes a sisterly interest in her orchestra. If it does not play to suit her, she quickly but pleasantly lets it know the fact. When she sings, it is a pure delight to listen, the voice is so even and so refined. Purity itself breathes in every tone. We have heard scales more faultlessly executed, and better phrasing, but the essential points of her art, the power to charm, a just appreciation of the requirements of a song and the ability to give expression to them; a due sense of the dramatic weight of what she is singing, the sensitiveness of nature that makes her able to sing either humorous music or the weighty measures of Handel, all these she possesses. Mlle. Nilsson has not only a voice of singular beauty, but also of great fulness and power, and this she sometimes uses to the surprise of all who listen. There is not only sentiment, but a certain poetic method in her treatment of some of the arias that she sings, especially so in the case of Handel's "Angels ever bright and fair." Her coloring of this beautiful air is so varied and also so original, that it has been accepted with doubt by many of the admirers of Handel, though with entire satisfaction by others. Mlle. Nilsson has already made her triumph among us secure. There is no doubt that she will entirely command the admiration of her audiences wherever she goes in this country. We await with impatience the opportunity for her fully to show her great abilities in their proper field—the operatic stage. Concerts are but poor fragmentary bits of patchwork at best, and hamper the artist with every manner of limitation. In opera, her dramatic talent will come to the aid of her beautiful voice, and we shall at last hear a *prima donna* worthy of the name. In the meantime, we hope she will not judge of the taste or manners of the New York public by the way in which a portion of her audiences have distributed "encores" during the late concerts. As these calls are made indiscriminately on all the singers, and are made apparently without the slightest regard to their feelings, or convenience, or physical powers, it is impossible to see in them anything but a brutal determination to get the worth of "one's money," by having as much music as possible in the time. The worst of it is that in this, as in so many other things in New York, the refined and cultivated portion of the audience sits still, while the ignorant and ill-mannered drag the singers back to the stage, and wring the last note from their weary throats.

Rare and Valuable BOOKS,

IN EVERY DEPARTMENT OF LITERATURE, SUITABLE FOR

Public Institutions and Gentlemen's Private Libraries,

Offered for Sale, at very Low Prices, for Cash.

Our Stock is various, comprising the Best and Rarest Editions of Works IN ALL LANGUAGES, including

Illustrated Works,
Voyages and Travels,
Poetry and the Drama,
Biography and Memoirs,
Secret Histories,
French and Italian Works,
Latin and Greek Classics—English and Foreign.
Early Fathers in Theology, in their Original Tongues, with Translations, etc.

Together with a Rich Variety of
STANDARD WORKS IN BEST LIBRARY CONDITION.

Reviews, Encyclopædias, Magazines,

Etc., now offered at Ante-War Prices.

THE OLDEST AND CHEAPEST IMPORTING HOUSE.

ESTABLISHED 1840.

London, & 138 Fulton St., New York.

A Manual for Debtor and Creditor.

GAZZAM'S TREATISE

On the Bankrupt Law for Business Men.

BY AUDLEY W. GAZZAM,

SOLICITOR IN BANKRUPTCY, UTICA, N. Y.

This work has been carefully prepared by a Solicitor in Bankruptcy, for the use of Business Men, and others who desire to *understand* the workings of the Bankrupt Law.

The arrangement of the text is something entirely new and original, and the several provisions of the Law are treated of as they usually occur to a reader seeking information and instruction. The notes having been compiled from the latest English and American cases, will be found very full. *This is the only work containing the recent Amendments to the Bankrupt Law.*

Price, in cloth, $2 50; half law sheep, $3. Sent free by mail on receipt of price.

GEORGE T. DELLER, Publisher,
95 LIBERTY ST., NEW YORK CITY.

In Monthly Numbers, at Fifty Cents each, of which Twenty have appeared.

Illustrated Travels

ALL ROUND THE WORLD:

A Record of Discovery, Geography, and Adventure.

EDITED BY H. W. BATES,
Assistant Sec. of the English Royal Geographical Society.

Prospectus.

In the present busy age, when steam navigation is bringing the most distant countries into closer relations, and the spirit of enterprise is opening up new sources of wealth and new fields of supply, a knowledge of the various regions of the earth is becoming daily of more importance. The small modicum of such knowledge as we obtain by the ordinary dry and uninviting methods is wholly insufficient to enable us to comprehend the whereabouts of the interesting events which are continually becoming subjects of social and political discussion.

The "ILLUSTRATED TRAVELS" is copiously illustrated with beautiful and authentic engravings, and gives accurate information of foreign countries, in the form of narratives, by travellers of the highest repute who have recently visited them.

In the choice of subjects for each monthly part, preference will be given to those countries which happen to be of the most general interest at the time. Thus the different parts of the world will be treated of in succession, and in course of time a body of useful information and entertaining reading on the most interesting subjects will be brought together, relating to the position, physical features, and natural productions of countries, and to the characteristics of their inhabitants, their institutions, customs, opinions, and everyday life. No branch of knowledge connected with geography, and treated of in the best books of travel, will be excluded.

The Political and Religious Aspect of Nations, Historical Geography, and Visits to the Sites of Important Events in Classical and Biblical History, Physical Descriptions of Interesting Regions, Narratives of Naturalists, Hunting Adventures in Wild Regions, Alpine Climbing—all these will be included in the range of subjects, as well as Narratives of Sea Voyages, Journeys of Discovery, and Descriptions of the Modern Condition of Countries.

CASSELL, PETTER & GALPIN,
596 BROADWAY, NEW YORK.

JUST READY.

COMPANIONS OF MY SOLITUDE.

BY ARTHUR HELPS,
Author of "Realmah" and "Casimir Maremma."

One volume, price $1 50.

(From a Notice of Arthur Helps.)

We like a book in which we are not bound to read consecutively, whose leaves we can turn at pleasure and find on every page something to amuse, interest, and instruct. It is like a charming walk in the woods in early summer, where we are attracted now to a lowly flower half-hidden under soft moss; now to a shrub brilliant with showy blossoms; now to the grandeur of a spreading tree; now to a bit of fleecy cloud; now to the blue of the overarching sky.

There are men and women, mostly young, with souls that sometimes weary of the serials, who need nothing so much as a persuasive guide to the study of worthier and more enduring literature. For most of those who read novels with avidity are capable of reading something else with avidity, if they only knew it. And such a guide, and pleasantest of all such guides, is Arthur Helps.

THE NEW EDUCATION.

Rational, Interesting, Useful.

The Science and Art of exact graphical Design and Education, with instructive descriptions, in the practical parts, of the things represented, is one of the leading elements of such Education, both in interest and importance.

PROF. WARREN'S SERIES,

the best, and, indeed, only complete and progressive one in this department, forms a new contribution to the means of education in Schools, Colleges, and the Engineering, etc., Professional Schools; and embraces the following volumes:

Plain Problems. 12mo, cloth,	$1 25
Use of Drafting Instruments. 12mo, cloth,	1 25
Students and Artisans' Projection Drawing. 12mo, cloth,	1 50
Elementary Perspective. 12mo, cloth,	1 00
Descriptive Geometry. 8vo, cloth,	4 00
Shades and Shadows. 8vo, cloth,	3 50
Higher Perspective. 8vo, cloth,	4 00
Elements of Machine Construction and Drawing. 8vo, cloth,	7 50
Notes on Polytechnic Schools. 8vo, paper,	40

Published and for sale by

JOHN WILEY & SON,
15 Astor Place, New York.

*** Copies supplied to Professors and Teachers for examination, at half-price.

The Nation.

NEW YORK, THURSDAY, OCTOBER 6, 1870.

The Week.

THE investment of Paris is most complete. Communication with the country and the extemporized second capital, Tours, takes place exclusively by means of balloons and carrier-pigeons—if the reports about the activity of the latter be true. Our doubt arises from the fact that we find these pigeons inclined to consume days in their flight where hours should suffice, and also to bring news otherwise unconfirmed, if not contradicted. Thus the news which the Prefect of the Department of the North telegraphs from Lille, under date of *September* 26, as "received by carrier-pigeon from Paris, dated Friday, *September* 23," enumerates a series of military successes, achieved by the besieged, on the 22d, in fights near Villejuif, at Droncy, and at Pierrefitte, of which later communications, received by balloon, make no mention whatever. The statements, too, contained in the despatch from Paris communicated by the same Prefect, as "received by carrier-pigeon, and dated *September* 30," tell the tale of the fighting on the last-mentioned day, with accompaniment of details as to positions occupied by the French, which cannot be made to agree with what we know from other sources. King William's despatch concerning the same affair, which announced a sortie by the French troops of the line against the Sixth Prussian Corps, accompanied by a less heavy attack on the Fifth, and a demonstration against the Eleventh, and repulsed after two hours of fighting—on the Prussian side, under command of the Crown Prince—seemed in its dry brevity to conceal some disagreeable facts, but later French accounts are apt to produce the opposite impression, to wit, that what the King omitted to state was the discomfiture of the assailants with considerable loss. The forts around Paris, from time to time, do some heavy firing to dislodge the Prussians from recently occupied positions, but with what effect our scanty information hardly allows us to state. The besiegers are busy throwing up earthworks while waiting for the arrival of heavy siege guns from Strasbourg. The authorities in Paris, both military and civil, work with energy; the citizens are quiet and orderly; and the *morale* of the troops, too, is said to be improving. The balloon men bring high-flown accounts of the number of the defenders, as well as of the resources in provisions and arms, of the isolated capital.

Detachments of the besieging armies are, in the meanwhile, active in making inroads into the surrounding and some more distant departments. Among the towns recently occupied by the Prussians we find Clermont and Beauvais, in Oise; Dourdan and Mantes, in Seine-et-Oise; Toury, in Eure-et-Loir; and Pithiviers and Patay, in Loiret. The three last-named places are at a small distance from Orléans, the occupation of which is thus again threatened. Patay, however, seems to point toward a further objective, Tours. At this partial capital of the Republic new measures of defence, some even breathing a spirit of terrorism, are daily improvised in decrees; but nothing goes to show that these decrees are followed by corresponding facts. No new army has as yet been stamped out of the ground. Perturbation, and even some discord, seems to reign in Tours, where old Crémieux, a lawyer, is obliged provisionally to act the part of War Minister. Lyons is believed to be menaced by a double advance of the Germans from Toul and the Upper Rhine, though only a portion of General Werder's forces, to which Strasbourg surrendered—on the evening of Tuesday, Sept. 27, not on Monday, as we stated last week after the Darmstadt despatch—is said to have begun operations in a southerly direction. The Red Republican régime in Lyons is not yet ended, though General Cluseret, who works hard to refresh his withering notoriety by humbug imitations of the scenes of 1793, has been arrested with some of his followers, gentlemen of the "revolutionary mob." The half-insurrectionary condition of that city is very annoying to the rulers at Tours, whose authority, which so badly needs the sanction of "the consent of the governed," is necessarily shaken by every act of disobedience. If Paris holds out to the day of the opening of the Constituent Assembly, that authority may possibly receive a new and more orthodox sanction. The elections for the Assembly are to take place on the 16th inst., all Frenchmen of and above the age of twenty-one voting. The total number of representatives is to be seven hundred and fifty, exclusive of the representatives of Algeria and the other colonies, for which no provision is as yet made. Nothing is known concerning the disposition of the Prussians to allow or not to allow the elections in the districts under their sway.

This sway now extends from the Upper Rhine to the Lower Seine, and from the Moselle and Meuse to the Loire. It continues, however, to be defied and interrupted by the garrisons of Metz, Thionville, Montmédy, Verdun, Mézières, Bitsch, and Soissons, all of which places are more or less closely invested. Heavy, but unsuccessful, sorties were lately made by the defenders of Bitsch and Soissons. Bazaine, in Metz, seems to be constantly in a fighting mood, but his repeated endeavors to break through the coil of Frederic Charles's army have as yet all been baffled, though not without severe fighting. Both contending armies are still at work strengthening their positions. The Germans also now and then attempt some shelling, and many of the villages surrounding the great fortress have fallen a prey to the flames. The surroundings of Thionville are almost equally exposed to the horrors of war. But the despair of the unfortunate inhabitants is nowhere productive of acts of reckless resistance; such is the terror inspired by the forces, the success, and the vigor of the Prussians. The inhabitants of Strasbourg have escaped with less harm than was believed, and its conquerors evince a particular mildness in their changed relation to them—a relation which they expect to render permanent. A garrison of eight thousand Germans replaces the seventeen thousand French, including National Guards, who so gallantly defended the stronghold.

It seems, from all accounts, as if it was getting to be time for Mr. Washburne to come home. Most people were only reconciled to his appointment by the belief that he would have nothing to do, and needed a change of air. Unfortunately, however, duties of the most delicate kind have devolved on him, and, as might have been expected, he has broken down piteously under them. When the Republic was proclaimed, he went off over it at half-cock, like an old blunderbuss, and not only recognized it, in his official capacity, before he had heard whether the rest of France would accept the Government set up by the street-mob, but volunteered his individual opinion that the war was wicked and unnecessary, and that the Prussians ought to stop it—a piece of impertinence such as, coming from a foreign minister during our war, would have drawn down upon him a snub which would have subdued him for years. Mr. Washburne appears, since then, to have been sinking steadily into a street demagogue, and, according to the last reports, goes to the Hotel de Ville instead of the Foreign Office, transacts his diplomatic business with the crowd, and "shakes hands all round."

There is one piece of news from Paris which is really afflicting to anybody who has a proper love of justice and a proper sense of the fitness of things. It appears that M. Émile Girardin, the editor and proprietor of the *Liberté*, left Paris as soon as he found a siege was inevitable, going, as his paper coolly announced, "to a central town of that part of France which is not polluted by the presence of the enemy." Along with him went M. Villemessant, the editor and proprietor of the *Figaro*. Girardin has now for four years been hounding the Government to make war on Prussia, and lashing the public into fever in support of it in the most violent and unscrupulous way. It probably did more than any other paper to precipitate the crisis in July. The *Figaro* has been just as violent, but even more impudent and untrustworthy. Its lies and exaggerations have been the disgrace of journalism and the wonder of the world. Both editors have made large fortunes by working on popular passions and pandering to popular delusions. Their place now is in the most exposed of the outlying forts. Girardin, it is true, is old, but if he was not too old to send other men to be killed, he is not too old to fight. Villemessant is physically in fine condition for active service, and it is a disgrace to French civilization that he should have been permitted to sneak off on the approach of the Prussians. In view of these facts, we cannot help thinking that, in addition to the conscription of editors for duties of a desperate nature, which we suggested the other day as a necessary feature of all military organizations in free countries, there should be some provision for holding editors to bail, as soon as war articles begin to appear in their papers, as security for their appearance on the battle-field. Something of this kind would doubtless be necessary to overcome their natural horror of places "polluted by the enemy."

During the apparent pause in the hostilities caused by the Prussian preparation for the siege of Paris, the chances of peace through mediation, and, of course, the terms of peace, continue to undergo larger discussion. The public feeling in England in favor of moral intervention grows stronger and stronger, and has received a marked stimulus from a letter of Sir Henry Bulwer, published in the London *Times*, in which he treats the objections to mediation put forward by Mr. Lowe as merely fanciful. Both parties, he says, have been sobered by the preparations for the siege. The Prussians will take less, and the French yield more, than they would have done some weeks ago, and England is called upon on moral grounds, and without reference to her physical ability to enforce her advice, to try and bring the parties to terms, before such a seat of civilization as Paris is exposed to destruction. Nevertheless, it is exceedingly doubtful whether anything in the shape of mediation is possible, or will be attempted, until the French and Prussians have both grown less sanguine than they are now. The French, it is quite evident from their talk, do not yet realize their situation. They cannot believe they have fallen so far in so short a time, or they would not attempt what is on its face absurd, the defence of an immense city with raw levies, and without any hope of relief from the outside. It is curious, by the way, and helps, in some degree, to explain their state of mind, to see how rapidly some of our own newspapers begin to take hopeful views of the French position, when the Prussians let even a fortnight pass without striking a heavy blow. The latter are bringing up their siege guns, and it is well to remember that whenever one of the outlying forts is taken, Paris will be within range, and it will be possible in a single night to fill it with death and devastation.

We discussed the Prussian demands last week, and showed that they were justified by usage and by the military situation. From the higher political point of view, there remain two strong objections to the annexation of Alsace and Lorraine which we pointed out some weeks ago—viz., that it would create a respectable and powerful reason for a renewal of the war on the part of France at the earliest possible opportunity; and that it would introduce once more into European politics the practice, from which the world has suffered so much, of transferring people from one power to another without their consent. Once revive this, and we have material for endless wars. If it is permissible to go back two centuries for justifications of acts of this kind, the world would be plunged in confusion. The great rule of prescription to which we owe so much of our peace and comfort would disappear utterly. Herr Jacoby, the Prussian Democrat, has urged this view strongly in an able and temperate speech, for which he has been incontinently locked up—a foolish and outrageous proceeding, for which the Prussian Government, though it may have the public at its back just now, will suffer more than he.

Professor von Sybel replies to this that higher interests are involved in this matter than the inclinations of the people of Alsace and Lorraine; that, even if the Germans do not take these provinces, it is folly to suppose that the French will sit down under the humiliation of their late defeats one minute longer than they can help; that they are sure to try and avenge them in any event; and for this, which all experience justifies Germany in expecting, it is her solemn duty to prepare; and that no preparation will be effective which does not give her Alsace and the German-speaking part of Lorraine. The question is, it must be admitted, an exceedingly difficult one—nearly as difficult as that which presented itself to foreign advisers of the North during the late war. When a nation is bleeding at every pore, in a war not of her own seeking, with the field still strewn with her dead, nobody can be thoroughly competent to advise, because no looker-on can put himself in her place. At such moment she has to look for counsel in her own heart, and the nations are happy and rare whose moral training has been such as to make it certain that in looking they will find wisdom.

The plebiscitum taken on Sunday in the Papal territory was, as could only have been expected, unanimous in favor of union with Italy, and there now remains only the legislative sanction of this union and of the removal of the capital to Rome. The terms which the King has offered the Pope are enough to produce convulsions in a Red-shirt, but the offer of them, before the occupation, by San Martino, was met only with objurgation on the part of his Holiness. He was distinctly heard to exclaim "whited sepulchres!" in a way to leave no doubt that he referred to the Italian authorities. It is reported that, as the Leonine City voted against him, he is bent on removing to Malta; a step which would indicate no great faith in the permanence of the "fixed and tangible revenue" with which the Government pledges itself, in common with other Catholic powers, to endow the Holy See.

The *Tribune* has once more been thrown into raptures by the announcement of "military preparations of Russia proceeding on a gigantic scale," such as it was able to explain to its own satisfaction as meaning neither more nor less than a new crusade against Turkey. Scarcely had the news been flashed across from London, under date of Sept. 29, when it became convinced that all Russia's "great military strength, 1,135,975 men in the aggregate, had been called into the field." It had had "many indications of the movements and mobilization of the troops" before, but now it saw them all—the million, the thousands, and the 975—marching to make "a descent upon Constantinople;" it saw Europe thrown "into a terrible state of excitement," the English consols suffering, "and the Bourses of every other nation affected;" it saw in Turkey a doomed victim, in England an idle spectator, and in Austria—and this is certainly the most extraordinary part of its vision—an ally of Russia in this enterprise. What a pity that this bright vision was so soon to be dimmed by an evening telegram from St. Petersburg of the same date, bringing an authoritative denial of the whole story. Of course, we do not mean to say that the *Tribune* acknowledged that it had been laboring under a kind of optical delusion, or that it did not next day endeavor to defend the correctness in general of its observations; but it is evident that it could not escape the mortifying sensation of doubting whether actually all the "1,135,975 men" were already in motion in the "advance to the Bosphorus."

Without insisting too much on their indication of the future of the Republican party, the splits now observable in it in Massachusetts and elsewhere are decidedly the most noteworthy feature of the fall campaigns. In Missouri, the principal Democratic organ, the St. Louis *Republican*, has come out in favor of Gratz Brown, and will undoubtedly carry the party with it, though it cannot be confidently predicted that the coalition will carry the State. The grounds of union are abolition of test-oaths and restrictions on the suffrage, and a constitutional convention, which shall wipe out the last vestige of animosities based on the divisions caused by the rebellion. The President, whose San Domingo enterprise put him under obligations to the least scrupulous and most radical members of Congress, and who pays the carpet-bag interest for its fidelity by denouncing the so-called Reform Party in the South, is settling his account with Senator Schurz by removing officials in Missouri whose sympathies are known to be with Mr. Brown and opposed to the Drake and McClurg party. In Pennsylvania, there are several cases of bolting. Mr. Kelley, in the Fourth Congressional District, has become engaged in a very hot controversy with his "irregular" opponent, Mr. Wm. B. Thomas, and personalities have quite taken the place of arguments for civil service reform which we had hoped to hear from the former. In the Second District, O'Neill, the "regular" nominee, is opposed by a Mr. Creely, a stronger man, but connected with some of the most disreputable and powerful city rings. In neither of these two cases have the Democrats made any nomination. In the western part of the State, also, in Allegheny and Beaver Counties, there are splits in the Congressional nominations, the return of Gen. Negley from the former being resisted, although Mr. John Covode alleges that he has been a most useful representative for the Protectionists, and that his defeat would be "hailed with joy by the Free-traders, who seek to overrun and ruin our home industries." In the southeastern corner, Chester and Delaware Counties are quarrelling with Montgomery because, having already the Congressman and State representative, it claims also the State Senator for the district. This is of more consequence, inasmuch as, by a rare coincidence, the Legislature will have to redistrict the State, both for State and Congressional purposes, though the one is done only every ten, the other only every seven years. In Baltimore, however, Messrs. Stockett Matthews and Adam King, rival Republicans, have withdrawn in favor of Mr. Washington Booth, whose election in the Third Maryland District will be contested by the notorious Governor Swann.

Governor Hoffman, of this State, has cemented his alliance with the city "ring" by refusing to exercise the power given him by the judiciary article, lately added to the constitution, to redistribute the Justices of the Supreme Court. He might under it have transferred Cardozo and Barnard to districts where only small interests would come into litigation, and where their powers of mischief would be comparatively limited. His failure to do this, in the teeth of the scandals of the last three years, completes the work which was begun by the signing of the Erie bill, and we think may fairly be expected to make respectable Democrats ask themselves solemnly whether any Federal question now before the country is of importance enough to justify them in acting any longer for its settlement with the shameful gang who control this city and State. Mr. Tilden's appearance with Tweed at Rochester ought certainly to be the last exhibition the country is to witness of the alliance of decent men for any purpose with these wretched thieves and swindlers.

There is a movement going on now at Washington for the removal of Secretary Cox. Mr. Cox was one of the very best of the President's early appointments—in fact, a model government officer as regarded both character and acquirements. He took the earliest opportunity of introducing the principle of civil service reform into his department as far as circumstances would admit, dismissing only for incompetency, promoting for merit, and appointing only after examination. The result is, he has, for instance, in the Census Bureau a body of officers, selected in this way, such as has not been seen in the United States service, except in the Coast Survey, for many a long day. As might have been expected, he speedily became obnoxious to the political managers, and they are engaged at this moment in a vigorous effort to procure his removal. The immediate cause of the attack on him is his refusal to allow the poor clerks in his department to be levied on for the expenses of the Pennsylvania election. He is willing to have them asked for voluntary contributions, but "the Association" which has the extortion in charge insists on fixing the amount each clerk must pay out of his scanty wages, and asking for his dismissal in case he refuses. Mr. Cox's resistance has led the band to hold a meeting and pass resolutions denouncing him, and it now remains to be seen whether the President will stand by him. Judging only from what is happening in Missouri, we should not be sanguine as to the result; but Mr. Cox, if he falls, will fall just as much in the service of the country as if he had perished at the head of his troops in the war. We may add that not one of the Pennsylvania gang questions Mr. Cox's integrity or ability.
